— THE —  
**Westinghouse Air Brake Company,**

PITTSBURGH, PA., U. S. A.,

MANUFACTURERS OF THE

**WESTINGHOUSE AUTOMATIC BRAKE**

The WESTINGHOUSE AUTOMATIC BRAKE is now in use on 24,000 Engines and 325,000 Cars. This includes (with plain brakes) 232,000 Freight Cars, which is about 23 per cent. of the entire freight car equipment of this country, and about 80 per cent. of these are engaged in interstate traffic, affording the opportunity of controlling the speed of trains by their use on Railways over which they may pass. Orders have been received for 173,000 of the Improved Quick Action Brakes since December, 1887.

The best results are obtained in freight train braking from having all the cars in a train fitted with power brakes, but several years' experience has proven conclusively that brakes can be successfully and profitably used on freight trains where but a portion of the cars are so equipped.

## THE MONEY QUESTION.

BY JAMES MIDDLETON.

Next to the control of land and franchises and the taxing power, the control of money is the most important means of fleecing the producer.

All purchasing consumers are put under tribute to the owners of lands and franchises. Upon the purchasing consumer falls almost the whole burden of taxation for the support of government. Upon the purchasing consumer falls the whole burden of that *quasi* taxing power conferred by unjust tax laws upon the few like Carnegie, who roll up vast fortunes at the expense of the great body of consumers.

The monopoly of lands and franchises and the monopolies arising from unjust taxation are the steady and primary sources from which great fortunes flow. Through these come the control of money.

When a few get practical control of the money of the country they have another means of fleecing the producer. By increasing the currency and increasing prices a stimulus is given to business. Men are tempted to run in debt in order to increase their gains.

By contracting the currency and lowering prices men find it harder to pay debts. The dollar has an increased purchasing power and is so much harder to get. A panic comes and mortgages are foreclosed. The real wealth and the lands and franchises are still more concentrated in fewer hands. Wages go down and tramps increase.

Of course, the primary constitutional remedies are to sweep away the monopoly of lands and franchises for individual profit; to abolish unjust taxation; to abolish all unjust class legislation. But in a time of financial panic, such as we are now passing through, immediate, special remedies are needed.

It is as if a person, sick with consumption, had a hemorrhage of the lungs. For the time being, the real constitutional remedies

which will restore the patient, ultimately, to health, take a secondary place and the stopping of the hemorrhage becomes the most important immediate thing to do, though the hemorrhage is the result of the consumptive tendency of the patient.

It is the same to-day with the productive industries of the country. We are suffering from a financial panic, brought on primarily by the unjust social conditions I have named.

What shall be done to stop the panic, restore confidence in business and set the idle to work? It is to give us now a better monetary system, one that shall make it less easy for the creditor to take advantage of the debtor, one that shall restore a greater degree of confidence in the industrial world.

Money is the mechanism of exchange and a measure of values. Even in our own country, a great variety of things have in different parts and at different times served as money or a medium of exchange. Among them may be named corn, tobacco, whisky, linen, skins, turnips, potatoes, and ten penny nails. Even musket balls are said to have been used as money in Massachusetts in 1631.

During the war of the revolution a large amount of continental currency, said by Thomas Jefferson to have amounted to \$200,000,000, was issued. This was supplemented by as much more issued by the colonies separately. The continental currency, not having a firm taxing power behind it to redeem, finally disappeared from circulation as valueless. Those who use this as an argument against a paper currency overlook this, also, that without the currency the revolution would have failed.

The makers of our constitution undertook to take away from the federal government, as well as from the states, the right to issue paper money. Fortunately our supreme court, by its decision, March 3d, 1884, by a vote of eight to one, Judge Field alone dissenting, has undoubtedly settled the full right of the federal government to issue full

legal tender paper money in peace as well as in war times, at its discretion, and to make it apply to debts contracted before as well as after such an issue.

I quote from the decision as follows:

This position is fortified by the fact that congress is vested with the exclusive exercise of the analogous power of coining money and regulating the value of domestic and foreign coin, and also with the paramount power of regulating foreign and inter-state commerce. Under the power to borrow money on the credit of the United States, and to issue circulating notes for the money borrowed, its power to define the quality and force of those notes as currency is as broad as the like power over a metallic currency under the power to coin money and regulate the value thereof. Under the powers taken together, congress is authorized to establish a national currency, either in coin or paper, and to make that currency lawful money for all purposes, as regards the national government or private individuals.

The first legal tender paper money was issued by act of February 25th, 1862. Previous to that, at different times, the general government had issued various forms of paper money, usually bearing interest in one case as low as one mill per annum, but never legal tender.

In the beginning the government made gold and silver dollars and multiples thereof, full legal tender, the gold dollar to contain 27 grains, eleven-twelfths pure gold, one-twelfth alloy. The silver dollar contained 371½ grains of pure silver and 44½ alloy or 416 grains. The ratio of pure gold to pure silver was 1 to 15. In 1834 the ratio was changed to 15.984 for the reason that gold bullion was worth more than its coining value and the coinage had practically ceased. The new dollar contains 25.8 grains gold, nine-tenths fine, or 412½ grains silver, nine-tenth fine.

Foreign coins of specified weight and fineness were also made full legal tender up to about 1816.

In 1853, for the reason that silver, even for small change, was lacking, because its bullion value was too great for profitable coinage, the half dollars and other smaller silver coins were made some 7 per cent. lighter; a dollar's worth containing only 384 grains of coin silver, (that is silver containing one-tenth alloy) instead of 412½ grains. They were legal tender for sums of five dollars or less.

Up to 1873 only some eight millions of silver dollars had been coined. In 1873 a silver dollar's bullion value was equal to about \$1.04 in gold—that is, the bullion value of a silver dollar was worth about 4 cents more than a gold dollar. They were both worth more than a paper dollar, for the reason that paper was dishonored by its own author. It was issued as a legal tender, at its face value, for all debts, public and private, except import duties and interest on the public debt; a damnable exception which was wrong from the government by the money changers in time of peril; an exception which has cost the pro-

ducers and consumers countless millions and untold suffering.

After the currency had been largely converted into interest bearing bonds, bought much below par, the self-sacrificing bond holders, through the compliance of a patriotic congress, by the credit strengthening act of 1869, provided that these bonds should be paid in coin or its equivalent. The refunding act of 1870 provided that refunded bonds should be paid in "coin of the present standard value; that is, in the gold dollar of 25.8 grains standard, or silver dollar 412.5 grains standard.

In 1873 an act was passed demonetizing silver, reducing at one stroke by 50 per cent. the bullion available for coin for paying the bonds bought below par with depreciated greenbacks, depreciated largely by the patriotic efforts of the money changers.

Strange to say, though, the bill appeared many times and was largely discussed before its passage, there was no warning voice raised. Afterwards some astute congressmen pleaded the "baby act" and said they did not know what they voted for.

In 1878 silver was partially remonetized and made full legal tender, "except where otherwise expressly stipulated in the contract."

In 1890 an act was passed authorizing the issue of coin treasury notes in payment for silver bullion, bought at its market value, to the amount of 4,500,000 ounces per month. These coin treasury notes contain the same exception clause as the act of 1878, which any one may read who has one of the notes in his possession.

The fifty-four million ounces of silver purchased yearly under the operation of the act of 1890, known as the Sherman act, should cost the government nothing but the cost of making the notes and handling the bullion, and coining as needed for the redemption of the notes. Every ounce of that silver is represented by these partial legal tender paper bills and is just as much in circulation as though the silver were coined and in the hands of the people instead of the notes. The notes are much more convenient and profitable, both for the government and the people than the coined dollars.

Only one thing was needed in amending the Sherman act, and that was to repeal the exception clause and make both the silver dollars and the notes based on the silver full legal tender for all debts, public and private. Only three classes could have objected; the holders and producers of gold and silver and the creditor classes, whose credits would be greatly increased in value at the expense of the debtors by stopping the purchase of silver with the coin treasury notes, with no provision made for a paper currency to take its place.

If the exception clause had been repealed, whatever profit there might have been in the purchase would have gone to the people and not to the mine owners as it would under free coinage.

Instead of pursuing that course the mine owners of the west are demanding free coinage so that they can pocket the profit of the government fiat, a profit that at the present rates of gold and silver amounts to many millions yearly, a big stake to play for.

On the other hand, the worshippers of the golden calf, and the holders of our government bonds, railroad securities and the like, are demanding the demonetization of silver, which would greatly enhance the value of their credits, ruin many debtors, reduce wages, produce poverty and starvation in many homes, but would concentrate the wealth in fewer hands. Free coinage is simply the least of two evils.

From the famous conflicts over the old United States bank down to the present time, the money changers have shown themselves the lineal descendants of those whom Jesus drove out of the temple.

It has remained for a President of the United States, elected on another issue, to add another shameful page to our financial history, by calling congress together for the express purpose of making all debts payable in gold, or the "money universally recognized by all civilized countries." He closed his message with these words:

I earnestly recommend the prompt repeal of the provisions of the act passed July 14, 1890, authorizing the purchase of silver bullion and that other legislative action may put beyond all doubt or mistake the intention and the ability of the government to fulfill its pecuniary obligations in money universally recognized by all civilized countries.

GROVER CLEVELAND.

EXECUTIVE MANSION, AUG. 7, 1893.

Never did the executive of a great nation make a more dangerous proposition. Fortunately, congress has simply repealed the purchasing clause and has not demonetized the present stock of silver for the benefit of the bondholders who would like only gold.

Let us hope that the new congress will provide a better means for expanding the currency to the needs of business than was provided in the clause repealed.

## AMERICAN AND ENGLISH LABOR.

BY GEORGE C. WARD.

From the Chicago *Inter-Ocean*, August, 1892, I clip as follows:

Mr. Willard I. Lansing, the workman chosen by his fellow wage-earners of Providence, R. I., to go to England and Europe for the purpose of investigating the question of wages and the condition of wage-earners, is sending home some very interesting letters. These letters are being published in the Providence *News*, the proprietor of that paper having furnished the funds to pay the expenses of Mr. Lan-

sing's trip abroad. His last letter is dated London, August 10. As it will be of interest to every American workman or woman, or any student of public affairs, it is here reproduced in full:

London, August 10.—Although Leeds is generally associated with Bradford, in speaking of cloth manufacture, we must take exceptions to it, as at the present time much of it is done within the borders of Bradford, Huddersfield, Halifax and other surrounding towns. A little dyeing and some finishing constitutes Leeds's part in the preparation for market of our present woolen cloth.

This was not always so, but is at present, and as if to make up for the loss, she has adopted a varied number of industries. Leaving the cloth industry to Bradford, let me call your attention to the industries most prominent in Leeds to-day. Large glass-making factories, iron-works, steam ploughs and engines, stone quarries, firebrick works, printing establishments, machine shops, shoe factories, paper mills and the already described screw factory. In the matter of printing, after inspecting Alf. Cook's large establishment, and viewing the work turned out by this enterprising concern, I can safely say for excellence they can, no doubt, when occasion requires, give the London firms quite a rub.

I decided to make a little study of the boot and shoe trade in Leeds for my readers, believing it to be one of the most important industries and most easy of access. These shoe making establishments turn out an entirely different class of work from those in Northampton or elsewhere. Their specialty and, in fact, general output are those shoes known as strong ones with nails. Immediately you can see the demand for this production is largely from home consumers, if not wholly. Sometimes four months in the year there will scarcely be any work thus bringing even a high rate of wages down to a very small average.

### SHOEMAKER'S WAGES.

It is safe to say there are 5,000 hands employed in this industry within the borders of Leeds and immediate vicinity. If these 5,000 men were fully employed the year round, their average weekly earnings would possibly amount to 26s or \$6.24 for skilled mechanics, but taking into consideration the above enforced idleness the average is lowered to about £1 or \$4.84. There are some special classes who earn during the busy season 36 to 38s (\$9.64 to \$9.12), with the usual decrease during dull months. The average rentals of the first mentioned is from 4s to 4s 6d per week, (.96 to \$1.08), and the last mentioned from 6s to 7s 6d per week (\$1.44 to \$1.80). Gas is 2s 2d per month (.62 cents.) These homes are not of the best within the borders of the city. A cellar, kitchen, room above, and one of similar size for a bedroom above, sometimes divided in half constitute the home. They are built back to back, one facing either street, with no yard, and perhaps sixty or more tenements to the block. On account of no yards the wet clothes are swung across the street from house to house, gathering the dirt from passing travel and soot from adjoining chimneys. One can also judge from these statements about the manner of living. I was assured food was as cheap here as anywhere in Britain, as well as general cost of living. Below is the usual table:

Article.	English.	American.
Butter . . . . .	14d lb	28c lb
Flour . . . . .	1s 6d a stone	35c—14 lbs
Sugar . . . . .	2½d lb	5c lb
Tea . . . . .	2s lb	48c lb
Bread . . . . .	3d 2lb loaf	6c 2lb loaf
Ham . . . . .	9d lb	18c lb
Fish . . . . .	3½d lb	6½c lb
Eggs . . . . .	16 for 1s	16 for 24c
Beef . . . . .	9d lb	18c lb
Mutton . . . . .	9d lb	18c lb
Milk . . . . .	4d quart	8c quart
Lard . . . . .	3d lb	10c lb
Rice . . . . .	2½d 3d lb	4½c lb
Bacon . . . . .	6½d lb	12½c lb
Cheese . . . . .	7½d lb	14½c lb
Pork . . . . .	7½d 3d lb	15½c lb
Onions . . . . .	1d lb	2c lb
Turnips . . . . .	1d lb	2c lb
Potatoes . . . . .	1d lb	2c lb

## THE JEWS IN LEEDS.

During the past decade 10,000 or more Jews have been added to the population of Leeds. They have, to a considerable extent, gone into the ready-made clothing business (practically an undeveloped business before their arrival), although one finds them in nearly every kind of business to a greater or less degree. For instance, the cheap slipper trade has employed vast numbers of the poorer Jewish population. Perhaps by quoting from the Leeds *Mercury* of February 5, 1892, I can give you a few facts unknown and properly vouched for.

The article is in part as follows: "Evidence given before the Labor Commissioner, Group C. Testimony given by W. J. Ingle, representing employes of the boot and shoe association of Leeds. The following is the gist of the article: There are 7,000 to 8,000 hands employed. Girl machinists and fitters average 13s (£3.12), and riveters and cutters 26s to 27s (\$6.24 to \$6.48) per week. Former prices for making slippers, 9s to 10s per doz (\$2.16 to \$2.40). Prices now paid Jews for similar work, or any others desiring it, 4s 6d per doz. (\$1.68). Place in Leeds to-day where £1,000 machinery is lying idle on account of men. In Leeds only four pairs of boots produced per hour. In the United States £100 of boots cost in labor £17, while in Leeds £100 of boots cost £33, and still American workmen make higher wages."

These facts were given before the Labor Commission and printed as aforesaid without contradiction. I have thus given you both men and woman's labor in the boot and shemaking line, with wages. Limited time forbade investigation in other branches of industries. Leeds is another typical old-fashioned English town, with few modern improvements considering its size. Horse cars with dummy engines infest the streets, and a thick mantle of smoke increases the gloominess in many parts of the city. It is quite a bustling place, and is quite a center for the woolen manufacturers. Bradford is but nine miles from Leeds, with trains running to and fro at short intervals.

## WORSTEDS AND WAGES PAID.

Bradford bears a remarkable likeness to Leeds, with perhaps a trifle less amount of traffic. On arriving we find that even here only light worsteds are manufactured to any such extent as are used principally in ladies' wear. Knowing we shall get no further, we must make the best of it and be patient. The manufacturers are very chary about allowing visitors ingress to their works; in fact, so close that influential friends were unable to accomplish it, but expect to when I return the last of August. This was surely a setback and disappointment, being almost the first desired goal I had failed to reach. The most important thing, however, wages, I did get with all their cunning.

Woman labor is almost universal in these mills. A few men, but the major portion of the male members of a family engage in some outside trade. The majority of these men employed are in the combing departments, they are night men, receiving 3½d (7 cents) an hour, working five nights per week and twelve hours a night, or a total of sixty hours—60x7—\$4.20 weekly wages. The day combers are women, working fifty-six and one-half hour per week, and earning 12s, or \$2.88 for the time. Females engage in preparing for and furnishing combing, as well as winding cards, receive from 10s 6d to 11s (\$2.52 to \$2.64) per week. The drawers, also females, receive 11s a week (\$2.64). Spinners and two-side winders, female, receive about 10s (\$2.40) per week. Short-time spinners (new hands, making half a day at a time), receive from 2s 6d to 4s 6d (60c to \$1.05) per week. Female twistors receive from 10s 6d to 11s weekly (\$2.52 to \$2.64). Weavers, female, average 13s to 14s (\$3.12 to \$3.36). Some few reach £1 (\$4.84) and others are as low as 10s (\$2.40). These branches given include most of those in the production of cloth in Bradford and are authentic. Rents average for these people 4s (90c) per week, including cellar kitchen, one living room and two small bedrooms.

Will not describe manner of living now, and condition, until more thoroughly inquired into upon my return. Obligated to hurry, as I leave for Belgium Monday, July 25. Promise you further and more complete knowledge before I return home, if health

remains good. Lost two days, needed here, in the sickness at Leeds. There will be several letters in general, gathering a few unintentionally omitted facts beneficial to a thorough understanding of the subjects investigated. Everything written thus far bears the stamp of authenticity, and is easily proven.

WILLARD I. LANSING.

I have reproduced the foregoing letter, *not* for the purpose of entering into an argument about the tariff, but for the purpose of demonstrating that the people of the United States are suffering from the avaricious rapacity of grasping monopolies, soulless corporations, extortionate money-lending capitalists and conscienceless landlords, the sums of whose joint extortions are included in the factors we term rent, interest and profit.

Of the matter of wages I shall say nothing except that while it is perhaps true that in some few industries wages are higher here than as quoted in Leeds, England, there are, nevertheless, thousands of women and girls in all our larger cities and towns, who receive just as low wages as those quoted by Mr. Lansing. The Jew of Leeds also has his counterpart in all the cities of the United States, the sweaters' dens of this country being carried on chiefly by Russian, Polish and German Jews, and being simply horrible in their unenviable notoriety. Whatever may be said of wages in protected industries, we have very little to be proud about, when we consider the wages we pay both men and women, and also children, in those avocations unprotected by a tariff. I also wish to say that organized labor and free lands and not the tariff may be thanked for any advantages laborers in this country have obtained in the matter of wages.

I will first call attention to the fact that \$500 worth of boots and shoes costs in England \$165 in labor and in the United States but \$85. This is equivalent to a statement that so far as his purchases of boots and shoes for himself and family are concerned the English operative in the boot and shoe industry can afford to work either twice as long for United States wages, or the same length of time as the United States operative for one-half his wages. This, in its turn, is only equivalent to a statement that in the United States raw material, rent, interest and profit stand for 83 per cent. of the value of the finished product, while labor stands for 17 per cent.; while in England raw material, rent, interest and profit stand for only 67 per cent., while labor stands for 33 per cent. As the price of raw material differs but little in the two countries, it is evident that rent, interest and profit absorb almost exactly twice as much in the United States as in England.

So far we have said nothing concerning the comparative relationship of the factor rent to the individual operator or laborer, in its direct application to him as an indi-

vidual. Taking the figures given in the foregoing letter as a basis, we find that the average monthly rent paid by the operative receiving the smallest wages, is \$4.50. The house would appear to be composed of a basement kitchen, a first floor living room and two bedrooms on the second floor. The average rent paid by the operatives receiving the best average wages is \$7.17 per month. I count in each case three days more than four weeks' rent, in order to make a full month. It will be seen at a glance that the same class of operatives or laborers in the United States must pay at least double the rent as is paid in England, while the price of gas in England is insignificant when compared with the price in this country. So, then, so far as rent is concerned, the English operative can afford to work for one-half the weekly wages paid in the United States, while the English landlord is satisfied with one-half the income from rentals as is extorted by his American cousin, although land in England is much the most valuable, so far as selling price is concerned.

Now take the cost of living. In approaching this branch of the investigation we must remember that England depends, to a great extent, upon importations of food products to feed her people. Especially is this the case with flour (or wheat) and beef, pork and lard. There, then, we should expect to find the prices very much greater than in the United States, but such is not the case. I give hereinbelow the retail prices in Kansas City, of the articles contained in Mr. Lansing's list. It is to be regretted that Mr. Lansing was not more specific in his price list, and that he did not, at least, give a maximum and a minimum price for beef, pork, bacon, &c., as here in Kansas City the cheapest grade of boiling beef sells for 3 to 4 cents, and porter house steak for from 15 to 20 cents, while chuck steak is worth 6 to 8, and round steak 8 to 10. Rib or sirloin roast costs 10 to 12 cents.

I did intend giving a list of Kansas City prices of the several articles of food given in the Leeds, England, list, but my readers can bring their own knowledge and experience into service in comparing English prices with those in the United States. This argument is not advanced with a view of showing that the English laborer can live as cheaply or more cheaply than can the toiler in the United States, but rather to show the American people how they are being robbed by organized capital and capitalistic monopoly. From a Kansas City paper of August 24, 1892, I clip the following market quotation:

## KANSAS CITY.

Flour—Steady but very dull. Buyers doing a hand to mouth business. Exporters bidding a shade lower for everything, but holders asking old prices.

Soft wheat, per 100 pound sack.		Hard wheat, per 100 pound sack.	
Patent . . . . .	\$1 80@2 00	Patent . . . . .	\$1 75@1 85
Extra fancy . . . . .	1 60@1 80	Straight . . . . .	1 60@1 75
Fancy . . . . .	1 50@1 60	Bakers' . . . . .	1 50@1 65
Choice . . . . .	1 00@1 10	Low grades . . . . .	75@ 90
XX . . . . .	80@ 90	Rye . . . . .	2 00@2 10
		Mixed rye . . . . .	1 30@1 40

## PROVISIONS.

A quiet and weaker market was had yesterday for most hog product, a break in Chicago causing a weaker market here in sympathy, and light trading in car lots. But the jobbing trade was fair.

We quote per 100 pounds:

Green Meats—Shoulders, cash, \$6.75 per cwt.; hams, \$9.25.

S. P. Meats—Hams, cash, \$10.75, and shoulders, \$7.25.

Pork—Cash, \$11.00, and August, \$11.00.

Lard—Cash, \$7.60, and August, \$7.60.

D. S. Meats—(Partly cured) shoulders, cash, \$7.00 per cwt.; s. r. sides, \$7.87½; l. c. c. sides, \$7.87½; and s. c. sides, \$8.20.

Butter—A steady and firm market continues to be had for most everything, though there is less excitement in the market than a few days ago. We quote: Creamery, highest grade separator, 22@23c; finest gathered cream, 20c; fine fresh, good flavor, 19c; fair to good, 18c. Dairies, fancy farm, 15@16c; fair to good lines, 13@14c. Country store packed, fancy, 14c; fresh and sweet packing, 12½c.

Eggs—The demand was good but market hardly so firm. Fresh candled, 14c. per dozen.

## ST. LOUIS.

St. Louis, Mo., Aug. 24.—Flour—Receipts, 2,000 barrels; shipments, 10,000 barrels. Market weak. Patents, at \$3.70@3.80; extra fancy, \$3.35@3.50; fancy, \$3.00@3.20; choice, \$2.40@2.50; family, \$2.20@2.30.

Butter—Quiet. Creamery, 20@25; dairy, 15@21.

Eggs—Easier, 12@12½.

Pork—Standard mess, jobbing at \$11.80@12.00.

Lard—Prime steam, \$7.40@7.50.

Bulk Meats—Dry salt meats, loose lots, shoulders, \$7.00; longs and ribs, \$7.85; short clear, \$8.00; boxed lots, 15c more.

Bacon—Packed shoulders, \$7.75; longs and ribs, \$8.75; shorts, \$9.12½.

Hams—Sugar cured, \$11.50@12.50.

## CHICAGO.

Lard—\$7.62@7.65 per cwt.

Short Rib Sides—Loose, \$7.80@7.90.

Boxed Meats—Dry salted shoulders, \$6.90@7.00; short clear sides, boxed, \$8.00@8.15.

Butter—On the Produce Exchange to-day the butter market was quiet. Creamery, at 17@25; dairy, 15@22.

Eggs—On the Produce Exchange: Market firm, 17@17½.

St. Joseph, Mo., quotations are as follows, for flour:

Leading City Brands (wholesale prices)—Davis' high patent No. 1, \$2.25; Blue D. full patent, \$1.85; Lion, half patent, \$1.65; Davis' Special Royal patent No. 10, \$2.65; Aunt Jemima pancake flour, \$3.25; bran, bulk, 50c.; shipstuffs, bulk, 60c.; brisk sale.

Here, then, are the market quotations on August 24, of certain leading articles of food in the three cities which are in the centre of the great wheat, beef, pork, butter and egg producing regions of the United States; the great Northwest—the far-famed Mississippi Valley.

## ENGLAND.

Liverpool, Aug. 24.—Wheat—Market was steady; demand poor; holders offer moderately. No. 1 California, 6s 4d@6s 10d per cental; red western spring, 6s 2½d@6s 3½d; No. 2 red winter, 6s 2d@6s 3d.

Corn—Quiet; demand poor. Mixed western is 11½¢ per cental.

Bacon—Long and short clear, 55 pounds, 48¢ 6d per cwt; long clear, 45 pounds, 42¢.

Lard—Prime western, 48¢ 6d per cental.

Pork—Prime Western mess, 70¢ per barrel \$11.80.

Beef—American refrigerator, forequarters 31¢; hindquarters, 31½¢ per pound. Extra India mess, 36¢ 3d per tierce.

Tallow—Fine American 28¢ per cwt.

Butter—United States finest, 97¢ 6d per cwt; do. good, 82¢ 6d.

Flour—American patent, \$1.48; superfine XXX, \$1.24; Minneapolis Bakers, \$2.64; St. Louis family, \$2.34.

And now I have given you the quotations on the same articles in Liverpool, England at wholesale and Mr. Lansing gives them at retail in the city of Leeds, England.

Upon the same date in the cities of Kansas City, St. Louis, St. Joseph, Mo., and Chicago, Ill., flour was worth as follows:

St. Louis family, per cwt	\$1.10	\$1.15
Minneapolis bakers, per cwt	1.50	1.75
Choice fancy, XXX per cwt	1.60	1.75
American patents, per cwt	1.80	2.65

These prices, however, are export prices, in car load lots, for shipment and are very little, if any, above cost of manufacture. The profit is made off the home consumer, as is shown by the wholesale prices charged retail grocers, as follows:

Family	\$1.75
Bakers	2.10
Good patent	2.30
Extra patent	2.45

In England flour was worth at wholesale:

St. Louis family, per cwt	\$2.34
Minneapolis bakers, per cwt	2.64
Choice fancy XXX, per cwt	3.04
American patent, per cwt	3.28

At that time the best brands of patent flours retailed in 25 lb sacks, sold to consumers in Kansas City at from \$2.80 to \$3 per cwt and choice XXX and good patent at from \$2.40 to \$2.75. In Leeds, England, Mr. Lansing tells us that the flour consumed by the Leeds operative cost him at the rate of \$2.52 per 100 pounds, in packages of 14 pounds each, (1 stone). Assuming that the flour these operatives used was the poorest and cheapest I have quoted (St. Louis Family) at \$2.34 per cwt, the English retailer made only 8 per cent. profit above the wholesale Liverpool prices. The Kansas City retailer makes a profit of from 15 to 20 per cent. upon all flour sold by him to consumers. On top of a 25 per cent. discrimination the mill men and wholesalers make in favor of foreign buyers and against the home retail grocer. Such extortionate profits as these, if extracted in England would drive the English laborer to starvation and suicide.

Take lard. On August 24, lard was worth at the Kansas City packing house \$7.60 per cwt. On the same date it was worth \$8.75 per cwt. in Liverpool. But the consumer

Kansas City paid at the rate of from 90 to \$12.00 per cwt. to the retailer, who le a profit of from 33 to 58 per cent. In eds, England, lard retailed at 10 cents

a pound, and the retailer made only 16 per cent. There's pork. Worth in St. Louis \$11.80 to \$12.00 per bbl., and in Kansas City \$11.00, and yet selling in Liverpool for \$11.80 per bbl.

Take butter. On August 24, butter was worth at wholesale in Kansas City, best creamery, 22 to 23 cents; good, 20 cents. In Chicago it was worth, creamery, 17 to 25 cents; dairy, 15 to 22 cents. In St. Louis the same. In Liverpool, England, it was worth at wholesale, best creamery, 23½ cents; good, 19½ cents. In England the best retailed for 28 cents per pound, and the retailer made 16 per cent. In Kansas City it retailed for 30 cents, and the retailer made 33 per cent.

And so it runs through the gamut from *do* to *do*, profits absorbing just about twice as much of the wages of the consumer in the United States as in England, while transportation half across the American continent and across 3,000 miles of ocean, together with the various middlemen's profits, aggregate less than the cost of shipping from one American city to another.

And if the case stands thus with rent and profit, how is it with interest?

In the New York *Herald* of August 25, I find the following:

Money on call at the Stock Exchange loaned at 1½ to 2 per cent. The last loan was made at 2 per cent. At the Boston Clearing House money loaned at 4 per cent.

The Kansas City *Journal* quotes money in Kansas City as follows:

The general trade is discounting very little, and as a whole money is easy and quiet. Rates, however, remain steady. General business papers 7 to 8 per cent. and special loans 6 per cent.

I clip also,

New York, Aug. 24.—Bar Silver—82½¢ per ounce. Money—On call easy at 2 to 2½ per cent; last loan at 2 per cent., closing offered at 2 per cent. Prime Mercantile Paper—4 to 5½ per cent.

London, Aug. 24, 4 p. m.—Money—½ per cent. Discount—Rate of discount in the open market for short bills, 1 per cent.; for three months' bills, 1 to 1½ per cent.

While the New York *Herald* says of London, England:

Money has been almost unobtainable, and short loans have been freely offered at ½ per cent. The discount market continues firm, two and three months' bills being quoted at 1½ per cent.

All of which goes to show that the rates of interest in the United States are from four to six times as high as in England.

We are justified in concluding that so far as is concerned everything but food, wages at \$1.00 per day in England, are more than equal to \$2.00 per day in the United States. We can also state, with emphasis, that the vital issue in economics is the rate of interest on money. It is upon the rate of interest upon money that the rate of rent is based and the two rates rise and fall together. And upon interest and consequent

rent the rate or per cent of gross profits is based, as gross profits must be large enough to include interest and profit, before there can be any net profits.

The foregoing article was prepared for the *MAGAZINE* in August 1892, but laid aside and overlooked. Very lately, however, the voluminous and exhaustive Seventh Annual Report of the United States Commissioner of Labor has been published for distribution, and it forever refutes the theory of the sin-

gle taxers that as interest rises, rents fall and *vice versa*. They maintain that a reduction in the rate of interest would simply raise rents, and so fail to be of any service to labor. Their contention is fallacious and can not be sustained by statistical facts.

At the cost of mutilating my labor report, I shall present to the readers of the *MAGAZINE* some statistics from the summary of woolen industries in the United States and in foreign countries:

B.—SUMMARY OF SOURCES OF INCOME.

G.—SUMMARY OF CONTRASTED INDIVIDUAL INCOME AND EXPENDITURE.

Nationality of husband.	Families.		Own house.	Expenditure per individual for—				Income per individual.
	Total.	Average size.		Rent.	Food.	Other purposes.	All purposes.	
UNITED STATES.								
Total . . . . .	911	4.9	154	\$18 99	\$54 10	\$52 76	\$122 28	\$136 49
EUROPE.								
English . . . . .	117	5.1	7	\$10 63	\$41 71	\$38 57	\$90 11	\$96 72
French . . . . .	179	5.2	15	6 48	35 61	31 90	73 21	80 92
German . . . . .	24	5.3	5	4 99	26 51	22 90	53 21	52 16
Scotch . . . . .	14	7.8	2	5 19	40 51	39 46	84 59	89 98
Total . . . . .	334	5.3	29	\$7 77	\$37 31	\$33 97	\$78 17	\$84 74

In this connection I cannot refrain from giving a few of the principal items of "Expenditure other than for rent or food," and calling attention to some very remarkable and noteworthy facts:

Nationality of husband.	Families.		Fuel.		Lighting.		Books and newspapers.		Amusements and vacation.	
	Total	Average size.	Families.	Average cost.	Families.	Average cost.	Families.	Average cost.	Families.	Average cost.
UNITED STATES.										
Total . . . . .	811	4.9	910	\$34 53	905	\$6 07	844	\$7 66	376	\$71 33
EUROPE.										
English . . . . .	117	5.1	117	\$18 42	106	\$6 93	109	\$6 61	104	\$22 94
French . . . . .	179	5.2	177	14 75	177	6 80	109	3 33	136	24 06
German . . . . .	24	5.3	24	14 28	24	3 78	20	1 37	16	8 39
Scotch . . . . .	11	7.8	14	15 93	14	5 46	14	5 35	14	17 30
Total . . . . .	334	5.3	332	\$16 06	321	\$6 56	252	6 61	270	\$26 96

Taking the rate of interest as a gauge and applying the single tax formula, rents in England should be from three to six times as high as in the United States instead of which they are only one-half as high. This proves what I have always asserted, that owners of rental property cannot get a higher rent than will pay the prevalent, current rate of interest upon the investment. While it is granted that the English laborer spends a little less for food than the American and

eats (perhaps) less meat, it will be noticed that he spends twice as much for "amusements and vacation." But he only spends one-half as much for fuel and his gas costs him about the same as coal oil costs the United States laborer, to whom gas is an impossible luxury. But it does not appear that the English laborer spends much less money for meat, if we include poultry and fish, as may be seen from the following table.

## D.—SUMMARY OF EXPENDITURE FOR FOOD. (1.)

Nationality of husband.	Families.		Beef.		Hog products.		Meat (not specified).		Poultry.		Fish.		Eggs.	
	Total	Average cost.	Families.	Average cost.	Families.	Average cost.	Families.	Average cost.	Families.	Average cost.	Families.	Average cost.	Families.	Average cost.

In the industries, "cotton and woolen combined," the English laborer spends upon his labor organizations \$11.26, while the United States laborer spends only \$5.29.

Now look at the table of English prices, as given hereinbefore, and you will find that the English laborer eats as much and as good food as does the laborer in the

United States, and you will be irresistably driven to the conclusion that whatever advantage the United States laborer may have in the matter of wages is lost because of the high rate of interest upon money and the consequent high rents and large gross profits, coupled with the extortions of coal combines and other syndicates and trusts.

But this communication is already too lengthy. The People's party is on the right trail. Let us keep hammering away at interest, which is the basis of rent and profits. Let us never cease to agitate the great questions of land, finance and transportation. If the United States, with her unrivaled resources, intense energy and vast territory, had as cheap money and as low rents and profits as has England, we would be the happiest and most prosperous people on the face of the globe.

## THE TREES OF DECEMBER.

The gaunt and wrinkled orchard shivers 'neath  
The blast, like Lear upon the English heath,  
And mossy boughs blow wild that undistressed,  
Another spring shall hide the nest.—Robert U. Johnson.

## AN ANNEX FROM HAWAII.

BY ELIZABETH MORGAN.

"So that's an idol," said Deacon Drew, putting on his spectacles the better to regard it.

"Yes," said the minister. "You know my brother is a missionary on one of the South Sea Islands. I received a box from him this morning containing many things which I shall value highly, and among them was this idol. His name, my brother tells me, is Nakuialua, he was the especial god of those who practiced the art of breaking bones. Human sacrifices have been offered to him, horrible as the thought is to contemplate."

"Is it possible!" cried the Deacon's wife, and then all the assembled company stared at Nakuialua with redoubled interest.

He stood on a little round table in the bow window where the minister's sister kept her flowers, cool green ferns arched over his head and long sprays of scarlet blossoms drooped beside him.

"He will think himself at home again," said Mary, as she settled him in his new position.

"Are young going to furnish him with human sacrifices to make the illusion complete?" inquired a young man who was assisting in the arrangements, and Mary felt a cold chill creep over her suddenly.

The minister had company that evening, some influential members of his parish came in to talk over matters relating to the church, and he was proudly displaying to them his new treasure.

And Nakuialua, where Mary had placed him, sat and stared at the guests with his great moon eyes as complacently as if he was sure of their admiration and approval.

"Ain't it awful to think of," said the Deacon; "that human bein's should bow down an' worship a wooden image like that? It kinder brings home to us what missionary work means, an' that old hymn—

"What, though with lavish kindness  
The gifts of God are strewn.  
The heathen in his blindness  
Bows down to wood and stone!"

"It 'pears to me," said the Deacon's wife to Mary, "that I couldn't abear to have that thing in the house with me. It ain't nothin' but a block o' wood, I know, but as Deacon says, folks have bowed down to it, an' prayed to it, an' shed human blood to it, an' you can't help feelin's as if all that must make a difference."

"It does make a difference," said the Deacon. "There's a sermon to be got out o' the creetur', just as he stands, perfessin' to represent a God, when he ain't even human enough to be called a likeness of a man. An' it ain't the first time folks has done a clumsy piece o' work an' fell down an' worshiped it when they was through."

"True," said the minister, "too true, but while we speak of the work as clumsy we must not forget that it was done with a stone adze, which made delicacy of outline impossible, and then only sacred wood could be used, which I believe was particularly hard. 'Koa,' if I am not mistaken, was the name my brother gave me. Perhaps you may be interested to see this copy of a heathen prayer. Doubtless it has been addressed to this very idol now before us. It is, as you see, in the native tongue."

"Can't you read it to us, Mr. Harding?" asked the Deacon.

"I am not conversant with the Hawaiian language," replied the minister, "except so far as I have picked up a few words from my brother. But this would appear to be the way the invocation begins—

"Na annakua o ka po,  
Na annakua o ke ao,  
Na annakua o ke ahi me ke kuahiwi:—"

"O, don't read any more of it, Mr. Harding," cried the Deacon's wife in a great fright. "It sounds dreadful wicked. You don't know what you may be prayin' for."

"You need have no fear," said Mr. Harding, but he laid the paper aside all the more readily that he was conscious of some uncertainties in his pronunciation of an unknown tongue. "This is a native dagger, Deacon Drew; the hilt is of curious workmanship. Mrs. Drew will be interested in this mantle. It is composed of native grass and very beautifully woven. This is a necklace and chain, and this a fan of peacock's feathers."

The minister's guests became absorbed in the contemplation of these curiosities, but his sister stood a little apart, her eyes still thoughtfully fixed on Nakuialua. The young man who had assisted her in the morning edged round the group and stood beside her.

"You seem to admire the old customer," said he. He was a college man and a member of a football team spending a few weeks in the country at the request of his professors under the instruction of the Rev. Mr. Harding.

"I don't admire him," said Mary. "I feel about him just as Mrs. Drew says, and I wish he was anywhere else."

"I'll soon dispose of him if you want me to," said the young man obligingly, "healthy old chopping block that he is," with a slap of his muscular hand on Nakuialua's bald head. But he caught his hand away again very suddenly with a smothered exclamation.

It was transfixed by the native dagger that some one had ingeniously leaned against the idol's shoulder, point upward.

"O!" cried Mary, in horror, as he drew it out and a gush of blood followed, staining

the handkerchief he hastily bound round his hand.

"It isn't anything," he said. "Don't attract their attention," with a glance over his shoulder; "I'll go out and get some water."

Mary ran off for some old linen and soon joined Nakuialua's victim in the kitchen, where he was bathing his wound.

"How frightfully it bleeds," she said. "How are we ever going to stop it? Don't you think you'd better go to a doctor?"

"I don't need a doctor if you'll do it up for me. That is, if you don't mind," lifting a dripping and bleeding paw from the basin.

Mary shivered and turned pale, but nervously herself, heroically bound it up for him with such simple remedies as she was acquainted with in her household practice.

"What's the matter with Jack's hand?" demanded a small voice, suddenly, beside them, as Mary was fastening the last fold in the bandage, and they turned to confront the minister's eldest son, a young gentleman of eight, Oscar by name.

"O, it's you," said Jack, not looking specially pleased at the interruption. "I attempted to pat Nakuialua on the head and of course he wouldn't allow any such a liberty as that and slashed me with his native dagger. He's a cantankerous old cove, and I advise you to steer clear of him. Human sacrifices are what he's after."

"I think you had better go and see the doctor," Mary interposed, "just to make sure it's all right."

"Do you think I'm going to let anyone touch it after you?" Jack inquired, but Mary had hurried away to wash her hands, and Oscar was clamoring for further information regarding heathen sacrifices. So Jack sat down in the dimly-lighted kitchen and regaled his young friend with a graphic description that was listened to with flattering interest and attention.

He was a good deal dismayed next day, when he returned after a lengthy skating excursion, to learn that the result of his eloquence had been a determination on the part of the children to have a sacrifice themselves, the details of which they had carefully arranged that morning while their aunt was busy with her household duties and their father in his study.

They had unanimously decided that the baby was to be the victim, firstly because he was too little to have a voice in the matter, and, secondly, because they all agreed that he was forever in the way and taking up their Aunt Mary's time when they wanted her to tell them stories. There was no doubt whatever that he could be well spared.

So when Mary, who was baking cake in the kitchen, looked in to see what the children were doing to keep them so quiet, she

saw, to her horror, poor little Arthur, decorated with flowers torn from her last summer's bonnet, lying on his back on a cushion in front of the terrible Nakuialua, who seemed to smile benignly upon him, while his cruel little sister stood at his feet and his cruel little brother at his head with the native dagger in his hand.

Mary broke down altogether when she was telling Jack about it. "To think if I had been one single *instant* later," she said.

"'Twas all my fault for telling them such stuff," said Jack, remorsefully. "I deserve to be shot for a thundering fool."

"O, you couldn't guess they'd do anything so horrible," said Mary, who was apt to be forgiving where Jack's follies were concerned. "I have put that native dagger where it will not be quite so convenient in the future for Nakuialua's sacrifices."

"Murderous old villain," said Jack, shaking his bandaged fist at the idol's bland countenance. "I'll have a reckoning with you yet." But Nakuialua smiled on with maddening composure.

It happened that the minister's ister was very pretty, a fact that others besides Jack were well aware of, the Rev. Horace Bullard was very well aware of it. He had charge of a neighboring parish and frequently exchanged with Mr. Harding, who knew and approved of his asperations.

Jack Romeyn also knew of these aspirations, and it is unnecessary to say, disapproved with equal emphasis.

It was impossible to say what Mary's views might be. She went peacefully on her way and as far as anyone could tell gave the subject no thought whatever.

But the Rev. Mr. Bullard was becoming impatient, the presence of Jack in the house of the lady of his choice was annoying to him, though he hesitated to admit there could be any danger in it. He was discussing the question with her brother in his study the day after the attempted sacrifice.

"I should advise you to speak to my sister at once if you are certain of your feelings towards her," said Mr. Harding. "It is a favorable opportunity. She is in the parlor and the children are out at play—you will be quite undisturbed."

"But that youngman,—" objected Mr. Bullard. "I heard his voice as I came through the hall. He was singing a chorus that reflected small credit either on his taste or his intellect. The college man of to-day is indeed a sarcasm on the advance of civilization."

"If you meet him you can tell him that I am prepared to hear him recite," said Mr. Harding.

Mary was in the parlor, so also was Jack. She was putting a fresh bandage on his hand and at the same time delivering some theories on the subject of football which

agreed perfectly with the views of Mr. Bullard. "It's an uncivilized game," she said. "It happens to be fashionable at present just as gladiatorial contests were fashionable once. It is the brute instinct in men and women that makes them enjoy such sights. It's no use for you to argue the question—I wouldn't go to see a football game for anything. You might as well be so many prize-fighters."

"O, come off," cried Jack. "You're slugging yourself now, Miss Mary. But look here—I wouldn't be afraid to bet anything you like if you'd seen that last game you'd been as much in love with our captain or some other member of the team as any girl on the grounds."

"O, indeed," said Mary. "Perhaps with yourself, for instance," glancing up at him with saucy defiance, but something in Jack's grey eyes made her drop her own again very quickly, with a decided accession of color, but before he could follow up his advantage the door opened and in walked the Rev. Mr. Bullard. He looked at them suspiciously for a moment and wondered if it was the fire that had flushed Mary's cheeks so brightly, then he delivered Mr. Harding's message to Mr. Romeyn, who, with a very bad grace, departed.

Mr. Harding was waiting, with a pile of books as high as himself, but his efforts to fix his pupil's attention were vain.

"What was that fellow saying to Mary in the parlor? Would she listen to him—or was there a chance for Jack if he dared to speak? Somebody always interrupted him. Why should the Rev. Horace sail smoothly on his way devoid of interference?"

"O, I beg your pardon," he exclaimed, suddenly starting up. "I've left one of my books——" and he darted out before Mr. Harding could remonstrate.

Mary and Mr. Bullard were standing before the bow window, whether they were admiring the idol or the flowers Jack did not know, but he thought they were much closer than there was any necessity for, and Mary looked decidedly embarrassed. He could have sworn the minister was trying to take her hand.

"I beg your pardon," he said stiffly; "I came for a book."

As he was not after any particular volume he could as easily have taken any from the table as to have gone to the shelves in the corner, only the latter course enabled him to pass directly in front of the pair whom he wished to interrupt. They were silent while he explored the shelves, a silence that enraged him more and more, as it seemed to imply their conversation to have been of a private nature. He did not propose to be hurried in his search, but as his back was toward them they could not see the true football expression of savage determination with which his features were set.

"What are looking for, Mr. Romeyn?" enquired Mary's voice, suddenly and sweetly.

"A book," he replied.

"Of course," she answered. "But if you'll let me know which sermons you are after I can tell you just what shelf to look on."

"I'm not looking for sermons," replied Jack.

"O," said Mary; "then I'm afraid you won't find your book in that corner."

And Jack, for the first time becoming conscious of the titles before him, discovered that her words were true and turned wrathfully at the sound of laughter in her voice. His mighty shoulder struck heavily against the shelves and something shot suddenly through the air over his head. There was a crash and a shriek and the Rev. Horace Bullard lay on his back before the idol, silent and motionless, streaming with blood from a wound in his temple, while a bust of Henry Ward Beecher lay broken in pieces beside him, and Nakuialua looked down upon them both, satisfied and complacently benignant.

Horrified, Jack sprang forward to his rival's assistance, conscious of the spirit that had been in his breast. He felt as guilty as if he had struck him down with his hand. He lifted him as gently as he could and laid him on the sofa, then ran off with all speed for a doctor, while Mary called her brother from his study and then went in hurried pursuit of more linen and Pond's Extract.

Mr. Bullard had recovered his consciousness when Jack returned, but it was late in the afternoon before he was equal to taking his departure. The doctor declared he would be in no way the worse for the accident beyond a little weakness from loss of blood and the effects of the shock, but Mr. Bullard's mind was for the time effectually diverted from love-making, and he departed with no attempt to renew his conversation with Mary where he had been interrupted.

So peace had descended once more upon the household that evening.

The minister had gone to the train with Mr. Bullard, the children were in bed and Mary and Jack sat before the parlor fire alone, except for Nakuialua, in his fern-shadowed corner. Mary was darning the children's stockings and Jack, on the other side of the table, was supposed to be studying. Outside it was raining softly and pattering against the window.

"They will have a wet ride to the station," said Mary, listening.

Jack looked up. "I'm glad he got over it all right," he said. "Somehow I couldn't help feeling all the time as if I'd hit him."

"You didn't *mean* to knock Henry Ward Beecher off the shelves?" said Mary.

"No; but there's no denying I was thinking just then that I'd like to give Mr. Bullard one for himself."

Mary opened her eyes at him in great

apparent astonishment. "Whatever for?" she said.

"What were you going to say to him if I had not come in?" inquired Jack, irrelevantly.

"Really, I can't see—" she was beginning. "That it's any of my business," finished Jack. "Well, I'll put it another way then—what would you say to me if I were fool enough to ask you the same question he did?"

"I should answer a fool according to his folly," replied Mary demurely, rising.

Jack rose also. "Do you call a man a fool for loving you?" he asked, abruptly.

"I've had no occasion," said Mary, and slipped past him quickly towards the door, but Jack had not been a "tackle" for nothing.

Mary was dusting the parlor next morning, assisted by the children. Cecilia and Arthur were rubbing the furniture with their little pocket handkerchiefs. Oscar could not find his so had taken a blue silk one of his aunt's that she usually wore round her neck. He thought it worked even better than his own and Mary was too much occupied with her own reflections to see.

Jack was in the study with her brother, she could hear their voices while she dusted. Jack had told her what he should say and she had told him what her brother would say. It was against her advice that he spoke at all. What was the use? He had still his education to get and afterwards his way to make in the world, they were both of them young enough that they could afford to wait, and wait they must. There was no use in irritating her brother so soon. But Jack said that he should feel he was acting dishonorably, and what Jack considered underhand and mean no man had ever known him to do. So she strained her ears to listen to the tones in the study, while Oscar dusted the legs of Nakuialua's table with her silk handkerchief and the baby sat on the floor and dropped pennies from his aunt's purse down the register, or more properly speaking, down the hole where the register should have been, for the servant had carried it out to clean and had forgotten to bring it back. It left a lovely dark, mysterious-looking hole, and the pennies made a fine ring when they dropped down, but Mary did not hear.

The study door opened and Jack crossed the hall and came in. One look at his face told her her words had come true. The minister was close behind. Jack did not notice him or the children, but marched up to Mary and took her in his arms.

"How long will you wait for me?" he asked.

"Forever," she answered. "Are you going away?"

"He is going, and at once," said Mr.

Harding, peremptorily, stepping forward. "There's been enough of this."

But here rose a wail from the children. "No! No! Jack shan't go."

Cecilia flung herself upon him and the baby, having first cast his aunt's empty purse down the furnace hole, scrambled across the floor to the scene of action, while Oscar, attempting to creep from under Nakuialua's table, become entangled and sent the whole thing to the floor, flower pots went rolling in every direction and the idol turning a double somersault, with a wild flourish of his misshapen legs in the air, disappeared down the register and was seen no more.

"Stop him!" cried Mr. Harding, rushing forward, but he was too late—his treasure was gone. "He'll fall in the furnace and be burned up," he lamented, and distractedly hurried away to the cellar followed by all the children, shouting in great excitement.

"Thank Heaven!" exclaimed Jack as soon as they were alone. "At least we'll have three minutes to ourselves. Nakuialua's befriended me for the second time."

"Do you think so?" said Mary, doubtfully. "O, Jack; what are you going to do?"

"Nothing," said Jack. "Your brother is going to write to the old fellows at the college and I shall stay round here somewhere till they settle what they'll do with me—don't hide your face away like that. They will be back in a minute and who knows when I'll see you again. Mr. Harding said you were as good as engaged to that Bullard. I'd knocked him flat if he hadn't been your brother. There they come again! I'd better start before I'm sent off a second time—give me one more kiss, darling, before they get here—I'm going up to my room for my things—are you sure you like me well enough to wait for me?"

"He must be caught in the flue," said Mr. Harding, in a voice of deep anxiety, as he entered. It is no possible that he could have fallen in the furnace and been burned before I reached there."

Jack did not reply to this surmise on the part of his instructor, but hurried away to make arrangements for his departure. He was but a short time tossing his belongings into his trunk. Then he came down stairs again and stopped at the parlor door for a last look at Mary.

Mr. Harding was in his shirt sleeves, leaning over the register with a fishing pole in his hand. He was breathing heavily and evidently was much inconvenienced by the heat which rose in his face. "I almost had him," he shouted, in great excitement. "Run down quick to the furnace to catch him in case he rolls that way."

Mary was sitting by the window. She rose hastily, as if to obey the command, but before she could take a step her brother,

reaching farther and farther down the black hole where his treasure had gone, suddenly lost his balance. The flue was large and the minister small, and if Jack had not been quick in coming to his aid his career of usefulness would have ended ignobly there and then, but Jack seized him by his gaiters just in time and dragged him up, nearly suffocated and black in the face.

"Another for Nakuialua," said Jack, as he laid him on the sofa. "Have in the warm water and sponge, Mary. If your brother intends to continue his idol worship he'd better hire a resident physician. It'll be cheaper in the end."

Jack did not leave the house that morning, nor for many days to come; he was too busy helping Mary to take care of her brother for Mr. Harding did not recover from his accident as promptly as Mr. Bullard had done from his, but, instead, went off into a fever that would have cost him his life with less careful nursing.

The idol would have been forgotten except for Mr. Harding's delirium, but he constantly called upon them to get Nakuialua out of the flue before he fell into the furnace. So at last Jack advised Mary to send for the workmen and have the pipes examined that they might set her brother's mind at rest.

The men came and the flues were cleared out but the idol was not to be found. Either he had been burned, as his master anticipated, or he had taken a subterranean passage to the region where he properly belonged. He was seen no more in the minister's family.

They expected Mr. Harding's heart would be broken when he learned his loss, and refrained from telling him till he was well enough to go down stairs. But, to their astonishment, he showed not the slightest surprise or grief. His animosity toward Jack had also entirely disappeared. He had actually grown fond of him while he was ill.

In fact, the cloud that had hung over their family for the last few weeks seemed to have utterly vanished when the enemy of Christianity whom they had mistakenly harbored departed from their sight down the furnace hole.

"You see," said Jack to Mary, "you couldn't expect a heathen idol to live in a Presbyterian minister's family and not try to make trouble. There's no denying he befriended me, so I ought to speak well of him."

"Jack," interrupted Mary suddenly. "Do you remember my brother's saying that Nakuialua was the especial god of those who practiced the art of breaking bones? Perhaps your belonging to a football team—"

"O, no; his motives did more credit to his head than to his heart," Jack replied. "At

all events, he circumvented your brother, laid out Mr. Bullard, and smashed the Rev. Henry Ward Beecher—three of his natural enemies settled with out of hand, which was doing very well for the length of his stay. It's lucky for us he went when he did. There could be no safety for a Christian minister in accepting such an annex from Hawaii."

## AN OBJECT LESSON IN ECONOMICS.

BY WILFRED P. BORLAND.

At this writing there are 20,000 mine and their families in the iron district, Michigan, who are standing face to face with death by starvation. Since last May when the mines first began to shut down there have been 5,000 men with families dependent upon them, able and anxious to work, but compelled to stand around in idleness while their scanty savings disappeared for the purchase of absolute necessities, leaving them at the beginning of winter in a district remarkable for the severity of its winter seasons, totally destitute and with the certain prospect of death by starvation or exposure staring them in the face. These men are not strikers, they are not tramps. They are law abiding, able bodied citizens of the great states of Michigan and Wisconsin, who are willing and anxious to work, but who are compelled to suffer because this poor privilege is denied them. Strong men are compelled to stand idly by and see their little children without food to sustain life in their frail bodies, without clothes to protect them from the biting winds, without shoes or stockings to protect their little feet from the drifting snow. They must look at their wives and children perishing for the want of the commonest necessities of life, while they are powerless to raise a hand to help them. Can any situation be conceived which is more calculated to make men desperate? The situation of these people has at last aroused the sympathies of the comfortable world outside; rumors of the desperate frame of mind which these miners were in, and the bloody and lawless deeds that might be expected to occur if their necessities were not relieved at once, were borne out from the mining districts to the people of the state at large, and the charitably inclined people of Michigan and Wisconsin suddenly discovered that they had a task in hand. Appeals for aid have been issued by the executives of both states. The appeal of Michigan's executive outlines the situation and its necessities, as follows:

*To the People of the State of Michigan:*

Owing to the closing down of the mines in the iron regions of the upper peninsula, which commenced as early as last May and has continued to the present time, the miners have been thrown out of employ-

ment and are in a situation of absolute want. This destitution extends over a large area of territory and includes a great number of people. A severe winter is already at their doors, and they lack fuel, food and clothing, and something must be done to prevent not only suffering but actual starvation. There is no doubt that the liberal-minded people of Michigan will be glad to respond freely and cheerfully to a call for aid of the needy within the borders of our own state. It must be borne in mind that this emergency is not temporary nor confined to a few. The relief must take some practical means for collection and distribution that it may not be wasted, and may reach those for whom it is intended. I trust our people will not be tardy in forwarding their subscriptions and contributions for immediate relief. All distributions forwarded either to the *Tribune* or *Free Press*, of Detroit, will be promptly acknowledged and appropriated for the purposes for which they are intended. Immediate steps will be taken for the organization of relief committees and means for the reception and distribution of food, clothing and money. The suffering and needy have never appealed to the people of Michigan in vain. While there is some poverty and suffering in our own midst, enough can undoubtedly be spared from our abundance to relieve the wants of our suffering neighbors in the upper peninsula. Let your contributions be prompt and liberal. It is hoped that the press of the state will give this appeal for aid the widest circulation possible as their portion of the good work to be done.

JOHN T. RICH, Governor.

Pursuant to this official call for aid, the citizens of Detroit and other cities throughout the state immediately responded with generous subscriptions to a relief fund. In Detroit, the millionaire land owner, Gen. Alger, headed the list with a subscription of \$500 a month during the continuance of the necessity for relief, and others responded very liberally according to their circumstances.

On the first indication of distress in his state, Governor Peck of Wisconsin, gathered several car loads of provisions and other necessities and accompanied them to Hurley, in the iron district, where he personally attended to their distribution among the destitute miners, and made personal observation of the extent of the suffering and the necessity for relief. This represents the philanthropic side of the matter. The work of relief is now going on bravely. As the destitution is wide spread and must be expected to continue at least through the winter, the work of relief will, of course, be systematized, and probably put in charge of an official commission, and, after all precedents in such matters, we may soon expect to hear grave charges of malfeasance, of contributions diverted from their true intent into the pockets of selfish and designing official understrappers, of a crowd of harpies who prey upon the necessities of the helpless miners by appropriating relief funds for their own benefit. We may expect to be regaled with the same disgusting details which have attended every one of the extended and well organized relief measures within the memory of the present generation. And, after all, the question is not one of philanthropy; it is one of economics pure and simple. These destitute miners do not require charity, they

simply ask the chance to work. They are amply able to provide for their own necessities by the power resident in their strong arms, and that they are compelled to become the recipients of charity because of six months' enforced idleness is a travesty on justice and a standing reproach to the intelligence of a free American citizenship. Had these people lost their all by reason of some terrible convulsion of nature, or been incapacitated by reason of some ravaging epidemic, had they saw the accumulations of years disappear like a flash in one fell swoop of the elements, as at Johnstown, their condition would have presented a proper example for the widest philanthropy. But these people have suffered from none of these causes. Their accumulations have not disappeared in a lump through any devastating natural cause; they have disappeared in dribblets, gone to procure the common necessities of life, while their owners have been compelled to stand by utterly helpless, unable to apply their labor to the procurement of sustenance against the rigors of winter. These people are the victims of economic conditions for which philanthropy is no cure, can give no relief. No man can give positive assurance, under present conditions, as to how long these philanthropic measures may be necessary; no man can say that, providing their necessity disappears next spring, they will not again be necessary next year, or the year after, or two, three or five years from now. Yet, in the face of these uncertainties, or certainties, whichever they may be called, there is no proposition from those in authority looking toward the removal of those economic conditions which call forth these philanthropic measures and render them necessary. Surely here is a question which calls for the highest statesmanship, but where is the statesman who has the courage to grapple with it?

Now, from the *Detroit Tribune*, of Nov. 26, I quote as follows:

A scheme for the relief the destitute miners of the upper peninsula has been proposed by a well known mine owner. He suggested that the mine owners give the miners all the ore they can mine to sell for their sustenance. The mine owners cannot afford to pay the miners wages to mine the ore. The price of ore is too low for profit. One miner had to pay \$2.70 per ton for mining, and then sell the product for \$2.30 per ton. But the miners, if the ground is donated to them, can sell for such prices as will command a ready market. They can at least support themselves and save the state the immense expenditure that must otherwise be made from the public purse.

There is not the least likelihood of this suggestion receiving a favorable hearing in quarters where it can do any good. But, unconsciously, perhaps, this mine owner touched the one fundamental economic condition that can afford these miners, and all laborers, permanent relief from the harrowing conditions to which they are sub-

jected at increasingly frequent intervals, and relieve them of the necessity of becoming the recipients of charity. Just for a moment contemplate the absurdity of economic adjustments which compel men to stand around six months in idleness, until their material condition has become so desperate that there goes forth a general call for charity to save them from actual starvation, all because a few mine owners can not pay wages and sell ore at a profit. And because these few mine owners can not make their profit the charitably inclined people, generally, of two great states are expected to support in idleness 20,000 persons for an indefinite period, or until the price of ore will justify profits. Can there be a more idiotic economic regime than this conceived of? In admitting that these miners might easily support themselves if they were allowed the privilege of mining ore on their own account and for their own benefit, this mine owner, in one simple sentence, sweeps into oblivion those well worn fallacies concerning the dependence of laborers on capitalists for their conditions of labor with which our ears are continually regaled. He puts the labor problem in its true light, and gives that battle cry, "Free access to natural opportunities" such significance that workingmen should be wise enough to take it up with such vigor as to make it an actual economic condition before the next decade has passed into history. When a few men are no longer able to make profits from the exploitation of natural opportunities, why should many men be deprived of the opportunity to gain subsistence from the same source, and be forced to stand around in idleness until they must become the recipients of charity in order to escape death by starvation? is a question for intelligent workingmen to ask themselves, and upon their answer to that question depends not alone their own welfare, but the welfare of generations of workingmen yet unborn.

And let us see upon what conditions this profit which our mine owner talks of, depends. We shall then be able to more fully appreciate the value of his suggestion in favor of the miners, and see whether or not they really could support themselves by mining on their own account. The conditions of production in the mines of the Colby syndicate, the largest operators in this district, as they existed in 1888, will serve as a good illustration. The facts here given are from the official report of Henry A. Robinson, formerly commissioner of labor statistics for the state of Michigan, now statistician of the agricultural department at Washington. The mine known as the Colby mine was originally purchased from the government for \$1.25 per acre, and, without spending one cent upon it for

improvements, its owner leased the privilege of taking out ore to the Colbys on a royalty of 40 cents per ton. The Colbys leased the mine to Morse & Co. for a royalty of 52.5 cents per ton. Morse & Co. contracted with Captain Selwood to mine the ore and deliver it on the cars for 87.5 cents per ton. Captain Selwood got a capitalist who owned a steam shovel, to dig the ore and put it on the cars (all that he had contracted with Morse & Co. to do) for 12.5 cents per ton. This was in 1885, and in that year the ore brought \$2.80 per ton delivered on the cars. Out of this \$2.80 per ton the share of the owners of the mine was 40 cents, Colby's share 12.5 cents, Captain Selwood's share, after paying 12.5 for the work of production, was 75 cents, and the remainder, \$1.40 per ton, went to the share of Morse & Co.

Now, let us take one year's production and see what it comes to. In the year 1885 there were mined 84,312 tons of ore, which, at \$2.80 per ton, brought \$236,073.60. Tabulating our results, we get the following:

84,312 tons, at \$2.80 per ton	\$236,073.60
Owner's royalty, 40 cents per ton	\$33,724.80
Colby's profit, 12.5 cents per ton	10,539.00
Morse & Co.'s profit, 81.40 per ton	118,036.80
Selwood's profit, 75 cents per ton	63,234.00
Capitalist's share, 12.5 cents per ton	10,539.00
Total	\$236,073.60

Now observe that the last item in this table is the only one out of which the laborers can draw their wages. The actual capital, in connection with the labor, employed in the work of production received the insignificant sum of \$10,539, or less than five per cent. of the value of the entire product. The balance, or over 95 per cent., went for what? Privilege, the price of land ownership, permission to apply the hand of labor to natural wealth which the Creator has intended for the use of all men. And it is upon such conditions as this that the profit which our mine owner speaks of, depends. And when these conditions can not be fulfilled, labor must depend on charity to avoid death by starvation. Should workingmen hesitate a moment to sweep such iniquitous economic conditions as this out of existence? These miners who have been standing idle all these months might, if they were not denied the privilege of using this natural wealth which those who control it refuse to use themselves, go in, with nothing but a pick and a wheelbarrow, and mine enough ore to keep themselves in comfort and lay by ample provision for the cold winter which now confronts them. They might do this even if they got no more than 50 cents per ton for the ore, as it is free ore and requires no mining other than to be scooped up with a steam shovel. Instead of this rational solution the charitable people of the state at large are now

called upon to contribute to the fund to keep them from perishing of want, and the worthy mine owners deplore the circumstance that they can not afford to put them to work because ore can not be mined at a profit! An while these men have been standing idle an immense trust, headed by Standard Oil Rockefeller, the Baptist deacon, has acquired control of nine-tenths of this iron property, and plastered it all over with stocks and bonds, and now, while the men starve, they wait for the market to rise to such a figure that, while paying the men bare subsistence wages, they can realize a profit on the immense capitalization they have put upon the property. Will the men be permitted to mine ore on their own account? Indeed they will not. They might overstock the market and thus defer the day for the realization of profits. It is cheaper to let philanthropic people keep life in their starving bodies with their charitable doles; and, moreover, under the latter system the workingmen are not so liable to cultivate a dangerous spirit of independence. What a wretched travesty of correct economic conditions it all is. When shall workingmen arise in their might and sweep them away?

## GOVERNMENT—WHAT IT IS AND WHAT IT SHOULD BE.

BY JOSÉ GROS.

The general and almost universal conception carried by the word government is that of repression, and it comes to us from far back, long, long centuries ago. It comes to us from all continents and all islands, from all regions and all climates, from all nations and all tribes, good, bad or indifferent. The very religious teachings that we have been made to drink down from our very cradles, and all along while developing as young school boys into young men, from the latter into old age, those teachings have intensified that perception of government as repression right and left, lest the whole organic structure of society goes to pieces, and chaos takes the place of order. Even the very word order has been perverted. It has been stated that order is heaven's first law, when order is simply an element of all law, even if the law happens to be a bad one. Just as if we could not have two classes of order, the order of freedom and that of despotism, the one that develops, and the one that crushes, the former imparting joy in all directions, the other but pain and tears all along through life. And what has been life so far, even among the supposed happy ones?

The 90 per cent. or even more who are daily struggling for one-half or much less of what we all could have under civilizations

but semi-normal, they may often look with a jealous eye up to the few at the very pin-nacles of human ambition in wealth and social position; but how little they know about them! Happiness, in human parlance, they may have, the few in question; the real article—they don't know what it means. The very fashions, modes of life, and conventionalities they create, and to which they subordinate themselves like slaves of their own fancies, that alone stands across the path of all substantial joy. Then, back of their own silly devices, back of their very idiotic conceptions of happiness, back of all that there is somewhere a God of beauty, whose beautiful laws are constantly transgressed by the fashions and devices in question. And joy can only come from obedience to such laws, in so far as we are in position to obey them.

We don't mention the above to reconcile the poor to their poverty, much less to make them feel that they should accept present conditions as something in accord with divine plans. They are not. They have never been so. And the cardinal and primary duty of every man is to rise against any such developments as we have had ever since that story of Eden. Perhaps that story, itself, is but the symbol of our crazy civilizations, for ever repudiating God's order in the social status, and hence we fail to grasp the joys that God means we all should have, on earth to begin with. Perhaps even the grave would vanish, under a correct civilization among all nations. Perhaps the earth would then gradually become an integral part of heaven, in connection with men, as it is already so in the order of nature, as a fragment of God's universe. And what is heaven but peace with the Creator, and good will toward all?

Let us now return to our idea of government, the old one of repression. But why such an idea? Why should repression be needed? Because of men's natural perversity, they will tell you. We don't deny that men have some provoking traits, and the most provoking ones to us are patience under suffering, gentleness under oppression, &c. Without those traits men would have rectified civilization long ago. We have nothing but contempt for gentleness under oppression, for patience under suffering caused by human laws, because laws of repression. We want laws of universal freedom, just as we find God's laws to be, when we study them in their general results through history. Sooner or later repression here means monopoly there, natural rights trampled upon, somewhere, the strong getting the best of the weak, the most selfish fellows victimizing the rest, disorder and confusion everywhere.

We can notice that, a little more or a little less, government has always resolved

itself into injustice because the few afraid of the many, as if the latter belonged to an inferior race that was forever to remain low down in the scale of life. Over 100 years ago the very father of our constitution, so to speak, Hamilton, practically declared that only a few choice men were fit to rule, and that the bulk of the people could not be trusted, and should quietly accept what the few proposed. As a matter of fact, the feeling that permeated the mind of Hamilton and most of the public men of his time can be found to-day among all classes above the wage earners and the farmers on the brim of a collapse, and often with some in the two ranks just named.

You talk to men about any radical reform tending to obliterate our present social extremes, and if those to whom you speak belong to any middle class, however pinched, in most cases they tell you. But who will do the work of those men? Of the men below them, they mean. That is the highest conception they have of government, most men, when not very far down in position, income, &c. The object of government for such men seems to be how to keep about three-fourths of the human race in partial or total bondage to the few on the top, that at least 20 or 25 per cent. of the race may remain a little better off than about 75 per cent. What a wretched conception of human government! And all because of a low, narrow, and fatalistic apprehension of divine government and divine law.

We should expect a certain class antagonism between all honest workers on one side, even if some of them happen to pocket, for the time being, three or four times more than most of the rest, and the 2 or 3 per cent., 5 or 6 per cent. if you like, who live in relative or absolute affluence, towards the upper social layers. That class antagonism is inevitable, and could easily be overcome or laid aside as insignificant in numbers, no matter how important in other respects. The class antagonism that we have the right to deplore, as senseless and illogical, as well as because it may prove fatal if prolonged, is the one between those who may earn \$500 or less, and those who may have from \$1,000 to \$2,000 per annum, in all cases through hard work, physical or mental, in all cases the result of useful services which, under a healthy civilization, would be bound to a considerable relative increase, with less wear and tear of the system than the present labors of all workers. Who can place a limit to the universal benefits resulting from social conditions respecting all divine law?

The latter class antagonism, in itself alone, even if we had no other national evils to overcome, places us in the same predicament which was no doubt at the root of

most if not all the disasters of that otherwise brilliant republic of Athens. And yet, if it had not been for the evolution of large empires in southern Europe, Athens would, perhaps, have survived, and cancelled the greatest drawback of hers, that of chattel slavery, which perpetuated class antagonism between her two groups of workers, making it indifferent, for the largest group, what the destinies of the common wealth should be.

The case with us is somewhat reversed, since it is not the lowest class of workers but the highest that seems indifferent to national destinies, if we only can keep the lowest workers a little farther down than that 20 per cent. with somewhat better pay than the 75 per cent. And there is hardly any doubt that the tendencies of modern society is to constantly decrease the number of workers with better pay, and increase the group with poorer pay. Perhaps that is just what we need, as it may help us reformers to show that the cause of labor can only triumph when class antagonism among workers has disappeared or decreased to a sufficient degree, so as to form a phalanx that can impose respect in all directions, upwardly and downwardly. Because we always shall have the two social extremes against us, the class degraded because having too much, and the class degraded because altogether too far down to grasp any solid truth.

We don't need to be discouraged on account of the two classes above mentioned. The top class is bound to be constantly on the decreasing line. The lowest class may yet increase some, but education among workers, fundamental education has already commenced, and, with God's help, we shall see that it goes bravely on, thus to check the farther increase of the lowest strata. Besides, under honest and scientific leadership, a relatively small proportion of citizens can gradually and even rapidly rectify the life of nations. We may dwell on that subject in some future article. Just now we should formulate the central thoughts on which government has rested, and those on which it should rest.

From all that precedes, and what it may suggest, we are justified in asserting that so far government has always been a failure, principally because of the unity of the few against the many, the former always afraid of the latter, and so always, bent upon keeping the many on a low level, as low as possible. The need of the hour is then to reverse that process through the *unity of the many*, not against the few, but for universal good. The selfishness, and meanness, and cowardice of the few which has prevailed all along in history, must be replaced by the unselfishness of the many. That means, down with all class antagonism among workers,

no matter what their respective income may be. Under our present industrial status the only real difference between the 75 per cent. of our workers with very poor pay, and the 20 per cent. with better pay, is that the former are slaves with heavy chains, and the latter slaves with lighter chains. The two classes really correspond to the chattel slaves and the bulk of the so called free men in Athens, industrially speaking, the latter so often pulled down by the oligarchies of the times, because of chattel slavery, as our plutocracies are only possible because of industrial slavery.

Let us again reiterate that the need of the hour is *unity among all workers of all classes*. Let that be a flaming reality. Even if it is only carried up to a certain point, in numbers, the magnetism of such a union would be felt through all the workers of the nation.

The grand industrial battle of labor, which is the battle of humanity, the battle of centuries, the only battle worth fighting for, must be carried on high moral principles. No permanent victories are ever accomplished but through fundamental moral ideas. Through them alone can we have government as it should be, of the many, for all, not of the few for the few, as it has always been.

The government of the few, for the few, is essentially and necessarily complex, with laws by the ton, each one with as many words as possible, subject to interpretations by the dozen, making plutocratic lawyers and machine politicians in the life of nations as plentiful as potato bugs in a potato patch.

The government of the many, for all—that should be simple in the extreme, with laws few and far between, each law embodied in short, precise sentences, very limited in number, making the above mentioned lawyers and politicians as useless and unnecessary as typhoid fever and small-pox.

The government of the few, for the few, is packed full with wheels and counter wheels, with lots of silly parliamentary devices, with a multitude of executive and fat salaried officers, all blended in such a confusing amalgamation that, when something is wrong you cannot find who is responsible for it. The individual hides himself behind the group, the committee, &c.

In the government of the many, for all, legislation must be direct from the people, and the executive officers must be few, the salaries reasonable, in accordance with honest earnings in industrial life, each individual, at the head of each department or sub-department, to be alone responsible for something. It may even be necessary, and it is possible to see that, when laws are not executed by the respective officer, a given

group of local citizens should have them enforced, under certain given forms.

The government of the few, for the few, has always rested on repression in many forms, giving to some advantages over the rest.

The government of the many, for all, should rest on freedom in all forms, the freedom that respects all God's laws, giving to no one any advantage over the rest, and thus opening to all men the path into joy and manhood, as intended by the Creator in his organization through the whole universe.

## WHAT IS SOCIALISM?

BY W. H. STUART.

Before considering the objections urged against socialism by Mr. Middleton in the November MAGAZINE, it might be proper to briefly define what modern socialism is based upon, and what it stands for.

Socialism is a phenomenon of the nineteenth century. Historic socialism commences with Owens in England, and with Fourier and Saint-Simon in France. Modern democratic socialism, however, commences with Louis Blanc, Lassalle and Karl Marx. The plans of Owens, Fourier and Saint-Simon did not contemplate any change in the political complexion of society. Louis Blanc was the first who demanded that the state should be organized on a democratic basis preparatory to its social re-organization. While Owens, Fourier and Saint-Simon proposed the gradual introduction of their schemes, expecting their rapid adoption until all society was included. Louis Blanc, on the contrary, insisted that the state should inaugurate social workshops for co-operative production. Karl Marx advocated an international movement of all workmen, while Lassalle favored national co-operation.

In our own country, socialism, under its specific name of "nationalism," advocates the gradual nationalization of all industries as fast as an intelligent public opinion is educated up to the justice and necessity of the public control and operation of all the means and instruments for the production and distribution of wealth.

Mr. Thos. Kirkeep, author of the article "Socialism," in the Encyclopædia Britannica, says:

The principle of socialism is of an economic nature, and is most clear and concise. The central aim of socialism is to terminate the divorce of the workers from the natural sources of subsistence and of culture. The socialist theory is based on the historical assertion that the course of social evolution for centuries has been to gradually exclude the producing classes from the possession of land and capital, and to establish a new subjection, the subjection of workers, who have nothing to depend on but precarious wage-labor.

The socialists maintain that the present system (in which land and capital are the property of private individuals, freely struggling for increase of wealth)

leads inevitably to social and economic anarchy: to the degradation of the workman and his family; to the growth of vice and idleness among the wealthy classes and their dependents; to bad and inartistic workmanship, and to adulteration in all its forms, and that it is tending more and more to separate society into two classes—wealthy millionaires, confronted with an enormous mass of proletarians—the issue out of which must either be socialism or social ruin.

To avoid all these evils, and to secure a more equitable distribution of the means and appliances of happiness, the socialists propose that land and capital, which are the requisites of labor, and the sources of all wealth and culture, should become the property of society, and be managed by it for the general good.

Mr. Kirkeep, contrasting the earlier schools of socialism with modern socialism, shows that the former were to a certain extent fantastic, Utopian and speculative, while in many ways teaching a noble spirit of unselfishness; in other ways, the tendencies were undesirable and resulted in bringing them into deserved contempt. Modern socialism, on the contrary, is a purely economic movement; religion it regards as a purely private concern. While many socialists are frankly materialistic in their views, there are others who hold that socialism is simply applied Christianity, that the ethics of socialism and Christianity are identical.

Mr. Kirkeep says:

But while the basis is economic, socialism implies and carries with it a change in the political, ethical, technical and artistic arrangements of society which would constitute a revolution greater probably than has ever taken place in human history, greater than the transition from the ancient to the mediæval world, or from the latter to the existing order of society. In the first place, such a change assumes as its original complement the most thoroughly democratic organization of society. \* \* \* Socialism, in fact, claims to be the economic complement of democracy, maintaining that without a fundamental economic change, political privilege has neither meaning or value. In the second place, socialism naturally goes with an unselfish or altruistic system of ethics. The most characteristic feature of the old societies was the exploitation of the weak by the strong under the systems of slavery, serfdom and wage-labor. Under the socialistic regime it is the privilege and duty of the strong and talented to use their superior force and richer endowments in the service of their fellow men. \* \* \* In the third place, socialists maintain that under their system, and no other, can the highest excellence and beauty be realized in individual production and in art, whereas, under the present system beauty and thoroughness is sacrificed to cheapness, which is a necessity of successful competition. Lastly, the socialists refuse to admit that individuality, or freedom, or character, would be sacrificed under the arrangements they propose. They believe, in short, that there is no opposition whatever between socialism and individuality rightly understood; that those two are complements, the one of the other; that in socialism alone may every individual have hope of free development and a full realization of himself.

Socialists recognize three great economic movements in the history of society: (1) slavery, (2) serfdom, (3) wage-labor. Under the two former systems, the robbery of labor was open and undisguised. Under the wage system, the robbery continues, but disguised under an apparent freedom of contract. This is what socialists term the capitalist system of production, and it is against this system of labor exploitation and the consequent degradation of the laborer that Karl Marx directed his most destructive criticism and

his most effective dialectic. Socialism is based on the fundamental theory that all wealth is the product of labor; that labor, in other words, is the only source of value.

Imagine, then, a society in which all labor freely and exchange the various products on the basis of the "socially necessary" time expended in their production. Suppose that, in such a society, five hours' daily labor will produce a subsistence. Now translate those laborers into wage-laborers under the capitalist system, and the laborers still produce their subsistence with the five hours daily of labor; but now, having sold their labor to the capitalist, they work ten or more hours per day. The first five hours produces their subsistence; the other five or more produces "surplus value," which the capitalist appropriates, *i. e.*, the laborer receives in wages the cost of the subsistence of himself and family; the surplus product of his labor is exploited by the capitalist and land owner in the shape of rent, interest and profits. The laborer being divorced from land and capital, the indispensable means of subsistence and wealth, is forced under competition with his fellows to accept a wage that represents, not the value of his labor, but the bare cost of his subsistence; all over that amount is appropriated by the capitalist.

Although the productivity of labor has enormously increased by the introduction of labor-saving machinery; by advances in the arts and sciences; by intensity of labor; by increased skill and efficiency, and technique, yet labor continues to receive only its cost of subsistence and reproduction. All the advantage of the improvements referred to are appropriated by the capitalist class. This ever increasing wealth, produced by labor, continues to flow, a Pactolian stream, into the coffers of the capitalist class. So greatly has this wealth accumulated under modern conditions of production that the wealthy class of New York City alone possess probably more wealth than was contained in all Europe during the fifteenth century, a period which Professor J. Thorold Rogers calls the "Golden Age" of the English workman, whose condition, he declares, was better than the English workman of the nineteenth century! It is against this system of exploitation that socialism is a protest. But, to again quote Mr. Kirkeep:

Scientific socialists strongly insist that the economic order of the future cannot be realized by Utopian schemes, or arbitrary legislation, or mere revolutionary disturbance. If it comes, it must come as the dominant tendencies of modern social development; it must be realized under the conditions prescribed by our nature and environment. In discussing the doctrines of Marx, we stated that the central point of the question was this: Do the strongest forces of the social development of our time really tend towards the superseding of the present economic order, and towards the establishment of a new and wider order based on collective capital and associated

labor?" Socialists maintain that they do, and that there is going forward a double process of dissolution and reconstruction—the dissolution of individualism, with a constructive tendency towards collectivism. (1) Over the whole industrial world we see great crises succeeding each other, resulting in stagnation and depression which now threaten to become chronic and permanent. While the productive forces of the world are enormously increasing, they only tend the more to intensify national and international competition, and to render labor superfluous, precarious and dependent. Under this system the worker has neither freedom or security. All this variety of symptoms are only a sign of the break-down of the present economic order, both in principle and method. They are the necessary results of the competitive system, which has finally revealed its real nature and tendency—economic anarchy. (2) The constant and inevitable tendency towards concentration in industrial operations, which began with the introduction of steam and of the factory system, through which the small producer has been superseded by the capitalist, the smaller capitalist by the larger. And now the single capitalist is being absorbed in the company (trust), a growing proportion of the world's business being so large that only a great company can provide the requisite capital and organization; whilst in the large companies there is a tendency, in case they cannot drive each other out of the field, to bring about a fusion of interests.

In all this we see a great constructive process inevitably going on as the result of the inherent tendencies of industrial development. Thus the control of industry will be concentrated in a few colossal companies and their chiefs. It is obvious how this process would simplify the transference of the whole to a collective management by society. (3) This leads us to a third important point, the growing tendency towards state control of industry, and the growing sense of the responsibility of society for all its members observable in German politics, not less than under the more democratic conditions of France and England.

It is apparent how, under this influence, the existing state might absorb one by one all the large social functions, as has already happened with regard to education, means of communication, &c. \* \* \*

(4) In England, during the last half century, we have seen a long succession of efforts, partially successful, towards a new organization of society rendered necessary by the changes due to industrial revolution.

In economics, as in other spheres, the watchword of the new era has been freedom—the removal of restraint. \* \* \* (5) But the great social force which is destined to work out the vast transformation consists of the human beings most directly interested in this colossal struggle—the modern democracy. This democracy is marked by a combination of characteristics that is new to history. It is being educated and enlightened in the school and by the press; it is being drilled and organized in large factories; \* \* \* by vast popular demonstrations in the gigantic electoral struggles of the time. \* \* \* Having transformed the political conditions of things, they are now ready for an economic transformation. \* \* \* The only issue out of the present economic condition is concentrated collective industry under the control of the new democracy and its chosen leaders. On the irresistible momentum of these two inevitable and ever growing forces—the concentration of industry and the growth of the new democracy—socialism depends for the realization of its scheme of transformation."

Such is a brief outline of the aims and objects of modern socialism. Fortunately, in our own country, the democratic ideal in our political system has been largely realized, and needs only the extension of the democratic idea into our industrial organization to complete the ideal of the social democratic state, where the people collectively shall control both their political and industrial organization in the interest of all the people.

I shall now consider the objections against

socialism offered by Mr. Middleton, quoting my statement that:

"The people collectively, and not merely the small capitalist class, must control all the means and instruments for the production and distribution of wealth."

Says Mr. Middleton:

Fortunately, in considering socialism, we have in addition to the writings of socialists many historical illustrations to shed light upon the results that will probably ensue if 'the nation itself shall control all the means of production and distribution of wealth in the interest of all the people.'

And then to show the dire results that would follow industrial equality in the nineteenth century, he cites the political condition of the Peruvians in the sixteenth century! An isolated nation cut off from all communication with European civilization, just emerging, when discovered by their Spanish conquerors, from fetichism and idolatry. This style of argument on the part of Mr. Middleton displays an ignorance of the canons of criticism that is far from creditable to him. The only proper comparison that can be made is between the condition of Peru and other nations of the same intellectual development. Measured by that standard, there is probably no nation in history that can compare with them. Mr. M. admits that poverty was unknown; he might have added that there was no word in the Peruvian language to express the term "poverty." Their political system was thoroughly adapted to their intellectual development. They had no political freedom, nor had they any desire for it, any more than had the ancient Egyptians. Yet, through their mild government and remarkable economic development, they reached a degree of progress, *without* poverty, unknown in the history of the world. Contrasted with the civilization and economic condition of the ferocious butchers who ruthlessly destroyed them, is certainly to the disadvantage of the latter. Dr. Draper, in his remarkable work, "The Intellectual Development of Europe," says:

By millions upon millions, whole nations and races were remorselessly cut off. The Bishop of Chiapa affirms that more than fifteen millions were exterminated in his time! From Mexico and Peru a civilization that might have instructed Europe was crushed out. \* \* \* In America, she (Spain) destroyed races more civilized than herself.

Dr. Draper describes the agriculture of the Peruvians as far in advance of the Spaniards, and refers to their public buildings and their engineering skill as even now the wonder of the world. That they succumbed so readily before their ferocious conquerors is nothing remarkable. Even the Roman Empire was overrun again and again by barbaric hordes, and India with its countless millions was conquered by a few thousand Englishmen. Neither Rome or India had, I believe, what Mr. M. calls "imperial state socialism."

No socialist will cite the history of Peru

abasement and degradation that will inevitably follow when a "tyrannous majority" decide that the people shall manage their own industrial affairs for themselves, instead of our present paternal system of allowing the capitalists to do it for them. No wonder cold chills run down Mr. Middleton's spinal column when he thinks of it.

By the way, he has no doubt heard of the shrewd Yankee, who, during a rise of the Mississippi river, just after the war, set a lot of "contrabands" to work catching driftwood on shares. The niggers done the work, he played the boss. The niggers retained half of the driftwood; the other half they piled up for "de boss." The arrangement was quite satisfactory to the "nigs;" they were accustomed to the paternal system of production and distribution. Now substitute, in place of the driftwood, an endless variety of commodities produced by minute subdivision of labor, a hundred men working to produce one article, so that the workman can not lay his hand on any one commodity and say he produced it; then substitute "wages" for the niggers' share of the driftwood, and you have our present capitalist system of production and wage slavery. Had the niggers the necessary brains and independence to dispense with the "boss," *anglice*, "capitalist," and co-

operated in the "production" of the driftwood and divided the product among themselves, they would have done what socialism proposes to do with the national product.

The desire to continue this capitalist system, and its inevitable and degrading wage-slavery, is a survival of the old feeling of dependence on and servility to a superior class. Our "coal barons" and "lords of industry," with their dependent wage-slaves, are worthy successors of their mediæval prototypes and their feudal retainers and serfs.

It is related that the natives of African settlements who are attached as *quasi* slaves to white men, look with disdain on their less fortunate brethren, and taunt them that "they have no white man to look after them." It must be a feeling akin to this that attaches Mr. Middleton so strongly to his capitalist masters. Down south, "befo' de wah," refractory darkies were threatened that if they continued "no 'count an' triffin'," "a ole abolitioner" would catch and take them north where they would have no "ole mass'r an' missis" to look after them. I suppose this is how Mr. Middleton would feel in a co-operative commonwealth, no capitalist to "look after him" or to work for.

I shall defer further consideration of Mr. Middleton's objections to a future article.

---

### We Want no Kings.

Go where I will, I feel a sound  
Like sullen thunder shake the ground.

And as I listen, half in fear,  
The sound swells louder and more near,

A sound of protest from the throngs  
Grown weary from their cruel wrongs.

Again I listen; thrilled and stirred,  
I catch its purport word for word,

As loud and louder yet it rings—  
"We want no Kings, we want no Kings!"

The world has grown too wise and old  
For monarchs with their crowns of gold,

And commerce has too many ports  
For noble men to mince through courts.

Humanity has grown too wide  
To let us now for queens provide;

Too weighty issues are at hand  
To maintain princes in the land,

And Thought has grown too bold and free  
To let us longer bend the knee

To any man, unless he fights  
For Justice, Truth and common rights.

The rights of labor to its hire—  
The rights of toilers to aspire

To something better than befalls  
The burdened oxen in their stalls;

The right of all paid slaves to rise  
Against self-crowned monopolies,

That rob the tillers of the soil  
Of honest proceeds of his toil!

That steal the poor man's flour and sack  
And grind him, till he buys them back

At twice their value. Down, we say,  
With these false kings who rule to-day.

With Freedom's voice the welkin rings:  
"We want no Kings, we want no Kings!"

*Ella Wheeler Wilcox.*

### IS IT YOUR TURN NEXT?

I feel sure that I can make the following statements to the members of the B. L. F. without being accused of blowing my own horn unduly.

I know of no body of men who are quicker

point by the slow torture to death, by cooking, of a dear friend who was held under his engine in a slight wreck. I am ashamed to say that before this I read in my morning paper the usual heading "Another Bad Wreck," and took it as a matter of course; and I have read the concluding sentence, "Nobody was injured except the engineer and fireman; one of these was killed outright, and the other was scalded so that he can not recover," a hundred times and forgotten about it in an hour. Such things are so common they excite no interest beyond

to see and appreciate anything done in their interests than this order as a whole, and they don't stop to hunt for the possible  *motive*; it's  *results* they are looking for.

Both before and since I got off a locomotive, I have tried to make the occupation of locomotive enginemen a better one, and any scheme that promised to dignify the calling or make it easier or better for the men in it, has always had all the support my feeble efforts could give. Some years ago I became deeply interested in the subject of accidents to enginemen, especially scalding accidents.

In 1892 there were 2,554 train and engine men killed, and 28,267 crippled; there were over 200 frightful scalding accidents.

My attention was forcibly called to this

the sound of the escaping steam, except in the homes of the victims.

The more I investigated the matter, the more ghastly the long rows of my dead and crippled comrades became.

A wreck once in a few months on your home road does not seem so bad, but when you add up the list for the whole country and set down the gruesome total, it commences to haunt you. Then when you go into details and read of the agonies that were suffered under some of these wrecks because of escaping steam, hard and cold, indeed, must be your heart if it does not yearn to throw off all obstructions and *do something* right then and there to stop the torture and the useless sacrifice.

I thought once that the brotherhoods were big enough and strong enough to take this matter up and enforce a reform; and so they could, if they knew what to ask or demand.

Right here is where I ran across the first snag.

We have invented or improved almost everything on locomotives except boiler fittings: cocks and valves and checks are just about as they were fifty years ago, except they are smaller and there are ten times as many of them.

The average railroad manager would be

solidation—with view of left side and boiler head as well (small reproductions of which are shown herewith), with all the boiler fittings left off. The prizes will be paid for the best job of finishing these designs.

We are going to give \$100 for the best, \$50 for second, and \$25 for the third best arrangement of cab and boiler fittings for each class, making the total cash prize money \$350.

We do not care what is used, new or old, nor how you use it. We claim nothing but the right to publish the designs; if anything new or patentable is invented, it belongs to

willing to order approved safety appliances for new engines, for they would probably be as cheap as others, and many roads are always ready to adopt a good device if its merits are apparent.

The question that arose was, "What is the best?" That question has not been answered, nor may not be.

After some thought on the matter and a consultation with my partner, Angus Sinclair, it was decided to make an effort to call out the best suggestions of the railroad men of the world on this subject, and pay for them. No one can insist on the adoption of safety appliances that are unknown.

We got out large drawings of two classes of locomotives—an eight-wheeler and a con-

solidation. We want to see safer, more convenient and better boiler fittings, and are paying the prize money with these objects in view, and at which the designs must aim.

*First.*—Greater safety for the lives of the engine crews under any and all circumstances, especially wrecks.

*Second.*—Convenience in handling the locomotive, comfort of the crews, consistent with best road service.

*Third.*—Economy of time and money in keeping up running repairs.

Before January 1st we shall select a committee of five judges, consisting of one superintendent of motive power of a large road, one superintendent of a locomotive works,

one chief draftsman, one traveling engineer and one locomotive engineer. These men will meet at the Master Mechanics' convention, next June, at Saratoga, N. Y., look over the designs and award the prizes. Winners will have their money for the Fourth.

The judges will not know *who* submitted designs until *after* they decide, as the drawings will only have a symbol on them, the names of owners being in a sealed envelope.

All of the prize designs, and, perhaps, some of the others, will be published in *Locomotive Engineering*.

I feel sure that every member of this order will be interested in this matter, whether they express an interest or not. Of course the prizes and the designs will excite some interest in *Locomotive Engineering*, and that is the only mercenary motive we have, or can have. The desire to make the callings of locomotive engineers and firemen safer and easier, and more comfortable, is earnest and sincere. Both Mr. Sinclair and myself earned a living for more than ten years on the deck of a locomotive.

We are ready to send drawings to those who wish to compete, and hope the competition may be spirited. There is no reason why any member of this order should not compete—and win.

If the men most to be benefited by improved locomotive appliances (those who risk their lives on the old ones) do not take an interest in attempts to improve them, who will?

There have been no improvements on boiler fittings that amounted to anything. Can't they be improved? Very few cabs are handy for the men who run the engines, principally because there is no standard practice, and men arrange them who never saw one out of the shop.

We have all *talked* about doing something to prevent this loss of life and this suffering from scalding accidents. Isn't it about time to stop *talking* and *do* something?

We never know whose turn comes next?

John A. Hill,

Editor *Locomotive Engineering*.

NEW YORK, N. Y.

#### SOME OF THE "STEAM SUPERSEDEES" AND THE RESULTS.

The attempt of the young engineering fraternity to "supersede steam," will bring to the minds of the older members of the profession remembrances of the days long ago, of interest to thousands of our boys who have not had actual contact with the facts, nor access to the libraries that contain these strange recitals of the attempts of, in many cases, educated men to pervert natural laws, by making apparatus which would in their estimation, do a certain thing, and save such an amount of material, as would instantly bring it into prominence; as an

evidence of which the financial wrecks strewn all along the coasts of memory of the last forty years are positive, if unpleasant, facts.

The steam engine has been misunderstood, and the uses to which steam has been put are not always improvement, even if with new or strange apparatus, and the results are far from being desirable often, as the writer has stated, "from the utter ignoring some natural law" in the course of the application that was made in the attempt. The basis of this article will be new to many of its readers, no doubt, and it is not made use of to throw the least discredit on one of the most honest as well as honorable of men, and in his later years one of the writer's most honored professional friends, the late John Ericsson, but it has also another purpose, that of showing how finely Professor-Doctor Rankine, at that time, had dug into the subject of heat and its application and how clearly he saw the result as the vindication, almost to an exactity, of his then newly demonstrated law of the "Efficiency of the heat as applied to the steam engine," and in this his review of the report of Doctor Norton (also a professor) who had access to the engines of the hot air ship, Ericsson, and whose report Rankine reviewed in his work on the steam engine, in 1855. It will be of more than cursory interest to all readers who are after information to attend with care to the whole article; while a part of it is only newspaper clippings or references, for the purpose of giving the dates and progress, it has also a value in the history of events that will be interesting.

The writer, as a boy of nine years of age, took the *Scientific American*, and it was in the first year of his reading it, 1851, that the wonderful hot air ship was first heard of. Referring to the files of that once mechanical paper it will be found, Nov. 8th, 1851, that "This invention is to use heated air as a propelling agent, and to save the heat of the air by the devices, substances and arrangements of the machinery described." "By which air etc." based on five claims. Editorially it is remarked in same article "All of which, however, are worthless if the principles upon which engine is built are not correct, and that they are not correct we have not the least doubt. \* \* \* Sterling's hot air engine is said to be a good one, but we don't believe it; yet, he never pretended it to be a perpetual motion, as is done in the above specifications." This related to one of the claims in which it was stated that "after making fifty revolutions the motion of the valves should be reversed" in order to overcome possible obstacles and secure the complete mechanical effect. April 10th, '52, the same paper says: "It is stated on authority of common hearsay, that Messrs. Paine, Patterson and Stack, Williamsburg,

N. Y., are building a large steamship of 2200 tons for a company; she is to have Ericsson's calorific engines and the engines will occupy less space than are given to boilers of marine engines, and it is asserted that it will save eighty per cent. of the fuel. She is for the Liverpool trade, and will be a fair test of the value of Capt. Ericsson's invention. We can not see how it can at all operate so as to do the work it has been asserted to do, we are of the opinion it will be a failure, a greater failure than the 'Iron witch.' We should be glad to find that we are mistaken, etc."

January, 8th, '53, same paper comments on the false deductions of reports in the daily papers on the fact that the screw had been moving, etc. January 22d, '53, same paper says: "On Tuesday last week this ship made her trial trip down the bay. N. Y. Times reporter says 'she made ten knots an hour,' in another place he says 'she made twenty miles in two and one-half hours.' *Scientific American* says, in reference to the same trial trip, 'she made in smooth water with and against the tide, an average of eight miles an hour,' and then says editorially: 'none of the scientific press except the editor of the *Scientific American* was on board.' And then uses some very forcible expressions as to the truth of some of the statements made by the press.

Then follows a description of the machinery, to some extent: "Four large cylinders of 22,300 square inches of area in each, of piston, single acting; over the last cylinders are placed three other cylinders, of 14,794 square inches of area each, piston area. The upper cylinders are huge air cylinders, one for each lower cylinder, the lower are called the working, and the upper the compressor, cylinders. There are no boilers; this requires, in starting the engine, the forcing of air into the cylinders at a pressure of 12 pounds per square inch, heat is then applied by means of the furnaces under the working cylinders and the regenerators supply and intercept heat in the passage of the compressed air to and from the working cylinder." In an article, which shortly afterwards appeared in the New York *Herald*, the regenerators were compared to 'a person with a sponge over his mouth, by which the heat is taken up during inspiration and given out in exhalation.' On which the *Scientific American* remarks that "This comparison is very just, but the writer quite forgets to remark that the sponge makes breathing very much harder and increases the labor of the lungs." On the trial trip Capt. Ericsson stated that the ship would use six tons of coal in twenty-four hours. The correspondent of the Brooklyn *Eagle* rated the power developed at 228 horse power. A writer in N. Y. *Herald* stated it at 600 horse power; while the editor of the *Scientific American* stated

that he had no reliable data, but put it at 437 horse power, basing his computation on Dalton's law. "As 15 pounds per square inch for every 491 degrees F." Not for each 480 as Dalton puts it. "The immense power of the feed pumps strikes every one." Out of 22,300 inches on each piston area, 14,794 inches are for feeding, and this leaves only an area of 7,506 square inches for effective working surface.

"An excellent dinner was served and wine and lunch followed it." Same paper in January 29th, 1853, gives the first illustrations of the Ericsson engine, taken from a five horse power engine patented in 1833, described in Sir Richard Phillips' "Arts of Life" printed in 1833. The steamship engine is illustrated in same number to show principles of operation, and in the same issue the editor of the *Scientific American* points out where Capt. Ericsson is making his mistake as to the steamship engines or the hot air ship. "The same heat but not the same air is to be used, the regenerator is to be heated and reheated, for the air as it uses to pass out and in through the same regenerator or in both directions. There are four working cylinders, each having 22,300 square inches of area each single acting, and of six feet stroke; the upper cylinders (air feed pumps) have each 14,794 square inches of area, and are of the same length of stroke. Atmospheric air enclosed in a vessel that is tight and raised to 384 degrees F. acquires a pressure of twelve pounds per square inch, and as the engine cuts off at three-quarters stroke the pressure is reduced to 10.96 pounds per square inch of mean pressure, the piston speed was fourteen revolutions per minute, six feet stroke and four of them then  $14 \times 4 \times 6 = 336$  feet, then for the total power of the engines working as supposed, from the temperature we have,  $22,300 \times 10 \times 336 \div 33,000 = 2,488$  horse power exerted on the working side of the 4 pistons, collectively, and from this we are to deduct the compression work on the other side of the pistons, as follows, the piston speed is the same as it is the same piston but the other end or side;  $14,794 \times 9.43 \times 336 \div 33,000 = 1,409$  horse power (1407 is right) and then for the total actual exerted power of the whole engine all working we have force exerted on working side of pistons, 2,488 horse power; force exerted on compression side of piston, 1,409 horse power, and, therefore, we find in the whole calculation that the amount of exerted power is 1,079 horse power, without any deduction for frictional losses, etc., and in these engines this nonaccounted for amount is very large, and in the articles referred to it is called 479 horse power, so that of net power is 600 horse power." This is the gist of the whole matter in a long article taken from the New York *Herald* at the time, largely ex-

tracted by the *Scientific American*. The editor of the *Scientific American* gave in his statement that the net exerted power for driving the paddle wheels was 244,572 horse power or  $244\frac{1}{2}$  horse power out of the whole 2,488 horse power furnished by the fuel.

It must be remembered by the reader that the above calculations are purely and entirely theoretical, no indicator or actual tests so far, and the record of them is not to be found in the paper referred to, but is on record in a foreign publication, not at the writers' hand at the moment, but accessible to him.

June 11th, 1853. The *Scientific American* says: "The New York floating derrick, Bishop, has recently been taken alongside the Ericsson for the purpose of removing her heavy machinery, and thus far one main cylinder and piston rod, weighing thirty tons, one air pump cylinder and the walking beam have been taken out."

July 23d, 1853. The *Scientific American* says: "The Ericsson is now lying almost like a sheer hulk, at the Williamsburg dock."

January 28th, 1854. *Scientific American* says: "In a letter from John Ericsson, he says: 'That the new engines of the ship are nearly ready, and are greatly reduced in size from the first engines built and the obstacles are removed, etc.'"

February 11th, 1854. "Mr. Ericsson writes again, 'that the matter is nearly ready, etc.'"

April 15th, 1854. "Mr. Ericsson says in a letter, 'will have our new improved machinery in and ready for a trial trip in about ten days, and proceed immediately to sea.'"

May 6th, 1854. *Scientific American* says: "The Ericsson while making a trial trip down the bay Thursday last was struck by a squall, careened and sunk, etc."

May 20th, 1854. *Scientific American* says: "The Ericsson was raised on Thursday and towed into the navy yard dock for repairs; damages sustained said to be \$50,000."

*Scientific American* of the same date says editorially: "The report of the daily papers in this city respecting the late and unfortunate trial trip, are not to be trusted in any particular excepting that relative to her being capsized."

July 29th, 1854. The *Scientific American* says: "The Ericsson is now being turned into a steamer." This is the subject of a short article relative to the repairs that have been going on quietly as "current report," and this is the end of her as a hot air ship.

We now come to the facts as to her performances as a ship, from her trial, and the data is from Professor Norton's report on her trial trip, and Rankine's deductions on that data from a purely scientific view, and not from actual observation.

It will be understood that Professor Ran-

kin's deductions are entirely from the data of the report and are only strictly scientific so far as the reasoning goes, and not from indicator diagrams or definite data of that kind. "The air engines of the Ericsson had four working cylinders of 14 feet diameter each, or  $154 \times 4 = 616$  square feet of area; length of stroke, 6 feet; revolutions per minute, 9; and from his previous reasoning he had found the mean effective pressure to be 2.12 pounds per square inch, or 305 pounds on the square foot, then  $305 \times 616 \times 6 \times 9 = 33,000 = 307$  indicated horse power, as the final result of the whole computation of the data furnished by Professor Norton. The actual amount of indicated horse power stated by Professor Norton is 300, and that computed by Professor Rankine is 307. Norton's result is from diagrams and Rankine's is entirely from his own formula computed by himself, and his method of reasoning is precisely what he had laid down as the laws that govern the action of steam or any medium for transferring energy, in which the medium was heated. The bulk of the engine was enormous for its power, and the amount of fuel used per hour per horse power as stated by Professor Norton, was 1.87 pounds, or 1,059,000 pounds for the foot pound duty of one pound of anthracite, and from this it appears that the resultant efficiency of the furnace and fluid was .1014 and the efficiency of the furnace (alone) was .4 nearly, or equal to the lowest efficiency of steam boiler furnaces. The heating surface in the engines of the Ericsson consisted simply of the bottom of the cylinders and amounted to, in round numbers, about 700 square feet. The consumption of fuel per hour was 360 pounds, and computed by another rule of his the Professor makes the efficiency of the same boiler furnace having the same area of heating surface, and burning fuel at the same rate .71; the difference between this and .4 must be ascribed to the great inferiority of air to boiling water as a medium for the convection of heat. It appears from the preceding calculations that, notwithstanding the low efficiency of the furnace in Ericsson's engine the efficiency of the fluid was so great as to give a resultant efficiency superior to that of almost all steam engines of the time of the experiments referred to. (1852.)"

In the engine as built by Capt. Ericsson the purpose was to save fuel, and the compound locomotive is also built to save fuel, but, as in the many compound engines where there are other objects than the cost of fuel, it has been found that while coal is perhaps in amount saved, other items are much more than in the usual way of working, and that some of the modifications of a compound are economical. The way they are sought to be put into use is not on all points either desirable or economical. To

return to the air engine, it did use fuel economically, it did a large duty and it did not furnish any economy when the amount of tinkering and repairs as well as cargo space was taken into consideration, nor did the promoters of the scheme ever allow her to commence business in going over the ocean with cargoes, and the second one has not yet been built. There is not the slightest doubt that Capt. Ericsson was sincere in his opinions, and to some extent he was correct in his way out of all the trouble of applying the heat to air instead of water, but there were several things subject to natural laws that he did not give sufficient prominence to in his computations, and the machinery proved subject to sudden and serious breakages, as it has ever since in smaller engines, to sudden fits of obstinacy, in its operation, and all considered it has not occupied any serious or important part of the work of the power using world. The space swept through for a horse power, per minute, was 108 cubic feet, for the working cylinders, and for the feed pumps "it was above 72 feet per minute," or a tremendous amount when compared with the steam engine, and while "space was saved" usually used for the marine boilers, the space occupied with the engine was enormous, and the result was from an eighth to a quarter of the indicated horse power we now put in the same space with steam, and of the cost of the engines, no one can tell, for all connected with it are now long ago with the silent majority, but we are sure that our new ships, calling for thirty thousand horse power, could not hold the air engines and anything else, as built to-day, and no one could with the slightest respect for the fact predict when a vessel would arrive at any port, if the same obstacles appeared in actual practice as did in the brief experimental work referred to. It appears, looking over the figures, that "from one-tenth to one-twentieth of the heat was wasted in and about the regenerator." The working pressure, instead of being ten to twelve pounds per square inch, was in reality a little trifle over two pounds to the inch, and this required very massive pistons, which in turn were subject to sudden cracks or breaks owing to the intense heat, and then difficulties in packing on the same account, were a constant source of trouble, and summing it all up, the theoretical reasoning was so modified when put to practical test that it was a failure, not a commercial success, and it was after great expense pulled out and the ship converted to steam.

The history of the caloric or hot air engine is a curious one, and it has not even now ceased to perplex its advocates, and some people in Boston thirteen years ago spent a large sum of money in making a new hot air engine, the main feature of which was the action of the pressure against the

atmosphere, that is they were to work under an atmosphere or two of back pressure and still convey power, and they did make a few machines, but the old features asserted the natural law, that a piece of red hot cast iron would not last with any certainty, and so after making various changes and improvements the new scheme was laid away with its predecessors, and now the same people are working on a hot steam engine, with a hundred thousand dollars spent in the hot air line.

In a trial of the Sterling hot air engine in 1854 it was clearly demonstrated that it was possible to work that engine at a pressure of 37.75 pounds per square inch, and the efficiency of the furnace was .44 and a steam boiler under similar circumstances was .61 and the efficiency of Sterling's engine approached more nearly the steam engine than did the Ericsson of a few years preceding, changes were recommended, and, as a certainty it has not yet come into general use, for the simple reason Rankine states so clearly, that "the great inferiority of air to boiling water as a medium of convection of heat" and by convection he means, "the transfer and diffusion of heat in a fluid mass by the means of the particles of the mass."

The scientific reasoning which led Rankine into this investigation has not been reproduced here, as it would not be easy to explain, and the article has already exceeded the limit of space allowed me.

*Thomas Pray, Jr.*

#### CURRENT NOTES.

That was a nice pot of money the Cramps secured from the government as a premium on the new cruiser, *Columbia*. I wonder if it has ever occurred to many of the taxpayers, who foot the bills for these play spells, what an immense fake this premium business is liable to be. We never hear much about the wonderful performances of these cruisers after they are once put in commission, but I am sure I cannot recall one of them now which did not earn more or less of a speed premium for its builders. In the case of the *Columbia*, the Cramps, her builders, get the snug sum of \$350,000 over and above the contract price, which is \$50,000 for each quarter of a knot she exceeds the specified speed in the official trial. That is a very good sized fortune; it would build a very respectable boat; it would set in motion forces which would provide ample support for many a family which finds itself confronted with absolute starvation at the beginning of the cold and gloomy winter; and it is abstracted from the earnings of an already tax-burdened people and given to swell the fortune of those who are already numbered in the ranks of millionaires—for what? Assuming that the Cramps

made a fair profit on the construction of the Columbia at the regular contract price—and it is impossible to make any other assumption—it is difficult to understand just why the government should find it necessary to swell that profit so enormously because the work happened to exceed specifications in a certain direction. It is a business principle not followed out by private parties, and there seems no good reason why it should be adopted by the government. Of course, it may all appear plain enough to those who are so fortunate as to be on the inside of this premium business, but to some of those who are not informed it looks like throwing hard earned dollars into a well, as well as a gigantic swindle on the people. The suspicion may be outrageous and an insult to honorable men, but such things have happened before, and in view of the case with which these cruisers always knock off a few hundred thousand dollars for their builders would there be anything strange if a good slice of the premium went to fatten the purses of government officials? Would there be anything strange if the figures upon which these premiums are based were doctored for a financial consideration, instead of representing actual facts? A hundred thousand dollars, judiciously distributed, might very appreciably shorten the course or cause the official watches to mark time wrong. All this might be done with a hundred thousand dollars, and, in the Columbia's case, it would still leave a cool quarter of a million to be pocketed by the Cramps. Of course such a suspicion may be unjust and unfounded, but it is a little strange that these cruisers always manage to exceed specifications a few hundred thousand dollars' worth. One might be excused for looking for a failure once in a while. And what does it all amount to any way? The government has secured a useless toy, for which it has paid \$350,000 more than it is worth, and the taxpayers foot the bill. If we, as a nation, exhibited half the intelligence in the ways of peace that we do in the ways of war, what a blessed thing it would be.

An excellent series of articles is published in the *Railway Age* under the caption "Locomotives at the World's Fair." This series begins with the issue of May 5th, 1893, and closes with the issue of November 17th. There are 26 articles in all, and they take the reader through the entire history of steam locomotion, beginning with Newton's crude attempt in 1680 and continuing to the highest improved machine of the present day, in a most entertaining and instructive manner. The series contains illustrations of 114 distinct locomotives, 53 of which are classed as historic, and old time engines, and are illustrated by line drawings. There

are 61 classed as modern engines, which are illustrated by diagrams or erecting cards, and of these 18 appear in the form of halftone engravings. A table, giving the principal dimensions, accompanies the description of each modern engine, and, in the case of the compounds, a separate article details the several systems of compounding, the starting and intercepting valves being illustrated and described. On the whole, the *Railway Age* is entitled to great credit for this series; it is an immensely valuable one and should be in the possession of all who are interested in locomotive work.

By a recent decision of the United States circuit court for the southern district of New York, the Westinghouse Air Brake Company obtains a very substantial victory over its New York rival. The New York company's devices are declared to be infringements upon the Westinghouse patents and an injunction is granted in favor of the Westinghouse company. The chief point in dispute between the two companies referred to the quick action triple valve now in common use, the Westinghouse company claiming that the New York triple was an infringement upon their patents. The contention on this point turned upon the matter of the relation existing between the triple valve piston and the emergency piston. The New York company claimed that the Westinghouse emergency valve piston was dependent upon the movement of the triple valve piston, while their emergency valve piston operates independently of the triple valve piston, and they denied infringement because of this feature; the other features of the New York triple being identical with those of the Westinghouse, and being manufactured after expired patents. But the court held that this feature was fully covered by a patent issued to the Westinghouse company in 1888, and the decision seems to knock the New York company completely out by barring it from the use of the quick acting triple.

During the course of an address delivered to the members of the B. R. T., at their recent convention, held in Boston, Mr. Moseley, Secretary of the Interstate Commerce Commission, presented some very interesting statistics and comparisons, which strikingly illustrate the constantly growing importance of the railway interests in the United States. The following statements are from Mr. Moseley's address:

The men employed by the railways to conduct the transportation business of the country last year were 82,435. They constitute an army 98 per cent. as large as the active German army; 73 per cent. as large as the active army of France; six times as large as the active army of Great Britain; and more than thirty times as large as the standing army of the United States in these days of peace. For every 79 inhabitants of this country, men, women and children, there

was last year one railway employe, and one for every fifteen of the popular vote cast at the last Presidential election.

This latter statement is interesting, as showing the constantly increasing proportion of railway employes to the whole population of the country. According to the report of the Interstate Commerce Commission, the number of railway employes in proportion to the whole population was, in 1889, 1 to 87 inhabitants; in 1890, 1 to 84; and in 1891, 1 to 82, thus showing a constant increase.

From a recent book on railways, unofficial, it appears that the United States has the most efficient body of workers, for, while the railways of England require the services of eighteen men per mile of line, those of Germany and France, respectively, fourteen men per mile of line, those of Russia fifteen men per mile of line, and those of Belgium twenty-two men per mile of line, the railways of this country in the operation of their vast mileage required the services of only five men per mile of line. I regret that statistics do not admit of a proper comparison by density of traffic. While the service required of American employes is so vastly greater than that required of employes in Europe, and while their average annual wages are about twice as great, it still appears that the cost of labor to American railways is less than to the railways in any country in Europe, labor costing the railways of Great Britain, for instance, \$6,000 per mile; Belgium \$4,620 per mile; Russia \$3,600 per mile; Germany \$3,500 per mile; France \$3,080 per mile, while the railways of the United States pay for their labor only \$2,625 per mile of line—less than one-half the cost per mile of labor on British railways, and about one-half the amount per mile paid by the railways of Belgium.

Mr. Moseley made many other interesting statements, all of which emphasize the fact that the railway interest is, by far, the most important one in the country to-day. When we reflect that this development has occurred wholly within a period of little more than half a century, the result seems little short of miraculous. Just reflect that every fifteenth man in the country is bound to be a railroad man, and it will be hard to understand why, in a country as free as this, in a political sense, so intelligent a body of men as are railway employes are not better represented than they are, in the legislative councils of the nation.

The theory concerning technical schools seems to be somewhat different over in Europe than it is here. There they train boys with the expectation that they are always to remain in a definite position in life; they do not expect or desire them to make any effort to raise themselves out of a certain position, for which they have been fitted. Our consul at Rotterdam, Holland, in a report on the trade schools of that country, says: "A unique, an entirely European (or class) criticism of some of the Dutch technical schools is made by Dutchmen to the effect that the schools educate too much and too well." "We seek," said one school manager, "to make good wage-earning mechanics who shall be competent to their tasks, but at the same time content to remain permanently in the rank and

station of a wage-earning mechanic. Yet we find our pupils ambitious to reach higher, and, by virtue of their excellent training, competent to reach higher." Growing animated, this man continued: "Why, one of the boys graduated by us, who should have been satisfied to do good work at his bench, went to New York a few years ago and I just now hear he has been successful against sharp competition in winning first prize for the best plan of a gigantic railway bridge in the United States." The teacher concluded: "It is not for this our trade-school boys are trained, and we make a social and industrial mistake in thus over-training." That may be a nice social theory which consists in training a man for a particular place and keeping him there, but it is to be hoped that the day is far distant when it will obtain recognition in this country.

Wilfred P. Borland.

#### IMMUNITY FROM ACCIDENTS.

The country is mourning over the large number of accidents during the rush of travel to the World's Fair, until it is a question whether it really paid to have such a grand exhibition, if it had to be done at the sacrifice of so many lives and limbs. While all the so called trunk lines have had accidents, it is a remarkable fact that the Morris and Essex Division, which forms the eastern end of the Delaware, Lackawanna & Western railroad has, even during this summer's rush for business, been able to keep its record unbroken. Its record is that *no passenger has ever been killed in its cars* on this division. As the M. & E. R.R. was first chartered in 1835 and built from Newark to Morristown, then to Dover and extended to Hackettstown in 1854 it is quite an old road, but it had only a local traffic up to 1866, when it was again extended and reached the D. L. & W. R.R. at Washington, N. J., and the Delaware river at Easton, Pa. It is thus nearly 60 years old, according to its charter, and has been in operation over 50 years for a part of its line, and for nearly 30 years has done a heavy business in coal and passengers, and within the last 10 years it has, by the extensions of the D. L. & W. to Buffalo been made the carrier of a large amount of western freight and stock. Beside this it has an ever increasing host of commuters, who seek to find rest from the turmoil of the city, amidst the breezy Jersey hills, or along the slopes of the Orange Mountains. The business of the road has increased so that, according to the latest time table, 172 first-class and about 75 second-class trains arrive and leave Hoboken (opposite New York City) every day. Newark, seven miles out, has nearly 160 passenger trains each day. Dover (about 40 miles out) has 58 first-class and about 60 second-class trains arriving and leaving each day, while Port

Morris (nearly 50 miles out) has 36 first-class and about 130 to 140 second-class trains arriving and leaving each day. These figures are given simply as a proof that this road does some business, and that its immunity from accident is not due to any lack of trains on its line. It is also not due to any block or safety signals in use, for the only block signal used is at a tunnel through which about 250 trains pass every day on its double tracks. It is only by the "esprit du corps" animating the employees that such a success has been achieved in handling about 9,000,000 passengers and about 5,000,000 tons of freight a year. It has been claimed that the M. & E. is the busiest little road in the world, and it seems with much truth, for it has on its 176 miles of road over 160 locomotives, and many of these are kept running day and night. When it is a fact that the average for the United States is 19 locomotives to 100 miles of road, the above figures being nearly 100 locomotives to 100 miles become more striking and convincing proof that we have some work here.

Mr. Borland, in the December issue, reviews the testimony in the recent investigation of the terrible disaster at Jackson, Mich., and comes to the conclusion that the "deadly angle cock" was the cause of the wreck, because it had been turned and thus placed the train beyond the control of the engineer at the critical point. No one can say positively whether that "angle cock" was closed at the time the attempt to stop the train was made, but it was found closed after the wreck. The question might still be asked, was it not possible that the impact of the collision or contact with some of the parts flying around loose might have closed that cock, as it had such a convenient handle to be jarred or struck? That man riding on the front platform may be the cause of the trouble, for it would appear that the angle cock must have been in shape even up to the time of recharging the train pipe when releasing the brakes at the last previous stop, but if he was the cause it is to be assumed that he would not knowingly place himself in jeopardy by shutting off the air and then riding on the first platform, where he would be most likely to be crushed. The only explanation to be given would be that the propensity to "monkey" with things, (so often and strikingly developed with some men) should have tempted some one to move that handle. But let the matter be as it will, the danger from having an angle cock shut off would be easily eliminated, or at least reduced to a minimum, by taking away the convenient permanent handle and having the stems of the valves made to fit a wrench or handle, to be in charge of the trainmen, and thus pre-

vent any displacement of the valves by outsiders. It does not appear possible to so arrange our air brake system as to do away with cocks at each end of each car, but it would seem that by the use of a return hose from the rear car to the cab of the engine and there connected to a gauge, any interruption to the flow of air in the brake pipe could be very easily detected and remedied before causing disaster. This return hose could also be used as the usual signal cord, by being run through the usual signal cord pulleys and eyelets, and might thus be made to do double duty.

If these ideas have any value they are free, as there is no patent on them, nor any to be applied for.

William Weiler.

SPECIAL attention is directed to the article of John A. Hill, editor of *Locomotive Engineering*, New York city, which appears in another column under the caption "Is it your turn next?" The proposition is not only unique but humane and should attract deep and widespread interest among the men of the locomotive, so many of whom have been sacrificed in ways well calculated to thrill the heart with horror because of the lack of improvement in boiler fittings and devices. The strong financial inducement held out by Messrs. Sinclair and Hill, the enterprising publishers of *Locomotive Engineering*, and the honorable distinction to be achieved in a contest involving the high purpose of saving scores of men who handle the throttle and scoop from frightful death and torture, will, it is hoped, stimulate spirited competition among our members, many of whom are close students of the machine and should have advanced ideas in matters of such importance to their calling.

#### INJECTOR PROBLEM.

MR. EDITOR:—In the September issue of the MAGAZINE, for 1893, Mr. Weiler explained the injector problem to W. J. Edwards. I have wondered many times since if Mr. Edwards was perfectly satisfied with that explanation. The injector may be a "mechanical paradox" and opposed to "reason and common sense"—natural philosophy is full of such; but the injector will work under certain principles, and when any of them are destroyed its operation ceases. I think if Mr. Weiler had mentioned something about the body at rest being overcome by the body in motion, that if the eight men start off on a run of perhaps ten feet, they might easily overcome the resistance of the ten men. With the injector, it is very essential to consider the induced current and condensation of steam.

**APPLICATION OF AIR BRAKE.**

MR. EDITOR:—Reading Mr. J. R. Norton's article in the November MAGAZINE brought to my mind some very good information in that line, which I came across at the air brake exhibit at the World's Fair. I fully agree with Mr. Norton's argument in favor of throwing the handle of engineer's valve to full emergency, should the occasion arise after making a service application of ten pounds, instead of releasing and then applying the emergency. But, suppose we look into the action of the triple valve a little more thoroughly. We all know that after we have made a ten pound reduction with a Westinghouse triple, and then throw the handle of the engineer's valve to full emergency, we do not get any emergency action, but simply a full service application. While at the World's Fair, I was told that the New York Brake company's triple acted differently; that instead of getting only a full service application after a ten pound reduction, they got the full emergency action. They said that a full emergency equalized at 62 pounds, a full service at 50 pounds, and an emergency applied after a ten pound reduction at 56 pounds. I did not believe this, and told them so, but, by making the different applications and showing me the pressure on auxiliary and brake cylinders, they convinced me that they were right. They also showed me the reason for this action of their triple, and I shall now try and explain it. Let us first look at the Westinghouse triple. Suppose we have an original pressure of 70 pounds in train pipe and auxiliaries, from which we make a reduction of 10 pounds. We now have 60 pounds in auxiliary and train pipe, and 25 pounds in brake cylinder. We will now look to the pressure acting on the emergency piston. The 25 pounds in the brake cylinder is pushing up on the emergency piston and tending to keep it from coming down and opening the emergency valve. The emergency valve has the 60 pounds in the auxiliary, and that 60 pounds must compress the emergency spring in the main piston head before it can get to the top of the emergency piston. We can easily see why this reduced pressure cannot overcome the different resistances which are tending to keep the emergency piston up and the valve closed, and the reason is plain why we do not get an emergency, but simply a full service application, in this case. Now, let us take the New York triple under the same conditions, namely: with 60 pounds in the auxiliary and train pipe, and 25 pounds in brake cylinder. The chamber at the top of the emergency piston has a port which opens directly to the auxiliary reservoir and keeps auxiliary pressure on continually on top of that piston, while the chamber at the bottom of the piston opens directly to the train pipe, keeping train pipe

pressure continually on the bottom of the piston. Now, it can be seen that the 25 pounds in the brake cylinder can have no effect on the working of the emergency piston, as it does not in any way come in contact with it. I hear some one ask, just as I did, "Why wouldn't the emergency piston work in an ordinary service application?" The train pipe pressure, pushing up on the emergency valve, forms a resistance to the piston which an ordinary service application does not overcome, as the pressure on top is also reduced as soon as the service valve opens. But, in the emergency action, the area of the piston is proportioned to the area of the emergency valve so that exactly the same reduction is required to open the emergency valve as with the Westinghouse triple. We have seen that, with this triple, if we want to get the emergency action after making a 10 pound reduction, we have not the 25 pounds under the emergency piston to overcome, in addition to the regular resistance to an emergency, as with the Westinghouse triple. In fact, we have simply the regular resistance to an emergency action to overcome. Therefore, if, after making the 10 pound reduction, we throw the handle of engineer's valve to the emergency position, we get the emergency action on top of the service action, equalizing the auxiliary and brake cylinder at 56 pounds instead of 50, and, also, we get this pressure all at once instead of waiting for the service to fill the cylinder. I do not know how the many readers of the MAGAZINE will look at it, but it looks to me as if this would be a big advantage in a tight place. In reply to Mr. Norton's questions, I will say:

1. The triple valve is so called because the original triple consisted of a combination of three valves.

2. The action of the main piston in the triple and the equalizing piston in the brake valve are alike. In fact, the equalizing discharge ports of the engineer's valve are almost identical with a plain triple; the equalizing reservoirs, from which the preliminary discharge comes, answers to the train pipe in the plain triple; the train pipe, connected to the engineer's valve, answers to the auxiliary; and the discharge valve answers to the service valve. In action they are identical, for, when we reduce the train pipe pressure, the auxiliary pressure moves the piston back and opens the service valve. When the pressure in the auxiliary equalizes with that in the train line the service valve closes. Thus we see that these actions are exactly alike.

3. We had two cases like this a short time ago on a job I was working on. In one of them I found that, during repairs on the valve, some one had put a spring in the emergency head which was very much weaker than the standard. The other case was more

of a puzzle, but I found that the small pin which opens the graduating valve had broken off; with a slight reduction it would catch, and open the valve all right, but with a greater reduction it would slip by and not open the valve.

4. If the emergency valve did not seat properly, the air which leaked by would pass through the emergency and release passages, and then through the port in the slide valve, to the pressure retaining valve; or, if the gasket between the triple and auxiliary did not form a perfect fit between the auxiliary and the pipe which carries the air to the brake cylinder, the air which escaped would follow the release passage, and the port in the slide, to the retaining valve. The graduating valve might also be responsible for the leak. If the main slide valve was leaking it would produce the same result, but it would also show a leak when brakes were applied.

#### ECONOMICAL USE OF OIL.

MR. EDITOR:—In the December number of the MAGAZINE, Mr. Lucas criticizes my article on the economical use of lubricating oil. I am glad to have him do so, for every one should be able to "Give evidence of the faith that is in him," and I especially consider my article open to criticism, inasmuch as it contains some assertions that do not accord with customary practice among engineers. Still these assertions have been proven in actual service. Many will agree that they have no intelligent idea of the limit of oil required to prevent heating, from the fact that they have not been restricted to a certain limit in its use, being always allowed to use their judgment without restraint, and catering to the maxim of Mr. Lucas that "A pint of prevention is worth a gallon of cure," rather than run the risk of an experiment to ascertain the actual amount required. Many of those same engineers are paragons in economical practice in other respects. They understand the limits of power to the speed required; working their engines to a nicety to the end that no more energy be expended than is actually necessary, but the majority of engineers must plead guilty to ignorance of the amount of lubrication necessary for a favorable comparison with other lines of economy. In my experience, which has been principally in freight service, I have made some experiments, the result of which were the basis of the article criticised. I run an 18x24 Brooks engine of the mogul pattern. Before going out on my run one morning last September, I noticed that the waste above the driving boxes was swimming in oil. Knowing that the holes in the boxes were clear, I concluded to experiment on the length of time and distance those bearings would run with-

out heating; the engine having just arrived from a trip over eastern divisions, and having received an oiling 33 miles before reaching the terminal, about two hours before I assumed charge of her. I took particular notice of the temperature of the journals at distances of 20, 40, 50, 62 and 90 miles. There was no noticeable change, except at 90 miles the back driving journals were quite warm the other four being at a normal summer temperature. The distance run with one oiling was 123 miles; time, eight hours. The waste in the cellars did not touch the journals, consequently all lubrication came from above. The bearings were in good condition and the best quality of Galena engine oil was used. The principal point in the above experiment is that it gives an approximate idea of the time it takes a quantity of oil to feed through waste. I hope to see this subject thoroughly considered and commented on by the readers of the MAGAZINE. I will give the results of different tests later on.

SAGINAW, MICH.

L. B. Moore.

#### THE ENGINEER'S VALVE.

MR. EDITOR:—In the rules adopted at the Master Mechanic's Convention for the operating of the Westinghouse air brake, there is one for the testing of the train pipe, for leaks, which reads as follows:

When coupled to the train, and the black pointer of the air gauge has become stationary, or begun to rise a little, place the handle in position 3 (on lap) and note whether the black pointer remains stationary or falls back, if it falls back it indicates a leak in the train pipe; and the rapidity with which it falls indicates the extent of the leak. No train must start out with a serious leak in train pipe or apparatus.

Now, the question at issue is: Is there any communication between the air gauge and the train pipe when the engineer's valve is in the lap position? I gave this question to the *Engineer's Journal* a couple of months ago, and it has brought out considerable discussion, some claiming that there is communication, while others claim there is not. It is evident from the many answers received that some one must be wrong, and, as the air brake will be an important feature in the future examinations of firemen for promotion, I give the question to the MAGAZINE readers, hoping to receive as many answers as I did through the *Engineer's Journal*. Now is the time to master the difficult problems as they arise before us. If there is no communication between the air gauge and train pipe when the engineer's valve is on lap, this rule is wrong; as the engineer, after coupling on to his train and charging it, could lap his valve and all the air could be taken out of the train pipe and he be none the wiser. In fact he would be sure that there was no leak because the black pointer did not fall.

In answer to Mr. Norton's questions:

Triple means three-fold, or three of a kind.

The triple valve consists of a piston valve; on the end of the piston valve rod, a slide valve works; and within the slide valve, a small valve called a graduating valve, works; the three valves make up the combination which is called a triple valve.

The main piston in the triple valve acts in the same relation as the piston in the brake valve. The piston in the brake valve has the equalizing reservoir, in connection with the brake valve chamber, pressure above it and the train pipe pressure underneath. The piston in the triple has the train pipe pressure on one side, and the auxiliary pressure on the other. As we reduce the pressure from above the piston in the brake valve, the train pipe pressure, being greater underneath, will raise piston and train pipe pressure will escape; and as the train pipe pressure is reduced, the auxiliary pressure being greater on the other side of the piston, forces it down, or away from the auxiliary, closing the feed groove, and auxiliary pressure enters the brake cylinder.

A defective slide valve, a weak graduating spring, a broken pin in graduating valve, or a gummy piston in engineer's valve, would cause an emergency application when not desired. But, as the service application worked with a reduction of 5 pounds, and the emergency with 8 pounds, a difference of only 3 pounds, it looks as though the emergency was caused by a weak graduating spring.

A defective emergency valve, or the improper seating of same, will cause a blow at the retaining valve. The emergency valve has a rubber seat, and if any dirt should lodge there to prevent seating, it would produce the above result.

In reply to Mr. Carey, I should think it only natural for the extension front to heat when spark cap was left off, as the air would be a feeder to the sparks; just as we need air to aid combustion.

A leaky check valve in triple will cause brakes to release without releasing engineer's valve. When we make an emergency application the train pipe pressure passes through the check valve, to brake cylinder, and, after the pressure becomes equalized, the check valve, closing prevents pressure from the brake cylinder from re-entering the train pipe. As these checks often leak after reseating, it can be seen that the pressure in brake cylinder feeds back to the train pipe through the check valve.

BALTIMORE, MD. *Walter C. Garaghty.*

THE once great Vulcan Iron Works, built at a cost of \$1,000,000, and covering six acres of ground, are being sold piecemeal as junk. The eight-ton steam hammer was sold to Pittsburgh manufacturers recently for \$6,000. Even the brick-work is disposed of to wreckers.—*American Machinist.*

#### QUESTIONS AND ANSWERS.

The following questions and answers are clipped from *Locomotive Engineering*:

G. E. B., Bedford, Ia., asks:

1. Suppose an engine should come in at an out-of-the-way roundhouse with all four eccentric blades bent, twisted and broken, so that it would be impossible to get the length accurately enough from them to send to headquarters, and you had no blue-print and no other engine of exactly same build was at hand, how would you get the length, close enough to allow for adjustment, to send to repair shop? (It is not probable that such an accident ever happened, unless in a bad wreck, but I use it simply as an illustration.) A.—Put engine on forward center, take up steam-chest cover, or use tram to set valve with proper lead opening, then measure from center of hole in top of link for eccentric-rod pin to shoulder on eccentric stop, drill holes after the blade arises; do same for back motion, and the two blades will be practically the same length. 2. How is the drop of the link-lifter arms of the lifting shaft determined? That is, when shaft is leveled on surface plate and center of reach-rod and pin-hole is perpendicular to surface, how is the distance (if any) calculated of the centers of pin-holes of lifting arms below centers of shaft bearings? A.—The throw of the tumbling shaft arm must be enough to move the link up and down the length between the eccentric blade connections; the bending down of arms is often done to avoid the boiler when the arms are at their highest point; the length of arm, of hanger and of the location of the tumbling shaft have a great deal to do with the distribution of steam. 3. What are the "Mansell" retaining rings and how are driving-wheel tires secured by them? A.—The Mansell retaining ring is two rings bolted to the outside of the wheel center, and having a lip on their insides that are let into grooves turned in the sides of the tire. 4. In laying off driving-spring hangers what is a good rule to observe in regard to the amount of draw to give a spring in relation to number of leaves and weight to be supported? A.—There is no set rule that can be followed in this case. 5. How is the tension of the driver-springs applied to the boxes of the "999"—by a downward pull connection at bottom of box, or pressure on top through system of levers? If at bottom how connected? A.—The springs are underhung, a heavy spring hanger being bolted across from one jaw of the driving-box to the other; the boxes are of Ajax metal and the connection made close to the bottom.

Fireman, Buffalo, writes:

We have some of Brooks' ten-wheelers with rocker set in front of forward drivers.

short valve-stem and long eccentric rods, valve-stem has flexible joint about midway between rocker and packing-box, and is fitted with metallic packing with a soft metal-lined guard extending out from packing-box about 10 inches. In an argument with an old runner, he claimed the joint was put in valve-stem on account of the guard being there. I said the guard was used on account of joint, and joint was used on account of valve-stem being so short. Being only a fireman, I did not feel like opposing his ideas very strong, but determined to write to *Locomotive Engineering* and find out. A.—Your views are correct.

L. A. P., Los Angeles, Cal., writes:

What is the matter with the following method of finding the dead center on the road? Place end of chisel on frame of cross-head, so that in moving the engine pushes the chisel, which leaves a mark on the guide. The end of the mark indicates the extreme point of travel, and, therefore, the dead center, or at least close enough for setting an eccentric on the road. A.—That gets the dead center near enough to do the temporary work required on the road. Under some circumstances the crank-pin may, however, be a considerable distance away from the center when the cross-head reaches the extreme point of travel.

And the following are taken from the *American Machinist*:

S. N. B., Austin, Ill., writes: Kindly give me full particulars in regard to the construction and working of the hydraulic ram. A.—The hydraulic ram is a self-contained and automatic pump operated partly by the pressure of a column of water in a pipe, and partly by the stored up energy acquired by intermittent motion of the column. In its simplest form, it consists of a main pipe placed on an incline leading water from a spring or reservoir at the upper end of the pipe to an air chamber attached to the lower end of the main pipe; this air chamber is connected to a tank placed somewhat higher than the spring or reservoir. To the lower end of the main pipe another smaller pipe is attached, extending downwards, with a cock at the lower end, from which water is drawn for, say, domestic purposes. When this cock is opened, the water in the small and main pipes is put in motion, and acquires a velocity due to the head; as soon as the cock is closed the momentum of the column of water opens a valve in the air chamber, and the water rushes into this chamber. This effect takes place every time the cock is used, and as water is drawn from it at short intervals for household purposes, an abundance of water will be raised in the tank.

2. Where can I get a copy of the patent

office report? A.—From the Commissioner of Patents, Washington, D. C.

H. G. H., Bristol, Pa., writes: Please inform me who was the inventor of the screw propeller; also of what was it made, and how was it made? A.—The screw propeller as an instrument of propulsion is of comparatively late date. We find it proposed by Hooke in 1680, Duguet in 1727, Paneton in 1768, Watt in 1780, Bramah in 1784, Fulton in 1794, Cartwright in 1798, and Shorter in 1802. In 1804, two years before Fulton began building the "Clermont," Colonel John Stevens, of Hoboken, N. J., built and run a steamboat on the North River, in which he employed a screw propeller. The engine and propeller are still preserved at the Stevens Institute of Technology. In 1806 he built the "Phenix," which made the trip to Albany from New York in 1807, shortly after Fulton had succeeded in accomplishing the same thing with the "Clermont." From this time to 1836 numerous arrangements of screw propellers were proposed, but no extended use was made of this method of propulsion until Francis Pettit Smith, of Hendon, England, and Captain John Ericsson brought the subject forward, and by their energy and perseverance proved the practical value of screw propellers for ships. Both obtained patents for the use of the screw in 1836, and from this time forward its application to steamships has steadily increased. (*Appleton's Encyclopedia of Applied Mechanics*.) We presume that all the early propellers were made of cast-iron.

T. W., Newark, N. J., asks: What is the difference between a "square foot" and a foot square? A.—The term "square foot," in its widest sense, is one of the units of measurements of the areas of surfaces; if, for instance, a surface is 24 feet long and 6 feet wide, it contains  $24 \times 6 = 144$  square feet; if it is 2 inches long and 6 inches wide, it contains  $\frac{24 \times 6}{144} = 1$  square foot. In a similar way the area of cylindrical surface, a sphere, or of any other surface, can be expressed in square feet. The term "foot square" indicates the form of the outline of a plane surface; it indicates that the surface is bounded by four straight lines at right angles to each other; it also indicates the length of these lines. If, for instance, a surface 1 foot square is mentioned, it is understood that a square is meant, and that each of its sides is 1 foot long; or, if a surface 20 feet square is spoken of, it is understood that this surface is bounded by 4 straight lines at right angles to each other, each 20 feet long. From the foregoing, it will be seen that a surface 1 foot square contains 1 square foot, and a surface 20 feet square contains  $20 \times 20 = 400$  square feet.

## WOMAN'S DEPARTMENT.

EDITED BY IDA A. HARPER.

Letters for publication should be directed to Ida A. Harper, Stanford University, California.

### MODERATE DRINKING.

At an Anti-Alcohol Congress recently held in Holland, at which were delegates from America and from most of the countries in Europe, one address was made which acted like a bombshell. It was given by Sir Dyce Duckworth, honorary physician to the Prince of Wales and lecturer on medicine at one of the great London hospitals. He declared that the moderate use of alcohol is not hurtful but beneficial, that total abstinence, even for the sake of example, is not to be commended, and that children should be so instructed as a part of their education. While the congress, as a whole, was outraged at this speech, it received strong support from several prominent medical men, none, however, from America, we are pleased to note. They took the ground that a man cannot live without some stimulant, overlooking the fact that, if such is the case, a stimulant is still more necessary to women, who are by nature less strong, more inclined to nervousness and subjected to peculiarly trying ordeals. Are these learned gentlemen ready to admit that all women should take alcohol in a moderate degree? If so, is any one ready to predict the kind of wives and mothers we should have and the probable effect upon the children? Is it not true that the reason there are not more drunkards to-day is because of the saving grace of the mothers? Or, as Charles Dickens once expressed it, "I think it must somewhere be written that the virtues of the mothers shall occasionally be visited upon the children, as well as the sins of the fathers." And Walter Savage Landor says:

"Children are what their mothers are;  
No fondest father's fondest care  
Can fashion so the infant heart."

If it is right for a man to be a moderate drinker, it is right for a woman. In the lower grades of society women are already moderate drinkers, and even drunkards. It is charged that in the highest classes there is much more drinking among women than there used to be. Are men ready for this state of affairs? Women have been taught from the days of St. Paul to "learn of their husbands," and the latter have been setting this example for as many years as we have any record. If drinking is a pleasant and a necessary habit, there is no reason why it should be monopolized by men.

These distinguished speakers at the congress fixed the amount at an ounce and a half of alcohol a day, three generous drinks.

Without stopping to discuss the quantity which would constitute moderate drinking, and admitting, for the sake of argument, that three drinks a day might assist digestion and give a man more strength for his work, we would ask each individual to consider all the cases of moderate drinking he has ever known, and note how many persons who commenced on this quantity never increased it during a lifetime. There is no better authority on liquor drinking in this country, or possibly in any other, than Dr. Leslie E. Keeley, and here is what he says on this subject:

I claim that facts will prove that the standard of moderation, established by these physicians, of one and a half ounces of alcohol daily will produce inebriety. In fact any quantity of alcohol, drunk daily, will produce inebriety in a corresponding degree. A man may take a very small quantity of morphine daily say one-eighth of a grain, and not cause any disease except opium inebriety. That a small quantity of morphine, taken daily, by its action on cell metabolism, will enable a larger amount to be done on the same quantity of food. It will do almost everything that alcohol will do under the same conditions. But the man who takes morphine in this manner will increase the quantity in less than a month, and within three months, unless a guard with a bayonet is standing over him and weighs out the morphine for him, he will be taking three or four grains at a dose. These poisons cannot be taken in any quantity without causing their respective inebrieties.

There never was a sadder story related of the human race than that which is telling itself in the thousands of wretched men who are crowding into the so-called Keeley institutes, as the last resort for the cure of a habit which they are utterly helpless to resist. In the face of this melancholy spectacle it seems the most terrible sacrilege to talk of educating our children that moderate drinking is a good thing. Every one of these unfortunate victims began by moderate drinking. All drunkards begin in this way. "There is no more need of prescribing any daily moderate quantity of alcohol for healthy people than there is for advising an occasional duel because wars are a part of civilized history," says Dr. Keeley. From possibly the widest range of observation ever made by any man, he says:

But I do not deny that there are moderate drinkers. I claim, however, that these people are all moderate drinking inebriates if they drink habitually, or every day or if they take alcohol regularly with meals. If a person begins taking one and one half ounces of alcohol with daily meals, and continues the practice a few months, he will notice the following results: If he omits the alcohol for a day he will miss it. He will feel a craving for something. His digestion and strength will be below normal. This means that the digestive organs and nervous system are educated to digest food under the stimulus of so much alcohol. If the alcohol is withdrawn the digestive forces and general physiological measure of force will be diminished accordingly. To this extent such a person is an inebriate. His digestion may recover its normal condition in time if alcohol is used; but until the craving for liquor is gone, the man is an inebriate.

One hates to be a fanatic. We would so much rather be able to say, "It is all right for a man to take a glass of liquor occasionally if he does not take too much;" but we

are forced to a radical position when we behold the fatal consequences that follow the "ounce and a half a day." Only that wife, that mother, who has seen the appetite increase, day by day, until it has dominated the man's whole life, can understand, to its full extent, the power that lies in that single glass. It reaches from heaven to hell, and it covers every form of vice and misery and anguish that is possible to humanity. Dr. Keeley does not exaggerate when he says:

It is true that if any person is positively limited to one and a half ounces of liquor daily for a lifetime no harm will come of it, but education will never bring such a result. Eight out of ten young persons who adopt the practice of taking this moderate quantity will shortly be victims of inebriety. A craving for liquor will be set up, and more will be taken. In a few months, more or less, these persons will be inebriates. In short, if the young people of a community adopt such a course, within a year nothing but imprisonment and surveillance will keep them from drinking alcohol as the drunkard drinks it.

These are not the words of a theorist, of a fanatical enthusiast, or of one whose vision has been warped by bitter wrong. They are the testimony of one who speaks from the unimpeachable standpoint of scientific knowledge and practical experience. It is corroborated by the voice of the ages. We dare not temporize with this question. The man who teaches the young that moderate drinking is beneficial, the woman who, without resistance, permits those whom she might influence to contract this daily habit, commits a crime. There is no middle ground which is absolutely safe. Nothing new can be said on this subject, one can only repeat the old arguments, and point to the infinite examples that at all times are to be found on every hand. And yet, when one reads that, at a great international council of learned men, it is seriously advised that the young should be instructed that the moderate use of alcohol is beneficial, it is impossible to keep silent. We seem to hear the voice of helpless women, of innocent little ones crying out in protest. We cannot permit the perpetration of this wrong upon our children. Rather let them be taught such laws of health as will render any stimulant unnecessary; and let it be impressed upon them that it is not only very foolish but extremely dangerous to contract a habit which if carried beyond a boundary line so uncertain that it cannot be defined will bring inevitable destruction. So long as young people are under the instruction and training of the home and the school, let them be taught in regard to intoxicating liquor, to abstain totally from its use. When they reach years of discretion and go out into the world, trust that they may understand from observation the importance of adhering to this rule. However this may be, it is the imperative duty of parents and teachers to lay the foundation,

instill the principles and build up the moral strength necessary for a temperate life. We may depend upon it that there will never be a public sentiment in this country which will favor our becoming a nation of moderate drinkers.

#### GAINS FOR WOMEN.

The cause of woman suffrage has gained two distinct victories since our last writing. One, the incorporating in the parish councils bill, now before the house of commons in England, of a clause enfranchising women. The other, the passage of a constitutional amendment conferring full suffrage upon the women of Colorado. Unfortunately, at this writing, we are in possession only of the bare facts as telegraphed to the daily press. Before this reaches our readers the full particulars will be known. The parish councils bill is an important one for England. It provides a system of self-government, taking away from parliament its authority in local matters and delegating it to councils similar to our boards of supervisors, town trustees, city councils, etc. It gives to women exactly the same voting privileges as to men. It is a liberal measure and will undoubtedly receive the full strength of this vote. The women of England have had, for a long time, a limited suffrage, much more, however, than is enjoyed by the women of this country. This bill will give them full municipal suffrage.

We shall then have the spectacle of England, a limited monarchy, giving to women privileges which are refused to them in America, the land of the free; where every person is a sovereign and entitled to his own individual representation in the government,—provided he is not a woman. In all matters connected with the municipality it is impossible to separate the personal and property interests of men and women. In all cases of taxation and expenditure of public money women must bear their proportion. They must feel, the same as men, the results of the administration of a city, whether it be good or bad. Why they should be refused the privilege of a voice in selecting the officials who control municipal affairs, levy the taxes and spend the money, is something which it does not seem possible to explain by the laws of equity. It will puzzle the future generations to find any reason for it when they are studying the history which we are making, and when this most unjust distinction of sex shall have been swept away. It is undoubtedly a great thing to be American woman, but Englishmen have done an act of justice to their women which certainly put the men of America at a disadvantage and increases the humiliation of our women.

There are several ways in which suffrage

can be secured to the women of the United States. One is by an act of congress submitting to the legislatures of the various states an amendment to the national constitution. Another is by the legislature of each state submitting to a vote of the people an amendment to the state constitution. A third is by a special act of the legislature. The latter is most unsatisfactory. The bill can be found unconstitutional by the supreme court, as was the case a few months ago in Michigan. The legislature of that state, last spring, conferred municipal suffrage upon women, and the supreme court decided that this conflicted with a certain clause in the state constitution and was null and void. The same thing happened in Illinois, when the legislature gave school suffrage to women and the supreme court declared it unconstitutional. If an act of this kind does pass the test of the supreme court it may at any time be repealed by another legislature, so that it is far from being a final settlement. Municipal suffrage was conferred in this way upon the women of Kansas, and any legislature has the power to repeal it, but public sentiment in that state is so strongly in favor of it that there is little danger of this being done. Still this does not alter the fact that the women are completely at the mercy of the men in this matter. Wyoming came into the Union with woman suffrage firmly entrenched in her constitution. It never can be removed except through a vote of the people and, as the women themselves would be able to vote on it, they are safe for all time.

The last legislature of Colorado passed a bill to submit the question of giving full suffrage to women, to a vote of the people, (that is, of course, to the masculine half of the people,) at the state election in November. According to the dispatches, it carried by a large majority, and by this time, doubtless, has received the signature of Governor Waite and become a part of the constitution. The law is explicit and gives women the right to vote for every officer from president to constable on exactly the same terms as men. This will carry with it the privilege of filling any and all offices. Governor Waite has long been an ardent friend of woman suffrage and recommended it strongly in his inaugural address. This new law will add 40 per cent. to the voting population of Colorado and women will cast about three-tenths of the ballots of the state. This undoubtedly will have an effect on the neighboring states which will ultimately lead to the enfranchisement of their women. The last legislature of Kansas submitted an amendment to the popular vote, giving full suffrage to women. It is almost sure to carry, as it is both a republican and a populist measure.

There is nothing which can prevent the ultimate enfranchisement of women. How soon it may come or how long it may be delayed it is not possible to predict with any certainty. Conditions in this country change so rapidly and so unexpectedly that it may be precipitated suddenly as a political necessity; or it may come gradually in response to an evolution of public sentiment. If, however, some one of the dominant parties should be wise enough to make it an issue and carry it to success, it would put itself so far in the lead as to be assured of power for many years to come. Personally I believe this will be done before a decade has passed.

#### WOMEN IN BUSINESS.

Mrs. Cyrus W. Field, whose new millinery enterprise is receiving considerable advertisement, adds to it by a long syndicate article on the "The Woman in Business." She makes some good points and some which are not so good. Among the former is this:

With the average business woman, it has usually been a question of maintaining herself or starving, and those who object to her not having preferred to starve should quarrel with our present social system and not with the woman. Surely, society is better off if woman enters business instead of the almshouse. I do not say that it might not be better still, if women never had to enter either.

She feels quite sure that women will elevate, ennoble and refine business life. She thinks they are more honest, more capable of acting quickly, more successful in managing details, more competent to consider the interests of those whom they employ. She thinks that woman's entry into business life may mean the solution of many vexing problems; that she may settle the disputes between labor and capital, become arbitress of the distribution of wealth and confer a hundred incidental favors upon society. These are roseate views, let us hope they may be realized. An English social economist has written a profound treatise upon "The ethical and intellectual effects produced upon women by the counting room and the office." Many students of social questions are anxiously inquiring what are to be the results of a business life upon the gentle and sympathetic natures of women, and especially how is it going to affect their matrimonial prospects? The *New York Sun*, which, for many years, held a very conservative position upon this question and looked with disapproval upon the new condition of thing, had this to say in a recent editorial:

The more general entrance of women into employments and daily association with men, is more likely to provoke marriage than their old and comparatively secluded manner of life. The attraction of this magnet is the stronger the nearer it is. It is the more irresistible the more constantly it exerts its power, and the more removed it is from the distracting influences of the traditional social intercourse. In plain words, if pretty girls work in offices with

men, the chances are that lovemaking will increase greatly. Instead of the enlargement of the sphere of women, as it use to be called, acting as a restraint from marriage, it fosters marriage. The more feminine youth, beauty, and charm are spread abroad, the more irresistible they become. The more the activity of women outside the confinement of the home, the more likely are homes to be multiplied.

However this matter may be decided, whether as a good or an evil, the fact remains that woman has entered the business world and is there to stay. She has tasted the sweets of independence and the satisfaction of being able to earn her bread, and she will never yield her ground. The question is not so much what she will do for business as what business will do for her. There is a tendency always to put woman in the role of a missionary, sacrificing herself for the good of somebody else. Before we grant her any privileges, we are always wanting to know what she is going to give in return. It is time we recognized her right as a human being to do the best she can for herself in the struggle for existence. As regards the effect of business life upon her chances for marriage, it is likely to increase them in two ways: first, by bringing her in contact with men and permitting an acquaintance; second, by showing her capabilities and qualifications, which make her just as valuable in the household as in the world of business. A girl with an occupation stands a better chance of getting a husband than the girl who is idle and dependent. She is, however, not so apt to marry, because she is not compelled to do so. What we need is not more marriages but more sensible marriages. The social structure will have some trouble in adapting itself to these new conditions but they will eventually prove more satisfactory than the old ones.

#### CURRENT COMMENT.

The papers are telling of a woman who has just entered Johns Hopkins University to take a post-graduate course for the degree of doctor of philosophy. They relate that, even though she should stand at the head of her class, the rules of the institution will not allow a woman to receive the degree. They state also that she will be considerably handicapped, as she has three small children, the youngest not yet three months old. With all due respect to this talented and ambitious woman, we must confess that this does not seem a wise thing to do. It hardly is worth while to strive for an honor which a college will not confer after it is earned, but perhaps this might be done in order to show the injustice of making this distinction of sex. The point we wish to make, however, is that the mother of three little ones commits a wrong against both herself and her children when she attempts to do a thing of this

kind. Unless she turn the children wholly over to the care of others, she will break herself down in the attempt and the children will necessarily be neglected. The mother of young children, unless driven out into the world by necessity, should consecrate a number of the years of her life to their care and training, even though her inclinations are strong toward other lines of work.

That was a fine spectacle when the city council of Chicago met to elect a Mayor pro tem to take the place of Carter Harrison. Fifty men, insane with anger, engaged in a hand to hand fight, knocked each other down, rolled over and trampled upon one another, and were prevented from bloodshed only by the arrival of the police. In the melee the heavy folds of crape which shrouded the chair of the dead mayor were torn into shreds. When a body of women, met together for some public purpose, have a heated discussion upon some point of disagreement, there is a prolonged chorus from the men and the newspapers of the country, pointing this out as a reason why they should not be permitted to have any voice in public affairs. It is barely possible, however, that not even the influence of women could rescue our large cities from the hopeless slough into which the influence of men has plunged them

A French statistician makes the startling announcement that men are constantly growing shorter and women are increasing in height, that if woman will be satisfied for a few thousand years she will not have to clamor for her rights but can pat the little men on the head and tell them that she will take charge of all the heavy matters of church and state and spare them the anxiety and fatigue. Heaven forbid! Women would almost rather give up the right they have and never ask for any more, than face such a calamity as this.

The papers are still discussing the Woman's Congress of Chicago, and one of them sends forth this wail: "Think of the 20,000 homes, more or less, which the women in attendance at the congress left behind them to the tender mercies of hirelings; think of the households that languished, the husbands that were neglected." It is a poor sort of a household that cannot be arranged to run for a week without the mistress, and it is a mean sort of a husband that would not be willing for his wife to take a little trip and attend a meeting in which she is interested. There would be just as much sense in the wife's objecting to the husband's taking a week off, on the ground that he would neglect his business.

It is a poor rule that won't work both ways, and husbands in the past have not been properly instructed in this particular application of the rule.

The government in Holland has passed a law that no woman shall be employed except between the hours of 5 A. M. and 7 P. M. This surely seems to be long enough, but the men put in more hours and thus shut out the women from work in many instances. The government would not dare to limit the hours beyond which a man could not work, if he chose. It should have no right to discriminate against women.

In Belgium the workingmen almost overthrew the government in their demand for universal suffrage. After they had secured it, the women, who had helped them in the fight, discovered that it was only male suffrage that was meant by "universal," and that they were not in it.

A firm of women in New York is doing a business of \$40,000 a year in the manufacture of paper dolls. Making paper dolls is unquestionably woman's work, but when it becomes worth \$40,000 a year is it not time some man stepped in and took charge of it?

The women of Iceland have had municipal suffrage for twenty years. It will be a cold day when they get left.

THERE are many inquiries for Mrs. Henry B. Jones. It is a long time since we had a letter from her. We beg our correspondents to be as reasonable as possible. All contributions which the most lenient judgment can consider worthy of a place in the MAGAZINE are prepared and sent to the publishers. No one is responsible for the delay in their appearance, it is unavoidable. Patience is one of the Christian virtues.

#### *The Servant.*

Since the publication of "Parental Responsibility" in this MAGAZINE, the weight of my weekly mail has considerably increased. The gentlemen, without a dissenting voice, agree with me, and their letters are in the majority. Most of the ladies agree also, but there is one who says, "I don't know whether you are correct or not, I never gave the subject a thought until I read your letter in the MAGAZINE." Another writes, "Dear Pebble, are you not afraid the men will tear you to pieces?" But four-fifths of the writers, have asked me to write something on the servant prob-

lem. Nearly all complain that they cannot get an honest servant, and they ask, "Why are so many servants dishonest? Did I ever have one?" Yes, I have had them, but I think I never made any dishonest by placing temptation before them. I believe I have reformed some, at least, they ceased to pilfer from me. I never leave money on the safe or clock shelf or the dresser top. I do not drop it down in the corner of the machine drawer. I never leave change lying around to tempt the girl, whose shoe soles are worn through, and who has scarcely a change of underclothing. I keep my money out of sight. I have a place to keep my pocket book, and I keep it in that place. I also have a place for everything, and I desire the girl to keep things in their respective places. It is then easier to know when small articles have really disappeared. As soon as I miss a thing from its proper place, I kindly but firmly tell the girl she must restore it to its accustomed place at once. This can only be done in families, where every member has been trained into these habits, but every family should be so trained. When I find servants pilfering, I take them into a room alone and reason with them. Often they tell me some of the saddest of all sad stories of want, cruelty, temptation and sometimes of sin. I never turned one from my house if there was any disposition to reform. Those who have no desire to reform, (as soon as they find they cannot impose upon me,) usually leave of their own accord. Otherwise, (as I do not keep a training school for servants,) I discharge them. There is a growing complaint against the servant of the present day, and not without foundation; it is very hard to get help that is *truthful*, honest and moral (to do house work,) for the reason that the smart, intelligent girl who has to earn her own living does not banker after the dishpan and wash tub; so she puts forth her best efforts and climbs higher. That leaves the most ignorant and incapable girls to do house work. They in turn do not love to stew and scrub, they envy the girl who stands on the rung above dish washing, and if the moral character has not been cultivated and strengthened—which it seldom is—they go down before temptation and want. But I never can forget that once, years back, they were as sweet and pure as the angels. Who can tell what grand and noble women they might have become if they had only been well born? The responsibility for this state of things dates back for generations. We are reaping what our ancestors have sown. If they sowed to the wind, we of the present generation shall reap the whirlwind.

Dishonest servants abound everywhere from the kitchen to the executive mansion. A gentleman wants to know, "Who

is responsible for this state of affairs?" The voters—the male population—persist in electing dishonest servants to fill the highest offices in the gift of the voters—the male population.

Gentlemen, if you prefer dishonest servants at the head of affairs why object to the same ornament in your kitchen? Perhaps when your wives vote, "the clouds may roll by. Perhaps then our numerous kitchens and temper-trying servants will vanish, or be swallowed up in a great cooperative affair that will give "rest to your weary souls."

Mrs. M. Orrell.

MURPHYSBORO, ILL.

#### *Thorny By-Ways.*

If ever we look for the cloudy side,  
The other we'll seldom see,  
But when we look for the sunny side,  
The cloudy will cease to be.

If we always look for a dangerous spot,  
When danger is nowhere near,  
We'll surely come to some silly thing  
That will add to our weight of fear.

If we always look for a crooked path,  
It's the one we'll surely find,  
And never know that the straight we've missed,  
Till we leave it far behind.

If we always tread with a doubt and fear,  
In lanes of the greatest length,  
We must find before their turning we reach,  
In hope lies our greatest strength.

So, 'tis better by far to only see  
The good things meant for man,  
And never taste of the bitter fruit  
When have of the sweet we can.

PRAIRIE DU CHIEN, WIS.

Nora Bull.

#### *The Art of Waiting.*

One of the most difficult lessons humanity has to learn is the art of patiently waiting. The activity which works for a certain end will prove the industry and skill of the worker, but the strain upon the endurance will not be felt then as painfully as, when his labor over, he waits the result. Who can tell what the poor artist has to endure in waiting the result of the picture that took so many days and nights to make; on which, perhaps, his future fame depends. The general who has drilled his soldiers so long and patiently for the approaching battle, awaits with anxiety the moment of contest. The sluggard who, with folded hands, waits for the favorable turning of fortune's wheel, is but a drone in the human hive. The hero is he who can stand firm and erect at a great crisis, preserving the even mental balance, the unshaken fortitude, the courage and endurance that have led to the hour of trial, and bear unmoved the suspense that precedes great events in life, ready for well earned rest if successful, or for renewed efforts if a failure, is the summing up of years of mental and bodily labor. Life's journey is marked by periods

of waiting. There are instances when hours of waiting are hours of keenest agony, and patience becomes the highest Christian virtue; for instance, waiting news after a battle. The aged mother walks slowly up and down the room, listening to each footfall, eagerly, eagerly, eagerly watching for loved forms that may be cold and silent upon the battle field. Fancy wings its flight o'er the distant meadows and she views the mangled body of her only son, the one that left her only a short time ago with spirits buoyed up with life and hope. The young bride bids her husband adieu as he sets sail for distant shores, but little dreams that it may be their last farewell. Days, weeks, months, and perhaps years, no tidings are heard from the ship that bore her from her sight. Daily she goes to the sea shore, where in childhood she whiled away so many happy hours. She eagerly watches each ship as it comes in, but, alas, she receives no news. Is there agony any greater than this? There are some instances where waiting for happiness taxes the patience and philosophy, as well as waiting painful news taxes the Christian courage. The active have duties, the healthy have their allotted work in life, but there are those to whom is given no part in life, save to wait patiently God's will. Some to whom is denied physical power, some to whom is given no mental force, some who are stricken down helpless midway in life's journey and must be a burden on loving hands until released by death. To these, in their weary hours of inactivity and suspense, there is comfort in the line, "They also serve who only stand and wait." Wait cheerfully then at life's periods where patience is called upon for her perfect work, folding the hands perhaps prayerfully, but fretting not that they must for a time be idle. Wait until God opens the way for renewed usefulness, or gives the spirit rest in the repose of death and happiness everlasting.

EL PASO, TEXAS.

Lena Widmann.

#### *The Old Year and the New.*

A year of changes has brought us to another division of time, which, as we mark it in our dates, emphatically reminds us "What shadows we are and what shadows we pursue." The "happy new year," the season of felicitations and of pleasures, though celebrated with festival, music and song, is yet a striking and solemn moment, and he must be hard indeed, who can write for the first time, the number that designates it, without a passing touch, at least, of serious emotion. It ought to remind him how far he has gone up on the scale of the dread century's progress, what a fleeting atom he is on the tide of passing ages, and how soon the frail records of time, which he strews

like leaves upon the dark wave, will be swallowed up forever. As we gather up the confused impressions of the past; as we meditate upon the many things, the many events, which seem as if they revolved in eternal circles, tending to nothing and producing nothing, we are ready to exclaim with the wise man, "Vanity of vanities, all is vanity." The sun rises and goes down, and hastens to the place where he rose. The wind goes toward the south, and turns about unto the north; it whirls about continually and runs again according to its circuits. All the rivers run to the sea, yet the sea is not full; into the place whence the rivers come thither they run again. Thus is revolution, change, instability written upon all things. The law of change is impressed upon every form of nature, it is taught in the revolving skies, it comes up from the heaving depths of the ocean. If we repose and rest everything is in motion about us, and the world in which we wake is no longer the world in which we fell asleep. Man's task, too, in the toiling world, when he makes himself a part of the world, what is it but motion, action, change—a ceaseless revolution which never carries him beyond his absolute or artificial necessities? Every human hand is stretched out to procure something that is wanted, to ward off something that is feared. The case even of boundless wealth, furnishes no exception to the law, for it brings, in equal proportion, the care of preserving and the fear of losing. Wealth has cares, poverty has necessities, and it is sometimes difficult to tell whether the cares or necessities are the greater burden, and whether the pride of wealth or the murmuring of poverty is the less easy and uncomfortable position. What state of mind or of the affections then is there, whether desired or deprecated, that may not minister to our annoyance if the holy virtues of faith, hope and charity, which give strength in our weakness, patience in our afflictions, and peace with our neighbor, be wanting?

"A bright and happy New Year to all."  
LEADVILLE, COL. *Nellie Lawless.*

#### *Passing Remarks.*

I have just finished reading Mrs. Harper's editorial "From the Center to the Circumference" in the November number of the MAGAZINE, and the splendid description she gives of her long journey is well worth reading again and again; indeed we feel indebted for the many interesting articles from her pen during the past summer. Many of us have not had the good fortune to visit the World's Fair, and the excellent pen pictures that have been presented to us from month to month, could not be surpassed.

I notice that many of the old contributors have been silent for a long time, I hope that

none of them have become indifferent towards the dear old MAGAZINE. Perhaps, like myself, they are in the midst of life's battles, home cares and duties seem to increase each day, until time for recreation and reading, or self improvement is almost crowded out.

With sorrow I read the account of "Wilda Chesterfield's" death. There were very few numbers of the MAGAZINE that did not contain her writings. They were always instructive and entertaining, she will be sadly missed from the Woman's Department. And, Mrs. Selby, it would be a vain attempt for me to offer words of sympathy that would in the least alleviate such a bereavement, but not a day passes without many thoughts of you. May the everlasting arms of love and mercy uphold, sustain and strengthen you until:

Unmindful of the flight of time,  
So fierce life's battle rages,  
Ere you're aware the cross will yield  
To rest, from sorrow and changes.

EAGLE BEND, MINN. *Mrs. C. S. Miller.*

#### *The Letter.*

I have written you a letter, my darling,  
That will tell you how sorrow and care  
Have entered my heart, my darling,  
And found a resting place there;  
And I trust when you read it's pages  
You will weigh each word I've said;  
They'll remind you of bright hopes vanished—  
They will tell of a love that is dead.

I have written you a letter, my darling,  
But there is sadness in every line;  
I cannot feel joyous and happy.  
Since thy fond love no longer is mine;  
Yet I thought it might soothe the anguish,  
It would make the burden seem light,  
Were I to tell you in writing, my darling,  
How my heart is aching to-night.

Yes, aching with sorrow and sadness—  
With grief that I cannot repress;  
Life's shadows fall thickly around me,  
Bringing with them despair and unrest;  
Like a tempest-tossed wreck on the ocean,  
Life's barque has gone down in the storm,  
The waves have engulfed it in darkness,  
With no gleam of a bright coming dawn.

• I have written you the letter, my darling;  
Dare I hope you will read it through?  
And will you think of me as kindly  
As I am now thinking of you?  
Will a thought of the past with its pleasures  
In a vision pass o'er thy sight?  
In your heart will you treasure each kind word  
That I've written you, darling, to-night?  
WEST OAKLAND, CAL. *Nellie Bloom.*

"WHAT'S this card in your pocket, John?" asked his wife. "That? Oh, before I went to lunch that was a bill of fare. Now it's my table of contents."

TEACHER—"It seems you are never able to answer any of my questions. How is this, my little boy?" "If I knew all the things you asked me, ma'am, father wouldn't go to the trouble of sending me here," replied Johnny.

JANUARY, 1894.

1893—1894.

The caption of this article would seem to be in the nature of a roving commission—a *lettre de cachet*, but we do not design taking advantage of such fancied privileges. "The past" will not tempt us into the realms of the pre-historic; "the present" will more fully engage our attention; "the future" is a sealed book, its pages unfold with the hours, twenty-four of which constitute a volume of revelations, embodying facts to be pondered, and with problems suggested and unsolved takes its place in the library of the centuries and goes to swell the vast number of the tomes of Time.

What is time? Is it folly to inquire because no man can answer? But men do answer. We say "past time," "present time," "future time." We divide time into seconds, minutes, hours, days and years, and then divide again. Shakespeare said: "The clock upbraids me with the waste of time." We talk of the "flight of time," but we do not stop to inquire how fast it flies. We talk of a day of twenty-four hours, measured by the earth's revolution on its axis at the rate of one thousand miles an hour. We talk of a year, measured by the earth's journey around the sun at the rate of 1,130 miles a minute, or 67,800 miles an hour, and this incomprehensible rapidity goes to make up the present and the past. The clock may run down, but time speeds on and on eternally. Time waits for no man. Time listens to no protests. If the moments are not caught and utilized as they go by they are lost forever.

There are those who think the years

loiter; not so, they are coming at the astounding speed of 67,800 miles an hour. To some the days seem to be tedious; not so, they are passing at the rate of 1,000 miles an hour.

"Arrow swift the present sweepeth.

And motionless forever stands the past."

The past has fulfilled its mission; the present is imperious in its demands; the future is a mystery. But what is the present? It is, perhaps, that instant of time measured by a heart throb, a breath. Strange to say, an hour may hold in its burglar-proof safe the fate of men and nations. It has been written, "Take no thought of the morrow,"—not as to its coming, but be intensely concerned to meet emergencies, provided it does come. We have a right to believe to-morrow will come, though, when it comes it will be "to-day." These to-morrows have been coming since the machinery of the universe was set in motion, therefore, in doing what to-day demands, we are doing all things possible to meet the requirements of to-morrow, and yet, after doing our best, we find, as Burns wrote:

"The best laid schemes o' mice and men,  
Gang aft a-glee."

No man is wise if he takes counsel of his fears. No man is worthy of consideration who hesitates to take all the responsibilities circumstances impose upon him. He may go down under accumulated misfortunes, but his duty is nevertheless clear—he must boldly confront his foes, be they devils, men, circumstances or conditions. To desert, to run, to skulk, is to invite the insufferable ignominy of treason to one's self and to all who are dependent upon him. To be shot in the back is the decoration death places upon the coward. To receive a death wound with face to the foe is to wrest from the iron grasp of fate an incomputable weight of glory, to remain monumental of his prowess "while heav'n has light or earth has graves," for it is the mission of courage, physical courage sometimes, and moral courage always, to keep both fate and foes at bay. And if there was ever a time, in the history of workingmen, when they were called upon to watch through gloomy days and nights, the present appeals to them for such vigilance.

Those who have been forced into idleness in the past, and are again in the grasp of the great misfortune, by virtue of which they experience the pains of poverty they cannot relieve, will simply realize an old enemy, and though the aphorism says, "Misery loves company," and though the number of miseries has swelled to a vast army, we doubt if the social phase of the situation will give eclat to the advent of 1894.

There will not be a reader of this New Year's article, though he may have mounted to the highlands of four-score years, who will recall a condition of the country so deplorable as that which now confronts us, particularly for wage-workers in the great centers of population and along all the iron railed thoroughfares of travel and transportation.

If we were to write the obituary of 1893, it would be in the nature of labor's funeral oration, and our welcoming address to 1894 would bear testimony of gloomy forebodings; and yet, as we have said, it is not chivalric to take counsel of our fears—, nevertheless, it is prudent to say, every workingman should know the extent of his resources to sustain himself during a winter campaign, and to the idle it is safe to predict that his courage, fortitude, forbearance and powers of endurance will be tested to the uttermost. Let it be understood that the future comes by minutes and hours—rapidly, we confess, but if to-day has premonitions of a gloomy to-morrow, there is, fortunately, a short span of time given to prepare for the worst, and hope, which "springs eternal in the human breast," should never be abandoned for the companionship of black despair. To brood over misfortune, to become melancholy, to despond, are the molecules from which cranks are evolved. The present is not the time to hunt for goblins or apparitions of any description; no time to throw dice. If a man betters his condition he must hold no conference with fate. The maxim is that "God helps those who try to help themselves." Napoleon said that "God is on the side that has the biggest guns." Be that as it may, only those who have courage win in the battle of life. We believe

a battle is coming; aye, it is begun; and now, comrades, courage. We hail you on the very threshold of 1894. We greet you as the dawn gilds the eastern horizon with its streaming light, to march with you as the sun of our destiny mounts to the zenith. In years that have passed, to return no more, we have sent forth the "Happy New Year's" greetings. We send them again, with our heart in every word. Thousands with whom we have tramped the thorny pathways from 1875 to 1894 will not hear our greeting—they have joined the ranks of the silent majority and gone to their reward. They were shining marks, and Death claimed them. It is the fancy of some that the spirits of the departed are with us and hover over and around us. If so, departed shades, to you, we say, hail and farewell—at least, you are in our memory. To the living, however, we address our New Year's greeting. When another New Year makes his appearance, and the MAGAZINE editor salutes the great order, it will be to us a source of unspeakable satisfaction, if the business gloom which now prevails shall have disappeared, and that all, from the humblest fireman to the Grand Master, shall be found enjoying the largest possible measure of happiness and prosperity that an overruling Providence vouchsafes to mortals. And now, comrades, one and all, a right happy New Year.

### VALUE OF THE BALLOT.

The *Alliance Independent*, speaking of the ballot, says:

A man's ballot is the scepter of his individual sovereignty. By using it wisely, intelligently, he maintains his manhood and guards at all points against the insidious encroachments of tyranny. The ballot is the proud, invincible weapon of American citizenship, the invaluable possession of the common people—and is itself a recognition of man as man, that one man, no matter who his parents were, has as much right to a place and natural means to live as all other men, and that he should be equally benefited by the laws of society, each having one vote and one only. The ballot placed in every hand has cost millions and millions of lives, and comes down to us, out of the struggle of the ages, as our chief inheritance. It is the gift of earth's countless heroes, and bears to us their free, undying spirit.

The ballot has with us displaced the sword we hope forever, and in the light of advancing truth shall peacefully settle the great questions which still divide men, questions of equity and individual rights. War,

all the aggressive wars of history, have been engaged in for conquest, for wealth and power over labor. To-day business is war, having the same object and compassing the same end.

Getting as much as one can.

While giving the least that one must, is the barbarous rule of business, and it does not bring into battle with each other those having equal wisdom and power. The far-sighted, the cunning, the law favored and intrenched demand net-profit tribute and unequal exchanges from the others, from the masses whom they have made dependent by first robbing them of their birthrights to land, which is the necessary basis of liberty. The monster monopolies are veritable kingdoms grown up in the republic, aggressive despotisms, far advanced in their encroachments on liberty's basis, and reaching out after the whole earth. We are all for the time being in subjection to monopoly power, and must unite at the ballot box to cut its absorbing tentacles and get loose from its grasp.

The foregoing is a happy and forceful presentation of the value of the ballot, but in further considering the subject, a number of questions are forced upon the attention of the American people. (1) While the ballot is the symbol of citizenship and sovereignty, is it not being used to destroy both? (2) Is there not a purpose rapidly developing to restrict the ballot within narrower limits?

In replying to such interrogatories, however severely condensed, considerable space must be taken, for, however easy it may be to formulate questions, it is not always, nor generally an easy task to answer them, and questions which relate to citizenship, sovereignty, liberty and independence should not be lightly dealt with.

The true American idea is manhood suffrage, that is to say, a native born American, twenty-one years of age, who is not an idiot, nor insane, and who has not committed crime, is entitled to the ballot, and in most of the states of the union, under the laws, has this suffrage right conferred upon him. But there are states that have enacted laws which do not recognize manhood as alone sufficient to entitle a man to suffrage. There are a number of states that disfranchise paupers, men no longer able to provide for themselves, and who, therefore, become a public charge. There are many grades of the misfortune called poverty, and the pauper is supposed to have reached the lowest—and is, therefore, disfranchised, and takes his place with the insane, the idiot-

ic and convicted criminals, who are also disfranchised. Now, if the pauper could get a chance to earn so much as fifty cents a day, he could, with the aid of Edward Atkinson's Aladdin oven, live on nine cents a day, and put forty-one cents in *bank*; and if then, like Jay Gould, he could get a patent mouse trap, or like old Commodore Vanderbilt, get a scow and a long pole, or like old John Jacob Astor, get possession of a mink skin, he might rise, in course of time, to the serene and lovely altitude of a millionaire. but in the absence of such opportunities, he must be a pauper, and in several states pay the penalty of disfranchisement. The law, as a penalty for extreme poverty, disrobes its victims of citizenship, of sovereignty, and reduces him to the level of the insane, idiots and criminals.

It is not required by the law that the pauper should be declared guilty of any crime, or that he should be crazy or a fool. If he holds out his trembling hands and asks for bread, for clothes and shelter, that answers the demand; and then the law reduces him to an outcast, the penalty, in so far as voting is concerned, is the same as is visited upon the most depraved wretch in a penitentiary.

It does not matter in what bank wreck, engineered by bunko desperadoes, his savings may have been wrested from him; it does not matter in what corporation mill, between the upper and the nether stones he was reduced to pauper pulp; it does not matter that he may have been remanded to idleness because he belonged to a labor organization, and sought to live as becomes an American citizen; it does not matter that he may have worked and obeyed the laws of his country, until bending beneath the weight of accumulating years he asks for bread; it does not matter that when the bugle called to arms, he said "farewell" to home and kindred, and sprang to the front and followed "Old Glory" into the storms of battle, the moment he asks the great public for help, something to keep his protesting soul within his famished body, he is disfranchised. The pauper may be possessed of every virtue, he may have been animated by noble aspirations, may have been charitable and magnanimous, but misfor-

tone overtook him, and great states, because he has no money, rob him of the ballot, and decree him an outcast.

In the states where this rape of manhood has been perpetrated, the idea prevails that money, not manhood is entitled to the ballot, and it is eminently pertinent to inquire if the crime could have been committed had workingmen—men, regarded as poor, as compared with the rich, had by their ballots protested against the iniquity?

Again, there are states which disfranchise men, because it is assumed they are non-taxpayers—that is to say, their names do not appear on the list of taxpayers. They are not paupers—they support themselves by their work, as also those dependent upon them for support. And these men, like idiots, the insane, and convicted criminals, are disfranchised. Here, again, the plutocratic class magnify money and seek to degrade the poor, upon the vicious assumption that a man can live in a rented house, buy food and clothing, and yet pay no taxes; when it is known and admitted that every rent payer is a tax payer; that every consumer is a tax payer. In short, every person, no matter how poor, who is not a pauper is a tax payer. Notwithstanding such uncontradicted facts, men are disfranchised, because their names do not appear on tax lists as tax payers, and here, again, the question arises, have workingmen, in the states where these poor men have been struck down by the plutocratic class and the ballot, to prevent the degrading crime, protested? Have they not stood idly by and seen the ballot, the "scepter of individual sovereignty," taken from the hands of their fellow toilers without an effort to prevent the crime?

In response to the question, is not the ballot being used to destroy the citizenship and the sovereignty of the individual? what we have said is a direct reply. There is no citizenship without the ballot, and only the citizen is sovereign, hence, when a man is disfranchised, citizenship and sovereignty go down together—hence, also, the ballot is used to enact laws disfranchising the poor, thereby placing all power in the hands of the rich. Such is the trend of affairs, and if workingmen do not see it they are blind.

Is there not a purpose to restrict the ballot within narrower limits? Every time a man is disfranchised, except for idiocy, insanity and crime, a flagrant departure from the true American idea is committed. On all occasions, and on every hand is heard the cry that illiteracy is the one great danger that menaces the government, but of late, comes another alarm; it is that wealth, consolidated wealth, is destined to overthrow our institutions. The rich are not illiterate. They can read and write and cipher, and it is the rich who are eternally repeating the *folly* that the illiterate, those who can neither read nor write are to bring about the ruin of the government—and by their clamor, they are able, here and there, to disfranchise, not only the illiterate, but men whose names are not on the tax list. In all of this is seen a purpose to do away with manhood suffrage, to deny poor men their rights, to create a governing class, made up of rich men, as if the hope of the country was based upon money, rather than labor.

---

A BANK bill is a note, bearing no interest, that the bank owes. Now if you go to your neighbor to borrow \$100, he says, "All right, make out your note with good security at 8 per cent." You do so, and give it to him and he gives you his note bearing no interest for yours. Wouldn't you think your neighbor rather cheeky? Well, that is just what you do when you borrow of a bank. They have had some law put behind their note to make it better than yours, and they draw interest on their notes while you pay interest. Do you think a law that gives your neighbor that advantage over you a fair one?—*The New Nation*.

Manifestly the bank has a decided pull on the borrower. But as matters stand just now the banks decline to loan money for the purpose of carrying forward industries, and as a result men are idle by the million. The proprietors of factories say "We can get orders, but cash down is out of the question." Customers require time but the banks refuse to loan money to help the proprietors, hence men are idle. Within the past few months four or five hundred banks failed. Why? Because, when their depositors called for their money it could not be had; it was loaned out. The idea is to do away with banks. Just how it is to be accomplished, and what is to take the place of the banks, if anything, remains unevolved.

## SUCCESS IN ENGINEERING

Mr. Chauncey M. Depew is president of the New York Central and Hudson River railroad system or corporation, and receives \$50,000 a year—his salary being the same as that of the president of the United States.

Mr. Depew has a charming personality. He is renowned as an after dinner orator. He has hosts of friends including all the Vanderbilts, Ward McAllister and his "400." He is learned, witty and some account him wise.

He makes the tour of Europe annually, or such portions of the continent as bring him in contact with its aristocracy and second class royalty, in fact he may sometimes be accorded the privileges of a cat and look at a king.

He has recently written a syndicate letter, on "success in railroading," in which he points out the opportunities for young men to rise from the ranks to positions of great power and influence, and to demonstrate that never before in the history of railroading have the magnates been so profoundly interested in the welfare of employees as at present.

In commenting upon Mr. Depew's syndicate letter we begin with its conclusion which is as follows:

Never before have the executive officers of railroads manifested so deep an interest in the welfare of the men and their relation with them. I know whereof I speak, and affirm this without fear of contradiction. Many of us who are charged with the practical management of the great railway system of the country are men whom I have known for years, and I assert that in no other great enterprise, industrial or commercial, in this or any other country, is such anxious, conscientious and thoughtful care bestowed on employees as is given to them by the managers of the principal railways of the United States. As before stated most of them have risen from the ranks of the worker. These have performed nearly all kinds of railway labor and have associated with all classes of railway men. They know by experience the risks and responsibilities and nearly always when a difference arises between the men and the company and there is a doubt as to which is right under the circumstances, the men are given the benefit of the doubt. My observation is that there never before was such intelligent management, such regard for the rights of the working classes and such attention to their general welfare as now obtains. The average railway manager of to-day is broader, abler and kinder than the average manager thirty or forty years ago. His sympathies are with his men, his interests repose in their hands, and he knows that competent service, loyal performance of duty, watchfulness by the workers

over the interests of the company, insure successful administration of its affairs. What better field is there for the pushing, energetic young men of to-day than our great railroad system? I know of none more promising.

Railroad employees engaged in the train service know just about how much of the foregoing is chaff, and how much is wheat, and they will be delighted if the chaff falls below 90 per cent.

It is probably true, that never in the history of railroading, have employees been treated with less consideration than now by the "executive officers," and when any consideration is extended it is owing to organization, but of late the power of organization has become a matter of little consequence in their estimation, hence the assertion, that never "in this or any other country is such anxious, conscientious and thoughtful care bestowed on employees as is given to them by the managers of the principal railways of the United States." Now then we challenge the record to show an instance when the "managers," finding business prosperous, said to their employees "men your duties are arduous and involve great danger, and we propose to advance your wages," but let business decline, and promptly is heard all along the lines the orders, 1st to remand men into idleness and 2nd to cut down the wages of those who are retained. If there is an exception to this record, just one, we shall be glad to know it, and will promptly give it prominence in the MAGAZINE. True it may be claimed that at least one of the Vanderbilts is very profoundly interested in having his employees bathe and keep clean, and is credited with being interested in their souls' salvation, but no one ever heard of the Vanderbilts solicitude taking the form of increasing wages 5 or 10 per cent. or any other percent, but the world has heard of wholesale discharges of men and the employment of Pinkerton thugs armed to shoot men on the N. Y. C. because they protested when outrages were imposed upon them, and if President Chauncey M. Depew protested, we will print his disclaimer in flaming capitals, if he or any of his admirers will forward the document to the MAGAZINE.

Such stuff is vulgar gasconade. When wages have been advanced or maintained it

has been by the action of employes, and all the twaddle about the solicitude of managers is downright duplicity and is intended to impress upon the minds of employes that the managers are responsible for their being in good running order, the same as their mules and machines—mere dependents, who would go to the devil were it not for the watchful solicitude of the managers.

But Mr. Depew voices some sentiments of real value, which from time to time have received our attention. He recites an incident or incidents in the history of Professor Morris of Cornell University, N. Y. Mr. Depew says:

I was out last fall making political speeches. They instructed and amused large audiences, but did no good. One of the places which I visited was Ithaca, N. Y. Before the train started the next morning I went up for an inspection of the Cornell University. I found there the best plant for the teaching of mechanics which I have ever seen. The theory was perfect, the processes were perfect, everything about it was perfect. They had every appliance which would send out a boy who could build a locomotive or an electric motor and do everything required where skill of hand and accuracy are needed. Prof. Morris who is at the head of that institution, said: "Mr. DePew, I feel that you are my superior officer: I am an old Central man."

"How did you get here?" I asked.

"I fired on the New York Central. I stood on the footboard as an engineer on the Central. While a locomotive engineer I made up my mind to get an education, believing that a mechanic could go anywhere if he had a good education. I studied at night and fitted myself for Union College, running all the time with my locomotive. I procured books and attended as far as possible the lectures and recitations. I kept up with my class, and on the day of graduation I left my locomotive, washed up, put on the gown and cap, delivered my thesis, received my diploma, then put away my diploma, put the gown and cap in the closet, put on my working shirt, got on my engine and made my usual run that day."

We confess to liking that sort of biography. It embodies a great truth, not that every one who applies himself to gaining knowledge will become professors in great universities, or that they will become railroad managers, but it does signify that they will place themselves in the line of promotion and may hope to advance.

One would be led to surmise, from what Mr. Depew writes of Professor Morris, that he would seek out from among the thousands of employes on the N. Y. C. men who give promise of intellectual development, of mind force, for the purpose of making them heads of departments. This, however, is

not done. If one of the rank and file gets up he has got to fight his way; not so with others whom Mr. Depew worms into head men. "We have," says Mr. Depew, "In the office of the Grand Central depot thirty young men who are graduates of Yale and Harvard. They are getting on an average \$36 per month, but they are coming on to take the places as heads of departments, and they will ultimately reach positions of profit and power in the railroad as they demonstrate their efficiency and ability."

This incident tells the story. The college graduate takes precedence, he has friends at court, and these nincompoops, without knowledge of men or of practical railroading, are scattered over the country and are generally a supercilious set of asses who often do more to create unrest and antagonisms than all other causes combined.

Mr. Depew recites a number of instances of the success of men who have risen from the ranks to places of commanding influence. We reproduce what he says as follows:

Twenty-eight years ago the president of the Atchison, Topeka and Santa Fe system, of nearly 10,000 miles, was the storekeeper at the principal locomotive shops of a Western railway. Thirty-seven years ago the president of the Lake Shore and Michigan Southern railroad company was division engineer upon the northern division of the Illinois Central railroad and prior to that time carried a rod and chain. Thirty-three years ago the vice president and general manager of the Southern Pacific company was a passenger conductor upon the Chicago, Burlington and Quincy railroad. Thirty-eight years ago the president of the Chicago and Alton railroad was an assistant engineer in the construction of the Illinois Central railroad, and served his apprenticeship with the rod and chain, and his vice president thirty years ago was a station agent at Springfield Illinois. My earliest recollections of the president of the Michigan Central railroad is in connection with a subordinate position held by him on the Chicago, Burlington and Quincy in Chicago.

The president of the Cleveland, Cincinnati, Chicago and St. Louis railroad company was an obscure young lawyer twenty-five years ago, who with unusual ability has concentrated into a successful and comprehensive system a number of lines of railway, most of which were previously unremunerative. The president of the Louisville and Nashville railroad company, ripe in experience from nearly forty years' service, sprang from the ranks. The chief executive officer of the Chicago, Milwaukee and St. Paul railroad company was fifteen years ago struggling in Cairo, Ill., with the varying fortunes, or rather misfortunes, of the Cairo and Vincennes road, about 160 miles long. The president of the Mobile and Ohio railroad company, formerly president of the Illinois Central, drove a team on the tow-path of a canal, then worked as a

track hand, then fired and subsequently ran a locomotive engine. The Pennsylvania system furnishes many examples of executive and department officers growing up nearly from boyhood in that great railway family and being transferred from the ranks of the workers to the sphere of larger responsibilities where their experience and training might be of mutual benefit to the company and its men. The New York Central and Hudson River railroad has been controlled and directed by substantially one interest for a long term of years, and in many instances it is officered by those who have virtually grown up with it and its vast army of workers. I might multiply these illustrations and show that the practical operation of the greater portion of our railway mileage is directed by men who have risen from the ranks, and who are familiar with the details of railroad life and railroad work.

Such reading supplies food for thought. There are still prizes to be drawn in the railroad lottery, not by *luck* but by hard study, by utilizing every spare moment, by having books for companions, by being prepared for promotion when it offers, to take the tide at the auspicious moment that leads on to fortune. We doubt if it ever flows by a saloon, or comes to a man whose hands are eternally thrust down into empty pockets to an extent that makes him round shouldered. There are vagaries in Mr. Depew's letter, but there are also great chunks of real wisdom, words that weigh a pound.

### RAILROAD ACCIDENTS.

Recently, in the city of New York, a number of railroad managers were in consultation regarding the remarkable number of railway accidents which make 1893 phenomenal in that respect. It was found that from January to October a larger number of accidents involving great loss of life and serious injuries had happened than for four or five years previously, altogether. These facts are creating widespread comment, and the managers who were in consultation upon the extraordinary exhibit were of the opinion that with one or two exceptions the accidents came within the class of railway fatalities which are known as the unaccountable and unavoidable.

During the meeting of the managers Vice-President J. D. Layng, of the West Shore railroad, referred to the accident which happened at Newburg early in the summer, which, he remarked, was a mystery to this day, because "it involves the explanation of the secret operations of the human mind," and added:

The switchman, a man who had been in the employ of the company ten years, always sober, always faithful, insisted that he had set the signal right, and that he had seen it thus properly displayed. The engineer, another man as careful and faithful as any of the company's employes, on the other hand, insisted that he saw the signal, and that it was set for safety. One of these men was wrong, and while, of course, each of them would naturally be disposed to defend himself, nevertheless it is the opinion of the railway people that each of these men believed that he was telling the truth.

What are the facts in railroad affairs during the year 1893? Some of them can be stated. 1st, There has been a wholesale slaughter of employes, and in numerous instances the men retained have been required to do double service, and this thing of one man doing two men's work inevitably results in accidents more or less serious. 2d, To reduce expenses the wages of overworked employes are reduced, and if an honest, tried and competent man complains of the injustice and seeks to remedy the wrong, a cheap-priced scab is employed, and the chances are that death, maiming and the destruction of property will result.

Again, regardless of the inexorable and immutable laws of man's physical and mental organism, railroad managers require employes to be on duty so many hours that accidents which might be avoided are rendered unavoidable because of excessive hours of labor.

Mr. Layng recited several instances of accidents having occurred where men exceptionally trustworthy were responsible, but he failed to tell how many hours those switchmen and engineers had been on constant duty without sleep. Had he given the facts regarding such inhumanity he might have omitted reference to the "secret operations of the human mind."

It comes to this: While railroad managers reduce their force and require men to do double duty, involving loss of rest and sleep, they will continue to lament the occurrence of accidents involving the loss of life and maiming, and the destruction of property, the cost of which far exceeds the sum total of what would be required to have full crews with ample time for sleep. The accidents of which they complain in numerous instances are chargeable to the greed of the corporation which befuddles their minds and makes their economy one of the most expensive features of railroading.

THE *Pennsylvania Railroad Men's News* for October has an article on heroism, in which, after giving the old-time standards by which heroes were judged and measured, says:

The mistake, however, which has long been made, and which we are only beginning to correct, is that courage alone can make a hero. To some extent we have given up this notion. Our present heroes are no longer cannibals or robbers or duellists, however courageous such men may have been. We have come to admit that something else must be united to bravery to create heroism. And what is that something else? Is it not some noble purpose outside of self and its interests? The glad and willing sacrifice for something higher than pleasure or interest, comfort or ease, united to the courage which scorns all mean temptations and persists in the truth and right, as far as it is seen, spite of all obstacles—that is the true heroism which we are vaguely seeking and beginning to appreciate.

We think the *Pennsylvania R. M. N.* is right, but to do right, to have noble purposes, to make willing sacrifices, etc., requires courage different from that which distinguishes cannibals, Indians and duellists, but still courage. A courage, which, when a railroad corporation cuts down wages or discharges a man he disdains to steal, even when hungry; who sees his wife and children hungry and naked but will not, therefore, sacrifice integrity and commit crime, preferring to die rather than disgrace himself. A courage which, were it in operation, would put an end to watering stocks and bonds whereby innocent parties are robbed, and to enable corporations to pay dividends on such evidences of fraud the wages of employees are cut down.

A GOOD story is told upon a Washington woman who now makes her home in Colorado. With evidently no thought as to the curious sound of the combination if spoken quickly, she has called her oldest child Helen Virginia. Not long ago upon a visit to this city she proudly brought her young daughter in to see an old friend. "What have you called your daughter?" queried the visitor. "Helen Virginia," was the complacent reply. "Ah, and what do you call her in Colorado?" was the unexpected but very natural response.—*Kate Field's Washington.*

Fortunately, the intellectual proprietor of the *Washington* was not named Helen Washington, though the late lamented extra session would warrant such a christening of all the girls in the capital city of the nation.

## The Lehigh Strike—On and Off.

The strike on the Lehigh Valley railroad was declared on November 18th and was declared off December 7th, making nineteen days the duration of the strike.

The strike having passed into history, it becomes prudent to inquire, what is its history? In view of the elaborate report of the origin and progress of the strike given in the December MAGAZINE, little is required to be added now. The circulars issued by Grand Master Sargent, together with the correspondence submitted tells the whole story up to the time when the state boards of arbitration of New York and New Jersey volunteered their services to bring about a settlement of the trouble existing between the officers of the road and their employees. The arbitration commissioners appeared on the ground November 28th, but received at first but little encouragement from the officials of the road, the arbitrators receiving from President Wilbur the following reply to their proposition to act as mediators in the trouble:

I am much obliged to you for your telegram, but at present there does not seem to be any occasion for arbitration, as there is no issue whatever between our employees, as such, and the company.

But the arbitrators were not discouraged by President Wilbur's curtness, and continued their solicitations for an interview, and finally succeeded.

It is eminently prudent, just here, to inquire, What was the nature of the trouble that precipitated the strike? It has been stated, but we repeat it here, that the final settlement may be the better comprehended, and nothing more explicit can be found than the following statement which appeared in the December MAGAZINE:

The strike is a direct result of broken faith on the part of the officials in dealing with their employees. Agreements made in good faith and conscientiously lived up to by the employees were flagrantly disregarded, and when redress was sought in a spirit of honesty and fairness, no consideration was given the complaint; and when finally, as a last resort the chief executives of the several brotherhoods were called in, they were given to understand by the officials that their intervention would not be tolerated—in other words, they were flatly refused a hearing.

Necessarily, behind this insulting action of the Lehigh officials there were grievances which the organizations had sought in vain to adjust honorably and amicably, which brought to the front as the last resort the chief executives of the organizations, and the refusal on the part of the Lehigh officials to treat with them, as has been said, brought on the strike, and as it was declared off December 7th, interest centers in the terms of the settlement. But to understand it fully, we are required to go back to November 21st, when President Wilbur issued the following bulletin:

To correct any misapprehension regarding the position of the officers of this Company, I would state that they are at all times ready and willing to give

patient hearing to complaints on the part of its employees, or any number of them in any department; if dissatisfied with the conclusions reached by the Division Superintendent or General Superintendent, the President will hear their cases and decide, but we decline to confer with organized committees composed of several branches of the service for the reason that we cannot know that such committees fairly represent its employees. Engineers, can not, of course, fairly represent grievances of telegraph men, nor can firemen properly represent trainmen. The company maintains the right to employ men upon such terms as may be agreed upon and settle all complaints only with its employees, and to discharge men for cause with the right to appeal, but without reference to the judgment or action of any organization.

A man is not required to be *argus eyed* to discover in the foregoing expressions a deep and abiding hostility to organization. It strikes at the fundamental principles of organization in that employees are denied the right of choosing their representatives to adjust grievances with railroad officials.

On Nov. 29, and subsequent to the posting of President Wilbur's bulletin, as given above, the arbitration boards of New York and New Jersey called upon President Wilbur and had an interview with him relating to the status of the employees, and published the following memoranda as the result of the interview:

That the road agrees to take back as many of their old employees as it has places for, without any prejudice on account of the fact that they struck or that they are members of any labor organization; that when in the employ of the road, committees from the various classes of employees will be received as stated in the bulletin of November 21st, and their grievances considered and justly treated; and that in employing men in the future the company will give the preference to former employees, when the strike is declared off.

Having secured the foregoing agreement on the part of the Lehigh officials, the arbitration boards, at the request of the striking employees, proceeded to Bethlehem, Pa., where they met the general grievance committee composed of John H. Rice, chairman, representing the engineers; W. E. Preston, representing the firemen; Emanuel David, representing the conductors; J. E. Dempsey, representing the trainmen, and John P. McGovern, representing the telegraphers, and after a long conference, telegraphed to President Wilbur the following letter:

SOUTH BETHLEHEM, Pa., December 5th, 1893.

E. P. Wilbur, Esq., Pres't. Lehigh Valley R. R. Co.:

DEAR SIR:—The State Boards of Arbitration of New York and New Jersey desire to know whether, if the existing strike is declared off, the Lehigh Valley Railroad Company will agree to take back as many of their old employees, as they have places for, without any prejudice on account of the fact that they struck or that they are members of any labor organization; that in re-employing men formerly in its service the available time shall be so divided among the men so re-employed that they may feel that they are again in the service of the Company and self-supporting; that in making promotions hereafter the Company will make no distinction as between men now in its employ and those so re-employed on account of seniority in service or otherwise; and that in employing men in the future the Company will give the preference to former employees, when the strike is declared off.

We further think that to prevent misapprehension, the Lehigh Valley Railroad Company should confirm

the rules posted by Mr. Voorhees, August 7th last, as First Vice President of the Philadelphia and Reading Railroad Company.

We believe that these suggestions are reasonable, and that if they are accepted by your Company the present strike will be at once terminated.

Respectfully yours,

G. ROBERTS, of the New York State Board of Mediation and Arbitration.

J. P. McDONNELL, Chairman of the State Board of Mediation and Arbitration of New Jersey.

It is said that the points in the foregoing letter were thoroughly discussed at the conference with the grievance committee, and subsequently with the Lehigh Valley officials, and as a result President Wilbur issued the following letter:

SOUTH BETHLEHEM, Pa., December 5th, 1893.

GENTLEMEN:—I beg to acknowledge your communication of this date. The Lehigh Valley Railroad Company agrees to the suggestion contained therein, and in the event of the present strike being declared off will abide by them.

We recognize and willingly respond to your modification of our former understanding—that the available time may be so divided that the men re-employed may have some certain source of support.

We further, of course, confirm the rules posted by Mr. Voorhees on August 7th last. The Lehigh Valley R. R. Co. resumed possession of its lines on August 8th, and the rules in question have not been rescinded. I am very truly yours,

E. P. WILBUR, President.

The supreme question is: Did the organizations win a victory?

It must be conceded that the various affiliated orders fought for the right as became courageous men. The campaign, it should be remembered, was inaugurated at a most inauspicious season. Winter, fierce and relentless, had set in and the whole country was in the grasp of the most unfortunate industrial conditions. It would be folly to ignore such environments. For the men to have done well under such circumstances is in itself a victory. From first to last, all honor to them, they never showed the white feather. They had spine and sand. There were no weak knees, but everywhere and all the time there were courage and prudence combined, and the strike *on and off*, leaves the men in positions in which no apologies are required.

According to the latest advices from the scene of the late strike, about 1,000 of the 1,800 strikers are left out of a situation, and a reduction of wages has been ordered to affect only those who struck and were taken back and the scabs that were hired. The reduction, in the language of the dispatch, was to "affect the strikers and the scabs that were hired, alike and alone." The scabs that remained at work, engineers, conductors, etc. were not affected by the reduction, the officials declaring that they "should be rewarded for their fidelity to the company." To think of thus debauching the term "fidelity" is enough to fire every drop of manly blood to indignation.

The conduct of the Lehigh Valley officials was reprehensible to a degree that cannot be properly characterized. Through it all

was and is seen the determination to wipe out organization, extinguish the lodge fires and make the Lehigh Valley a fit companion for his Reading twin brother, who, under the rule of such monsters of depravity as Corbin and McLeod, was years ago shorn of his hair and whiskers and dressed in stripes, the garb of a felon, fit emblem of a master's lash.

In re-employing the old men it is said that those who were in anywise active are, with scarcely an exception, out of a job. The officials informed the men that they had "only agreed to take back as many as they had room for," and that "none of those who had been hired would be dismissed to make room for those who had struck." The officials took their choice, shrewdly excluding those who had been active in the strike—the mainstay of organization, informing them when they reported for duty that their "places were filled."

In the future no man above 45 years of age is to be employed. The scabs are scattered over the system and by design it frequently occurs that a scab fireman is placed with a striking engineer, a scab conductor with a striking brakeman, etc., etc. The purpose of this is too obvious to require explanation. Under the terms of the settlement no allusion is made to the recognition of organizations, their officers or committees, and it will manifestly be the policy of the officials to run their road without the intervention of any organization.

The employees and the organizations made a gallant fight for a vital principle, and this in a large measure compensates for the sacrifice of men and money that the strike entailed.

A WRITER in the *Union Pacific Employees' Magazine*, referring to affairs connected with the Knights of Labor, remarks that "as far as we can judge from information at hand, T. V. Powderly did right in resigning as General Master Workman, in face of the circumstances that confronted him. He will be thought none the less of by those who have supported him in the past, who have recognized the high character of his generalship." The writer affirms that the work of the K. of L. is "educational" and must go forward. The "need of unity" is commented upon. Factions are generously rebuked, but, says the writer, "if it is necessary, let us destroy all organization and build anew. Organizations are but means to an end. It would be but the throwing away of an old tool for a new one." Manifestly, the breaking down of an order no more means that organization is to be arrested, than when a railroad is declared insolvent means that no more roads will be built. The Knights of Labor order may be, just now, in trouble, but we entertain the belief that it is not destroyed.

## Captain Jack Crawford, the Poet Scout.

It affords us real satisfaction to introduce Capt. Jack Crawford, a real poet and a real scout, to the readers of the *MAGAZINE*. In all things Capt Jack is *real*—as an army scout, a frontiersman, he has won proud distinction, and as a poet he rides his winged horse as gracefully as if it were an Arabian steed. He knows Parnassus from Pike's Peak, and could find the "harmonious springs" of the muses on Helicon without the aid of a search light. In a word, Capt. Jack, as a poet, has won his way to distinction, and is winning fresh laurels every day. As a specimen, replete with thoughts that breathe, we introduce the following:

IF I BUT COULD,

If I could clothe each jeweled thought  
That comes to me from Nature's bowers  
In classic language, such as taught  
Away from western woods and flowers,  
If I could sing the sweet refrains  
That in my soul in silence cluster,  
From many a heart I'd strike the chains,  
And give the star of hope new lustre.

If I could scatter all the gems  
That light my soul, in darkened places,  
Could pluck the hope-buds from their stems,  
And wreath them o'er despondent faces,  
If I but had the power to stay  
The blighting hand of pain and sorrow,  
The human flowers that wilt to-day  
Would raise their heads and bloom to-morrow.

If from the Master hand above  
To me the longed-for power was given  
To change all bitterness to love,  
Of every earthly hell make heaven,  
The lowering clouds would quickly flee  
Before the light which followed after,  
And every wave of Life's broad sea  
Would gleam and shine with sparkling laughter.

Another gem is his "Sunshine," of which we give a stanza, as follows:

This world at best is but a hash of pleasure and of  
pain,  
Some days are bright and sunny, and some all sloshed  
with rain,  
And that's just how it ought to be, for when the  
clouds roll by  
We'll know just how to 'preciate the bright and  
smilin' sky.  
So learn to take it as it comes, and don't sweat at the  
pores  
Because the Lord's opinion doesn't coincide with  
yours;  
But always keep rememberin' when cares your  
path enshroud,  
That God has lots of sunshine to spill behind the  
cloud.

Capt. Jack is now in the entertainment field, and is winning golden opinions in the ranks of men and women who are lovers of a combination of the beautiful and the true, all that is pure and sympathetic in poetry and prose, as he recites the one or the other. In addressing Army Posts, when he meets the veterans, he carries everything by storm. We can do our readers no greater favor than to urge them to be present and take front seats when Capt. Jack Crawford holds forth. They will be entertained and edified, and will go again.

## Judicial Department.

We begin with this issue of the *MAGAZINE* a Judicial Department, which will be found of special interest to all classes of railroad men. It will contain decisions of the courts throughout the country touching liability, and non-liability of corporations, and from time to time such statutes enacted either by congress or by states as relate to labor.

### RUNNING TRAINS SUNDAY.

The provision of section 4,578 of the code making it a misdemeanor to run a freight train upon any railroad in this state on the Sabbath day is a regulation of internal police, and not a regulation of commerce. It is not in conflict with the constitution of the United States even as to freight trains passing through the state from and to adjacent states, and laden exclusively with goods and freight received on board before the train entered this state and consigned to points beyond its limits.

*Henington vs. State*, Supreme Court of Ga. 17 S. E. Rep. 1,009. (96.)

### LEGAL POWERS OF A CORPORATION.

The charter of a corporation, read in the light of any general laws which are applicable, is the measure of its power, and the enumeration of those powers implies the exclusion of all others not fairly incidental. All contracts made by a corporation beyond the scope of those powers are unlawful and void, and no action can be maintained upon them in the courts, and this upon three distinct grounds: The obligation of every one contracting with a corporation to take notice of the legal limits of its powers; the interests of stockholders not to be subjected to risks which they have never undertaken; and, above all, the interest of the public that the corporation shall not transcend the powers conferred upon it by law.

*Todd vs. Ky. Union Land Co.* Circuit Court D. Ky. 57 Fed. Rep. 47. (147.)

### LIABILITY OF RECEIVER FOR ACCIDENT TO TRAINS.

A railroad company which had the right to run its trains into a certain town over the tracks of another company, then in the hands of receivers, duly notified the yardmaster of the latter, at that place, that an extra train would arrive about 10 A. M. on a certain day. The yardmaster communicated this intelligence to the foremen of the several switching engines, but the foreman of one engine neglected to notify his engineer, and the latter, while looking backward at the cars in his charge, ran his engine into the extra, thereby killing a passenger. The receivers were liable for the death, and this notwithstanding the fact that the extra was so late that, under the rules of the yard, the switch engine had a right to occupy the tracks, for the want of notice prevented the keeping of a proper lookout.

*Eddy vs. Letcher*, Circuit Court of Appeals, Eighth Circuit. 57 Fed. Rep. 115. (163.)

### NEGLIGENCE OF ENGINEER NOT IMPUTABLE TO FIREMEN.

The neglect of a locomotive engine driver to keep a proper lookout, and the consequent failure to avert a collision caused by the negligence of his employer's vice-principal, is not imputable as contributory negligence to the fireman of the same engine, who is injured in the collision.

*C., N. O. & T. P. R. Co. vs. Clark*, Circuit Court of Appeals, Sixth Circuit. 57 Fed. Rep. 125. (57.)

### TELEGRAPH OPERATOR AND LOCOMOTIVE FIREMEN FELLOW SERVANTS.

A telegraph operator at a way station, whose duty it is to display signals to prevent one train following another on the same track too closely, is the fellow servant of the locomotive fireman.

*C., N. O. & T. P. R. Co. vs. Clark*, Circuit Court of Appeals, Sixth Circuit. 57 Fed. Rep. 126. (41.)

### FOREMAN AND SWITCHMAN OF SWITCHING CREW ARE FELLOW SERVANTS.

A railroad yard was shown to consist of side tracks upon either side of the main track, adjacent to some principal station or depot, where arriving trains are separated and departing trains are made up, and where such switching is done as is essential to the proper placing of cars for deposit or departure. All

operation of the yard was under the direction and supervision of a yard master. The several yard switching crews were each under the control of a foreman or conductor. A brakeman of one of the crews claimed to have been injured by the negligence of his foreman, in giving a signal at an improper time, whereby the train was moved, and ran over his foot. The foreman and switchman were fellow servants, and the railroad company was not liable for negligence of the foreman resulting in injury to the switchman.

*Harley vs. Louisville & Nashville R. R. Co.*, Circuit Court, D., Tenn., 57 Fed. Rep., 141. (1147.)

### CONDUCTOR AND BRAKEMEN FELLOW SERVANTS.

In Indiana a brakeman on a freight train is considered a co-servant of the conductor of another train, through whose negligence a collision occurs.

*Becker vs. B. & O. R. Co.*, Circuit Court D., Ind., 57 Fed. Rep., 188. (28.)

### WHEN RAILROAD CONDUCTOR IS A VICE PRINCIPAL.

Rules of a railroad company imposing upon its conductors the care and management of switches used by them, and charging them with the responsibility of their proper handling and position while in such use, are such a delegation by the company of the duty it owes its employees, as will render a conductor, in that connection, a vice principal; so as to charge the company with liability for the death of an engineer killed by reason of his engine running into an occupied side track, through a switch negligently left open and unguarded by the conductor of another train.

*Mase vs. Northern Pacific R. Co.*, Circuit Court D., Minn., 57 Fed. Rep., 283. (102.)

### ASSUMPTION OF RISK BY EMPLOYEE.

Where a brakeman is injured in coupling an engine the coupler of which was not defective, but more dangerous than another kind, he cannot recover where he knew of its character and had informed himself of the best method of coupling with it.

*Hatter vs. Ill. Cent. R. Co.*, Supreme Court of Miss., 1580. Rep., 827. (46.)

### LIABILITY FOR INJURY TO PERSON ON TRACK.

Where an engineer blows the whistle on seeing a man on the track, and on discovering from the man's manner, when 200 feet from him, that he is intoxicated, makes no effort to check the train, and there is evidence that the man was struck on the side as he was trying to leave the track, the jury are justified in finding the company liable.

*Texas & P. R. Co. vs. Robinson*, Court of Civil Appeals of Texas. 238 W. Rep., 133. (68.)

### INJURY TO SERVANT BY DEFECTIVE APPLIANCES.

In action by a brakeman against a railroad company for personal injuries, there was evidence that at a certain station, while he was in the act of setting a brake on a flat car, the brake rod came out, because of the absence of the pin in the lower end, and caused him to fall. The brake had not before been used since the train was made up, and the absence of the pin could not be seen by a person setting the brake, but could by inspection under the car. There was no indication that the pin was displaced by the effort to set the brake, and there were indications that it could not have fallen out as the result of the car's motion. It was error not to submit to the jury the question as to whether or not the company used reasonable care in the inspection of the brake.

*Bailey vs. Rome, W. & O. R. Co.*, Court of Appeals of N. Y., 31 N. E. Rep., 298. (149.)

STRIKES and boycotts are useless weapons at the present time. With more than half the workmen in the country out of employment, it would be as foolish for workmen to butt their heads against a stone wall as to strike. Since you cannot strike with any hope of success, would it not be a good plan to strike at the ballot box?—*Cleveland O., Citizen.*

The panic, brought about by "Congressional legislation," has not only demonetized silver, but it has demonetized labor. In the mad rush for a "gold standard" the labor standard has been pretty effectually demolished.

### Train Robbing and Wrecking.

It is not surprising that the whole country is profoundly stirred by the frequency of the crime of robbing and wrecking railroad trains. So oft-repeated are these felonies, that they have become a national disgrace, and call loudly for the adoption of measures that will put a final end to their occurrence. In this connection our attention is called to an editorial article in a late issue of the *New York Herald*, in which it is said that "formerly these daring highway crimes were confined chiefly to the south, southwest, and the far west. But recent instances still fresh in the public mind show that they have been spreading to the more thickly settled portions of the north and east. When great trunk trains between Chicago and New York are boldly and successfully attacked by desperate highwaymen, a grave menace to life and property is presented which calls for the most stringent measures for the prevention and the punishment of the crime." It is now proposed that the general government shall take the matter in hand, and provide the means of ridding the country of the train wrecking and robbing criminals. A more timely and prudent suggestion could not have been made, and every consideration of safety to life and property demands prompt action on the part of congress to carry out the idea. A bill has been introduced in congress as follows:

Introduced in the House of Representatives, Sept. 16, 1886, by Hon. Jno A. Caldwell, M. C., Second District of Ohio.

H. R. 3188.

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That any person or persons who willfully and maliciously displaces or removes a railway switch, cross-tie, or rail, or injures a railroad track or bridge, or does or causes to be done an act whereby a locomotive, car, or train of cars, or any matter or thing appertaining thereto, is stopped, obstructed, or injured, with intent to rob or injure the person or property passing over any railroad engaged in interstate commerce, and in consequence thereof a person is killed, shall be guilty of murder.

*SEC. 2.* That any person or persons who willfully and maliciously displaces or removes a railway switch, cross-tie, or rail, or injures a railroad track or railroad bridge, or places an obstruction on such track or bridge, or unlawfully and maliciously displays, hides, or removes a signal or light upon or near to a railroad, or unlawfully and maliciously does or causes to be done anything with intent to rob or to injure a person or property passing over such railroad engaged in interstate commerce, shall, upon conviction, be imprisoned at hard labor not less than one nor more than twenty years.

*SEC. 3.* That any person or persons who unlawfully and maliciously throws, or causes anything to be thrown, or to fall into or upon or to strike against a railroad train, or an engine, tender, car, or truck, with intent to rob or to injure a person or property on such train, engine, car, or truck engaged in interstate commerce, shall, upon conviction, be imprisoned at hard labor not less than one year nor more than twenty years.

*SEC. 4.* That the Circuit and District Courts of the United States are hereby invested with full and concurrent jurisdiction of all causes or crimes arising under any of the provisions of this act."

Railroad trainmen should at once sign

petitions, and promptly forward them to the member of congress representing their district, urging him to push the measure until it becomes a law of the land. Copies of the bill, together with a form of petition will be promptly forwarded, upon application to the *Express-Gazette*, Cincinnati, O.

We are pleased to know that our genial friend, C. F. Willard, Esq., of Boston, Mass., has become president of the National Coin Company, doing business in Boston, Mass. Mr. Willard is not unknown to the readers of the *MAGAZINE*, as he has contributed to its columns a series of well-written articles, touching subjects in which our readers are deeply interested, and is an ardent friend of the wage worker. It will afford the *MAGAZINE* pleasure to promote Mr. Willard's business enterprise to the extent of its ability. We call special attention to the advertisement of the National Coin Company, No. 832 Exchange Building, State Street, Boston, Mass., of which Mr. Willard is the president, a guarantee that business is conducted on the square and that correspondents will have no cause for regrets and readers of the *MAGAZINE* who happen to have any coins dated before 1873, may find among them a quantity of varieties which are worth many times their face value. The National Coin Company sends out 16-page circulars, with illustrations of United States and foreign coins, with prices they pay for coins, stamps, Confederate and Continental currency. Cut this out and send stamps, and you will receive book by return mail. Send now. It may mean a fortune to you.

It is reported that common laborers in Carnegie's mills in this city receive 96 cents per day of 12 hours. If the big corporations keep on they will have little cause to refer to the pauper labor of Europe. They have the genuine article here at home.—*Commoner and Glassworker*.

That is to say, Carnegie's mills are grinding men so relentlessly, that in the future they may become paupers. There is no such thing as "pauper labor." As long as a man supports himself and family, however poorly, he is not a pauper. He lives upon his income as independently as an Astor or a Vanderbilt. But when forced to hold up his hands and beg, then he is a pauper. Carnegie is working along that line, toward that end.

Don't forget that an advertiser should command first attention in your purchases at this season. Their patronage helps the *MAGAZINE* and helps the brotherhood, and if you see anything in our pages that interests you write the advertiser and state *always* that you saw the advertisement in the *FIREMEN'S MAGAZINE*, that proper credit may be given. We have several new advertisements in this number which we ask careful perusal of.

### • The Clown and the Pope.

Hon. Chauncey M. Depew, P. N. Y. C. & H. R. R. R., recently had an interview with His Holiness, the Pope, in his vatican palace at Rome. Chauncey had prepared himself with a card to inform the Pope of his presence, gotten up at the *Tribune* office, New York, under the eye of Whitelaw Reid, late minister to France, and the letters P. N. Y. C. & H. R. R. R. were done in purple and gold, flanked by a bald-headed eagle and "Old Glory." A distinguished officer of the palace presented Chauncey's card to the Pope, who immediately inquired why such a large array of the English alphabet? The official, who had been posted, informed the Pope that the letters indicated the gentleman's various titles of nobility, conferred by Ward McAllister, who is at the head of New York's "400"—and were intended to inform His Holiness that a very great man was waiting to be introduced. Upon further inquiry, His Holiness was informed that in Yankee-doodledom the gentleman was addressed as Prince Nonesuch Youbet Constantine and High Rotating Rooster Rollingstock. It is reported that the Pope was utterly dumbfounded, and gave orders to let the P. N. Y. C. & H. R. R. R. come in without further ceremony, whereupon Chauncey entered and made one of his after-dinner speeches, telling the Pope that his salary was \$50,000 a year—the same as that paid the president of the United States; that he would like to rent a palace for Ambassador Van Alen, who was worth \$20,000,000, and would be likely to spend a clean million annually, and give such banquets as the King of Italy never dreamed of. He discussed labor affairs with the Pope, but failed to tell His Holiness that he found the employment of Pinkerton thugs had a quieting effect on kicking employees. The Pope is much in the habit of receiving royal personages, but he never struck anything quite so grand as Prince Nonesuch Youbet Constantine and High Rotating Rooster Rollingstock Chauncey M. Depew, with Vanderbilt air brakes and Ward McAllister's "400" tubed boilers. Now, then, by all means, let P. M. Arthur go to Rome with sufficient steam on to make him pop.

"AUDITOR," in the *Railway Age*, seeks to bring the labor leaders into ridicule and contempt, as follows:

I had the opportunity the other day of going over the notes of a meeting between a general manager and a committee representing various classes of the employees of his road, in the course of which the general manager made some very vigorous remarks on just this subject. I have to quote from memory, but what he said was something like this:

"Now you men know very well that if a priest was to come into this room and offer to keep you out of purgatory if you would chip in and pay him a dollar a month apiece for him to live on, you would just

laugh at him. May be you would drop him out of the window; but anyhow you would laugh at him. And you would think any man who believed him and paid him his money was a fool. Now when you men chip in to support a labor leader, other men laugh at you. I laugh at you just as you would laugh at the man who paid the priest. You act like fools to me. You take a man who is no better than you in your work not as good as many of you, and you pay him a good fat salary, and he lives well and doesn't care a ——— for any one of you, so long as he holds his job. Do you think people don't laugh at you?" Do you suppose he doesn't laugh at you himself?" And then he proceeded to express himself with some vigor on the personality of individual labor leaders.

With labor leaders, as labor leaders, he refused absolutely on behalf of his company to have anything to do. Like every other general manager he is extremely anxious to do justice to men on his road and to give them every possible opportunity to be heard in their own behalf; but, he insisted, they must be heard as employees of the road, and representing only employees of the road, and not as a committee of an association representing anything but employees of the one company.

Now, as to the general manager, to whom "Auditor" refers: He is not a labor leader, but a leader nevertheless, chosen to represent somebody and to speak for somebody—stockholders and bondholders—floating debt holders—first, second and third mortgage holders, who cannot be on hand to speak for themselves, often to their financial loss. This being true, why may not employees, who cannot be present to speak for themselves, choose a "general manager"—a leader, to meet the other general managers? And why should the magnate swell up when approached by the chosen representative of employees? There is no good reason—there never was a good reason—there never will be a good reason for the course pursued by the railway general manager. Such things as "Auditor" writes, he may imagine as in the line of fiction—and he may feel proud of the achievement. Nevertheless, employees are not greater fools, to put it mildly, in choosing a leader to approach the general manager than in numerous instances are the stockholders of railroads in selecting a general manager to represent them. The railroad history of the country is full of instances in which stockholders in paying general managers would have made money by taking the cash paid him for managing and given it to a priest "to keep them out of purgatory."

*Locomotive Engineering*, in its December issue announces its sixth birthday, and that it is now "goin' on seven." To note its size and contents, one might suppose it was way up in the "teens" possibly still more advanced in maturity at any rate for only "six years" it is a prodigious prodigy; still, we observe the intention is to grow. The editors say:

*Locomotive Engineering* for 1894 is going to be as much better than it was in 1893 as we know how to make it. Right on the start, it will have a cover: this has long been needed to keep the paper clean, to allow of side

stitching to keep it in better shape, and to admit of printing 16 pages of solid reading matter in front and 16 pages of solid advertisements behind, in order to enable our pressmen to do better work on both forms. We are going to give away \$2,000 worth of educational charts with subscriptions to the paper for '94. There are three of these going to each subscriber, and they are going to do \$20,000 worth of good.

The paper will contain several series of articles from the pens of the best posted railroad men in this country on especially timely subjects.

But there will be one feature that we believe will be especially interesting and do a lot of good at the same time, and that is, the prize competition for safe, handy and economical designs of boiler fittings for locomotives. We are offering \$50 in cash for the best designs for two classes of engines. This contest must excite interest, because it appeals to the life-saving instinct of human nature—the victims of scalding accidents reach into the hundreds every year. It appeals to the men on locomotives who seek more comfort and convenience as well as safety, and it appeals to railroad officers, as a design that means cheaper repairs, means a great deal in money saved as well as more miles per month for the power.

We felicitate Messrs. Sinclair and Hill upon the splendid success that has crowned their efforts and upon the cheering outlook for A. D., 1894.

#### Addressed to the Deity.

I've often wondered, Lord,  
Why, at Creation's birth,  
Thy wisdom could afford  
To populate the earth,  
Then give the power to man  
His brother to enslave,  
And keep him under ban  
Through lifetime to the grave.

O, Lord, this life is tough,  
We hopeless railway slaves  
Find daffy hell enough  
On this side of our graves  
Without a constant dread  
Of punishment in store  
When once we drop down dead,  
To roast for evermore.

Our masters, puffed with pride,  
Expect to reign in bliss  
When once o'er Jordan's tide,  
In that life just like this;  
I guess, O, Lord, they'll get  
A taste of something queer  
The moment Nature's debt  
They pay when leaving here.

Their combines, trusts and such  
Are growing every hour,  
They have us in their clutch,  
For absolute's their power;  
Please elevate thy hand,  
And knock such scheming out,  
If not, "Fair Freedom's Land"  
Will soon go up the spout.

Each day we live we feel  
How helpless we become,  
Ground 'neath each tyrant's heel,  
And must endure it dumb.  
I wonder if thou'lt throw  
A thunderbolt right soon  
Amongst such fiends, and blow  
Their bodies to the moon.

Thou'rt reticent of late:  
Some centuries gone by  
A man might know his fate  
At odd times from the sky.  
But, Lord, I know and feel  
When e'er life's game thou'lt call,  
Too mete out woe and weal,  
Thou'lt justice do to all.

*Shandy Maguire.*

#### Governor Altgeld and the Anarchists.

MR. EDITOR:—On page 975 of the November issue of the MAGAZINE appears an outburst from some zealous fanatic so rabid, so brutal, and so widely and wholly at variance with the actual facts in the case that to allow it to go unanswered would be a crime against truth and justice.

W. H. Gray, of Auburn Park, Ill., with all the cant terms at his tongue's end of the penny-a-liners who drivel for the public press, assails Bro. Debs in the most insulting manner and attempts to criticize and instruct Bro. Debs on a subject that he, himself, is densely ignorant on, or else he is some tool of the Citizens' Association who has got his "bit" from them for his contemptible frothings. If some brother in California or Maine, or some other remote place, who could obtain his information on this subject through the daily press only, had written such a tirade, the workingmen of Chicago could forgive him; and, like Jesus of Nazareth, they could say, "Father, forgive them, they know not what they do." But to think that a man living in Chicago could perpetrate such an article shows how stupid he really is, or else that he has other motives which are not apparent at this time. But I will not waste much space on Mr. Gray. His writings show him in his true colors far better than I, or even Bro. Debs, could do it; but as a workingman and a member of the B. of L. F. who was present from the inception of the anarchists' troubles until their burial in Waldheim, I will relate a little inside history that probably a great many readers of the MAGAZINE are not acquainted with.

During the spring of '86, thanks to the effective agitation of the previous winter, performed principally by Messrs. Parsons, Spies, Leebe, Fields and Schwab, the workingmen of Chicago were thoroughly organized and more unified than ever before and resolved to demand an eight hour day. As it is a well known fact that labor, when it is unified, is irresistible, they got what they demanded. The manufacturers of Chicago, seeing that the men were united and determined, knew that they would be beaten if it came to a fight; in fact, they were beaten, so they plotted to raise some side issue that would disrupt the men and ultimately defeat them. This was successfully accomplished through its tools by the Citizen's Association, a sort of a club composed of rich men that masqueraded as a public-spirited body of citizens working for their city's improvement; but in reality an instrument for raising and distributing money where it would do the most good, bribing the judiciary, subsidizing the press, paying the expenses of the anarchists' trial and paying an army of spies.

After considerable agitation by the press to prepare the public mind for what was coming, the police under Captain Bonfield brutally and without any provocation or instructions attacked a gathering on a public square that was a peaceful meeting, according to the testimony of Mayor Harrison, who was present at the time. During the attack some one threw a bomb—who has never been determined, but it is believed by many that it was some paid tool of the Citizens' Association to give them the groundwork on which to form their plot.

With the essential features then presented to them, a lying press, a corrupt public department and a half dozen labor agitators who were indiscreet enough to utter some foolhardy statements about capital, the Citizens' Association of Chicago took its pen in hand, which is represented by the following mark—S, and wrote the details of a plot that was far deeper and more cunningly contrived than all the writings of Shakespeare combined.

With the explosion of that bomb for an excuse, took out four or five men, some of whom had not even been near Haymarket Square, and hung them; not for attempting to overthrow this government, but as an awful example to the workingmen of Chicago in particular and the labor world in general.

The plot worked like a charm and organized labor was dealt a body blow from which it has never recovered. Of over two hundred trades and callings which then had an eight hour day but one is left, the bricklayers. It divided the men and disrupted the organizations.

When any member of the B. of L. F. feels disposed to condemn the so-called anarchists, he should remember the C., B. & Q. strike. How quick the press were to change their opinion of us! Previous to the strike we were lauded as a most conservative body of men, likewise the engineers; but they changed as soon as the strike was proclaimed and we were branded as a lot of dynamiters; the same was true of the B. of L. E. Members of both organizations were thrown into prison, being charged with using dynamite, and the entire membership were condemned equally with Bro. Goding; but then they were no more innocent than he was.

The anarchist trial is a precedent that the rest have aptly followed. In fact, it is getting to be quite the fad to invoke the aid of the law to overcome the workingmen. It is cheaper and surer to buy a court or two than to fight the men in a fair, open fight; witness Homestead, Buffalo, Toledo and Cedar Rapids, where Grand Chief Ramsey, of the O. R. T., was arrested for cutting wires. If they could hang a few more labor leaders now, like they did in '86, they could scare off the rest of them and have things

their own way, particularly if some so-called labor men like W. H. Gray would defend their action in their various labor publications.

The public press has always been the pliant mouthpiece of the moneyed classes. To illustrate, I will mention an incident that came under my personal observation. At the time of Mr. Parson's death the members of his lodge, myself included, attended his funeral in a body, also a certain Howard Trogdon, a member of the G. A. R., a citizen of the United States, and an old soldier who had served with distinction during the rebellion; his bravery at a certain battle, I believe it was Gettysburg, being very conspicuous and favorably commented on by the Chicago press prior to the funeral. Before joining the procession he determined to distinguish himself in such a manner as to effectually refute the charge that the anarchists or their sympathizers and mourners were an illiterate crowd of foreigners who wished to overthrow the government, as the press assumed, and he wished also to impress the public with the fact that he was a loyal American citizen and desired to protest against the judicial murder that was being enacted at that time; so he provided himself with an American flag and, walking at the head of the mourners, he waved the flag about his head. This was something that the Citizens' Association did not want. It wasn't in the play. The idea of any one connected with the anarchists or sympathizing with them waving an American flag and proclaiming that he was a citizen of the United States and had fought to preserve the country! It would never do; it wouldn't look well in print; it might lead fairminded people who heard of it to wonder if there might not be some justice in the so-called anarchists' claim that they were persecuted workingmen, instead of men who had tried to overthrow the government. So a hasty consultation was held and a squad of policemen were detailed to capture that flag at all hazards. They started after the old man, but found they could not bluff him and it looked for a few minutes as if there would be a riot. Finally, when the public seemed disposed to take a hand, the policemen gave it up and the brave old soldier continued marching and waving his flag to the end of his journey.

This incident was gratifying to the mourners who witnessed it, as the publication of it would be sure to place the five thousand mourners before the public in their proper light, as American citizens protesting against an outrage on law and justice, not as blood-thirsty anarchists hungering for revenge, as the public press would fain have it; but they reckoned without their host. If the police were not equal to the task of suppressing that flag the press was, for, with a

devilish ingenuity, they garbled and distorted the facts in the case until its meaning and significance were entirely perverted. Monday morning's papers, in their report of the funeral, recited how the gallant old warrior, outraged to see the anarchists walking without a flag, had grasped one and, waving it about their heads, had declared that nobody could insult the flag in his presence, and how the fierce and blood-thirsty anarchists had sprung on him like tigers and attempted to tear him and his flag to shreds and how the police and finally the public were compelled to interfere to overpower them, and then he marched triumphant, with his flag flying over the sullen and subdued anarchists, to the grave. This is a fair sample of the manner in which they have been maligned and slandered by the Chicago press.

That the jury that tried the anarchists was packed with prejudiced men everybody knows who is at all familiar with the case. I have often heard Mr. Morgan, who works in the I. C. shops, relate how he and his son had heard a certain juror, I believe his name was Parker, declare in the depot that the anarchists ought to be hung and if he was on the jury he would hang them higher than a kite. Afterwards, when he was accepted on the jury, Mr. Morgan and his son filed affidavits reciting his speech, which would have disqualified him before any judge in America with a particle of justice in him; but Mr. Gary refused to entertain their affidavits and forced the defense to accept this man, who had formed and published his verdict without hearing a particle of the evidence.

Contrast this with the Cronin case, which in many respects is similar to the anarchists'. One thousand and twelve men were examined before a suitable jury was obtained, while in the anarchists' trial only 120 men were examined, and as soon as the peremptory challenges for the defense were exhausted Judge Gary forced on them the most prejudiced jury that he could obtain, and it is an easy matter to fix a jury in Chicago. Politicians will get you on a jury or off one with the greatest freedom. Some men never sit on a jury, while others make their profession and living as jurors.

You will notice in the press criticisms of Governor Altgeld that they do not attack his motives as much as the result. They claim that he committed political suicide in pardoning those men, which may prove to be the fact. He has gained something which is infinitely greater than political preferment; he has gained the admiration and respect of all honest men and covered himself with glory.

The charges that W. H. Gray makes against Bro. Debs' being inclined to anarchy are as silly as they are unfounded. Bro.

Debs' record is established, and known years ago, not only to members of the B. of L. F., but to the workmen and labor press of this continent, as a deep thinker, a brilliant speaker and as the most gifted and forcible writer on the labor question before the public, and I sincerely hope he will continue to inspire the columns of the *MAGAZINE* with his genius for many years to come.

CHICAGO, ILL.

James Deegan.

### Are the Brotherhoods a Failure?

While rival organizations are in the field, men will of necessity be led into hostile camps; prejudices will assert themselves; enmities and jealousies will prevail and do their deadly work, and all these influences will combine to prevent a perfect unification of the craft such as is necessary to protect their rights and interests and secure for them that degree of consideration at the hands of their employers to which they are so justly entitled.—George W. Howard (*Vice-President of the American Railway Union*).

That there is a degree of restlessness, a yearning for something new, within the ranks of railway labor organizations is apparent to casual observers of current events. Existing organizations have not yielded the harvest that some had hoped for, and from many localities comes urgent demands for a change, for a new organization, one that possesses none of the defects peculiar to the brotherhoods, and one that will give immediate and permanent relief to our diseased social condition.

Subordinate lodges of the Brotherhood of Locomotive Firemen have received within the past few months numerous circulars, in pamphlet form, purporting to set forth the "principles of the American Railway Union," an organization now being instituted for the purpose of filling all requirements of those who are not satisfied with the present railway labor organizations. This circular is issued over the signatures of Eugene V. Debs, President, and S. Keliher, Secretary, which gives to the document more than ordinary interest, inasmuch as each of these gentlemen are quite prominently connected with other existing organizations and are favorably known to all organized labor. George W. Howard, ex-Grand Chief Conductor of the Brotherhood of Railway Conductors, is the Vice-President of this new order, adding strength by his prominence and popularity in labor circles. This trio of officials is of itself sufficient to draw to the American Railway Union the support of their many admirers.

The circular referred to dwells at length upon the merits of the American Railway Union but the larger portion of the document, in the language of the president and secretary "points out with unerring certainty the defects and demonstrates the inefficiency of the organizations as they now exist." That the president and secretary have implicit faith in their new order and none whatever in the organizations as they

now exist is evident upon the first reading. They arraign existing organizations as defective and inefficient in eleven special features and "the reforms sought to be inaugurated and the benefits to be derived" from the American Railway Union are set forth in six paragraphs.

From the fact that the Brotherhood of Locomotive Firemen is one of the most prominent of existing organizations, and that I am an ardent admirer of the firemen's order has led me to attempt in this article a defense of some of the "defects" which have been so severely criticised in this manifesto. It is not my intention to question the sincerity of these gentlemen; I believe them to be earnest in their endeavor to find remedial measures for the present distressed condition of labor, but it is my intention to demonstrate that some of the defects which they enumerate are, in fact, desirable attributes. My admiration for Messrs. Debs and Howard will be apparent when it is seen how copious are the quotations from the writings and words of these eminent labor leaders.

The circular introduces the discussion as follows:

In the creation of a new organization of railways employes, certain reasons prompting the movement are demanded and should be set forth with becoming candor.

The number of railway employes now in service of the railroads of America has been variously estimated from 800,000 to 1,000,000. It is safe to assume that this vast army of employes is at the present time not less than 1,000,000.

Accepting the highest claims of the various railroad organizations as a basis of calculation, less than 150,000 of these employes are members of such organizations leaving more than 800,000 who are not enrolled in the ranks of organized labor. \* \* \*

Experience, the great teacher, whose lessons sooner or later, must be heeded, points out with unerring certainty the defects, and demonstrates the inefficiency of organizations as they now exist.

First. They do not provide for all classes of employes, it being shown that 850,000 of them, or eighty-five per cent. of the whole number, remain unorganized. These may be divided into three general classes: (1) those who are eligible but decline to join; (2) those who have been expelled because of their inability or refusal to bear the financial burdens which membership imposes, and (3) the multiplied thousands in various departments of the service who are totally ineligible, there being no provision for their admission. \* \* \*

It would seem from the introduction to the prospectus of the American Railway Union that the principle reason for instituting a new organization is that organizations as they now exist do not provide for all classes of employes. Will this statement bear the light of investigation? Is it not a fact that the Knights of Labor provides especially for "the multiplied thousands in various departments of the service" who are ineligible for membership in organizations that have no provisions for their admission?

Do the president and secretary forget that the Knights of Labor have made especial provisions for these classes of em-

ployes by instituting "railway district assemblies?" These employes are now thoroughly organized upon the Union Pacific Railway, they were becoming rapidly organized upon the New York Central when a strike was precipitated which resulted disastrously to the Knights of Labor, and the president of that railway, Chauncey (Mephistopheles) Depew, was severely and justly criticised by the LOCOMOTIVE FIREMEN'S MAGAZINE for the war of extermination waged by him against those employes who desired to "march under union banners in the great struggle for the triumph of union principles."

Railway district assemblies of the Knights of Labor are composed entirely of railway employes, having no connection with other assemblies, except the moral and financial support, ever ready, and the same chief executive, T. V. Powderly. It may be said that like all other existing organizations, the railway assemblies of the Knights of Labor have defects, but not the defect specified in the first charge. The statement "they do not provide for all classes of employes" is not proved, in fact, the assertion is untrue. The president of the American Railway Union once said:

It is a fact, well understood, that the organization of the Knights of Labor, by virtue of its system of 'mixed' assemblies is in shape to organize the various classes of railway employes. If that great order should seriously consider the question of federation with other organizations of railways employes, we do not doubt that a satisfactory plan could be formulated.

If the first reason for creating a new organization is because no organization "provides for all classes of employes" then it is no reason at all according to the president's own statements.

The (2d) clause in the first defect assigns as a reason for the advent of the American Railway Union that existing organizations have expelled many members "because of their inability or refusal to bear the financial burdens which membership imposes" in existing organizations. A strike is the heaviest financial burden that members of existing organizations are called upon to bear; all others are trivial when compared to the large and oft-repeated assessments levied for the purpose of conducting a prolonged strike. The expense of insurance can hardly be called a burden, it is a self-imposed expense and is voluntarily accepted by nearly all members of the Brotherhood of Locomotive Firemen. Does the American Railway Union seek a membership that is "unable or refuse to bear the financial burdens" of a strike?

The circular says "less than 150,000 of these employes are members" of existing organizations. Taking this statement as correct it demonstrates conclusively that there is no reason prompting the creation of a new organization to represent those

employees engaged in train service as nearly all of this 150,000 are employed in the transportation departments. According to estimates furnished by existing organizations there are now enrolled under union banners the following employees in the train service:

Brotherhood of Locomotive Engineers . . . . .	55,000
Brotherhood of Railroad Trainmen . . . . .	30,000
Brotherhood of Locomotive Firemen . . . . .	28,000
Order of Railway Conductors . . . . .	20,000
Order of Railway Telegraphers . . . . .	20,000
Switchmen's Mutual Aid Association . . . . .	8,000

Total . . . . . 141,000

The Inter-State Commerce Commission reports less than 200,000 employees in the train service in the United States, which proves that these classes of employees are already well organized and stand in no need of a new organization.

The greatest objection to the creation of a new organization for railway employees in the train service is the rivalry that will immediately spring up between the old and the new. The American Railway Union has already thrown down the gauntlet and accuses all other railway organizations of being defective and points out reasons why employees should prefer the former. But after giving eleven reasons why existing organizations are failures it complacently sends greeting to them. After accusing the brotherhoods of being undesirable organizations for railways employees to affiliate with, after a terrible arraignment of them, it coolly "comes with a message of greeting and good cheer to all organizations." This reminds me of the member from the north of Ireland who, after having been reprimanded by the chair for using personalities in addressing the house arose and said of another member who had just spoken: "In replying to the eminent gentleman I will say that he is a dirty blackguard and a disgrace to the mother who bore him, but I would have this honorable body to understand that I mean to indulge in no personalities toward my esteemed friend and countryman for whom I have the most fraternal feelings."

The quotation at the head of this article is from a paper submitted to the third annual convention of the Brotherhood of Railway Conductors by their Grand Chief Conductor, George W. Howard, and shows what he thinks of rival organizations.

When one organization attempts to occupy a field of labor already occupied by another organization a bitter struggle is certain to follow in which the employer rather than employe has cause to applaud. The "Northwestern affair" was but the natural result of such a situation. Those members of the Brotherhood of Railroad Brakemen whose ambition led them to seek switchmen as members are the true originators of that trouble. The Switchmen's Mutual Aid

Association lays claim upon switchmen as does the Brotherhood of Locomotive Firemen upon firemen, and with equal propriety.

Only a year ago the Brotherhood of Railway Employees, an organization, to all intents and purposes, the same as the American Railway Union, was organized upon the Atlantic & Pacific Railway. Before its birth had become known abroad it became involved in a struggle with existing organizations and the railway company which resulted in a strike. The new organization suffered defeat and became practically defunct, but members of existing organizations in that vicinity are called scabs by the members of the Brotherhood of Railway Employees. Should the American Railway Union ever desire to secure contracts or schedules of pay in the interest of the engineers, firemen, etc., who have seen fit to enlist in its ranks, their committees will experience many hardships in securing these privileges. The officials will probably say: "Gentlemen, we would be pleased to grant your requests but we already have contracts with our engineers and firemen and have heard no complaint from them. We are honor bound to respect the existing contracts with the brotherhoods, and therefore must positively decline to grant your request." In a situation like this what would the American Railway Union do?

In the struggles for supremacy between rival organizations the interests of labor instead of being advanced are obscured; fraternal feelings are supplanted by hatred and fanaticism, one of the results of which is that modern monstrosity, the exhonored scab.

One high and holy purpose should animate all, that of increasing the efficiency of organizations already established, and of bringing all workmen who are standing aloof from organizations under their beneficent influence.—*Eugene V. Debs (President of the American Railway Union).*

To quote in their entirety all of the defects of organizations as they now exist, pointed out by the circular issued by the American Railway Union, would require too much space in the MAGAZINE, so I shall quote in an abbreviated form and condense my defense as much as possible.

The circular proceeds:

*Second.* The existing organizations, designed to promote and preserve harmonious relations between employer and employe, have met with only limited success, if, indeed, it can be shown that any progress has been made in that direction.

That the Brotherhood of Locomotive Firemen has not been instrumental in promoting "harmonious relations between employer and employe" is a fallacious statement. Our brotherhood, and, the same can be said of other similar organizations, has done more to promote harmony than have all organizations with "mixed" mem-

bership combined. It has made of the "common coal shoveler" of the past, whose likes or dislikes were of no concern to employers, a self-reliant and respected fireman. The evolution has been complete. During the early days of our brotherhood firemen were ignored if not despised by railway officials; hounded and discharged when it became known that they dared to affiliate with a labor organization. To-day firemen and their representative committees are received in general managers' offices throughout the land with friendliness and respect. The Brotherhood of Locomotive Firemen has taught railway officials that the class it represents is upright and reliable, are men worthy of their confidence, men who will perform their duty and do it as men should. One of the principles of the Brotherhood of Locomotive Firemen is "the interests of our members and their employes being identical we recognize the necessity of co-operation, and it is the aim of the brotherhood to cultivate a spirit of harmony between them upon a basis of mutual justice." That our brotherhood has accomplished its aim, has hit the mark, is evident to all who have any inclination to give our order credit due.

Of course the Brotherhood of Locomotive Firemen has had trouble; has encountered storms which strained every timber in her structure, but we have weathered these storms and are not men to fall upon our faces and weep with despair because all has not been fair weather. That our brotherhood has, upon more than one occasion, fought railway officials to the very hilt, fought when manhood demanded it, when to protect our membership from injury and insult a fight was imperative, no one will deny. Is it of this that the American Railway Union complains?

The *third* defect in existing organizations is as follows:

*Third.* What must be said of organizations which have failed to establish friendship and good will even among themselves? From the first there have existed antagonisms and jealousies culminating in warring factions instead of a harmonious whole. Organization has been pitted against organization, bringing upon themselves not only disaster but lasting reproach.

Does the American Railway Union propose to remedy this evil by springing into the ring, ready to meet all comers in a fight to a finish with champions of the past? No, no! The Union "comes with a message of greeting and good cheer to all organizations." If this circular, which they send broadcast over the land, is that "message," it is most uncheerful to those who have hugged to their breasts the vain delusion that we should be proud of our brotherhood. If we had but realized, ere this, that our brotherhood, that institution of which we have been so proud, whose

beauties we have ever been prone to exhibit with pride; if we had but known that, in the eyes of others, it was defective and inefficient what humiliating, mortifying heart-burnings could have been avoided.

The lack of harmony between labor organizations can be ascribed to three causes: (1) personal ill-feeling between representative grand officers; (2) "mixed" organizations, infringing upon class organizations, and (3) trivial incidents that will arise just as long as "man's inhumanity to man" is a characteristic of Adam's progeny.

As long as representatives of labor organizations wage inky battles through the columns of their representative publications there will be a lack of "friendship and good will even among themselves." Do the representatives of the American Railway Union propose to avoid this cause of fratricidal warfare? The Brotherhood of Locomotive Firemen must plead guilty of this offense and I must confess that, at present, the outlook is gloomy in the extreme for an improvement in this direction. This manifesto continues:

*Fourth.* Protection is a cardinal virtue of the present organizations; but they do not protect.

When the American Railway Union succeeds in securing contracts and schedules of wages, more numerous and effective than those now in force which have been obtained by the present organizations upon nearly every railway system of importance then it can consistently criticize. What protection has the American Railway Union for its members?

*Fifth.* It is universally conceded that one of the most serious objections to existing organizations is their excessive cost.

*Sixth.* Another defect in existing organizations is their secrecy, as for instance, the secret ballot, by virtue of which thousands of worthy applicants have been excluded. The air of mystery surrounding their proceedings is not calculated to inspire confidence. On the contrary, in the relation between employer and employe, in carrying forward great enterprises in which the people at large are profoundly interested, mystery is not required, and is productive of suspicion and distrust. Open, fearless and above-board work is far more in consonance with the spirit of independence and free institutions.

The expense of organizations is self-imposed and can be reduced at the will of their members. The objection to the secret ballot is well taken but when it is proposed to conduct an organization without "secret work," it will not stand. Even the mutual insurance concerns depend upon their secrecy for their very existence, "guarding with care the passwords and signs of the order." When employers attend our lodge meetings it will be embarrassing to employees to discuss any injustice that these employers may have perpetrated upon them.

*Seventh.* The tremendous power conferred upon chief officers has been a source of wide spread distrust.

*Eighth.* The subject of grievances committees has

itself become a grievance that cries aloud for correction.

*Ninth.* Organizations have become so numerous and their annual and biennial conventions occur so frequently that the question of furnishing free transportation to delegates, their families and their friends, is being seriously considered by railway officials as an abuse of privilege without a redeeming feature.

There is no denying the fact these are undesirable conditions, but is the remedy to be found in establishing another organization? Will it make them less numerous? Will the American Railway Union succeed in suppressing grievances? Will the power conferred upon president and secretary be less than they have exercised in the existing organizations with which they are so prominently connected?

*Tenth.* The extraordinary fact cannot be overlooked, that while present organizations are provided with expensive striking and boycotting machinery, and while millions of dollars have been wrung from their members, have been expended in support of strikes, they have with scarcely an exception been overwhelmed with defeat.

It cannot be denied that the policy of present organizations has filled the land with scabs who swarm in the highways and byways awaiting anxiously, eagerly the opportunity to gratify their revenge by taking positions vacated by strikers.

We have had organizations that did not possess these defects, organizations that did not wring millions of dollars from their members to be expended in support of strikes. They never suffered overwhelming defeat because they never raised a hand in their own defense. A strike may be lost and yet be a valuable object lesson. It is the fear of a strike that has secured justice, not the strike itself.

What particular "policy of present organizations has filled the land with scabs." Before existing organizations had educated workmen a scab was a most respected personage. He did not scab for revenge, he scabbed because it was customary to do so.

Will the American Railway Union succeed in converting these scabs to better men? I hope so, but I fear that with all the perfection claimed by the new order scabs will ever exist. Just as long as labor struggles to better its condition these human vultures will perch upon "the highways and byways" waiting an opportunity to devour the offal cast to them by tyrannical employers who never recognize the rights of employees.

*Eleventh.* The ever increasing body of idle engineers, conductors, etc., seeking in vain for employment, is the legitimate fruit of promotion on the seniority basis. What is required is a system of promotion that recognizes and rewards merit rather than seniority.

Which of the existing organizations is not in accord with the sentiments expressed by the officials of the American Railway Union? Firemen have repeatedly refused to accept in their contracts with railway companies clauses thrust upon them by officials which provided for promotion of firemen to the exclusion of engineers. All that firemen

ask is an equitable adjustment of the question.

With the eleventh clause ends the chapter of defects in this circular issued by the president and secretary of the American Railway Union, the remaining pages being devoted to the merits of the new order. The objects to be obtained are the same as in existing organizations, the method of procedure being different. It is not the object of this article to parade the defects of the new order and enlarge upon them. I only intend to defend the brotherhoods from attacks and will continue the subject in other chapters and leave it to organized labor at large to answer the question "Are the Brotherhoods a Failure."

TAYLOR, TEXAS

W. S. Carter.

### Pardon of the Anarchists.

MR. EDITOR—In answer to your criticism of my article which appeared in last month's MAGAZINE I feel like saying the bomb has exploded but not with such force as to shake the foundations of my opinions. However, in showing up my stupidity you do not arouse my anger, but to you, Mr. E. V. Debs, I extend the hand of friendship, and as for entertaining a malignant spirit towards you, such may be the case at times, perhaps, but not entirely without reason.

Heretofore I never noticed where the MAGAZINE upheld anarchical acts or principles. But why was it? In my opinion it was because the editor was aware the brotherhood would not allow it, but now I have come to the conclusion we have found a wolf in sheep's clothing; or, you may be a part of the output of the Carnegie steel works which you refer to that had not underwent the proper amount of purifying and was afterward detected as being counterfeit. You claim to be very opposed to the anarchist's principles. If such is the case, Mr. E. V. Debs, why is it that you alone endorse the governor's action with the exception of the anarchists themselves. Are you of the opinion that John Pardon Altgeld and Eugene Vindictive Debs are the only able minded men our great country has produced? What a pity that out of sixty millions of people only two seem to understand the law. It is indeed a fact that the governor has pulled the halter from a great many necks recently, out of 98 or thereabouts 40 per cent. were imprisoned for murder. What a reformer he is too, when he sets at liberty men who dread not the law, who have no respect for society and terrorize our civilized community. —now, Mr. E. V. Debs, in the high noon of our boasted civilization, what a plant to place in the executive mansion. For example, take the case of one who was recently pardoned and who not long ago was arrested for attempting to rob an old lady at the point of a revolver.

Another was serving a sentence for wife murder and others I dare say whose names are linked with infamy and carrying the mark of Cain if the facts were only understood. What a shining light he is in the government of our country and how much thought he gives for the peace and welfare of its citizens. Now, Mr. E. V. Debs, how highly pleased you should be to uphold such a man and do you really think you are right in doing so? Your intended visit to Chicago, had it been carried out, would not have been of the highest class either. The same crowd you were to address on the lake front were mostly of the type mentioned, as it is clearly demonstrated by their attempt to raid one of the big department stores down town. The same mob assaulted and pounded the police inspector and he was with difficulty rescued from an untimely death for the faithful discharge of his duty. Now, Mr. E. V. Debs would you put the halter around the necks of those men or would you not? I don't say they were all anarchists, but after listening to speeches made by men who were anarchists in the true sense of the word they had to vent their lawlessness in some manner so they took the above way of doing so. Three weeks ago yesterday they assembled at Waldheim to commemorate the death of their brothers, while passing through the streets these were their mottoes very plainly inscribed on their flags: Tyranny, no God, no Lord, no slaves. The former and the latter I will not dispute, but the others are utter blasphemy and such emanate not alone from a disordered brain but are the teachings of a nature born to corruption. Now, Mr. E. V. Debs, are you not ashamed of the men you applaud? Men who have no respect for Divinity will have much less for humanity and I say such characters should be imprisoned as they are of no account in this world and are nothing less than a menace to society. I don't know whether you are an anarchist or not, but I notice you are very much in sympathy with them. If you do belong to that class of people do not blaspheme the name of Christ by using it, for if you belong to that class you are doing nothing short of it. There is an old adage "Those who lie down with dogs will rise up with fleas." So before I conclude Mr. E. V. Debs just a word of warning, should you ever come to Chicago again to speak on the cause of labor avoid mob gatherings or you may find yourself on the downward course and mixing up with people who are liable to get into the meshes of the law. I dare say you are aware our fairminded Judge Gary is to sit on the bench again and it will fare very badly with anarchists and all such law breakers. However, there is nothing nicer than to think the pardoning power will not lose its efficiency for some time yet.

AUBURN PARK, ILL.

W. H. Gray.

### Influence of the Magazine.

MR. EDITOR:—THE MAGAZINE, in digesting the suggestions contributed by modern labor apostles in behalf of business and the "good of the order," has, it seems to me, neglected a most important feature connected with the prosperity and influence of our MAGAZINE. Manifestly, it is in the interest of our order that our MAGAZINE should become everybody's MAGAZINE, and to accomplish this highly desirable result, it should be placed on sale at all the news stands throughout the country, thereby making it accessible to all.

Those who are at all familiar with the FIREMEN'S MAGAZINE, know it is issued twelve times every year, and that each copy is valued at from 25 cents to \$10.00, according to the intellectual capital of the reader; that it discusses the important topics of the day in a way to command attention; that it advocates a man to man religion; that its editor contains no alloy, and that the contents of the MAGAZINE are not watered stock, and everyone should know that the MAGAZINE is read and heartily indorsed by a half a million persons twelve times a year, and also, while there are many other labor publications far inferior, our MAGAZINE has few equals and no superiors, and these publications are found on all the news stands of the country where they can be bought every day in the year, while our superior MAGAZINE never puts in an appearance.

It is a foregone conclusion that to properly conduct a business of this nature, and dispose of the revenue secured advantageously, would be a matter for debate. The question would arise, what shall be done with the profits? Well, the editor would keep his pen in operation more vigorously. The local MAGAZINE agent could arrange with the news dealer for the sale of the MAGAZINE, and the profits could be used for rent, regalia, furniture and incidental expenses of the lodge, or, on the other hand, the grand lodge could supervise the selling and the appropriation of the revenues arising, large or small. The point I make is, that the MAGAZINE should be placed within reach of all, the farmer, stockman, miner, woodsman in a word, all workmen.

We are forced to admit that our footsteps follow our mind; therefore, novels are worthless. Professors, mechanics, laborers and all good people who desire to grow in useful knowledge, supply themselves with books which furnish solid intellectual food, which invigorates the mind and enables them to perform their mental tasks in a creditable manner. Can anyone recall a single instance where the MAGAZINE published an article calculated to destroy a home? The answer comes from a vast multitude, and from every direction, "No!" And here I will ask the liberty of reciting a little romance, for which

the MAGAZINE was responsible, and which, instead of wrecking a home, culminated in establishing a happy home for two loving hearts.

The scene dates back to 1889, on the balmy coast of California. The hero of our tale, a friend of the writer, whom I will call Harry, indulging in the luxury of "love's young dream," became enamored of a fair and accomplished young lady of Oakland, Cal. Unfortunately, Harry was lacking in self-confidence and that courage which should distinguish a lover, but evinced his appreciation of the heroine's intellectuality by subscribing for the MAGAZINE in her name, and sought consolation in the reflection that if he, poor fellow, should be rejected, some other railroad man might draw the capital prize in the grand matrimonial lottery. He surmised that the girl he loved was trifling with his affections, and further fancied that her objections related to his station in life. But, unwilling to abandon his hopes, on an occasion of a furlough, he visited his dulcinea and was delighted to be received with a smile which betokened welcome. But, suddenly he was confronted with a poem by that ardent, eloquent and independent, high-pressure poet of the rail, Shandy Maguire, followed by an outburst of choice invective that made his ears tingle. But our hero, grown bold, managed to encircle the waist of his sweetheart with his arm, and plead for an opportunity to recite the poem, with appropriate gesture and vocal modulations. Permission was granted. It was a supreme moment for Harry. He did his best, and when all was over, the climax was reached, love's sweet vows were exchanged. Shandy was vindicated, and Maud and Harry became two souls with a single thought, and two happy hearts beat as one; and this happy termination was, in some measure, brought about by the MAGAZINE.

Let me make the remark right here that should the MAGAZINE be placed on sale at the news stands of the country, it is quite probable that Judge Ricks, Andrew Carnegie, Frick, and others of their feather, would purchase a copy, thereby obtaining a relishing mental feast, and might be persuaded to change cars, because our ever honorable editor, all of his followers, and the devils in the printing office, are with the honest laboring classes, and will continue in that line forever and a day.

In conclusion, I would modestly urge upon my friends and the readers of the MAGAZINE to read the organs of the various labor unions and brotherhoods of workingmen, for by so doing they will become acquainted with the spirit of the labor press, and with men who are men, and become convinced that all is not gold that glitters, and thus be able in times of trouble to resist impositions which many are now contending with. At any

rate, this wide reading of labor literature, if it does not enlist your sympathies, it may teach the importance of withholding the lash of criticism. Our interests are yours, and men who labor for food, if they would not be reduced to the level of mere commodities, must stand together and battle for the right.

Capital seeks investment and protection, and why should not labor seek protection? Our MAGAZINE—our Bible. Try it. It will give you wisdom, and make you feel that life is worth living to down those who are conniving to make honest men beg for a living.

*Ira D. Mayhull.*

LAJUNTA, CAL.

### Monopoly and Misery.

MR. EDITOR:—The MAGAZINE for the present month (November) contains an article captioned "I'm hungry" called forth by a meeting of the unemployed of Chicago held in that city on the 22d of August in which are quoted the words of one of the speakers who said: "I haven't eaten a bite for two days, and my wife lies at home sick and starving. I've looked for work until I'm worn out, and where is it to end?" In commenting on this expression the question is asked by the MAGAZINE, "Why this state of affairs, why this army of idle men, this menacing peril?" The question is easily answered. It is because the common inheritance of the human race, the natural resources of the earth from which are produced by labor and labor only all those things necessary to the support of human life, comfort and happiness, are monopolized by the few to the exclusion of the many who must starve and die unless they have access to them. It is to private ownership of land the natural operation of which must of necessity deny to the great and ever increasing majority the power to enjoy their inalienable inheritance, the free use of the earth, the air, and sunshine to which no man has any better right than another and without the use of which no human being can live. That is owing to the hideous fact that strong men capable in all respects of performing labor enough to-day to support a dozen persons, are compelled to stand up in public meeting and while tears and sobs choke their utterance make the horrible statement that they are hungry, that they haven't eaten anything for days and that their wives are starving to death for want of food. It is to this hellish injustice, this private ownership in land that gives to the few the power which they never fail to use to its fullest extent to rake into their own private coffers the public product of the combined industries of the community without any compensation whatever to the community

in return therefor, and enables them to drive people off the land, as cattle are driven out of a field, to starve and die, or permit them to live on it on whatever conditions their own sweet will may incline them to dictate, that must be charged all the murders (no other term will describe it) that have ever been and are now being committed by starvation through the monopoly of natural resources. The banks might lock up their currency, proprietors shut down factory, mill, forge and mine, railroad managers reduce their forces to whatever extent they desired, and with the law of equal freedom in force—land free to all to use—no man need lose a single meal's victuals, much less be compelled to say that himself and family were starving to death on account of having had nothing to eat for days because he could not find work. Nor would the army of the idle increase or thousands of men and women parade the streets exclaiming in unison "I'm hungry." Nor in midsummer or midwinter would the cry "I'm hungry" be heard. "Will it (the cry) be heard when the mercury is down to zero?" Yes, it will be heard when the mercury is down to zero, or down to hell if it should ever get there, or if it be going in the other direction when it is a hundred in the shade or up in heaven if it ever gets there, in all seasons and every day in the year so long as private ownership in land exists, and until it is wiped out by the single tax which will give "equal rights to all and special privileges to none," render unto Caesar that which is Caesar's and unto God that which is God's. Until we get the single tax and all its relations in force, the cry "I'm hungry" will continue to be heard day and night and murder by starvation and freezing through landlordism will go merrily on.

I take this opportunity Mr. Editor of patting you on the back to express my pleasure at the masterly manner in which you handled Mr. W. H. Gray of Auburn Park, Ill., in this issue of the MAGAZINE. That poor man has much to learn yet. I am afraid that it would be a tough job (I would not like to undertake it) to mould his mind into such such form as would enable him to see that malicious prejudice and bigotry can never be made to do duty for reason, justice and love of liberty nor to produce the same effect.

I do not agree with the MAGAZINE in all its views, in fact I differ widely from it on many points, but for the character of its dauntless editor I entertain the most enthusiastic admiration for the fair and fearless manner in which he conducts himself in the discussion of all subjects that he considers. My admiration is not a voluntary gift Mr. Editor you take it by right (the force of your character) "and the devil

thank me." Full many a time while reading the MAGAZINE I silently but rapturously applauded the sledgehammer blows you delivered to our common foe. It is strange but nevertheless true that great men are sometimes caught fighting ghosts; we have an instance of it in the present case of the MAGAZINE editor's bout with Mr. Gray. But now that he has laid that ghost forever it is to be hoped that he will not waste any more of his precious time or matchless talents on any more such chimeras, but that he will keep his guns trained in the direction in which they are really needed and on enemies more worthy of his attention and more necessary to be met.

P. W. Monahan.

GRAND JUNCTION, COL.

### Assistance Fund.

MR. EDITOR:—My suggestion in the September MAGAZINE appears to have struck a responsive chord in the minds of at least two of the brothers of the order. I should be pleased to see the suggestion taken up and agitated to a successful issue, the more so, as Mr. Mayhall's inference is a correct one. I have been both a "tourist" and closely associated with them." I have punched many a hole in my ticket for members of the tourist fraternity in years gone by, not over a thousand miles away from Mr. Mayhall's present stamping ground, and, in the matter of this tourist business, I have some warrant to speak by the card. It is indeed true, as Mr. Mayhall remarks, that those who are inclined to exhibit the most selfish spirit in times of prosperity are generally the ones who look for the greatest amount of aid from others in times of adversity, and I know of no better plan to correct this tendency than the one proposed. Give to each and all a certain claim upon the order at large, under proper restrictions, and all "sponging" must cease along with the present excuse for it. As Mr. Ogden suggests it would of course be necessary to incorporate in such a measure certain provisions against fraud; but the difficulties in that direction are by no means insurmountable, and are easily to be overcome by the collective intelligence of the order, in convention assembled. Indeed, there is nothing novel or original in the idea at all; such a measure has been in practical and satisfactory operation as a part of the program of the Amalgamated Society of Railway Servants of England, for more than twenty years, or since the establishment of that order in 1872. The membership of the A. S. R. S., approximates pretty closely to that of the B. L. F.—35,000 in 1892—and it has thrown the Aegis of protection around its members much more thoroughly than any American organization has yet attempted

to do. From a communication of the general secretary of the A. S. R. S., to Mr. Moseley, secretary of our Interstate Commerce Commission, I quote as follows:

A legal assistance fund, which, as its name implies, is for instituting legal proceedings on the members' behalf in order to obtain any rightful claim for compensation, wages, etc.

Donation or out-of-work benefits, from which members unjustly suspended by the railway companies receive 18 shillings per week during the period of such suspension. If discharged from employment from any other cause than drunkenness or misconduct, 12 shillings per week for the first ten weeks, and 6 shillings per week for the second ten weeks such member may be out of employment. Traveling relief is given at the same rate to members when going from place to place in search of work.

A protection fund for the purpose of protecting individual members who may be victimized by their employers for pronounced activity in the society's work, and for assisting members when engaged in disputes with their employers. In the former case a lump sum of £50 is awarded to a man dismissed from the service, or in the event of a reduction of wages the amount is recouped him from the fund for a period not exceeding twelve months. An emigration grant of £10 is allowed, if after a dispute a member does not get back to his work, and is unable to obtain other employment.

In addition to these several funds which have been in successful operation since the inception of the order, they have a superannuation fund, a sick and burial fund, and an orphan fund; this latter fund was established, along with the protection fund, in 1880. It provides a weekly allowance, paid to the mother or guardian of the children of members, under 13 years of age, to be used for the benefit of such children, of all members dying after eighteen months' membership. In the line of protection, there are some suggestions in this program which American railway organizations might very profitably follow.

BAY CITY, MICH.

W. P. Borland.

### Problem of the Unemployed.

MR. EDITOR:—While the problem of the unemployed is up for discussion why can we not find a remedy for it? I believe we can, at least, stop the most of our unemployed brothers from being so coldly treated as they are, while going from place to place in search of employment, and many times going hungry before they make the fact known. We all dread the idea of having to get out and hustle for a job, and those who have not had to do this are not aware of the snubs and sneers which a brother on the road is subjected to; only experience can teach this. How hard it is to go and "brace" a conductor one is not on good terms with to carry a brother, and, at the same time, that brother has feelings and he perhaps dreads it as much as yourself. But the employment question is what we are discussing, and the way to settle it is to first locate where the trouble lies. Is it in our subordinate lodges, or is it in the grand lodge? For myself, I think it is in our subordinate lodges; and if

so, why can we not devise some plan to check it? Let us start a labor bureau (I believe the constitution provides for such) let every general and local chairman be in direct communication with it, and when a fireman is needed on his division the chairman can, by having all the unemployed firemen registered there, secure one very readily. This bureau could be kept up by a small assessment on each member, and when it is considered that a member will give out to traveling members from five to six dollars a year for assistance where others are not giving anything at all, it will be seen that a very small amount, when paid by each member, will suffice to keep it up. This, too, I think would be a remedy for some of our members who do nothing but travel and "work" the brothers at every opportunity, but who never work the scoop; that's out of their line of business, but if such a rule was adopted we would have no cause to fear such bloodsuckers. What we want is to get work for our brothers who are out of employment in the easiest and quickest way. Let some of our wise-heads solve this problem. Idleness is ruining many of our firemen who have not the nerve to face the chilly world.

W. N. Breen.

NEWTON, KANSAS.

### The Lodge Seal.

MR. EDITOR:—Permit me through the MAGAZINE to say a few words on the subject of the lodge seal. It has frequently happened that our lodge has been asked to grant a limited withdrawal card to a member, who desired to join elsewhere, but the application had no lodge seal attached, and our lodge therefore declined to grant the card. The lodge applying for the card was kindly notified of this, but in some instances the secretary became angry and returned the application entirely covered with impressions of the seal in testimony of his indignation. Others claimed that they did not wear the lodge seal in their hip pockets, etc. I desire to say that we take section 76 of the constitution as our guide and authority. We believe that a request for a limited withdrawal card, being in the nature of lodge business, should bear the seal of the lodge, and that unless this is done the application is not valid and the card should not be granted. I have called attention to this matter in the hope that the above citation may bring the matter to the attention of some secretaries who have overlooked it.

PEORIA, ILL.

W. A. McMillan.

We would call our readers' attention again at this most reasonable time of the year to the advertisement of Ely's Cream Balm found upon our advertising pages. This is an old and stable remedy for the cure of catarrh and cold in the head, and put up in bottles with screw metallic tops, they inform us, as to be specially suited to the needs of railroad men.

### Boston's Great Review.

The November *Arena*, which lies before us, is strong, able and invigorating. It closes the eighth volume of this review, whose career has been so remarkable, and whose influence has grown to be a potent force in our country. The superb courage, the catholicity of spirit and the cordiality with which it has received the advance guard among the world's thinkers, finds no parallel in the history of magazine literature. While employing talent fully as learned and scholarly as that represented in any other great review, it has as a rule avoided discussions of problems not vital in character, while its influence has always been thrown against class privileges, entrenched injustice and out-grown ideas. A glance over the index for the past year reveals a corterie of contributors which it would be difficult to surpass in any review published in the English-speaking tongue.

Among those who have written for its pages during the past 12 months are such leaders of thought and eminent scholars as Rev. M. J. Savage, Rabbi Solomon Schindler, Sir Edwin Arnold, Bishop J. L. Spaulding, Rev. Lyman Abbott, Prof. W. J. Rolfe, Helen Campbell, Alfred Russell Wallace, D. C. L., Dr. J. F. Furnival, Prof. David Swing, Hamlin Garland, Rev. George C. Lorimer, W. D. McCracken, A. M., the Marquis of Lorne, Prof. J. R. Buchanan, Rev. John W. Chadwick, O. B. Frothingham, Henry George, President J. M. Coulter of Indiana University, Rev. Marion D. Shutter, D. D., United States Senator W. M. Stewart, Prof. N. S. Shaler, Edmund Gosse, Prof. Orello Cone, D. D., Louise Chandler Moulton, Gerald Massey, Ignatius Donnelly, Prof. A. E. Dolbear, Edmund C. Stedman, the late Richard Procter, Henry Irving, Henry Wood, Napoleon Ney, Louise Frechette, etc., etc.

The announcements for next year are even more inviting, if possible, than those made before. Among the great features of the *Arena* for 1894 will be a series of six papers on the "Ascent of Life" by Stinson Jarvis. They will take up the evolution theory where Darwin dropped it, and proceed in a search for the soul of man in a strictly scientific manner. The editor of the *Arena* predicts that this work will create a pronounced sensation, and will be a contribution of great value to the modern critical literature. Another brilliant feature of the *Arena* for 1894 will be a series of papers setting forth the "Aims and Objects of the Higher Criticism" by leading orthodox scholars of Europe and America who stand with Prof. Briggs. The opening paper will appear in the December *Arena*.

It is written by the great Oxford professor, Dr. William Sanday, L. L. D., D. D., A. M., who is recognized as one of the most profound students of sacred literature in Eng-

land. Dr. Sanday will be followed by R. F. Horton, A. M., the eminent author and lecturer who was called from London to deliver a course of lectures at Yale College the past winter on the "Higher Criticism." A third paper has been prepared for this series by Rev. Washington Gladden, D. D., and others will follow by scholars equally eminent. A third feature will be a series of papers on "Indian Occultism," by Heinrich Hensoldt, Ph. D., a German scientist who has spent 10 years in Ceylon, India, Thibet and Burmah. The opening paper of this series will appear in the December *Arena*; it is entitled "The Wonders of Hindoo Magic."

Vital political, economic and social problems will appear in the following series embracing discussions by the most able and live thinkers of the age. 1. Short talks on the Land Question, embracing 12 short papers on this great problem by leading specialists. 2. Ideal Republican Measures, embracing a series of papers on the Initiative, Referendum and Proportional Representation. 3. The Nervous and Arterial Systems of the state, a series of papers by Rabbi Solomon Schindler and other leading thinkers on a governmental control of railways. 4. The present aspect of the Money Question, the light of European and American history, a number of brilliant papers by students of finance. 5. The Slums of Our Great Cities and how to abolish them.

Another series of papers will deal with the Civilization of To-morrow, in which hereditary and prenatal influences and early environment will be ably discussed. Popular Papers on Emergency Surgery, by a leading Massachusetts physician and surgeon. Psychic Science and Progress in the realm of Physical Science will receive attention from experts. Among other attractions are a series of short papers by Rev. M. J. Savage on Our Latter Day Poets. Short stories, brief biographies, portraits of leading thinkers and critical reviews of leading books of the day will be the features of the *Arena* for 1894.

In a critical editorial which appeared in the Toronto Sunday *World* for October 1st, 1893, the writer observes: "Boston is the head and center of American literature, and the *Arena* is known as the leader of Boston's thought." The writer might have broadened his limit, for in fact the *Arena* leads the advance column of American thought in the realm of vital present day problems. The publishers announce a magnificent premium album, containing portraits of 16 eminent thinkers, which will be given to every subscriber whose subscription is received after October 1st, 1893. The announcements made indicate that the *Arena* for next year will be indispensable to those who wish to be in touch with the world's best thought.

In the book publishing world the Arena Publishing Company has achieved marked success. In the number of handsome and artistic books issued from the Arena press during the past year this comparatively new house stands second to only one other publishing house in the United States. Having the powerful and universally popular *Arena* magazine at their command, they are able, not only to reach the reading public, but also to bring their publications to the attention of every book and newsdealer in the country. Occupying this position, the house has gathered around it a coterie of brilliant and successful authors, all interested in its growing fortunes. The Arena Library Series, containing 29 titles, mostly novels, sold both in paper and in cloth bindings, has been almost universally commended by the press for its artistic excellence of the books no less than for the literary abilities of the different authors. In at least two notable cases books rejected by older publishers for fear of adverse criticism, but accepted by the Arena Publishing Company, have gone through many editions, the sale of one exceeding 50,000 copies. The Side Pocket Series being wholly unique in design and execution, has attracted general attention.

One of Boston's oldest booksellers pronounces "A Guide to Palmistry," one of this series, "the handsomest book issued by any American publisher during the present year." As the name indicates, these little books are of suitable size to be carried in the side pocket. They are dainty, delightful volumes to handle and are bound to become very popular. The Copley-Square Series is a series of books designed by this enterprising house and bears the name of Boston's most beautiful public square, Copley square, where the office of the Arena Publishing Company is located, is surrounded by some of Boston's most notable public buildings. These are, first, the great Public Library building, costing millions of dollars, perhaps the most magnificent library building in the world; then the Boston Art Museum, another monument to the liberality and taste of the art lovers of the city and state. On another side of the square is the great Trinity church, so long presided over by the lamented Bishop Brooks. For beauty and richness of design and splendor of architecture, this church is perhaps the finest on the American continent. Then there is the new Old South Church, with its stately tower and imposing architectural beauty. Another striking feature of this noted square is the Pierce building in which the Arena Publishing Company is housed; built of solid stone from foundation to turret, and one of the most imposing business blocks in all Boston. Copley square is rapidly becoming a household word in consequence of the enterprise and energy of this great pub-

lishing house. It is impossible in the limited space at command to mention even the titles of the large number of important books issued from the *Arena* press during the past year. The "Rise of the Swiss Republic," by W. D. McCracken; "Zenith of the Vestal," by Margaret B. Peeke; "Along Shore with a Man-of-War," by Marguerite Dickens; "Sultan to Sultan," by M. French Sheldon; "Albert Brisbane: A Mental Biography," by Redelia Brisbane; "Wit and Humor of the Bible," by Marion D. Shutter, D. D.; "Christ the Orator," by Rev. T. Alexander Hyde and "Son of Man," by Celestia Root Lang, are among the most important and successful ones of the *Arena* list. The reading public will be deeply interested in the forthcoming announcement of new publications to be issued from the *Arena* press in the near future as well as in the many beautiful books already published.—*Boston Traveller*.

The magnitude of the Pullman sleeping car company is impressively indicated by the following figures from its annual statement just issued: Assets, \$61,791,643; capital stock, \$36,000,000; net surplus, \$25,791,643; earnings from cars last year, \$9,200,685; earnings from manufacturing and investments, \$2,189,190; total revenue, \$11,389,896; disbursements, including operating expenses and dividends, \$7,383,447; surplus for the year, \$4,006,448; number of cars—sleeping, dining, parlor and tourist—owned and controlled, 2,573; passengers carried last year, 5,673,129; mileage of railways covered by contracts, 126,975; number of employees, 14,635; wages for the year, \$7,751,644. Only ten years ago the assets were but \$23,065,369, the capital stock \$13,269,000, the earnings, \$4,093,245, the number of cars, 579. The continued growth of the company, in spite of competition and of the disposition of railway interests to take over all branches of the transportation business, is evidence of the wonderful executive and administrative force by which the business of building and operating sleeping cars has been maintained separate and distinct ever since Mr. Pullman organized his company in 1867.—*Railway Age*.

One of the P. R. R.'s new class "P" engines, with a 78-inch wheel, made a good record the other day, reaching a speed of 90 miles per hour between Stanton and Wilmington. On one run 65½ miles were made in 63 minutes, including six slowups. The 107½ miles between Bay View and Chases was covered in 9 minutes and 40 seconds. The boys call this good work for the P. W. & B., and the new "P's" are voted a success.—*Locomotive Engineering*.

**Pay as You Go.**

There's a trite little saying, a maxim of old.

And to learn it mankind is exceedingly slow;

Yet it turns all our coppers to silver and gold—

So think well about—'tis pay as you go.

Would you sport a fine coat, or a carriage and pair,

Don't buy it on credit, nor steal it—go slow;

They will come in good time, if you only beware

Of installments and store-books, and pay as you go.

The world's not unfair to the poor, but I think

They're unfair to themselves and their children;

they know

When their pennies go out for cigars and for drink

That for these there's no trust—they must pay as they go.

There's a man lives up-town, worth a million, I guess,

In a mansion, with servants and horses, and show;

If you ask him the secret of all his success,

He'll answer you quickly: "I pay as I go."

Are you pushed by the grocer, or back in your rents?

Is your wife looking shabby, your daughter also?

Just balance your income and bills of expense,

And begin the next quarter to pay as you go.

When you own your own home and have funds in the bank,

When your fuel's laid in and the winter winds blow,

Then be kind to the poor—'tis the best way to thank

The rhymers who taught you to pay as you go;

*J. R. Parker, in Philadelphia Times.*

**Earning a Living.**

A contributor to the current number of Kate Field's *Washington* asserts: "I do not believe that a woman should under any circumstances have to earn her own living; and, further, that the modern idea that it is a suitable or even praiseworthy thing for her to do so, is bad political economy, bad morals and bad sociology."

To the utilitarians who conceive of life as arranged primarily as a place for exertion, and especially to that class of enterprising persons who plume themselves upon discovering or inventing "new occupations for women"—usually most repulsive and uninteresting ones, it must be added—this bit of heresy will appear as a species of social dynamite. There is no question, however, but that many persons, as yet unperverted by advanced sentiments, will not only agree with the writer, but even extend and enlarge her proposition by the assertion that no one, man or woman, should earn a living at all.

It is a process that diverts one's energy from the more praiseworthy occupation of enjoying life. It is a hindrance to the development of a talent for leisure. Instead of regarding life as designed to live, it is regarded as a mere period in which to fall to and earn a living. This is a low and debasing view, and one quite unworthy the coming century.

In an ideal state of society no individual will fall under any such low obligation. Food, clothing and shelter, the mere necessities of existence, should, in an ideal republic, be provided for each individual by the

State, and his time and talents be liberated for such pursuits as the higher mathematics or the comprehension of the significance in Browning's lyric inspiration, the etymological analysis of George Merideth, the relation of Wagner music-dramas to culture, or the relation of Ibsen's ideas to moral progress. No less an authority than Mr. Darwin announced that science and domestic affections were enough to occupy man, and Prof. Jowett has discovered that adequate attention to the Greek accent would of itself require the exclusive devotion of a lifetime.

Indeed, when one contemplates all there is to do in the world, to say nothing of all there is to enjoy, he wonders that any portion of mankind should ever fall into the stupid and erroneous idea of wasting life by spending it in earning a living.

**A Law to Punish Train Robbers.**

A bill has been introduced into congress which proposes to make the growing business of train robbing and wrecking more perilous to those who engage in it than it is to-day. The act provides that any person who does any act which is to be done any act whereby any car is stopped, obstructed or injured with intent to rob or injure any one passing over any railroad engaged in inter-state commerce, and where, in consequence of such acts any person is killed, shall be guilty of murder. If the attempt does not result in murder, the guilty person, on conviction, shall be imprisoned at hard labor for from ten to twenty years. Circuit and district courts of the United States are given jurisdiction of all cases arising under the act. The bill has been referred to the committee on inter-state commerce.

Train robbing and wrecking have been so outrageously common of late that vigorous suppressive measures are necessary, and congress will not act fairly towards the traveling public if the bill does not promptly become the law of the land. The train robber is the successor of the old highway robber, with the difference that murder or violence nearly always accompanies his thieving attempts. Under existing laws train robbers who commit murder generally escape the supreme punishment on the plea that murder was not premeditated. It is high time that strong laws were enacted to meet existing conditions of transportation, for most of the state laws appear to protect rather than punish this class of criminal. Many scoundrels who are now ready to shoot trainmen who interfere with their raids would be less inclined to kill people if they understood that it would lead them to the gallows.—*Locomotive Engineering.*

### Petroleum and its Products.

Speaking broadly, the treatment of crude oil is by distillation and little more. Petroleum as it flows from a well may be considered as a mixture of a variety of substances ranging all the way from gasoline to tar, each with its own boiling point. If heat be gradually applied in a still and increased the gasolines and naphthas pass off first, then the illuminating oils, next the lubricators, until nothing is left in the still but an almost solid black cake. This kind of treatment is called fractional distillation. Fractional distillation is often modified and for a good reason. By a happy accident Mr. Joshua Merrill, in 1867, began to apply heat to a still in such a way as to augment the yield of illuminating oil, while at the same time its quality is bettered. In processes of this type known as "cracking" the elements of the crude oil rearrange themselves into a quite different group of products from those obtained by fractional distillation. One of the products due to the treatment originated by Mr. Merrill is an odorless engine oil: a specimen of it used for ninety days on machinery was unimpaired in lubricating quality. Gasoline dissolves rubber for waterproof clothing; removes grease from the fleeces of sheep and flaxseed reduced to meal is placed with it in a percolator, effectually separating the flax oil. With care, gasoline can be made to destroy moths in furniture and clothing; an entomologist with a pint of it can painlessly kill a thousand insects, with what is of importance to him, the least possible distortion of leg and wing. In the manufacture of paints, varnishes and lacquers, deodorized naphthas have manifold utility. As substitutes for turpentine they are used as thinning ingredients; in such japans as are baked, naphtha is better than turpentine, in that it dries quicker and does not run. Naphtha goes to form a capital wood stain for shingles, and a wood filler serviceable as a first coat to the painter and varnisher. Combined with rosin and cheap metallic oxides it makes a paint good enough for barrels and the like. Besides all this it yields inexpensive lacquers for the decoration of iron and tinware. At the other pole of usefulness with the brush, let it be said that a French artist has recently proved that naphtha is an admirable medium for color, as it mixes perfectly with the pigments of a palette, and on the canvas soon evaporates completely. For New York the fire test is placed at 150° Fahr. An oil of 175° test is furnished for locomotive headlights; another is extensively supplied to lighthouses. For lake, river and coast steamers, and for passenger cars, an oil is supplied with the extremely high test of 200°. This brand, which is known as mineral seal oil, is very unlikely to take fire

in case of accident; indeed the claim is preferred that it could be cast upon an ordinary small fire with the same effect as water. One of the important uses of petroleum is as fuel. Weight for weight, it has twice the efficiency of coal. In Russia locomotives use petroleum, and so do steamers on the Black and Caspian seas. When from petroleum all the oils have been driven off there remains in the still a residuum which looks about as worthless as anything can. And yet, plied by modern alchemy, from that murky sediment is derived paraffine, a mineral soap stock, wax white as snow, asphaltum for paving, tar for roofing, and carbons to shine as petroleum's haughty rival, the electric light. The paraffine is made into candles, and renders leather, wood and paper waterproof, as testify certain wrappers for cartridges, pasteboard egg cases, sheets of caramel tissue, and butter platters of thin veneers. Wax, in its unrefined state, is applied to building paper; purified and bleached, it is moulded into the semblance of fruits and flowers; it is even worked up into chewing gum. Of kin to all these are the vaselines, perfectly deodorized, which never grow rancid, and which are here shown in a wide variety of emollients and face paints. — *New York Sun.*

### The Stitches in a Shirt.

A *Mail and Express* man was standing in front of the "gents'" furnishing goods department in a big east side dry goods store the other day when a lady entered, and pointing to a big pile of shirts which were spread out on the counter with the prices marked on them in figures as long as your arm, inquired of the clerk:

"How much?"

"Thirty-nine cents each, madam," replied that functionary.

"Three for one dollar, of course?"

"No, madam, we couldn't really afford it."

"Oh!"

And she picked up one of the garments and proceeded to test its quality by pulling with might and main at its weakest points. Failing in this laudable purpose, she threw it back on the counter, and with a look of disgust on her face bounced out of the store.

"Usual thing, I suppose?" queried the reporter.

"Oh, that's tame," he replied. "I was surprised that she didn't report me to the manager. Now, just look here a minute," he continued, "that woman couldn't afford to spend her time sewing that shirt together, to say nothing of the material and cutting, for three times the amount we ask for it. Do you know how many stitches the seamstress had to put into that shirt to withstand the kind of usage it has just been put to? Well, just twenty-one thousand."

"There are four rows of stitching in the

collar, 3,200 stitches; cross ends of the collar, 550; button and buttonhole, 150; gathering the neck and sewing on the collar, 1,205; stitching wristbands, 1,328; ends of the same, 68; buttonholes in wristbands, 148; hemming slits, 264; gathering the sleeves, 840; setting on wristbands, 1,468; stitching on shoulder straps, 1,880; hemming the bosom, 393; sewing in sleeves and making gussets, 3,050; sewing up seams of sleeves, 2,554; cording the bosom, 1,104; "tapping" the sleeves, 1,526; sewing up all other seams and setting the side gussets, 1,272. That represents the amount of labor that must be put into a shirt and explains why the home-made article has gone out of fashion."

A TELEGRAPH operator sued the Bridge & Terminal Railroad Company at Martin's Ferry, Ohio, claiming \$523 for overtime, having worked from fourteen to eighteen hours a day, while the Ohio law makes ten hours a day's work, and a jury in the circuit court at that place has awarded him the full amount demanded. It would seem that the employing company must have been very neglectful in regard to its agreement with employes, as the fact that ten hours make a legal day would not prevent anybody from contracting to work any number of hours at a given salary, if he chose. The result of the decision, if it should be sustained by higher courts, would be not to stop men from working over ten hours, but to reduce the present rate per hour where a longer day was necessary. As a general principle, however, ten hours a day is long enough for any man to work, and this is practically conceded in the railway service, though there are exceptional cases where more hours are required. — *Railway Age*.

The last report of the bureau of statistics of the state of Pennsylvania, recently issued, shows that, not including the strike of the employes of the Carnegie Steel company at Homestead, there were only twenty-six strikes during the year, a much smaller number than usual. Of these thirteen were by employes engaged in iron and steel industries, one was a railroad strike and one a lockout by coal operators. Eleven of the strikes occurred in Philadelphia and four in Pittsburgh. The whole number of persons engaged in the strikes was 4,208, and the number involved 7,414. Only three strikes succeeded, four partially so, while the others failed. The total loss incurred by the employes was \$373,285, and the employers' loss, as far as ascertained, \$50,985. The report concludes with the statement that the striking employes at Homestead lost in wages about \$1,250,000, while the expense to the state in the transportation and maintenance of troops was \$440,256.31. — *Railway Age*.

## GRAND LODGE.

### Quarterly Dues Notice.

OFFICE OF THE GRAND LODGE, B. OF L. F.,  
TERRE HAUTE, IND., January 1, 1894. )

#### To Members of Subordinate Lodges:

SIRS AND BROTHERS:—Pursuant to Section 129 of the Constitution, you are hereby notified that the dues for the quarter ending April 30, 1894 (such an amount as may be determined by the several lodges, provided in no case it shall be less than five (\$5.00) dollars), are now payable and must be paid to the Collector of your lodge on or before February 1, 1894. This amount will be in full payment of all subordinate dues and beneficiary assessments levied by the Grand Lodge for said quarter, as provided in Section 132 of the Constitution. All beneficiary members now enrolled and all those admitted prior to March 1, 1894, are liable for the full amount of quarterly dues for said quarter. All members initiated during the months of March and April, are exempt from payment of quarterly dues for said quarter, as provided in Section 129 of the Constitution. Any member failing to make payment as above provided will be expelled from the order, as per Section 130 of the Constitution, said expulsion taking effect February 2, 1894, and the Secretary is required to make due report thereof to the Grand Lodge.

Yours fraternally,

F. P. SARGENT, G. M.

F. W. ARNOLD, G. S. AND T.

### Notice to Secretaries.

OFFICE OF THE GRAND LODGE, B. OF L. F.,  
TERRE HAUTE, IND., January 1, 1894. )

#### To Secretaries of Subordinate Lodges:

SIRS AND BROTHERS:—Pursuant to Section 130 of the Constitution, you are required to report to the Grand Lodge as expelled all members who fail to make payment of their quarterly dues for the quarter ending April 30, 1894. The names of said members must be reported to you by the Collector of your lodge not later than February 2d, and by you reported to the Grand Lodge, in the prescribed form, immediately thereafter. Failing to report the names of expelled members as herein provided, the Grand Lodge will hold subordinate lodges liable for their assessments, as per Section 133 of the Constitution.

Yours fraternally,

F. P. SARGENT, G. M.

F. W. ARNOLD, G. S. AND T.

### Notice to Receivers.

OFFICE OF THE GRAND LODGE, B. OF L. F.,  
TERRE HAUTE, IND., January 1, 1894. )

#### To Receivers of Subordinate Lodges:

SIRS AND BROTHERS:—You are hereby notified, as provided in Section 54 of the Constitution, that no beneficiary assessment is required for the month of January, 1894, and that therefore none has been levied for said month.

Yours fraternally,

F. P. SARGENT, G. M.

F. W. ARNOLD, G. S. AND T.

**Addresses Wanted.**

E. R. HALL.—A member of Morning Star Lodge, No. 88, is missing and his relatives are in deep distress on account of that fact. He is described by his sister as having been seen last in the Grand Trunk depot at Chicago the 2d of December, when he said he was going to work for the Big Four R. R. Co., prospecting for oil near Indianapolis. He is about 5 feet 7 inches in height, has broad shoulders, dark auburn hair, sandy moustache, short chin beard and blue eyes. He had on his working clothes and a brown overcoat, and carried a large, brown leather satchel. Any information concerning Bro. Hall will be gratefully received by his sister, Miss Kathryn M. Hall, 735, 12th street Boulevard, Chicago, Ill.

F. W. KOEPE.—A telegraph operator, employed until February 1st, 1893, by the C. M. & R. R. When last heard from was at El Paso on his way to Mexico. Any information regarding him will be thankfully received by addressing J. C. Kochenderfer, N. W. corner avenue H and 36th street, Galveston, Texas.

**FORTUNES FOR COINS AND STAMPS.**

Enormous prices are paid for many varieties of United States and foreign coins dated before 1883. There are also good sized premiums on Confederate and fractional currency, also old stamps. There are dealers who buy the above. One of the most reliable concerns is the National Coin Co., 832 Exchange Building, Boston, Mass. By sending a stamp you can get a 16-page pamphlet full of interesting and valuable information, which, if taken advantage of, may make you many dollars wealthier.

CLERICAL applicants for free transportation on a certain railroad receive the following card, it is said: "Thou shalt not pass."—Num. 20: 18; "Suffer not a man to pass."—Judges 3: 28; "None shall ever pass."—Isaiah 34: 10; "This generation shall not pass."—Mark 13: 30; "Though they roar, yet they cannot pass."—Jeremiah 5: 22; "So he paid the fare and went."—Jonah 1: 3.

"WORTH A GUINEA A BOX."

## BEECHAM'S PILLS

365 Canal St.

Send postal for our valuable book, "Constipation."

## To Firemen's Wives and Daughters.

### SHEET MUSIC FOR YOU!

There are numerous offers of cheap music this season, but here is the cheapest and best of all. The small sum of ten cents will bring you our charming musical and literary magazine three months on trial. You will also receive absolutely free 168 pieces of popular sheet music, including *That Is Love, After the Ball, You Will Never Know a Mother's Love Again, 'Twixt Love and Duty, Ever Faithful, Old Madrid, Sweet Heather Bells, Two Little Girls in Blue, Better Bide a Wee, Comrades, Ta-Ba-Ra boom-de-ray, Little Fisher Maiden, Pussy Cat, Annie Rooney, Bob Up Serenely, I Whistle and Wait for Katie, Bonnie Doon, Stop Dat Knocking, Kissing Over the Garden Wall, Five O'clock in the Morning, Let Me Dream Again, When Red Leaves Fall, In a Cottage by the Sea, Speak to Me, Maiden's Vow, Brave Old Oak, She Wore a Wreath of Roses, Take Back the Heart, Love Among the Roses, Anvil Chorus, Daddy Wouldn't Buy Me a Bow-wow, Think of Me No More, Lullaby, Old Zip Coon, On to the Field of Glory, Swiss Boy, Oh Day of Joy, Douglas, Tender and True, Annie Laurie, The Parting*, and many others. In addition to the 3 months' subscription and 168 songs (word and music), we will send an elegant art production in 8 colors (worth \$1.00) entitled, "The Interruption." All the above will cost you only 10 cents. Get the most for the least money by sending a silver dime to AMERICAN NATION COMPANY, 325 B Washington Street, Boston, Mass.

A Scalded Engineer,  
A Bruised Fireman,  
A Sore-Handed Conductor,  
A Chap-Handed Brakeman,  
A Bleeding Switchman,

Will find a comforter and healer in a cleansing and refreshing wash with

## Glenn's - - - Sulphur Soap.

It is not a fancy toilet soap, but a plain, every day remedy for the mechanic, the busy housewife, and the children. No household should be without it. Ask your druggist for it; he keeps it.

An Appropriate Christmas Present!

## The BROTHERHOOD SEAT

Patented and Manufactured by Brotherhood Men.

B. L. E. No. 88.

B. L. P. No. 28.

Only locomotive cab seat on exhibition at the World's Fair. Perfectly equalized, Adjustable to any weight. Seats made in any size. We make a specialty of Drop Seats for engines where boiler extends through the cab. Our upholstery is the very best. Best seat and back covered with grained Horsehide Leather. No engineer can afford to be without this seat, as it adds comfort and improves health. Over one hundred in use on second division of the U. P. R. R.

Satisfaction Guaranteed or Money Refunded.

Seat Sent on One Week's Trial.

Send stamp for our twenty-page catalogue and price list:

Appleton, Wis.

# Engineers and Firemen!

## STANDARD LITERATURE.

**These Books Will Help You to Master Your Calling and Get "On Top."**

**"Locomotive Catechism,"** by ROBERT GRIMSHAW. Nearly 400 pages. Full of cuts and illustrations. Fresh from the press and fully up to the times; *Price, \$2.00.*

**"New Catechism of the Locomotive,"** by M. N. FORNEY. More than 700 pages and more than 500 engravings. Greatest book published. *Price, \$3.50.*

**"Compound Locomotives,"** by ARTHUR T. WOODS. The only book on the subject. Should be in the hands of every student of the locomotive. *Price, \$1.25.*

**"Air Brake Practice,"** by J. E. PHELAN, of the Northern Pacific R. R. An exhaustive treatise on the Air Brake; explains in simplest language how to operate it under all conditions. *Price, \$1.00.*

**"Progressive Examinations of Locomotive Engineers and Firemen,"** by JOHN A. HILL. A capital little book for new beginners. An excellent pocket companion. *Price, 50 Cents.*

**"Alexander's Ready Reference,"** by S. A. ALEXANDER, for engineers and firemen. This book contains more valuable information in fewer words, and is easier understood by railroad men than any other book now in print. *Price, \$1.50.*

**"Twenty Years with the Indicator,"** by THOS. PRAY, JR., M. E. Copiously illustrated and containing many rules as to the best way to run any steam engine to get the best results. *Price, \$2.50.*

**"Simple Lessons in Drawing,"** by ORVILLE H. REYNOLDS (Chief Draftsman, Northern Pacific Railway). A splendid book. Every student of locomotive engineering and every explorer in the field of mechanics should have it. *Price 50 cents.*

**"Roper's Hand Book of the Locomotive,"** by STEPHEN ROPER. One of the most valuable treatises ever written on the subject. It is fully illustrated, and contains a description of the most approved locomotives in use. *Price, \$2.50.*

**"Locomotive Running Repairs,"** by L. C. HITCHCOCK. A splendid little book for locomotive men. *Price, 50 cents.*

## THE BROTHERHOODS' JEWELER.

**McGRANE'S**

**"LOCOMOTIVE CLOCK."**

The only substantial, moderate price clock on the market. Movement has jeweled escapement. Case cast bronze; front screws on; side wind; six inch porcelain dial. Very elegant and accurate. The red hand shown at VI o'clock is on the inside of glass and is moved by a knurled nut on the outside. This is John Alexander's "Red Reminder." When it is moved out of its regular position, (six o'clock), it is put at the time of the next meeting point, order station, or what not, and serves to remind you that you must make a meeting point, get orders to side track at that time. No extra charges for the "Reminder," clocks furnished with or without it.

**Price, \$12.00.**

P. S.—Please note the change of address from 48 Maiden Lane.

## FORTUNES FOR RAILROAD MEN!

Enormous prizes are paid for many varieties of United States and foreign coins dated before 1890. Railroad men who keep their eyes open can make a small fortune if they run across the proper coin. There are good sized premiums also on Confederate and fractional currency as well as old stamps. There are many dealers who buy the above. One of the most reliable concerns in the United States is the NATIONAL COIN CO., 335 X, Exchange Building, Boston, Mass. By sending stamps to them you can get a 16-page illustrated pamphlet full of interesting and valuable information, which if taken advantage of, may make you many dollars wealthier. It will show you how to keep your eyes peeled.

## BLOOD POISON

When Mercury, Iodide of Potassium and Hot Springs fail to cure, we will guarantee a cure or no pay. Can be no failure. Cure in 20 to 90 days. Will contract to pay railroad fare and hotel bills if we fail. We are incorporated, with large capital. Refer to Bradstreet's. Everything sent sealed, in plain envelopes. Write for references and proofs free. Can work during treatment.

Tested over 40 Years.

EFFECTUAL AND HARMLESS.  
50c. per bot. at druggists, or expressed from 6th  
and Wood Sts., Philadelphia, to any address 80c.

## R\*E\*M\*E\*D\*Y

There is more Catarrh in this section of the country than all other diseases put together, and until the last few years was supposed to be incurable. For a great many years doctors pronounced it a local disease, and prescribed local remedies, and by constantly failing to cure with local treatment, pronounced it incurable. Science has proven catarrh to be a constitutional disease and therefore requires constitutional treatment. Hall's Catarrh Cure, manufactured by F. J. Cheney & Co., Toledo, Ohio, is the only constitutional cure on the market. It is taken internally in doses from 10 drops to a teaspoonful. It acts directly on the blood and mucous surfaces of the system. They offer one hundred dollars for any case it fails to cure. Send for circulars and testimonials. Address

F. J. CHENEY & CO., Toledo, O.

Sold by Druggists, 75c.

## THE NEW METHOD

Cures PILES, FISTULA, &c., without cutting, caustic, clamp, injection, ligature, pain or blood. Immediate relief. Pay when cured. Investigate.

THE MEDILL PILE CURE CO.

Chicago office: 189 W. Madison Street, Chicago.

## CONSUMPTION SURELY CURED.

TO THE EDITOR:—Please inform your readers that I have a positive remedy for the above named disease. By its timely use thousands of hopeless cases have been permanently cured. I shall be glad to send two bottles of my remedy free to any of your readers who have consumption if they will send me their express and postoffice address. Respectfully,

T. A. SLOCUM, M. C.,

No. 183 Pearl Street, New York.

**GRAY HAIR OR WHISKERS** Restored to perfectly natural color by using **VAN'S MEXICAN HAIR RESTORATIVE**. It removes all dandruff; stops hair from falling out and cures all diseases of the scalp. It is no dye, and is warranted absolutely harmless. Money refunded if it does not do everything claimed for it. Sent to any address on receipt of price, \$1.00 per bottle. Full information free. Agents wanted. **ALLEN & CO.**, 312 Inter Ocean Building, Chicago, Ill.

## FOLKS REDUCED

From 15 to 25 lbs. per month by a harmless treatment administered by practicing physician of 17 years' experience. No bad effects; no detention from business; no starving; no wrinkles or sabbiness follow this treatment. It improves the general health, clears the skin, and beautifies the complexion. Endorsed by physicians and leading society ladies. Thousands cured. **PATIENTS TREATED BY MAIL** confidentially. For particulars call, or address with 6c in stamps, **O. W. F. SNYDER, M. D.**, 246 WICKER'S THEATER BUILDING, CHICAGO.

We will send you the **MARVELOUS** and **UNFAILING** French Preparation,

## CALTHOS

Free, and a legally executed guarantee that **CALTHOS** will restore your **HEALTH, STRENGTH and VIGOR.**

*Use it & pay if satisfied.*

Von Mohl Co., Importers, Cincinnati, Ohio.

## EPILEPSY OR FITS

Can this disease be cured? Most physicians say No—I say, Yes; all forms and the worst cases. After 30 years study and experiment I have found the remedy.—Epilepsy is cured by it; cured, not subdued by opiates—the old, treacherous, quack treatment. Do not despair. Forget past impositions on your purse, past outrages on your confidence, past failures. Look forward, not backward. My remedy is of to-day. Valuable work on the subject, and large bottle of the remedy—sent free for trial. Mention Post-Office and Express address.

JAMES M. KEACH.

## For Locomotive Engineers and Firemen.

BUFFALO, N. Y.

It has long been my desire to make a statement of my cure to the Brothers, not only for the benefit of those in my own Brotherhood of Locomotive Engineers, but for all those persons who have suffered in like manner. I had a rupture that was very large and difficult to hold in place. Trusses of all kinds were tried. They were painful and would not hold it. The rupture would come down constantly when at my engine and give me fearful pain. I was cured at Dr. Pierce's Invalids' Hotel and Surgical Institute, Buffalo, N. Y., by a treatment that is safe and certain.

My cure has been permanent, although I have worked steadily at my engine.

Your sincerely,

JAMES M. KEACH.

Abundant references, by permission of those whom we have cured, will be furnished to any one wishing to call upon or write them.

### RUPTURE.

HERNIA (Breach) or RUPTURE, even if old and large, is speedily and radically cured in every case undertaken by our specialists, without dependence upon trusses, and without danger. 385 cases of Rupture cured by us, at the Invalids' Hotel, in 1892.

There is on longer any need of wearing clumsy, awkward, chafing old trusses. There is no safety in any kind of a truss, for there is constant danger of strangulated hernia.

### VARICOCELE.

VARICOCELE, or false rupture, and HYDROCELE are permanently cured by new and painless methods.

An illustrated Treatise on Rupture, Varicocele, or Hydrocele, sent to any address on receipt of ten cents.

☞ Address all letters to

**CAPITAL STOCK, \$500,000.**

**SHARES, \$1.00 EACH.**

**Full Paid, Non-Assessable.**

**No Individual Liability.**

Over 300 railroad men compose this company. Are you one of them? If not, why not?

**A great strike at Copper Rock!** Thirty feet of solid mineral! Read of this fabulous wealth, described and illustrated in the pages of the GOLD NUGGET for December. Send for it.

**Vast bodies of ore uncovered at Yankee Hill.**

**Fortunes for all!** The GOLD NUGGET for December tells all about it. The best 16-page gold mining journal, richly illustrated and replete with strangely fascinating stories of the mines sent free on application.

We quote no prices. There are but 10,000 shares offered, and the price to-day may not be the price to-morrow.

Telegraph or write, stating number of shares wanted, and we will reserve them until you can get full particulars and investigate.

Address,

N. C. MERRILL, Secretary and Treasurer,

No. 30 Kittredge Building, Denver, Colo.

Local agents and traveling men on a salary wanted.

☞ Read this proposition carefully. A beautiful native quartz gold specimen taken from our mines, cut and set in 14-karat gold, in the form of a large neck or scarf pin, worth \$15.00, is offered as a gift on the following terms: Send us the names and correct address of such people as in your judgment would be likely to invest in the stock of this company. Each list sent will be duly filed and credited. To every person on the lists furnished we will send a personal letter, a copy of the GOLD NUGGET, and specimens of ore from our mines. The person whose list secures to us the greatest total of stock sales before the 1st of February, '94, will receive the pin. The best list, not the largest, is most likely to win. Each competitor for the gift will be credited with sales made through his personal effort as though made direct from the office.

RHEUMATISM.

## ARTIFICIAL LIMBS.

Patent Adjustable Slip Socket.

Warranted not to Chafe the Stump.

Largest firm (excepting one) in the U. S.

The Inner Socket, seen outside the limb in cut, is made over a plaster cast of the stump, giving an exact fit, being held permanently upon the stump by elastic fastened to lacer above, and in act of walking, moves up and down in the Outer Socket, bringing all the friction between the two sockets, instead of between the stump and the socket, as is the case in all single and wooden socket limbs. With our SLIP SOCKET the most tender and sensitive stump can be fitted and limb worn with perfect ease and comfort. Endorsed and purchased by U. S. Government. Send for our New 1893 Catalogue with illustrations.

---

The Pocahontas Coal is acknowledged by all railroads that have used it to be the best American coal for Locomotive use. It generates steam with great rapidity, and at the same time holds the fire an unusually long time. The merits of the coal are shown by the unprecedented growth of the mines, which were not opened until 1863. Since that time the out-puts have increased over 1,200 per cent. beyond all precedent, amounting during 1892 to 3,000,000 tons. During the present year it will be at least 2,000,000 tons. We are therefore prepared to fill all orders with prompt dispatch.

## Galena Oil Works, Limited.

FRANKLIN, PA.

### SAFETY, SPEED, ECONOMY

Are the results of the use of Galena Oils. Scientific and practical tests of the past twenty years have demonstrated the fact that Galena Oils are superior to any other oils in the market.

Galena Oils in winter stand a cold test of from ten to fifteen degrees below zero, and will not freeze in the coldest weather.

The superiority of Galena Oil is demonstrated by their exclusive use upon a large majority of the railways of this country. They are in use upon three continuous lines of railways from Boston and New York to the Pacific coast and on one to the City of Mexico, thus demonstrating their adaptability to all climates and all temperatures.

We also supply our patrons with Sibley's Perfection Valve Oil, which is in exclusive use upon a large majority of the leading railroads of the country.

## Dreher's Cylinder Oil

MADE ON THE SAME PRINCIPLE AS THE

**CELEBRATED DREHER'S CAR COMPOUND.**

We will furnish sufficient to make a test free of charge.

MANUFACTURED SOLELY BY

## INDUSTRIAL REVOLUTION.

BY EMILY L. BAKER.

Professor Ross of Stanford University has been delivering a course of three lectures on the labor question at the Unitarian church, Oakland, two of which I had the pleasure to hear. Professor Ross, although connected with a university founded by a corporation millionaire, comes out strongly against the injustice of corporations and in favor of labor organizations. I think the full text of his lectures would interest your readers, but in the absence of that, I venture to send what I can remember of them.

First, as to what has brought about the industrial revolution. By the introduction of machinery, the division of labor has been carried an enormous distance. Where formerly one man made a whole shoe, there are now sixty-five different kinds of work recognized in the shoe-making business. Where formerly a man learned a trade by which he could alone make a salable article, he now learns only part of a process of manufacture. One of the most obvious consequences of this is that each man is dependent on his fellow workmen, and they are all dependent again on the man who has the money to establish the factory and put the finished product on the market. This inter-dependence is a form of co-operation and it has been said that nature herself works on the same plan. There are perhaps five hundred distinct nerve centers in the human body, each doing the work for which it is fitted. In the lower orders of animal life these centers are independent, but as we go up in the scale, the centers become more and more under the control of one center, the cerebrum. In other words, four hundred and ninety-nine nerve centers have been reduced to subjection to one. Co-operation has become despotism. Likewise in the factory, each individual doing his own part of the work is at the mercy of the man who furnishes the material and machinery and sells the product.

Another feature of modern life is that while we have many rich men, we have not enough rich men to do the business of the country, and the result is the forming of joint stock companies or corporations of rich men, each contributing a share to the enterprise. No one man risks his entire fortune in one business, and if one undertaking fails, each stockholder loses only what he puts in.

Referring to Ricardo's iron law of wages, *i. e.*, that wages depend on what it costs the workingman to live and replace himself (that is, raise a family), Professor Ross says that Geo. Gunton converts this into the golden law by showing that if the workingman cannot buy the ordinary comforts of life he will not marry and will not leave children to succeed him. With the extensive improvement in the comfort of living made by new inventions like gas, railroads, electric light, etc., the working man demands his share, and accordingly his wages must rise to a point where he can afford them.

In industries where women and children can be employed, it has often happened that the workman's family has attempted to increase the income by assisting in the work and in all cases it has followed that the price of wages has fallen until the amount earned by the whole family only equalled that paid to workmen in other industries where women and children were not employed. This evil has at times become so great that the law has had to step in and forbid the employment of women and children in certain trades.

Another consequence of this industrial revolution that is going on is that we have always with us not only the poor but also the unemployed. Under the old order, when every man had a complete trade he could himself make something salable and only the vicious were idle. Now when a man can make only a certain part of an article, he can make nothing that he can sell. He must find some one to employ him, and

every business has its dull season when men most willing to work are "laid off." This gives us a floating population of a most undesirable kind. When a ship has a cargo not solidly packed, as the ship rolls, the cargo lists and the ship can not be easily righted. So with the ship of state. Her floating population is borne from side to side by stress of political and social storms and menaces the safety of the nation.

It's an old, old story that corporations have no souls, and it is also true that the agents of a company will do meaner things for their employer than they would do for themselves. The stockholders judge of the success of the management by the size of the dividends. When individual acts of the management tending to increase the dividends but working hardships on employees are brought to the notice of stockholders, they plead innocence, saying: "Our manager attends to that, we don't know anything about it." The managers say: "Don't blame me, the stockholders want a bigger dividend and I've got to make it for them."

All these things, the introduction of machinery, the division of labor, the growth, greed and injustice of corporations, have brought about a state of affairs wherein we have two distinct classes, the people who sell labor and the people who buy it, and the adjustment of the relations between these two classes constitute the labor question.

One school of economists has classified labor as a commodity, something that is bought and sold. Some people adopting that classification say that there ought not to be a labor question more than a potato question. But in one essential particularly labor as a commodity differs from any other commodity, because the seller goes along with the thing sold. If a man sells potatoes it is no concern of his what becomes of them. If he sells his labor it is of vital interest to him where, how and for what purpose it is to be used. So a labor question becomes inevitable. A business man is apt to say to his employees when they make complaint on any of these points. "I'm going to run my business to suit myself, and I'll have no interference from you." Is it interference? Has not a man a right to say something about where he shall work, and how long, and under what conditions? Is not all that his business? In discussing these matters it is customary to expect the employer to act like a business man and his employees like saints.

Some people declare that the interests of capital and labor are identical, and others claim that they are diverse, and both parties are right. So far as production goes, their interests are the same; it is to the benefit of both working man and capitalist that roads should be built, mines opened and

goods manufactured. When it comes to a division of profits, the interests of the two clash. If the stockholders of a road claim 70 per cent. of the net income for their share, there is but 30 per cent. left for the employees. If the employees get 40 per cent there is only 60 per cent. left for the shareholders.

There are various ways by which the workingman can better his condition. One way is by getting more for his money, by learning to spend it judiciously. It is a well known fact that the rich men who have made their own fortunes are usually close bargainers, better buyers than the men who work for them on small salaries.

Saving is well in its way, for no people can thrive without thrift. To urge saving with the promise that the workingman will thereby be enabled to become an employer is like encouraging a school-boy with the hope of becoming president. The chances are too slight. The uninvested savings of a life are too small to be of much use, but there are now many ways of investing small sums to advantage. Aside from banks and bonds, there are joint stock corporations and building and loan associations which offer great inducements and are pretty safe. If by concerted action a large number of employees of one railroad system should buy stock of that road, could they not make a respectable showing and have something to say in the board of directors?

Napoleon said he won his battles by presenting his strongest battalions at the point of contact, and the old Romans won theirs by dividing the enemy's forces. Capital in its contact with labor adopts these tactics to-day. Capital employs expensive managers for its business and the best legal talent to fight its battles in court. Every railroad company has lawyers to whom it pays from \$5,000 to \$50,000 a year. That is one of the recognized expenses of conducting the road.

When a labor organization employs a man to attend to its interests all over the United States at a salary of from \$1,000 to \$5,000 a year, the other side raises a hue and cry and figures out carefully how much each member is "taxed" (so they call it) "to support this gentleman." They take pains to find out how he lives and dresses, and assiduously disseminate this information, drawing comparisons between the way the members of the organization usually live and the way their representative lives. All this is done for the purpose of making the workmen discontented and dissatisfied with their leaders. For a long time in England it was the policy of the wealthy classes to draw off successively the leaders of the working classes by offers of political or social advancement. The same thing is going on here, always on a smaller scale, but it is hoped that the representatives of the working men will some time see that their in-

terest is with their own, the larger class, and will stand by their colors.

In order to secure better wages or more favorable conditions for himself, there is no hope for working men acting singly; they must combine. It is only by making common cause and dividing the risk of the employer's disfavor that they can hope to secure justice. Organization is the chief weapon of the employe, and one which is also used by the employer against him, and it is a weapon which can not be taken out of the hands of one party and left in the hands of his opponent. As to the loss of liberty entailed in joining these organizations, that is the same in all organizations. When a man joins a secret society, or a club, or buys shares of stock, or associates himself with any body of men which agrees to be governed by the will of the majority, he gives up a part of his liberty.

Strikes seem to be a necessity and justifiable when the provocation is sufficient. If a merchant can hold back a cargo of goods for a rise in the market, why can not the working man refuse to sell his labor until the price of wages rises or more favorable conditions are granted him? Referring to the evils attendant on strikes, particularly those affecting innocent parties, Professor Ross admits the hardship, but says in their defense: "It is war, and war is neither beautiful nor pleasant."

The future is not hopeless, but the sooner both parties in the struggle agree to deal with one another in the friendly spirit of christian charity, the more easily will their relations be adjusted to the satisfaction of both.

## WAGE-SLAVERY.

BY W. H. STUART.

Those readers of *The Magazine* who have followed my attack on the single tax are aware that the strongest indictment that I brought against that theory was that it contemplates the perpetuation of our present damnable and degrading system of wage slavery. A system by which a small minority of the population are enabled, by control of land and capital—the means and instruments of production—to virtually enslave the masses. For, as the laborer is absolutely dependent for a living on his ability to gain access to the means of production, those who control them are able to dictate the terms, and the terms are: That while labor is accorded the permission to produce all wealth, including all the modern tools for its effective production, it shall retain of the product—in the shape of wages—only sufficient for a bare subsistence, the other and larger part, the capitalists' "surplus-value," goes in the shape of rent, interest, and profits to the support and per-

petuation of the non-producing capitalist class, who are fast absorbing the national wealth.

Modern industry is tending more and more to large production by means of labor-saving machinery, involving great aggregations of capital, and the inevitable dependence of the laborer, who, divorced from the tools of production, are degraded and enslaved in the fierce competition for employment.

The concentration of wealth in the hands of a small class is proceeding at an ever accelerating rate. Already, so Mr. Thomas G. Shearman informs us, 31,000 persons own the major portion of the national wealth, while 250,000 own practically the entire wealth of the country.

Of this system of wage slavery, the necessary result of such conditions, the greatest of political economists has said:

"The law by which a constantly increasing quantity of means of production, thanks to the advances of the productiveness of social labor, may be set in movement by a progressively diminishing expenditure of human power, this law in a capitalist society—where the laborer does not employ the means of production, but the means of production employ the laborer—undergoes a complete inversion and is expressed thus: the higher the productiveness of labor, the greater is the pressure of the laborers on the means of employment, the more precarious, therefore, becomes the condition of existence, viz.: the sale of their own labor-power for the increasing of another's wealth, or the self-expansion of capital. The fact that the means of production, and the productiveness of labor, increased more rapidly than the productive population, expresses itself, therefore, capitalistically in the inverse form that the laboring population always increases more rapidly than the conditions under which capital can employ this increase for its own self-expansion. Within the capitalist system all methods for raising the social productiveness of labor are brought about at the cost of the individual laborer: all means for the development of production transform themselves into means of domination over, and exploitation of, the producers; they mutilate the laborer into a fragment of a man, degrade him to the level of an appendage of a machine, destroy every remnant of charm in his work and turn it into a hated toil; they estrange from him the intellectual potentialities of the labor-process in the same proportion as science is incorporated in it as an independent power; they distort the condition under which he works, subject him during the labor-process to a despotism the more hateful for its meanness; they transform his life-time into working-time, and drag his wife and child beneath the wheels of the Juggernaut of capital. But all methods for the production of surplus-value are at the same time methods of accumulation; and every extension of accumulation becomes again a means for the development of those methods. It follows, therefore, that in proportion as capital accumulates, the lot of the laborer, be his payment high or low, must grow worse. The law, finally, that always equilibrates the relative surplus-population, or industrial reserve army, to the extent and energy of accumulation, this law rivets the laborer to capital more firmly than the wedges of Vulcan did Prometheus to the rock. It establishes an accumulation of misery, corresponding to accumulation of capital. Accumulation of wealth at one pole is, therefore, at the same time accumulation of misery, agony of toil, slavery, ignorance, brutality and mental degradation at the opposite pole, i. e., on the side of the class that produces its own product in the form of capital.

\*\*\*Capital," by Karl Marx, Appleton's ed. pp. 660-661.

It is sometimes urged, in extenuation or defense of our brutal competitive system, that it is possible by industry and shrewdness to rise out of this class of wage-earners into that of the capitalist class; that, in fact, a large proportion of the latter class commenced as wage-earners; that there is always room "at the top." The necessary inference being that by industry, prudence and shrewdness that all could be capitalists, that all could reach "the top," that every marksman could hit the bull's-eye; that every runner could win the race, and so on, *ad nauseum*, which is, of course, nonsensical. Let it be remembered, however, that while it is true that wage-earners are continually rising into the capitalist class, that the relative proportion in numbers between the two classes remain nearly the same. If, for instance, there was no such thing as inherited wealth; if every member of society commenced poor, even then only about 5 per cent. of the workers could expect to rise into the capitalist class, the other 95 per cent. would be doomed to a life of dependence, degradation and unrequited toil.

Every American in our glorious republic is, of course, a possible president, but only about ten in a generation can attain that position. One man owns a factory and a thousand work for him. It is quite possible that in the course of a life time the owner may sink to the condition of a hired worker in the factory he once owned, and that a former employe may take his place as owner, but the proportion between the number of employes and owners remains the same. Even if the owner was compelled after ten years possession to step down and into the ranks of the workers, and an employe raised into his place, and that process continued forever, even then only four wage-earners in a life time could rise out of their class, and so long as the means and instruments of production continue to be private property this proportion must necessarily continue, a few capitalists and the great mass wage-slaves.

The conditions have entirely changed under which wealth is produced. The tools and instruments are different, and the allowing of a small class to own and control those modern instruments of production compels us to support in luxurious idleness the capitalist class, who levy a tribute in the form of rent and interest which they are enabled to exact by virtue of possession.

Land and capital are things in which private property is impossible except on condition of a constantly diminishing minority owning all such property, and the great majority nothing at all.

This inevitable result of the private ownership of capital is entirely overlooked by the advocates of the superficial theory that

the state confiscation of rent would in some occult and mysterious way prevent the owners of the instruments of production from absorbing, as now, all over a bare subsistence to the laborer. One man would continue to own the factory, the thousand employes would continue to work for him, and on the same terms. What alternative, more than now, would they have? Could they, without capital, compete with the owners of the bonanza farms? Could they raise cattle in competition with the cattle kings? Could they mine coal in competition with the coal barons, who could, by the use of mining machinery, produce coal at a price that the miners would starve on, or who could pay a higher rent for the land, and thus as effectually exclude the miners without capital as an employe of the Lehigh Valley combine is now excluded. When land was practically free some years ago, wage-slavery still flourished, and the owners of large industrial plants accumulated immense fortunes by the control of them. No system of land tenure will prevent or interfere with this system of exploitation. The only alternative is, that by collective ownership the worker will cease to be divorced from the tools of production, then, and only then, can he hope to receive the full product of his labor. When the producer controls both land and capital, rent, interest and profits will cease. The capitalist, the landowner and the profit-monger will no longer be able to live by the robbery of labor.

Some time ago an editor of one of the great New York dailies, defending Carnegie, remarked that "He was a splendid type and product of the competitive system, that it was possible for every citizen who possessed his business capacity, industry and energy, to rise to the same position of wealth that he had attained." Which goes to show how possible it is to be a great editor and still be an ass of the deepest bray—in economics. For the assertion is equivalent to saying that if each of Carnegie's 20,000 employes had his capacity and industry they might each be the owner of a Homestead plant, or some other industry of equal importance, and that if all citizens had his "push and enterprise" they might all be worth thirty or forty millions each. That in fact, we might all, by "industry, strict integrity (?) and close attention to business" become capitalists! that all could be employers of labor!! The usual *reductio ad absurdum* of such learned ignorami.

The plutocrat and the pauper are the natural complaint, the one of the other. Great wealth at one pole means great poverty at the other. Wealth is produced only by labor, if the laborer does not retain the wealth he produces, but it is absorbed by a small, non-producing class, it is at once evident that the real producer is robbed.

Therefore, wealth in the hands of the capitalists represents merely accumulated unpaid labor. The wage slave is a lineal descendant of the chattel slave; hunger a good substitute for the lash, as Rodbertus very acutely observed.

It is urged, in deference of the capitalist, that by his "abstinence" capital is accumulated, and used for the production of more wealth. Quite true, he invests the capital he robs labor of in means of production, which enables him to continue the robbery forever. Socialism proposes that the capital now handed over to the capitalist class shall be retained by the original producers, and used for their own benefit; that collective capital shall be substituted for private capital. That, in fact, we shall substitute freedom for slavery, equity for dependence and degradation, democracy for plutocracy and the co-operative commonwealth for wage slavery and poverty. Why should any intelligent worker hesitate for a moment which he will choose?

The remaining objections urged by Mr. Middleton in the November MAGAZINE are not so much objections against socialism as they are protests against the highest political, social, and ethical ideals and tendencies of the age.

As socialism, however, is in full accord and sympathy with those ideals and tendencies, I will briefly consider them.

First, Mr. Middleton protests against the democratic ideal government by majorities.

"Majorities," he informs us, "are often wrong—minorities are often right. To the extent that the majority believes itself right, or is controlled by selfish leaders who believe they are right, they will endeavor to control the minority." This is, of course, very true, but what would Mr. M. substitute for the majority control, control by the minority? or would he abolish all control and government, as the anarchists advocate? As the majority will suffer equally with the minority from the effects of bad laws, is it not reasonable to suppose that when a certain policy is inimical to the general welfare, that the policy will be reversed?

Under our present system of industrial inequality it may be to the selfish interests of a large manufacturer to maintain a high protective tariff, his employees may consider it to their interest to abolish duties on raw material, but the employer gives his men to understand that he who votes against his interests will lose his job. The workman's political equality in this case is but a sham.

But suppose that under a co-operative regime the question comes up, whether it would be the best policy to produce everything possible within our own territory; or to freely exchange products with other nations. It is quite possible that opinions

would differ on the subject. But what selfish interests would be aroused either for or against the proposition? It would be simply a question of statistics, and perhaps experience, and would soon be settled solely with reference to the interests of the whole nation.

But while a social democracy is the highest ideal of the socialist, he continually insists that until economic equality shall give a basis to political equality the latter is but a sham, and he contends that the industrial system of a nation, like its political system, should be a government of the people, by the people, and for the people.

Compulsory co-operation has a bad sound to Mr. M., but let him consider that we are at present living under a system of compulsory republicanism, which appears to give pretty general satisfaction except to a few millionaires, who, like Astor, consider America "not fit for a gentleman to live in, don'tcher know." I hope when we establish industrial equality and abolish wage slavery that Mr. M. will not find it necessary to emigrate to Russia.

However, with our boundless resources I feel confident that when we adopt the co-operative system ample provision will be made for those who, like Mr. M., may prefer isolated production, or in small voluntary communities, and while I don't wish to hurry Mr. M., may I suggest that it may not be too early for him to pick out his cave, for while I write these lines the splendid news is flashed over the wires that the American Federation of Labor, through its delegates at Chicago, has followed the example of the Federated Trades of Great Britain, and come out squarely for the "collective ownership of the means of production and distribution," which is the full socialist platform, the realization of which will be the co-operative commonwealth. Over half a million of the best brawn and muscle of America "declared against wage slavery."

Let me express the hope that it will not be long before the American railway employe will to a man demand that the transportation interests of this country shall no longer be controlled by a few capitalists on the joint principle of "the public be d—d," and "charging all the traffic will bear." Government ownership of the railroads means to the employes shorter hours, better pay, security of employment, and no discharge without adequate cause. It also means improvements and safety appliances that will reduce the present butchery of employes to the minimum.

Under our system of industrial warfare, and the consequent competitive struggle, where the "golden" rule is: "Do up thy neighbor as he would do thee up;" the altruistic tendencies are repressed and dis-

couraged, and have free play only in the family. Within this charmed circle only does the strong not trample on the weak, where the most helpless and dependent receives the most help and assistance.

Socialists hold that with the abolition of the competitive struggle the altruistic tendencies would not be confined within the narrow limits of the family, that family exclusiveness would be broken down, and the feeling of brotherhood and solidarity extend till it included the nation, and in time all humanity. This ideal may be Utopian, but certainly it is a noble one. With this ideal, however, Mr. M. appears not to be in sympathy. He quotes from the *Co-operative Commonwealth*, by L. Groulund, the following:

Next, in the very nature of things, family supremacy will be absolutely incompatible with an interdependent, a solidaric commonwealth, for in such a state the first object of education must be to establish in the minds of the children an indissoluble association between their individual happiness and the good of all. To that end family exclusiveness must be broken down, first of all.

I quote the rest of the paragraph:

A public spirit, *i. e.*, the spirit of all being members of one social organism, must be substituted for family spirit. Now please do not misunderstand the socialist position in this respect. We do not make war on the family; on the contrary, our aim is to enable to help every healthy man and woman to form a family. But we do make war on family exclusiveness—perhaps a better word than "selfishness"—on family prejudices and family narrowness, and we are glad to be able to say that our common schools are doing very much to break down that spirit.

If this be treason, then in the words of Patrick Henry, "make the most of it."

Mr. Middleton's strongest indictment of the socialist state (next to his soul-harrowing exposition of the horrors that will inevitably ensue when we attain economic equality) is, that work will be compulsory on all. This at once suggests to his vivid imagination the workhouse and the penitentiary. Not, of course, that he would expect to loaf around and be supported by the community, but he dislikes the term "compulsory"—the word "voluntary" has a better sound.

He quotes passages from "Looking Backward," showing how, under the industrial system there outlined, compulsory service would be inevitable, that, in fact, the whole social order was based upon mutual service, there being no other possible way in which a citizen could provide for his existence.

Under our present industrial system the ways are various under which a man can obtain an existence, and a very luxurious one, without any equivalent on his part. He can be a monopolizer of land (which he didn't produce) and live on the "unearned increment," or from the rent derived therefrom; or, he can loan money and confiscate part of the increase due to another laborer, or he can live on profits of trade, which consists in purchasing commodities below

their labor cost and selling them at their full value. These are all, under a present system, legal means of robbery. Of their moral equality there are again, various opinions. The single-tax school of economics denounce private monopoly of land as infamous, while their leader infamously defended thieves who robbed the poor and defenceless by cornering the necessities of life, and defends interest and profits as the "just return," or wages of capital! Another class hold that all robbery of labor is effected by the control of money—by interest, while the general belief is, that profits, when not excessive, are quite legitimate. But the socialist goes deeper, and sweeps these sophistries aside. He declares there is only two ways by which a man can exist—by his own labor or by the labor of others; if he exists by the latter plan he is morally, if not legally, a robber. The co-operative commonwealth makes no provision for the latter class.

The fact that an action is legal does not in the least affect its moral or ethical quality. For instance, piracy was once considered a very reputable and manly business. A hundred years ago the Christian merchants of England and of our own country considered the trade in African flesh and blood as reputable as it was legal. Indeed, I am prepared to show that our piratical and slavery-captaincy ancestors were, from a strictly moral point of view, not a whit worse than our modern coal pirates or iron pirates, or cornerers of food products, for our ancestors in their nefarious callings took some risk of being captured themselves and "walking the plank" they intended for others, or of being murdered by their infuriated black slaves. But our modern pirates and white slave-owners can, without any danger to their worthless carcasses, decide, over a bottle of wine and cigars, how many of their ignorant wage-slaves shall annually "walk the plank" of slow starvation and freezing, and do it with less compunction than an old-time pirate.

The radical difference between the socialist and the current industrial politico-ethical ideals is well illustrated by the way in which each regarded the thieving exploits of Stanley in Central Africa. Meeting once a tribe of natives who possessed an enormous quantity of ivory, valued at, I believe, some hundred thousand pounds, he took advantage of their ignorance of its value, and acquired possession of it for a few dollars worth of trinkets. Christian England regarded the transaction as a perfectly legitimate one, no compulsion being used, and the ignorant natives exercising their privilege of "free contract." The socialists, on the contrary, denounced Stanley as a robber, and dubbed him the "Buccaneer of the Congo." They declared the ignorance

and consent of the natives did not justify the act of robbery, and upon exactly the same grounds they denounce the present robbery of labor, effected under our capitalist system of production, and its necessary effect - wage-slavery.

Let me hope that when Mr. Middleton finds the time, and has the inclination to give the subject of socialism a little intelligent investigation, he will modify his opinions as to its supposed blood-thirsty and immoral tendencies.

## MONEY—WHY IS IT APT TO BECOME SCARCE?

BY JOSÉ GROS.

Here we are, towards the end of the nineteenth century, with all the fumes of what we call modern progress, and after two or three generations of that system of popular education which was to regenerate the human family and give us a civilization entitled to self-respect, resting on human rights, enabling each man to succeed in proportion to his individual merits, honesty and manhood. Well, have we accomplished anything of the kind? Are we satisfied with present conditions?

Less than forty years ago, when our troubles were not one-third as intense or provoking as those we have experienced in the last twenty years, we used to smile with contempt at the sight of the great troubles experienced by the old *effete* civilizations in Europe. To-day we are having at least as much trouble as the nations in question. We seem to be navigating in the same identical boat, through oceans turbulent in the extreme, under skies dark and threatening, indeed. And have men any clearer perception of what is the matter with us? Mighty few seem to be bright enough for that. We don't lack what we may call reform movements. We have too many of them. That is just the trouble. That is but a sign of the ignorance with which we are afflicted. We have too many doctors with their different medicines. Among them we have the money doctors; those who would like to rectify civilization through plenty of money. Yet the very men who claim that what we need is a great abundance of money already commence to realize that money is not wealth, but a mere sign or representative of wealth.

A few moments of quiet thought ought to reveal to the average mind that what we do need is wealth itself, not mere signs of wealth, and we need not only wealth somewhere, but wealth where wealth should be. If there is a nation on the face of the earth which should have clear perceptions in the money questions it is our own nation, because for over a full century we have had more trouble in money matters than any

other in the whole range of human history. We have tried all forms of money in all quantities and qualities. None of them have given us any long rest. Neither gold nor silver, neither bank notes nor government notes, in quantities large or small, have prevented us from having great commercial disturbances, considerable industrial paroxysms and the like, with the same inexorable result of enriching the gamblers at the expense of the workers.

The great peculiarity with all kinds of money is its tendency to disappear when most needed, or that of becoming plentiful when not necessary. Also that, independent of the quantity and quality of money in the country, it is relatively plenty where wealth abounds, and more or less scarce where wealth is scanty. We can prove all that without plunging ourselves into ancient history. For a number of weeks during last August and September, all at once we found ourselves without money—we, the poor, of course. Gold, silver, bank notes, small change, everything disappeared from the spots where it was most needed, just as if we had pitched our whole circulation to the bottom of the ocean. Even our silver notes, the apparent cause of all trouble at the time, even these (by some despised as dishonest) notes could not be found to carry the most indispensable commercial needs for some weeks.

Well, in less than two months the scene had totally changed, and towards the middle of December the banks in New York City were loaded with over \$200,000,000 in ready cash. That sum comprised the whole available circulation of this nation of ours in 1860, with the 31,000,000 population of the time! The writer was then in active business in New York City, in a large commercial house. Nobody in this nation complained then of the absence of money. We did not know what a tramp or a city loafer meant in that period of our history. No one was out of work who wanted to work. Discontent among farmers and wage earners was then unknown in the sense that it is known to-day. The available circulation to-day is more than double that of 1860, on a per capita ratio.

It seems to us that the above historical facts vividly illustrate the fallacy of trying to manufacture prosperity through a mere expansion in the volume of money. In the last five months we have had a dreadful business paralysis. It commenced and was developed when money disappeared. Money has now become plenty and our industrial troubles are still worse! And our abundance of money does not seem to be localized in the east. The west has been sending at the rate of \$4,000,000 per week to New York City alone. Boston, Baltimore and Philadelphia have no doubt received their share.

In August and September we had no money with which to carry on our business transactions. In November and December we had lots of money but hardly any business to transact.

Now be good enough to notice that absence of confidence brought absence of money about three months ago, and that the same absence of confidence brings absence of business to-day, although money is begging for employment as much as labor itself, and it seems to have recovered all confidence. And who are the fellows subject to a lack of confidence now and then? The men who have lots of money, because they have lots of wealth. That lack of confidence is always concentrated with the few and directed against the many. Why? Because the many are just as poor as rats, and hence they lack money because they lack wealth, and so they need to borrow, they need credit. There you have the cause of all industrial and monetary disturbances, absence of credit among the many because of absence of wealth, and so absence of money. The wealthy chap never lacks money, and never needs credit. He has lots of both because he has lots of wealth. He never needs to borrow money because he never needs to borrow wealth. No matter how large or small the money volume apt to circulate may be, it always flows toward the wealthy and always runs away from the men without wealth, a little more or a little less, as a matter of course.

And we should try to remember that what men borrow is not money, but wealth; wealth in the form of land, buildings, machinery, tools, merchandise, &c. Who cares for money but as a means to get something else with?

Imagine a nation in which nobody needed to borrow wealth. There would never be any panics in that nation; never any absence of confidence; never any absence of money, and that would happen even if the volume of money was far from large. Under such conditions it would not hurt anybody to reduce that volume and thus give to every dollar the capacity to buy five times as much wheat, shoes, clothing, &c., as it does now. Our money circulation could be very small, and yet our wealth circulation would be large. What nations do need and could and should have, is a large, important wealth production and corresponding circulation of wealth, properly distributed under ethical principles, with no especial group of men in need of being permanently in debt to anybody else. It then follows that the absence of confidence and that of money, and lack of employment, are but symptoms arising from a diseased social organization in which a wretched land distribution evolves a large class of debtors, permanent ones, with a small class of cred-

itors, a great many constant borrowers of wealth and relatively few lenders of wealth.

Can you alter any of the above results by a mere artificial contrivance, that of creating large quantities of money, when money is not wealth? Can you create wealth through the mere creation of signs of wealth? Independent of its quantity and quality, those signs of wealth will flow where wealth flows, and hence where monopoly makes it flow, and so it will run away from the wealth producers into the hands of the wealth manipulators. The whole course of human history tells you that. Besides, while we, as a nation can create all the money we want, we can not fix its purchasing value any more than that of the moon. The purchasing value of money is fixed by its volume in relation to the average daily commercial transactions that money may need to represent.

Look now at that central thought—absence of money—from a somewhat different point in the compass, from another section in the horizon around that money, the root of all evil, already in old times and perhaps more so in our days. But is money the root of all evil, except in a figurative sense? The root of all evil is greed, a desire from most men to obtain something from each other at the expense of each other. And that desire is kept alive and intensified from century to century by legislative enactments encouraging men to live at the expense of each other, literally devouring each other through the basic instrumentality of land gambling, from which it follows a great facility in the gambling of land products. Please connect this fact with that of money endowed with the power to buy land in any quantities you may see fit, and keeping it totally or but partially developed, so that to obtain from it a much higher price later on than that you paid; when increase in population makes such land more and more indispensable to somebody. Is it not self-evident that money is simply the root of all evil because of its power to buy the source of all wealth and keep it away from the wealth producers, by which the latter becomes the mere slaves of the land gamblers?

Under a correct civilization money would simply be good to exchange labor products. That is the only real function of money. It is a perfect absurdity and a colossal crime to give to money the creation of human law, the power to buy land, the creation of divine law. Already over forty years ago Thomas Carlyle ridiculed that barbarous human device. And do you know what would happen if we did not give to money the power to gamble in land? What would then happen is that money would never hide itself, would never become scarce. There would be no object in hiding money.

then. You would have no debtors. You would have no creditors, not in permanent forms, we mean; not in forms injurious to anybody. You would have no gamblers. You would have but workers. Each worker would have sufficient wealth, even if some had more than others. Each worker would have sufficient credit, and so sufficient money. All because each worker would or could have sufficient valuable land to make a nice living with.

Money being the creation of law, and the people being the only real sovereign, the volume of money should be fixed by direct popular vote. In order to prevent any commercial maladjustments from any sudden increase or decrease above that of wealth or population, any other increase or decrease in the money volume should be decided upon one or two years before it takes place. Such money, once deprived of the power to gamble in land, would represent permanent labor notes, forever flowing into labor's hands. There would be no other hands into which to flow without land withdrawn from the circle of production, and hence land forever kept into labor's grasp, under the exclusive control of those willing to use land in full, according to the provisions of the day.

It is hardly necessary to state that the above money should be direct government notes, and nothing else but that.

### RAILROAD MEN IN POLITICS.

BY GEORGE C. WARD.

From time immemorial down to a comparatively recent date sheep and lambs, and probably other animals intended as sacrificial victims or food purposes, have been led to the slaughter. Thus, the prophet Isaiah, gazing down the vista of time and discerning the sacrifice of the Lord Jesus Christ, speaks of Him as "A sheep led to the slaughter." But in these days of steam and electricity, of gigantic enterprises and restless push and energy, the nation's slaughtering is done by wholesale and the intended victims are herded and driven by droves up to the point where falls the fatal blow which deals death and destruction. And here our inventive genius calls a halt, for although there are isolated cases of apparently well authenticated instances of self-destruction or suicide upon the part of certain dumb animals, it has remained for man, with his sensitive, conscious faculties, to flee in numbers from the ills and misfortunes of life's checkered existence and brave the stern realities of an unknown state.

With all our inventive genius and grand and unrivaled progress in material science, we have as yet been unable to formulate a plan whereby the dumb and insensate victims of our appetites may be induced to

voluntarily walk up to the shambles and be slaughtered. With our own species, however, we have been more successful, and our modern system of civilization, with its concomitant control of industries by private corporations, has evolved a plan whereby men, supposed to be free, deliberately walk up to the political shambles and suffer political slaughter upon the altar of Mammon and corporate greed.

In the recent election in the state of Nebraska, the principal office to be filled was that of supreme judge. The two judges holding over are admitted to be the creatures and tools of monopoly, subservient to the will of the corporations. In the recent election the Republican candidate was of such antecedents and so notoriously the candidate of the railroad and kindred monopolies, as to render it certain that with his election the supreme bench of the state would indeed consist of "three of a kind." So notorious was this fact that the *Omaha Bee*, the leading Republican paper in the state, openly and vigorously opposed his nomination and after his nomination refused to support him but fought him with all the energy at its command. The Populist candidate—well, he was a Populist, with all that the name implies, and it goes without saying, was a steadfast and consistent friend to organized labor and an enemy to its corporate exploiters and oppressors. He was, withal, a clean, able and altogether qualified man. There was a Democratic candidate as a side show, to catch the votes of those Democrats who, with only two tickets in the field, would have voted the Populist ticket rather than have supported a Republican. The mandate had, however, gone forth from the administration that gold-mounted, monopoly-bored Democrats should vote the Republican ticket. The result was that the Republican candidate was elected by slightly over six thousand votes. But throwing out the votes of Omaha, Lincoln and—say Plattsmouth, or any other city of its size, the Populists carried the state. Now, mark this: It is estimated that *twenty thousand railroad employees* voted in the state.

Speaking of the Nebraska election, Henry R. Legate, in the *Boston Traveler*, says:

It should also be remembered that there are 20,000 railroad employees in the state whose tenure of employment depends upon the will of their bosses, and nearly all of them were given a holiday on election day and told that their services were required at the polls.

This statement is virtually confirmed by the *Omaha Bee* and from many Nebraska papers I learn that on election day railroad employees were "given their time" and virtually commanded to vote for the railroad candidate for supreme judge whose name was upon the Republican ballot.

Shades of Andrew Jackson!!! Consider

for a moment the momentum import of this fact. Twenty thousand railroad employes, with the echoes of the Ricks and Taft decisions ringing in their ears, deliberately casting their votes for another judge of the same calibre, when at the same time they had it in their power to put a true and staunch friend upon the supreme bench. Did I hear some one object to governmental ownership of railways, because of the enormous leverage the vote of the railway employes would give to the party in power? There can no system of railroad control be devised that can possibly exert a more absolute ownership and disposition of the vote of railroad employes, than is possible under the present private corporation control, with a competitive system of industry in vogue. Railroad employes no longer need to be openly led or driven to the shambles for slaughter. With the average employe, human as he is, selfish and fallible, and dependent for subsistence, nay, almost for existence, upon the will and caprice of a soulless and impersonal corporation, whose God is Mammon, and trained as he is under our present planless system of dog eat dog, to follow literally the programme—Every one for himself and the present pressing needs of himself and his; the devil take the hindmost, the nation and humanity's cause—all that is needed is that the corporate employer shall indicate the manner in which it is desired he should exercise his right of suffrage, and the employe will meekly and voluntarily (?) go and cast his ballot as he is directed to. No longer are the sheep "led to the slaughter" they willingly (?) walk to the shambles and bow their heads to the blow.

I arraign the present competitive system of industry because, 1st. It affords to the toiling masses a bare subsistence only. 2nd. It results in insecurity of tenure of employment. 3rd. As a concomitant result of these it makes slaves rather than freemen of working men and thus results in slavery. But I must be brief.

It results in a bare subsistence because with the present long hours of labor and fewness in number of employes, both features constantly increasing in intensity, there is a large and steadily augmenting number of railroad men out of employment, clamoring for work and, because of their readiness to take the place of strikers, defeating all attempts at shortening hours of labor, raising wages or increasing the number of employes. It results in a bare subsistence because, while the traffic is already taxed all it will bear, an army of superfluous and high-salaried officials and attaches and the interest and dividends upon fictitious capitalization, absorbs the earnings justly due the laboring employes who really operate the road and leaves only such an amount for them as they will consent to live upon.

It results in insecurity of tenure of employment because, as is a self-evident fact, the sole tribunal which decides whether a man shall continue in employment or not, is another hired man or set of men, constituting and consisting of a president, or general managers, or board of directors or control, etc., etc., who are simply hired by the stockholders to operate the business so as to extract the most profit from it and at the least possible cost obtain the greatest possible net revenue. This impersonal and soulless control is neither moved or governed by any principles or motives of humanity, justice, equity or kindness and, waiving sentiment aside, is ruled altogether by the ethics (?) of dollars and cents. And at the whim, or caprice of these creatures of selfish lust, wages are cut down, or men thrown out of employment without any means or opportunity of legal recognition, or equitable redress.

It results in slavery because, with the fear of destitution and starvation, misery and degradation continually and ever hovering, spectre-like, over him, no man is free, or dares to do right. Take the average man, and throw on the one scale idleness and hunger, and upon the other put manhood, political independence, patriotism, unselfishness, truth and candor, human rights and the nation's weal, and the scale containing idleness and hunger will weigh infinitely more than that containing all the balance, with the result that the man will go forth in the world with bowed head, branded in the forehead "slave." The fear of starvation makes cowards of most (not all) of us, and this it is that the moneyed oligarchy wields as a whip, to lash us into submission, while they spoliage and rob to their heart's content.

The foregoing indictment applies with equal force to all manufacturing and productive industries, as to the railroads and other distributive agencies. There are, however, honorable exceptions in the railroad ranks. I have the honor of working for a railroad corporation which steadily eschews all interference in politics and allows a perfect freedom in political opinion and action, on the part of its employes, asking only that honest service shall be rendered for wages paid. The general manager of the road in question is not hated and feared, but loved and respected by all the road's employes, and he never refuses to confer with a grievance committee, or to listen to his men's complaints through their regularly appointed representatives. And there are some others—but "exceptions prove the rule." It is the system, not always the men who are to blame.

The ideal government is the one which absolutely guarantees to all its citizens an opportunity to earn a comfortable living by

honest toil. But that is possible under a socialistic regime only, which proposes collective ownership of all capital and collective management of all industries. Then every employe would be a public functionary and, at the same time, a member of the firm or corporation which employed him. All industry would then be regulated by law. Our present planless, wasteful system is industrial anarchy.

Public ownership and operation of railroads would give to railroad employes plenty, security and freedom.

This may be easily demonstrated. By abolishing useless sinecures and an army of salaried superfluous offices—by merging all railroad general offices into one only, in each city, and in many other ways cutting down wasteful expenses—as also eliminating fictitious capitalization, traffic rates may be reduced to the public, and more men be employed, shorter hours at double the present wages. This would result in plenty.

By putting the railroad service into the classified civil service list and by putting all power and authority concerning employment and control of employes into the hands of a national board of railroad commissioners, upon which all political parties should be equally represented, and filling each subordinate office by election by the employes under its jurisdiction in connection with other innovations and safeguards, the railroad service may be entirely removed from the sphere and sway of partisan politics and this would result in security of tenure of employment, subject only to and dependent upon ability, capability, industry, sobriety and good behavior, with the ultimate result of freedom—to think and act as the employe pleased—politically, socially and religiously.

## SOME CONSEQUENCES OF SOCIALISM.

BY WILFRED P. BORLAND.

Mr. Stuart has well stated the theory of modern socialism, and it is indeed a noble one; but it is an exceedingly trite remark that theories do not always work out in practice, and the question to be decided is, would the consequences following the application of a system of collective production and distribution really be such as socialists so confidently predict? Large generalizations from observed facts, especially when they relate to questions affecting the welfare of large bodies of persons—as social questions—do not always furnish a stable basis of argument, and they need to be well sifted for the purpose of eliminating any disturbing influences before it is absolutely safe to give them implicit reliance. Our religious theory contains practically all there is of social science; upon its practical application all the different ists and isms

relating to moral and social questions must disappear since there would no longer be any possible excuse for their existence, and, withal, the theory is so simple; only this: "that ye love one another." Men have claimed to practice this theory for more than eighteen centuries, and how many there are to-day who are firm in the belief that they are really living out the theories of Jesus Christ, no man can say. Yet, how widely the practical differ from the theoretical results of this theory. But it will be said that the theory has suffered in its application; that it is not real Christianity that men have practiced, but a perverted Christianity, which they have conceived and applied in furtherance of their own selfish ends, and this is true. And how is it that, after eighteen centuries of trial, the practical results of Christianity are so far away from the theoretical? How is it that men have preferred a perverted form of Christianity to the genuine article? especially when they have been promised elysium upon condition of their practice of Christianity, and the torments of the Inferno for their neglect of such practice. Must we not say that, with the alternative before them, the motives are indeed strong, and not to be brushed aside in a simple sentence, that have led men to prefer unrighteousness to righteousness? And can we believe that the sublime theory of socialism, since it must encounter the same forces which have caused the perversion of the Christian theory, shall escape the battle unscathed and place upon the ruins of the present system a social structure harmonious in all its working? Modern socialism is, truly, "a purely economic movement," and as such it must be tried; but, now that we are on the subject of religion, as it is a question that has considerable importance for some persons, we might inquire if those "frankly materialistic" ones are not the only really logical socialists? Such seems to be the view of Mr. Belfort Bax, and I suppose he may be considered good authority on socialism. I must here present a rather extended quotation from his *Ethics of Socialism*:

Our moral is the futility of attempts to fundamentally change one aspect of the current order of things while conserving another. In vain does one party of generous and well-meaning men, no doubt, think to batter down current theology, while ignoring, or even justifying, the great social contradiction of the age. In vain do they hurl their thunderbolts at the gaunt spectre of Christian dogma, which only stands "as the air invulnerable," confronting them with its soulless eyes. What, for instance, though they may show the doctrine of vicarious atonement to have its roots in a bestial superstition pertaining to the worst side of paganism, a superstition which has borne cruelties innumerable in the world's history as its fruit—the foul doctrine, with the rest of the system of which it forms a typical part, will continue to be fulminated every week from a thousand pulpits while these pulpits are subsidized by capital, and they will continue to be subsidized so long as the *status quo*, of which capitalism and Christianity are two of the

chief elements, subsists.

Unconscious humbug is an important ingredient of the *Zeitgeist*. The *bourgeois* respectability and pietism alike, spring from roots hidden perhaps to himself, but none the less real, to-wit, his own pocket, potential and actual, or the pocket of his class generally. He is acute enough to connect *Atheism* and *Communism*.

Lastly, one word on that singular hybrid, the "Christian socialist." Though the word socialism has not been mentioned, it will have been sufficiently evident that the goal indicated in the present articles is none other than socialism. But the association of Christianity with any form of socialism is a mystery, rivalling the mysterious combination of ethical and other contradictions in the Christian divinity himself. Notwithstanding that the *soi-disant* Christian socialist confessedly finds the natural enemies of his socialism among Christians of all orthodox denominations, still he persists in retaining the designation, while refusing to employ it in its ordinary signification. It is difficult to divine the motive for thus preserving a name which, confessedly, in its ordinary meaning is not only alien but hostile to the doctrine of socialism. Does the "Free Christian" want a personal object of reverence? We can offer him many such, even now. Let him look eastward at those who have indeed places in which to lay their heads, ay, in some cases mansions and estates, but who renounce them and court the slow death of imprisonment in fortresses and Siberian mines, who flinch not at the sword, and whose utmost good fortune is the liberty of preaching their gospel in the dark places of civilization, and oftentimes amid a poverty unrelieved by even a *Zaccheus*. Let them call to mind the massacres of '71, and the Paris workman who, on being asked for what he was fighting and dying, replied: "*Pour la solidarité humaine*." Or again, let them think of the aged Deleuze closing a life of untiring devotion at the barricades, in harness to the last. Must we forever insult the living and lately dead, by falling back for our ideal upon the first century? Do nobleness and devotion, indeed, require to be mellowed by the "dim religious light" of ages before we can recognize them as such? This, however, by the way. Our contention is the following: If by Christianity is meant the body of dogma usually connoted by the word, it will probably be conceded by those to whom we refer that it is in hostility to progress. If, on the other hand, this be not meant, but merely the ethical principles Christianity is supposed to embody, then, even if these principles were distinctly and exclusively Christian, which they are not, we challenge them to show this connection or even their compatibility with socialism. If, again, they fail in this, as fail they must, the whole matter is resolved into one of sentiment. And for the sake of retaining a catch-word, for such it is, and no more, under these circumstances, they would compromise principles and throw a sop to respectability in its most hypocritical form. To say nothing of the thousands in Europe to whom the name of Christian is positively abhorrent, how shall they face the eastern world when the time comes for so doing? Only those who can tell the Moslem, the Buddhist, the Confucian, we care not for Jesus of Nazareth any more than for Mohammed, for Gautama, or for Kon-futze: disputes as to the relative merits or demerits of these teachers are vain as they are endless; only those who can say we know of greater men than these; greater, inasmuch as humanity has reached a higher level; greater, inasmuch as they have not posed as great teachers, but have contented themselves with the rank of humble and equal workers—who come in the form of neither god nor prophet, but of the humanity whose religion is human welfare—not the welfare of a race or a class, but of the whole; whose doctrine is its attainment, through human solidarity, or, in other words, socialism: only those, we repeat, will ever obtain the ear of the Orient, and never they who come in the hated and blood-stained name of Christianity—name indicative of racial and religious rivalry. What in earlier phases of human evolution has been accomplished as in pre-human evolution by the survival of the fittest in the struggle for existence; in other words, what has hitherto been accomplished *physically*, or unconsciously, must, in the future, be done *psychically*, or consciously—the struggle for existence must give place to co-operation for existence, and this co-operation,

though in one sense the result of economical revolution, implies on another side a correlative change in the basis of ethics and religion. Then, and not until then, will the contradiction of our age be resolved in the unity of a fuller and more complete life than any yet experienced by humanity.

I have quoted Mr. Bax at some length because it seems to me that he has correctly stated the socialist position on the religious question. I think he is better authority on this phase of the question than Mr. Stuart, inasmuch as he has written a book—"The Religion of Socialism"—which is regarded as a classic in the literature of socialism, and I think it will appear that, instead of regarding religion "as a purely private concern," authoritative socialism takes a very decided stand on the basis of materialism. Within the limits of this ism, the greatest freedom might be allowed, but propagandism of any other theory would not be considered compatible with the main principle of socialism, and it seems quite certain that when socialists had developed sufficient strength to be able to stop such propagandism they would not hesitate to do so. The entire previous history of the human race supports this conclusion. While giving expression to their economic principle, they could not permit to exist "a basis of ethics and religion" which was incompatible with the proper expression of that principle. There would be danger in allowing this basis to remain, even as a tentative measure. I must confess that this question has very little interest for me, as I am a professed Deist, but the question is a vital one with a vast number of persons who would shrink from socialism with horror were they to understand its conscious attitude on the subject of religion. There has been more blood spilt on this old earth of ours over differences in religious belief than from all other causes put together, and it is by no means certain that humanity has seen the last of these. If we could be certain that introducing humanity into an environment of economic equality would only put an end to religious prejudices, we might be hopeful—but would it? For myself, I can say, in the words of Prof. Emilie de Laveleye, "it is impossible to understand by what strange blindness socialists adopt Darwinian theories which condemn their claims of equality, while at the same time they reject Christianity, whence those claims have issued and whence their justification may be found." But, as before said, it is through its economic principle that socialism must be tried, and, in my view, it is here that socialism develops the greatest weakness. I had intended, when I began this article, to point out here some of the economic consequences of socialism, but I find myself so completely under the pressure of other duties that I must forego it, and I will content myself with briefly pointing out a fallacious assumption of Mr.

Stuart's, which has a bearing on what will follow at a later time. Although our government is theoretically one of the majority, practically it is not so, and when Mr. Stuart makes the assumption that he does with respect to our government, he displays as complete an ignorance of the canons of criticism as that of which he accuses Mr. Middleton. But, even in theory, the majority has now no power to decide, absolutely, what the people shall eat, drink and wear, while under socialism they unquestionably would have such power, and the question up for discussion is, would it be in the interests of humanity to give such an extension to the principle of majority rule as social democracy (Ochlocracy) requires?

### THE VALUE OF MONEY.

BY JAMES MIDDLETON.

Political economy usually recognizes two kinds of value; value in use and value in exchange. Value in use is utility.

The utility of money is incalculable. Without it commerce would be reduced to barter in its most primitive form. So important is money to a civilized state that even schemes of socialism include it, though they call it by another name, time checks. These time-checks are what the workman would receive for his work and which would be cashed at the public stores in whatever commodities he should see fit, or used in payment of rent for his home or any other debt he might owe the state. Changing the name does not change the object.

It is the essence of money that it is something that all desire, not for its own sake, but for the sake of what it will bring.

F. A. Walker in his *Political Economy* has described its nature in exceptionally clear language. He says:

Money is the medium of exchange. Whatever performs this function, does this work, is money, no matter what it is made of, and no matter how it came to be a medium at first, or why it continues to be such. So long as in any community there is an article which all producers take freely, and as a matter of course in exchange for whatever they have to sell instead of looking about, at the time, for the particular things they wish to consume, that article is money, be it white, yellow or black, hard or soft, animal, vegetable or mineral in its composition.

He emphasizes that it must be something that circulates freely and which all producers accept; and shows that bank checks, for instance, are not money. They do not circulate freely but are only received on account of faith in the one giving it in each individual transaction.

The issuing of the money of a country has, and wisely so, been made an exclusive government function. The "stamping" the article by the government as money is coining it. The word used to apply only to stamping metals such as gold and silver, but has come to mean the affixing the government money stamp upon any article.

Says Judge Joel Tiffany, of New York, in his treatise on "Government and Constitutional Law":

To coin money and regulate its value as an act of sovereignty involves the right to determine what shall be taken and received as money, at what measure and price it shall be taken; and what shall be its effect when passed or tendered in payment, or satisfaction of all legal obligations.

Government, like the Spartan law giver, may put its stamp upon leather, and make that currency. And so long as it can fully provide against the counterfeiting the same, and can thus regulate the quantity in use, it can give to its stamp upon leather the same money value as if put upon gold or silver, or any other material. Thus the government may put its royal or sovereign stamp upon paper, affixing its money value, and, if it limit the quantity, and fully provide against counterfeiting of it, it will have the same currency value as gold or silver, or any other substance.

When the material of which the dollar, pound, or franc is composed approximates in exchange power to that dollar, pound, or franc it is called commodity money—such is a gold or silver dollar. When the material of which the dollar is composed costs almost nothing, that material is usually paper, and the dollar is then called a paper dollar. If the paper dollar is redeemable in a commodity dollar it is called convertible. If its final redemption depends upon the taxing power of the government solely it is called an inconvertible or a fiat dollar.

The exchange value of a dollar is its power to command all other products or services and is expressed by the ratio of exchange with whatever object or service it is compounded with. For instance, if one dollar will command two bushels of corn, the ratio of exchange is 1 to 2. If it will command 20 pounds of sugar its ratio to sugar is 1 to 20.

Upon what does the power of a dollar to command products and service depend? If it is a commodity dollar, like a gold dollar, it may depend either upon the commodity of which it is composed or upon the decree of government and the consent of the people. As a commodity it is dependent upon the same laws that govern the exchange value of all commodities, the law of supply and demand, in which the cost of production is an important factor regulating as it does the supply.

Sometimes the commodity value is greater than the legal tender value. For instance, in 1873, prior to demonetization, the commodity value of a silver dollar was nearly four cents greater than its coin value. Sometimes it is a great deal less—as is the case to-day in regard to silver. In case of a paper dollar there is practically no cost of production, so that cost of production does not affect its exchange value.

In the case of a paper dollar its value depends upon the law of supply and demand modified by the credit of the government. This is practically true whether the government simply promises to receive it for all dues, or to redeem it in coin or makes it full legal tender. At the beginning of the

war the government issued some \$60,000,-000 redeemable in all dues against the government. So long as they were in existence (and they disappeared in 1863) they fluctuated with gold and never fell over three cents below a gold dollar though they were not legal tender except for dues against the government. Granted that the credit of the government is stable the exchange value of a legal tender dollar outside of commodity value depends wholly upon the law of supply and demand.

Let us first suppose the demand to be constant, then if the supply is doubled each dollar will be worth one half as much. If a bushel of wheat cost before one dollar it would now cost two dollars. If on the other hand the supply be reduced one half then each dollar will buy twice as much, that is, one dollar will buy two bushels of wheat.

Let us suppose, second, that the supply is constant and that the demand varies. If the demand diminishes one half then there will be twice as many dollars for the work, and the bushel of wheat will bring two dollars. If the demand doubles then the dollar will buy two bushels. Whatever increases the supply or diminishes the demand sends up prices of other things measured in money. Whatever diminishes the supply or increases the demand sends down prices of other things measured in money.

The more increasing or diminishing the amount of money leaves the amount of wealth, the material products that gratify our desires, unchanged.

This law was well illustrated by Bastiat by a game of poker. While the amount of money in the pool remained the same, doubling the chips simply made each chip worth one half what it was before. Dollars, fractions and multiples thereof are only chips.

There are many and complex causes affecting the supply and demand of money.

Barter, credits, bank checks, and similar devices all limit the demand and act the same as an increased supply of money. Whatever increases credits and promotes their stability tends to raise prices. Whatever disturbs credits acts precisely the same as diminishing the supply of money. Inventions increasing the amount of wealth give more wealth for the same amount of money and send down prices.

So far as falling prices come from increases in the supply, wealth through inventions, bountiful harvests and the bounties of nature, they are a benefit. Falling prices from contraction of money or disturbance of credit are a curse.

The expansion of money and credit make it that much easier to pay debts. When wheat is two dollars per bushel it will pay twice as much debt as when it was one dollar per bushel. But while it will pay twice as much debts it will buy no more of other

things. If it took two bushels of wheat at one dollar per bushel to buy a hat at two dollars it would take the same two bushels of wheat at two dollars per bushel to buy the hat at four dollars. The increasing or diminishing the money makes it easier or harder to pay debts but leaves the exchange value of products to each other unchanged. Many in discussing the money question overlook this fact.

The increasing or diminishing the money supply to the demand affects those with fixed incomes the same as the debtor classes; they can buy less or more as the case may be. The expansion of money reduces the purchasing power of wages and the contraction of money increases the purchasing power—supposing business remains constant. Unfortunately business does not remain constant. Contraction of currency makes it so much the harder for those business men in debt to pay their debts. As it contracts, more and more are forced to the wall, and panic sets in. Then wages are affected by employes being thrown out of work and being brought into competition with those still at work.

While expanding currency diminishes for the time being the purchasing power of wages, if it results in promoting business the increased demand will eventually cause wages to rise. The last part of the saying: "Wages are the first to fall and last to rise" is emphatically true.

While it is true there should be money enough to transact business properly, the amount needed depends very largely upon the stability of credit. Whatever in finance, taxation and government, promotes equality of condition, promotes credit and makes it so much the harder for the designing few to disturb credits.

So long as the few, through unjust taxation and control of monopolies, have great wealth it is in their power to disturb credits for selfish ends, a power they are by no means slow to avail themselves of as our present panic shows. While to remedy those conditions is primary, yet it is of great importance also to secure as far as possible a correct and stable monetary system so as to secure as great a uniformity in the value of money and as little disturbance to business as possible. That is probably the most pressing immediate problem to solve.

### **Nobody Knows but Mother.**

Nobody knows of the work it makes

To keep the home together;

Nobody knows of the steps it takes;

Nobody knows— but mother.

Nobody listens to childish woes

Which kisses only smother;

Nobody's pained by haughty blows;

Nobody— only mother.

## AIR BRAKE FAILURES.

In view of the epidemic of air brake failures which have lately startled the country particularly the Big Four wreck at Lafayette, Ind., and the tail-end collision at Jackson, Mich., in which so many lives were lost—the public, including many railroad men, are asking one another: Is the Westinghouse automatic air brake all right?

The representatives of the air brake company claim that it is infallible—that it will always work, if properly handled—and their claims in this respect have never been successfully disputed, but very often doubted. These claims, like many others which are made in this world, are subject to modifications and qualifications that their authors do not always make; they should have qualified their assertions by adding: if the brakes and all their attachments are in perfect condition.

The Westinghouse Automatic Air Brake Company base their claims of infallibility for their brake on the assumption that the brakes and all essential features of them are in good working order, and the fact of their not being in such first-class condition would be such an anomaly—something so extraordinary—that everybody would readily understand that the W. A. A. B. Co. was not responsible for the disorders and failures of that particular brake. There are many practical railroad men, handling the brake every day, who believe that their assumption would come nearer being correct if the principal features of it were transposed, viz.: that it would be an anomaly to see a train of air cars or an air pump in which everything was in perfect condition.

I hope that no one will construe me as attacking the W. A. A. B. Co., or its representatives. But they tell us that the brakes will never fail, and how wonderful it is that the brakes always work so well before the accident, and so well afterwards—when there is enough of them left to make a trial. I wish to remark that it is equally wonderful how the engineer will state that he applied the air at the usual place and it failed to hold—when there is enough of him left to make a statement, which is not always the case. I don't wish to attack anyone; I simply want to get at the facts in the case and explain to the reader how two can tell such widely different stories, and yet both tell the truth.

As already stated, the W. A. A. B. Co. base their argument on the assumption that the brakes are in good working order,

and experience teaches us that the brakes are frequently *not* in good working order, and sometimes fail to work. Below follows a specification of the disorders which cause a majority of air brake failures:

1. Governor sticking.
2. Pump stopped from other causes.
3. Frozen triple valves.
4. Too much water in main reservoir and pipes.
5. Too many applications.
6. Running with brake valve on lap.
7. Not making sufficient reduction to cover leakage groove.
8. Angle cocks closed.
9. Rotary valve cut.
10. Making an emergency application when emergency check valves are leaking.
11. Drain pipe from air pump governor frozen up.

1. Is caused by the air piston sticking in governor after steam is shut off.

2. Includes many parts about the pump which are liable to break, chief among them being broken packing rings, they breaking quite frequently.

3. It is very rare that frozen triple valves have caused an air brake failure; as an unusually large quantity of water must necessarily lodge in each one and the weather be extremely cold before enough of them would freeze to prevent the brakes working properly, yet instances have been known where such circumstances have occurred and caused a wreck.

4. Main reservoir and pipes getting full or partially full of water are common occurrences; this is not surprising when you consider the poor facilities which have been provided on some engines for draining them; there are some engines which have the main reservoir located beneath the boiler between the front drums; you can't get at it by going in between the drums—they are situated too close for that; in fact, the only way that you can get at them is by crawling in between the front truck and pilot and then under the truck frame to the cramped space beneath the reservoir; then when you open the drain cock you will invariably get a shower bath of dirty water. Why can't those reservoirs have a rod extending to side of engine similar to those on auxiliary reservoirs of freight cars, thereby avoiding the necessity of going underneath at all?

5. Too many applications is the cause of a majority of air brake failures, if we are to believe the testimony of air brake experts who ought to know whereof they speak; in handling the brake, as few applications as possible should be made, as repeated applications exhaust the supply of air in the auxiliary reservoir, which is really the available braking power; the main reservoir is simply a store room for surplus air and the train pipe a means of transmitting

it to the auxiliary reservoir; incidentally, it is used to bring all the cars in the train into communication with each other, and by reducing its pressure permit the air in the auxiliary reservoir to flow into the brake cylinder and set the brakes; but only in an indirect manner does the train pipe have any part in setting the brakes. Most locomotives nowadays are furnished with an air gauge provided with two pointers, the black hand showing train pipe pressure and the red hand showing main reservoir pressure, but there is no gauge nor pointer to show the variations of pressure in the auxiliary reservoir, or, to put it in plainer language, the different degrees of braking power that there is under different conditions. This is what confuses most men who have trouble by making too many applications. They infer, from the fact of the air gauge being placed so prominently in front of them, that its pointers denote their braking power, when in reality the red hand simply advertises the fact that there are so many pounds of surplus air stored in the main reservoir, and the black hand does not advertise much of anything after you have once made a service application and turned your brake valve back to release position.

There is no gauge whatever to indicate how much air has been consumed or withdrawn from the auxiliary reservoir by this operation. This has not been provided for. It is left to the judgment of the engineer, and by the manner in which the engineer's equalizing and discharge valve is handled a man illustrates how much judgment he has on this particular subject. Failures similar to the above have occurred when a service application of say 20 pounds has been made, thereby cutting out the governor and permitting the pumps to work, while the brake remained on a long time, during which interval a high pressure, say 100 pounds, was accumulated in the main reservoir. Then the brake valve handle was thrown in a release position and shortly afterwards another service application made, which did not check the train at all, and it invariably ran by. There was 80 pounds in the train pipe, also in the auxiliary reservoir if the brake valve was in running or release position for one minute previous to the service application of 20 pounds being made, which reduced both the train pipe and auxiliary reservoir pressures to 60 pounds; then when the brake valve was thrown in release position the pressure of 100 pounds in the main reservoir equalized into train pipe, and bringing its pressure up to about 90 pounds, but did not increase the auxiliary reservoir pressure unless a minute elapsed before making the second application, which is very seldom done for want of time. Therefore there was 90 pounds in the train pipe and 60 pounds in

auxiliary reservoir when the second service application was made, and should have been off 35 pounds before it would move the triples and set the brake. It only took five pounds to move the triples on the first application, and some men have failed to note the difference and handled the brake accordingly; result—they have failed in making a good stop, and in some instances have caused considerable damage before getting stopped.

6. Running with valve on lap is the cause assigned by a number of experts on several air brake failures, one case in particular which I will cite being that of a passenger train which got beyond control of the engineer while coming into a terminal station and dashed into another engine, killing the engineer.

The presumption is that when he made the last regular stop, about twenty miles from home, he first released the brakes and then attempted to put the brake valve in running position. But the rotary valve, working very easy, slipped by on lap, and, it being night, he didn't notice his mistake. After the train pipe pressure had fed into the auxiliary reservoir and equalized the pressure he probably had about 60 or 65 pounds. While running that twenty miles a great deal of this leaked away, and when he approached the yard limits he probably used fifteen or twenty pounds more when checking his train, and when he arrived at the depot and attempted to stop he had nothing to stop with, and before he could stop with the reverse lever he was into them, and when picked up was unconscious and lived but a few moments.

7. Not making a sufficient reduction refers to the habit some men have of placing the brake valve, when they wish to stop, just past the lap position and making a reduction of from two to three pounds; any reduction of less than five pounds is not sufficient to move the piston in the auxiliary reservoir past the leakage groove, consequently the air in the auxiliary is frittered away. While this practice has never been charged with being responsible for any disastrous failures, yet it is easy to see that it could be possible to cause trouble. While only five or ten pounds might be wasted that might represent a difference of a couple of car lengths in stopping, and sometimes a car length or two represents the difference between a close call and a wreck.

8. Angle cocks shut off are held responsible for many a failure, sometimes a stone or a lump of coal falling off the tender has flew up and struck an angle cock, closing it, and thereby rendering the brakes useless. Sometimes one trainman has turned the cocks open and another one will follow up with the intention of opening it, but neg-

lects to notice that it is already open, and turn it the wrong way, thereby shutting it off again. On other occasions they have not touched it at all.

9. A rotary valve cut is one of the most dangerous air brake disorders that an engineer has to deal with. There are walls in the bottom of rotary valves about one-quarter of an inch in diameter, which separates the main reservoir pressure from train pipe pressure. Through lack of oiling face of valve, particles of sand being carried there by the air, etc., it does not take long to cut a cavity across the face of this wall, which results in the main reservoir pressure feeding into the train pipe after a service application has been made. Any slight increase of pressure in the train pipe is sufficient to release some of the brakes, the train pipe pressure begins to feed into auxiliary reservoirs which fact prevents the train pipe from immediately showing any great increase, and before there is any material gain in train pipe pressure, or enough to warn the engineer that the rotary valve is leaking, the brakes are all released and the train is not reducing speed, therefore another service application is made, and this performance is repeated until the supply of air in the auxiliary reservoir is exhausted and train stops of its own volition or some obstacle on the right of way stops further progress. If you find that the brakes leak off when making a stop, and you wish to ascertain the cause, get down on the ground and have the fireman make a service application of five or eight pounds, and leave brake valve on lap, then listen, and if you hear triple valve under tank report, as it usually does when releasing, you will know that the rotary valve is cut; if it does not report you can look for leak at the connections of pipe leading from auxiliary reservoir to brake cylinder, and sometimes when the complaint is from the driver brake it is caused by the brake cylinder being located close to the firebox and heat from it shriveling up leather packing in the same.

If you ascertain that the rotary valve is cut and you are going to run by, place the brake valve in the emergency position. This brings train pipe port into direct communication with the atmosphere, thereby avoiding the possibility of the increasing train pipe pressure releasing the brakes.

10. Making an emergency application on a long descending grade is what caused a bad wreck at one time. The air in its passage through the pipes carries many foreign substances, as sand, small stones, pebbles, etc. This sometimes lodges in the emergency check valves and prevents them properly seating; after an emergency application has been made air leaks into train pipe and releases the brakes; there is nothing

to fall back on, as the air was all consumed when an emergency application was made. On the other hand, if you make a service application while descending a long hill, there is no danger, even if the emergency check valves are leaking. First, because they are not called into play; second, because the brake cylinder pressure would not leak against or into the higher pressure that then would be in the train pipe.

11. Drain pipe from air pump governor freezing up is common in cold weather; it is easily located and easily remedied. All that is necessary is to thaw out end of pipe, where the ice usually forms, with a little oily waste or a torch.

These are but a partial list of the various disorders that the air brake apparatus is subject to. To enumerate them all or the numerous theories advanced for past failures is beyond the scope of this article.

As the various disorders and capers of the air brake are being more fully learned and comprehended, it is the belief of many that no one has yet fully mastered its possibilities or failings or derangements. Even the men who profess to be experts contradict one another, and it is only recently that they have admitted that it is not always advisable to follow those instructions literally, which read: "Never make a reduction of more than twenty pounds." And again, "Always make an emergency application when you wish to stop as soon as possible," as a blind obedience to those two rules have caused a few wrecks, as cited above, and may cause many more.

After noting the eleven enumerated above it will be seen that they can all be avoided by care and watchfulness on the part of the engineer. With one exception, angle cocks being displaced (and I understand that Mr. C. Skinner has lately invented a safety angle cock that effectually disposes of this danger), there seems to be a disposition on the part of those in authority to place all the blame for a failure on the shoulders of the engineer. Who ever heard of a theory being advanced for an air brake failure that did not indict the engineer as the guilty party?

If the engineers are receiving more than their share of the blame for the shortcomings of the air brake, they can thank themselves for such a state of affairs; for they have invited such treatment by the ignorance they have displayed on the subject. It is only in the past few years that they, as a body, have learned anything about the brake, more than to put it on and off. You can easily imagine that the experts who have been sent out to investigate an air brake failure have not been sent for the purpose of giving their employers the worst of it.

When I stated that those causes, enu-

erated above as responsible for numerous failures, could be avoided by care and watchfulness on the part of the engineers, I did not mean that he is wholly to blame for the accident; he is not, but by exercising a general supervision over the entire brake, he can reduce its possibilities of failure to a minimum.

This is, in a great measure, the secret of him receiving the bulk of the blame. Many railroad officers hold that inasmuch as they are paying their engineers the highest wages of any one connected with the care and operation of the brake, they expect them to display the highest skill, they expect that not only shall they be competent to properly perform their own duties but also to guard against and prevent any errors of commission or omission that his fellow-employees may commit.

The sooner this truth is comprehended and acted on by young runners, and firemen who are ambitious for promotion, the more certainly will they avoid trouble in the future.

We have many members who are well informed on this subject, let them pitch in and start a primary grade in the Mechanical Department on this subject, until all our members who are running, or those who may be running in the future, may learn to acquit themselves in a creditable manner in both the discharge and description of their duties, and if ever there should be a failure, be competent to assist in locating the blame and placing it where it properly belongs.

*James Deegan.*

#### COMPOUND ENGINES—SUBSTITUTES FOR STEAM.

The attempts of the new engine builders to supplant the ordinary so-called high pressure engine—or, strictly speaking—the non-condensing engine—by the use of two cylinders, and of compounding at high pressure, is one of the fallacies of the day, but it is fashionable, and some of the same men who make them argue that with a high pressure or non-condensing engine they can save over forty per cent. with such an one over the single cylinder non-condensing; but with a close-shaved contract, specifying whether it meant forty per cent. of the fuel or forty per cent. of the heat units, they would find they could not save *two* per cent. Yet, it is clear, in some cases, that a saving of forty or fifty per cent. *has been saved*, over what another engine did do, but the circumstances were not in the first case truthfully stated.

Taking the efficiency of steam, it is not possible to get out of it any more than was put into it in the first place, but sometimes this is done, if the figures made are honest. In a recent pumping engine test that the writer reviewed for the supreme court of

one of the states, the steam was reported to be "107 per cent. good." On asking the man who made the test in which this extraordinary quotation made its appearance, to explain it, he replied that it was 107 per cent. according to his rule; and, asking for the rule, it was found that he had inverted the factors in one of Rankine's formulas, and so reported *his own mistake*. In a test of a pumping engine, now in the courts, the duty figured out was over eight per cent. beyond the total capacity of the coal, if it had been perfectly dry and not a particle of ashes in it.

Yet these very factors are at the bottom of the compound locomotive. No matter by whom it is made, or under whose patents, it is impossible to get as much heat effort out of the steam as the fuel honestly burned puts into it, for it is a law that steam, from the moment it is made and moved, loses at every turn, and keeps on losing.

To return to our ancient history, it is only fifteen years ago that a "new" hot air engine made its appearance in Boston; it was called "The Woodbury, Merrill and Woodbury"—or, perhaps, there was another name in it. The prospectus was to run an engine with hot air under a pressure of one, two, or three atmospheres and still give out work on the machine, so as to be advantageous in its operation, so far as the making power went. It was a new departure in some ways, and gave promise of quite a field, as it was not so cumbersome as the Ericsson, and could be made at far lower price, &c. The indicator diagram was pretty nearly the shape in outline of a large egg placed at an angle of 20° to the horizontal (to the eye) on the card, with one or two atmospheres as back pressure. It was a pretty machine, and was double acting. Some few were made, a great deal of money was put into the work, and after an absence of some years from the "Hub" as headquarters, the writer, a few weeks ago, came in contact with one of the parties named and was surprised to find that he was now in, to use his exact words, "hot steam in place of hot air," it being a fact that the engine had been found after all to be the possessor of weak points, and is practically abandoned, for the simple reason that the natural laws asserted themselves, and cast-iron, it was found, persisted in cracking, and pistons of not being tight, &c.

Theoretically, many other wrecks lie on the shores of observation in the older engineers' experience, and frequent schemes are brought to us to enlist capital, which, when looked over to discover some intrinsic excellence, we have to decide against; and then comes the cry of "old fogy," "prejudiced," and such others as are usual.

There was never any one thing put in the market for steam users that had in it more of the apparent advantages than the "Bab-

cock & Wilcox" automatic cut-off engine, some twenty years ago. It had, so far as could be supposed, all the theoretical points in its makeup to make it a successful competitor, but it proved the worst kind of a failure from unexpected and unconsidered obstacles, and in a little while was utterly abandoned. Its inventors, in another application in the same line, were successful in a business way, and died—one a day or two before last Thanksgiving, the other seventeen days later, or only a few weeks ago.

It is a fact that wonderful amounts of money have been and still are put into such improvements and material matters that are to return such "fairly amounts" of dividends, but it is also clear that some of these wonderful matters come back to us after a few years or months with a long face and a longer profit and loss account, and it will no doubt be a matter of some interest to our readers if they are given some of the particulars why such was the case, and for this article we shall discuss the "Great Eastern" steamship.

There are certain data in the case of this great ship that are now not to be found, so far as compared with the way the same data is now kept, but the main points are sufficiently known to be comparable. At the time she was projected the speed of the few ocean steamers was not far from ten knots an hour, and that was considerable. The contracts for her construction were signed in the latter part of the year 1853. The first plates were laid in early May, 1854, and she was ready to launch on November 3d, 1857. Her launching was not successful until January 30th or 31st, 1858, and was a new experience in such work, for when she was in readiness for launching, it was found she could not be moved on the ways, and in the time that elapsed from her being ready to her floating, it cost over half a million of dollars for the apparatus and labor of putting her into the water. When she was in the water, or launched, the money was exhausted, and not a stroke of work was done on her for a year. A new company was then formed, and work went on again; her first steam trial occurred in September, 1859, and here we have one of the most magnificent ships ever yet constructed, ready for going into service, already bankrupt and reorganized, and it was now found that the prime object for which she had been built would have to be abandoned. The original intention had been to have her take a very large cargo to the East Indies and land it at such ports as she could get in at, and then, using smaller ships to redistribute her cargo, as it was to be, at various ports.

At this point it was found the original idea could only be made feasible by having six or more of the same ships, so as to make frequent trips, and so keep the smaller ships

busy at the other end of the trip in taking away and bringing in new cargoes; hence, it was determined to put her into the trans-Atlantic trade, and from 1860 to 1863 she made nine trips to and from New York. On one of these trips, hundreds of miles from Queenstown on her way to New York, she met with an accident to her rudder head, which was twisted off and the paddle wheels badly damaged, and she made her way back to Queenstown for repairs. On another trip from Liverpool, with over 400 passengers on board, she ran on or over a reef of rocks on Long Island and tore a hole in her outer skin in ten places, one of which was over eighty feet long and nearly ten feet wide, which would have sent to the bottom any other ship then afloat, and most of those now afloat, but her double bottom prevented any particular damage. She delivered her passengers in New York safe, and most of them, until afterwards, were in ignorance of how near they had been to death.

The conception of this ship in its entirety and the general working out of the details are to be credited to Ishambard Kingdom Brunel, one of the most eminent and successful of English engineers, but such a multitude of new computations had to be made, and the element of so many new features had to be considered, that he sub-divided the matter. He had before this time submitted to Mr. William Froude a model of what was in his mind as to the "great ship," and Mr. Froude had made many experiments with this model to ascertain certain features as to her "rolling"—of which Brunel made use, with due credit, Mr. Froude having died before her construction had began. The "lines" of the ship were designed by another of the most eminent of England's engineers, Scott Russell, upon his "wave line principle, and the cellular principle of the hull and inner bottom, as well as the complete sub-division of the hull into watertight compartments, were Mr. Brunel's. Two little extracts from the life of Mr. Brunel, by his son, in 1870, are made here: "I never embarked in any one thing to which I have so entirely devoted myself, and to which I have devoted so much time, thought and labor, and on the success of which I have staked so much reputation. \* \* \* Every part had to be considered and designed as if an iron ship had never been built before. Indeed, I believe we should get on much quicker if we had no previous habits and prejudices on the subject."

This may seem strange to our readers, but if it is stated—and it is a fact—that what Mr. Brunel had attempted was so very different and involved so many new and untried features that it would have perhaps simplified matters if this had have been the first ship, for ideas as to ships then in use

were of only little advantage in the construction of this giant ship; but it remains to-day a fact that many of the features shown in her building are now considered as correct, and while her non-success is probably one of the reasons why Brunel's death took place, he is entitled to far more credit than he or his contemporaries at the time thought of bestowing.

Having been taken from the field for which she was built, and transferred to the Atlantic trade, it was soon found that she could not be run at a profit and she was withdrawn from that, and again went into a new company (the third). The Atlantic cable was laid by her, and more or less of this work made her a temporary service. After a variety of uses, she was laid up at Milford Haven, and finally and lately was broken up and has ceased to exist.

The paddle engines of the ship were designed and built by Scott Russell & Co., London, who also built the hull. The screw engines were built by James Watt & Co., Soho Works, near Birmingham, England. The screw engines had an indicated power of 4,500 horses, at sea, and only one screw propeller; the paddle wheel engines had a power of 3,500 horses, in use, and the total horse power of this ship was not over 8,000 when in full work, or a trifle over one-quarter of that now in the new Cunarder's "Lucania" and "Campania," both of which have fully 30,000 when wanted, at sea, for full speed.

The screw of the "Great Eastern" was 24 feet in diameter, and 44 feet pitch; engines, 84x48 inches, steam pressure 18 to 20 lbs. per square inch; the paddle wheel engines were 74x168 inches, and four cylinders to each set of engines; the paddle wheels were 56 feet in diameter, steam being worked expansively, cutting at about one-third of the stroke, and, running at about fourteen knots an hour, she used in a day of twenty-four hours nearly 400 tons of coal. She had ten boilers in all, of the "box" type, square tubular, 18 feet long and 14 feet high, the whole ten having 112 furnaces.

It is now to be considered: what made her a failure? It was mainly the lack of more exact knowledge as to the change in the power of a ship of a given tonnage and with a certain displacement at different speeds; that is all.

In 1836 Mr. Brunel designed the "Great Western," and in her he adopted some of the points which he elaborated more in the "Great Eastern," and made certain changes in the first in 1836 that were adopted in the later one and have since been very generally in use in the most modern vessels from that time. There is only one other reason why she was a failure; it is thus stated by an English critic, in a document now twenty-three years old, as, "that at the time she

was built there were no lines of traffic on which a vessel of such huge capacity could procure with dispatch the amount of freight or passage money necessary to insure a profit." Another Englishman, of late, says: "The 'Great Eastern' was a failure commercially, but from a mechanical point of view she was, in all her main features, successful to a degree that was marvelous when compared with the standard of her time."

While this data is only the very elements, so far as the engineering features go, it is quite sufficient, for it shows the reason in general for one of the most promising enterprises, and one of the most stupendous failures in a commercial way. Yet, the whole matter was in the hands of three of the most successful among engineering firms of their time, and it is a noteworthy fact that Mr. Brunel spent more than three years in getting from all possible sources the most authentic data he could to insure success before he designed her.

The size of the great ship is often misquoted, and her correct dimensions are given from the record of one of our societies: Length over all, 692 feet; length between perpendiculars, 680 feet; moulded breadth, 82 feet; depth to upper deck, 58 feet; register tonnage—gross 18,915, under deck 18,837; draft, loaded, 30 feet; total accommodations for people, 4,000, of which 800 were first, 2,000 second, and 1,200 third class; total horse power, 8,000; speed at sea, 14 to 14½ knots; coal per day of twenty-four hours, 400 tons.

As a comparison, as well as a matter of interest, the "Campania's" data is here given, so far as is permissible. The tonnage of cargo is not in either case given: Length over all, 622 feet; between perpendiculars, 600 feet; moulded breadth, 65 feet; to upper deck, 41½ feet; register tonnage—12,950 gross, under deck 10,267; draft, loaded, 27 feet; passengers first class, 600; second, 300; third, 700; total, 1,600; indicated horse power when at sea, 30,000; speed, 22 to 23 knots per hour. The "Campania" has two engines, with five cylinders in each engine, three cranks to each; the high and low pressure cylinders are on the same crank, and she has two of low pressure to each engine, and the size of each are as follows: High, 37 inches in diameter; intermediate, 79 inches in diameter; low, each 98 inches in diameter; stroke, 69 inches. Thirteen boilers with 100 furnaces make up the power, and the consumption of coal is only a trifle more in the "Campania" than in the "Great Eastern." This was one of the matters that troubled Brunel; he did not and could not get the power required in her at anything like the cost for fuel that he had calculated.

Space for a fuller discussion of the various features of the big ships cannot be taken, but there are some other points quite as

much of interest as those discussed. The "Cimbria" and "Etruria," Cunarders, have been running near ten years now. They draw the same water, within an inch, that the "Campania" and her sister, the "Lucania," do, but the two last named are 100 feet longer than the first two named, and these are full up to the capacity of the water on either side; hence, we are coming to another feature at no distant day--either to deepen our channels, or stop at some point not now so very remote in deep sea navigation, and fast steamers.

There are many sources of information ready for us, when we are ready to attain it; no one of them is more to our advantage than the retrospective, for anyone can look back with profit, if he will. It is sometimes better to do this than to attempt to do away with some of the natural laws and undertake to demonstrate how much we know that "ain't so." It is always cheaper to try to find out if someone has preceded us in the line of investigation we are pursuing, and, if possible, to ascertain if they have failed in the line we are ready to go into. Some of the objections to the newest steamship engines are soon to be considered, and from the highest authority. To the men who run them, and the men who made them--on paper, it will be interesting reading, if read with care.

In 1849 the writer made a trip from New York to Liverpool on a Cunard ship, on which Sir James Anderson was a passenger. Some of his narratives of the "Great Eastern," when he was her commander, are now in my short-hand note books, and verified the statements in this article.

*Thomas Pray, Jr.*

#### ECONOMY.

The cry is "hard times" just now; therefore, a chapter on economy will not be out of place. Perhaps it may be well to define the meaning of the word economy, for it is often associated and in some instances used as if it were stinginess, but that is not its true sense. Economy is defined as saving; using everything to the best advantage; getting the most or the best results at the least cost. An economical man is opposed to waste in any form, but willing to furnish everything needed to conduct or carry on any enterprise in which he may engage, and thus differs greatly from the stingy man, who is not inclined to eat enough nor to have anyone connected with him have enough to eat. True economy consists in giving every man his just due; if he is working for you, to give him enough material to work with, and insist upon it being used to the best advantage for all concerned.

A good illustration of economy is given in "Frederley's Treatise on Business" in a letter written by a literary man, who found

himself short of funds in Hamburg, and determined to present a note of introduction which had been given to him by a friend. On his way to the given address, he noticed an old gentleman, who stopped to buy some fish and had them sent home, and then wandered on in the direction taken by the writer. They both came to a stop in front of the number given, and then it turned out that the fish buyer was Mr. Moorfield, and sole proprietor of the extensive importing and jobbing house of that name. The writer was invited to accompany the old merchant to his private office and entered the building with him. On the way they stopped to note some men who were weighing sacks of coffee. One of the men was handling the sacks rather roughly and burst a hole in one of them through which the coffee berries ran over the floor. The old merchant reproved the man for his carelessness and told him he would be discharged if he did not do better, for it was not his first offense. After helping to gather up the few handfuls of coffee and directing a careful re-weighing of the sack, he proceeded toward the office. At the door they met a dudishly dressed clerk who seemed to be trying to escape observation, but who was accosted with the question whether a ball or reception was to be held in the office to-day? This was followed by some good advice about the better care of his poor mother, and his younger brothers, who were running the streets barefooted. In passing a desk he inquired in regard to some bills of lading, policies of insurance and receipts, and found them all in good shape, and while commending the clerk for his promptitude, he took occasion to caution him about the more careful use of the blotting sand, which was at that time used in the place of blotting paper. After arriving at his desk and looking over his morning mail and attending to several calls, the old merchant noticed a woman, who, with tears in her eyes, said she was the wife of the man who had recently had the misfortune to break his leg by a bad fall in one of the warehouses, and as it would be some time before her husband could again return to work, she did not know what to do for themselves and their five children. "You will have to trust in the man in whose service your husband met the misfortune. Whatever he may need of wine, cordials or provisions shall be supplied from my kitchen and you must come and get his weekly wages every Saturday," were the orders that gladdened her heart. "Go home now and greet your husband, tell him not to worry, and that I will soon call to see him." As a result of the experience in these different cases, the writer had small hopes of obtaining the financial help he so urgently needed, but his fears were groundless, for he had no sooner explained his situation than the old merchant advanced him more than he really

expected or asked for. Economical in business, he saved and had the means to relieve distress when the applications came, and they were not ignored or thrust aside. Therefore, meanness and stinginess does not necessarily follow economy.

Mr. Pray, in the December MAGAZINE, pitches into the editor of *The National Car and Locomotive Builder*, because the latter has the temerity to say that "but a small proportion of the engineers are disposed to give heed to the great economy to be derived by this method of running (meaning the wide open throttle and short cut-off). Mr. Baker, the said editor, has, I think, had exceptional advantages to form an idea on this matter, as he has fired and run locomotives, and also was for awhile a traveling engineer, and thus thrown in contact with all kinds of men in the employ of his company. Among them Mr. Baker has no doubt found some men that do pay some attention to this matter of fuel economy, but it is also apparent that he has found many not so inclined, and, as a matter of course, his remarks could not be applied to the detriment of the former. Mr. Pray says that he "has had something to do with locomotives and with railroad men for some years," but from the general tenor of his remarks I deem it just possible that he never has fired or run one of the "iron steeds," and is, therefore, not as well able to judge of the merits of the case. During my service of nearly ten years of firing it was my fortune to be with a variety of engineers, and it was also my fortune to be placed in the very situation that Mr. Pray inquires about; that is, firing the same engine, on the same run, pulling the same trains over the same grades, and I can positively say that it made a great difference which engineer was at the throttle, for with the one I could keep her hot with nearly a ton of coal less each day than would be needed by the other one to keep her nearly hot. A difference of one ton in six is surely fully 15 per cent., which Mr. Pray doubts, but after having such a practical exemplification of the difference in management forced upon my attention by months of unnecessary work each day, I was forced to admit and to believe that not all the economy of fuel was to be accomplished by the fireman, but that much depended upon the way the result of the firing was used. An old proverb says, "A penny saved is better than two earned," and that is the truth, for if a man was to earn two dollars and spend one dollar and a half he would only have fifty cents saved, or half of the dollar instead of a whole one. Even so it is with the steam. It has ever been the rule to require the locomotives to do all in their power with a full head of steam, and the engineer has, therefore, ever had the problem of making the

best use of the steam at his command. Some have learned the art of making a little go a good ways; while others can not get along unless they have a full supply at all times.

Mr. Pray should not be so hard on Mr. Baker, because as it appears in Mr. Pray's article, the statement of the 15 per cent. to be saved is really a part of the report of the committee on compound locomotives of the master mechanic's association, and the blame of the 15 per cent. clause ought to be shared and divided between them, if they are to be blamed for a truth spoken more in sorrow than in anger. It will not do for us to ignore one truth and discredit it, even if we can establish the fact that in many instances mismanagement, family rings and corrupt practices permeate the whole of a system of road and absorb all the resources to their own advantage, leaving those out of the ring to suffer loss on their investments.

Now, I can not help but see that Mr. Pray rather "straddles," and gets his feet on both sides of the fence at once, for in one place he says that "the engineer's record for the easiest adjustment, or the lowest coal or repair record is not worth a cent," and in another he says that "a saving of even 3 per cent. was worth a thousand dollars a week easier than telling about being sure he could do it." Then again, in one place he denies the existence of the "interior engineer," and on the next page he declares that "engineers or real good firemen who do know their business are not so numerous as to glut the market," thus conveying the idea that there is room for improvement among them. This has been the aim of the Mechanical Department, to incite to improvement, and I believe the seven year's work of the Mechanical Department has done some good in this line, and that more will still be accomplished in the years to come.

As the query in the *American Machinist* about hydraulic rams, and the answer given was deemed of sufficient interest by you to publish it, you will please allow me to give a correct answer, as the answer given by the *Machinist* is incorrect in several particulars. The statement that the hydraulic ram is a self-contained automatic pump is correct, but it is not operated in part by the pressure of a column of water, but solely by the energy acquired by the intermittent motion of the column. In its simplest form it consists of a main or drive pipe placed on an incline, leading water from a spring or reservoir at the upper end of the pipe to an air chamber with a suitable valve near and below it. The delivery pipe issues from the lower part of this air chamber, and can be taken to any elevation

and the ram will deliver water at most any height, much higher, in fact, than the spring or reservoir from which it is taken. When the column of water in the drive pipe is at rest the valve near and below the air chamber is adjusted so as to open of its own accord, and not, as stated in the *Machinist*, by drawing water from it. The opening of this valve at the lower end of the drive pipe sets the whole column of water in the pipe in motion, and it soon acquires velocity enough to lift and close the valve. The water being in motion, and thus suddenly cut off by the valve alluded to, lifts a valve in the base of the air chamber, compressing the air in it and placing a quantity of water in the bottom of the air chamber. This quantity is determined, first, by the amount of acquired energy of the water in the drive pipe, and next, by the height to which the water has to be delivered by the delivery pipe, which is, as stated before, attached to the water space of the air chamber. After the energy of the water in the drive pipe has lifted the valve in the base of the air chamber it has to overcome air pressure, which after a short time stops the ingress of the water and brings it to a rest. As soon as this is done the air also presses back downward and would force the water out of the chamber into the drive pipe again were it not for the action of the valve in the base of the air chamber, which opens inward and therefore is closed by the return pressure, and the only escape from the pressure is into and up the delivery pipe, and that is what actually takes place. While this reaction is taking place in the air chamber and delivery pipe, the water in the drive pipe having been brought to a state of rest, has allowed the valve in the end of the drive pipe to drop, and has again acquired velocity and is soon in condition to force another quantity of water into the air chamber. The action is thus entirely automatic, and hydraulic rams will work for months or years without any attention, or just as long as they have a supply of water, or their valves remain in good shape and deliver a greater or less quantity of water in an intermittent motion.

William Weiler.

### OILING.

At the Traveling Engineers' Convention, held last September, there were some remarks made on oiling that are apropos to the discussion between Messrs. Lucas and Moore. The committee appointed to report on the "Economical Use of Oil and Supplies," reported that "Under ordinary circumstances an engine will run from 50 to 75 miles to an oiling." And that "When driving box and engine truck cellars are properly packed with good wool waste, an engine will run 10 hours in freight service, at a

speed of 15 miles an hour, on one oiling of boxes." The committee further said that "To economize in oil the men must have confidence that the oil is of superior quality. There is no economy in using a poor grade of oil. Cheap oils are always inferior." This report seems to bear out the claims of Mr. Moore, especially with respect to the oiling of driving boxes, and, in the rather extended discussion which followed, the above conclusions were not called in question. The discussion, as reported in the *National Car and Locomotive Builder*, is worth reproduction here.

Mr. Skinner: I think there is more oil wasted in oiling eccentrics by the can than any other line of oiling. On the Ohio and Mississippi we have a very fast train, and when I took charge of the engines they were using a needle cup on the rods. They would choke up with sediment. Before I made a change I made an estimate of the use of oil on the engines for two or three months, then removed them and put on a plunger cup on both eccentrics and rods and I made a saving of very nearly 40 per cent.

Mr. Rossiter: We are getting about 35 miles to the pint of engine oil on passenger service and 25 in freight service. We have no engines less than 18-inch cylinders, and since we have got the men interested and changed the oil, and they are positive we are furnishing them good oil, you can see the result—from 40 miles to 150, and we have some men that are making 25 miles to the pint of valve oil, and we have never had a seat injured a particle. We use automatic cups on eccentrics, rods and guides. You will find more economy in using automatic cups on guides and eccentrics than any other part of the engine. Set cups will not do. One man will screw them down and the next man will run them up. The only feed that we get the best results from is the automatic cup. We have a set that our feeds are gauged by. They are put on to stay. For a guide cup we use an automatic feed: for an eccentric we use an automatic feed with one-quarter-inch lift; for rod cups one-thirty-second-inch lift.

Mr. Bauder: We run the "Exposition Flyer" 95½ miles at one oiling. We have run it all summer; haven't had a hot box on it.

Mr. Brinsley: Our men all run 74 miles. They have no oilers, so they can't get out and oil at all. They have got to run 74 miles and they do it.

Mr. Bauder: Looking at it from an economical standpoint, I don't think there is much economy. They are running pretty fast and it would be perfectly natural for a man to use more oil in one oiling than if he was going to oil twice.

President Conger: My experience has been that a road that uses stone ballast, and a road that runs over sand ballast, especially the character of sand that cuts journals, eccentrics, etc., all to pieces, should not be compared with each other at all. On one they can use enough oil so that they will make 18 or 20 miles to a pint and the other 30 or 40. But we will leave this sandy business aside and take up valve oil. That is the most expensive kind of oil, and on our road we use the oil record as the test of the ability of an engineer, and when a young fellow starts in he uses a good deal more than the old fellows, and I say to them: "It is not the six cents' worth of oil that you use going over 100 miles, it is the test of your ability, and whenever you take interest enough to get your oil record down fine, or your coal record down fine, it is an indication to your superior officers that you are a good engineer or will be shortly." That, I believe is the only way to look at this matter with young men, as a test of their ability.

Mr. John A. Hill, of *Locomotive Engineering*: I believe it has been demonstrated here that there is no rule of comparison between the roads, between the miles that can be run. We are not allowed to make any changes in the engines, and the traveling engineer must make some arrangement with the men to get the best work he can. I will therefore offer the following resolution:

*Resolved.* That in the opinion of this Association there is no reliable comparison between roads as to the use of oil per mile run. Each engineer must make his time and be allowed to use some judgment in the use of his supplies. We believe that the standard of comparison should be the monthly average of the best half of the runners on a division. This makes allowance for local conditions, climate, engines, water and the difference in oil.

Mr. McVicar: We find men there who will make less than 20 miles to a pint of cylinder oil and a man right beside him will make 50. Now there is no difference in the conditions, but as a matter of fact the man who makes 20 does not put it all in his cylinders. I will make the statement that 50 per cent. of the oil is used for other purposes than that intended. I think if you could restrict the use of cylinder oil to the purpose for which it is intended, that you would find remarkable results. A man will tell you that he didn't put but a little on his eccentrics but it will be running on the ties. We have two engines that are running on the sixth district, in Wyoming, that average 200 miles for a pint of cylinder oil, but right beside these engines are others that don't make 30. Now, there is more difference in men than in machinery. There is a greater factor of variation in the dispositions of men and the way they have been educated and the way they have allowed themselves to do than in anything else.

President Conger: There is one point about this extravagant use of oil on engines which I might go on record as defining. I think the extravagant use of oil on engines is more than the engine requires, and we certainly must put that on the engineer. One gentleman asked a little while ago if we expected to hold the engineer responsible for the extravagant use of oil. I think as defined that way we can hold him responsible.

Mr. Brown: What relation is there between the amount of oil—cylinder oil—used, and the fuel consumption? Now some roads are making a great specialty of seeing how little oil they can use, but where is their coal going to? You hear their engines going by and the pistons in the cylinders sound like a buzz-saw. Ask the engineer why he is running so dry. He will tell you that only so much oil is allowed to that engine, about sufficient to grease my shoes (I have large ones). Now I think there is little relation between the amount of cylinder oil used and fuel consumed. An engineer can use good oil very extravagantly and it will only cost the company about 35 cents per 100 miles. How many scoops of coal does it take to cost 35 cents? Engines are dragging their way over this country every day, and they might better have a brake set than try to drag out an existence with the amount of oil that they are using. I think there is a little relation between the two.

After some further discussion, Mr. Hill's resolution was adopted.

President Conger covers the whole question with his definition of extravagance, as "more than the engine requires." That definition will cover those cases where a man is compelled to use the "gallon of cure" because of his misdirected economy in the use of his "pint of prevention;" the gallon being of course, more than the engine requires, and therefore extravagant, no matter what caused it. There is a great deal of truth in Mr. Lucas' proposition that "a pint of prevention is worth a gallon of cure;" if properly construed it covers the whole question of economy. The extravagance comes in when men substitute quart, and sometimes gallon, for "pint of prevention." The quart of oil more than is actually necessary, which is used to prevent heating, is just as truly wasted as is the quart which is used to doctor a hot journal following the application of too little oil; and that is where the question of good judgment comes in. To

know when all bearings are getting enough—not too much nor too little—oil is the mark of the really economical engineer. Men don't learn such things out of books, nor by blindly following the acquired practices of others; they learn them by making intelligent and painstaking observations on their own account; and the man who is not capable of bringing this personal element into the affair is not capable of practicing any true economy, for he always stands in danger of running up against a "snag" of some sort or other, when the economy that has been taught him would really be extravagance. What shall he do in a case of that kind, providing he has no "spectacles" of his own to look through? Why, simply commit an extravagance.

Speaking of the Traveling Engineers' Association, calls to mind the comment of some of the railway papers, concerning their first convention. There is no reason in the world why there should be found anything to criticize, adversely, in the conduct of the Traveling Engineer's Convention, any more than the convention of any other body of railway men, and the different railway editors who, before the event, seemed to be afraid "suthin' was goin' to happen," were not long in finding it out, and hastened to give the Traveling Engineers their full need of praise as a capable and intelligent body of men. But the facts of the case seemed to stick in the crop of that pessimist among railway journals, the *National Car and Locomotive Builder*, and they wouldn't go down without the accompaniment of a protest of some sort or other. At first there was a suspicion that the association was to be dominated by B. L. E. influence; this suspicion was presented in the "correspondence" columns and mildly deprecated in the editorial columns, where the conclusion was finally reached that it was without foundation. But it would never do to let that convention pass without a protest—and what an idiotic protest it was! It came in the form of some lofty and disinterested advice, as follows:

"We have been prominent in advocating the merits of this association and in expatiating upon its possibilities for good, and we shall be quite frank in criticising whatever we notice in its conduct and proceedings that we cannot approve. There was one thing we noticed in the proceedings of the last convention that we would like to remind the members, in all kindness, was not suitable to the character of their association, or to the position they occupy in railroad service. We refer to the habit that some of our members indulged in of referring to their associates as "brother." We appreciate the fact that this was the first convention of the association, and that, like

any other new machine, it had a good many rough edges to wear off. This was one."

One might write a long tale with that subject for a text, but, "nuff sed;" the Traveling Engineers will no doubt appreciate this advice at its true value.

W. P. Borland.

#### The New Brake Valve.

MR. EDITOR:—As the Westinghouse Air Brake Company has made improvements in some of their brake appliances, and not having seen any account of it in the MAGAZINE, I will try and point out the difference between the old and new engineer's brake valve. This for the benefit of the firemen who may not be acquainted with the change, as the firemen are the ones who will have to handle it next. The chief difference is when the handle is in running position; with the old valve, after releasing the brakes and returning the handle to running position, communication was shut off from train pipe until the excess pressure was obtained, and the amount of excess pressure obtained depended upon the tension of the excess pressure valve spring, which amounted to about twenty pounds. The chief difficulty, then, was found to be with long trains, when the brakes would creep on, owing to insignificant leaks in train pipe, and the lost pressure could not be restored until after the excess pressure was again accumulated. With the new brake valve with feed valve attachment, with the handle in running position, air is automatically cut off when the train pipe pressure reaches 70 pounds; and should there be a reduction in train pipe, from leakage or any other source, the lost pressure will be automatically supplied. With the old valve, the governor is connected with the train pipe, and with the new one it is connected with main reservoir; also the rotary valve is more easy to examine in the new valve than in the old, as the bottom section contains all the pipe joints, and in examining the rotary they remain undisturbed. The seat of the rotary valve in the new brake valve is of cast iron instead of brass, as in the old valve, and the rotary is brass, as before, which makes a better wearing surface of brass upon cast iron. I like the new valve, in so far as passenger service is concerned, for the reason that the governor being connected to the main reservoir, only that pressure can be obtained in the reservoir to which the governor is set. The Westinghouse people recommend 100 pounds, which would give 30 pounds of excess pressure carried at all times, and, as passenger trains seldom exceed twelve or fifteen cars, the limited amount of reservoir pressure carried has been found to meet the requirements perfectly. But with the old valve, the governor being attached to train pipe, by making an

application and returning the handle to lap position, you could pump up as much air as you had steam, and then, by releasing the brake, you would put such a high pressure in train pipe as to be liable to burst the hose, and also keep the pump idle too long.

I would be pleased to hear from some of the brothers as to the merits of the new valve in freight service. Whether the limited amount of reservoir pressure is sufficient for quick release on long freight trains or not?

BALTIMORE, MD.

Walter C. Garaghty.

#### Economy in Fuel.

MR. EDITOR:—I have read many accounts in the press of the great work done by the compounds, and the immense saving of fuel that was brought about by their use; but, in reading the report of the last Master Mechanic's convention, it looks as though the master mechanics cannot recommend them very highly. My experience of a number of years on the rail is that a first class fireman, one who thoroughly understands his business, can beat a compound all hollow, as far as fuel economy is concerned, and I say this as a matter of justice to some of the men on the left-hand side. I know firemen to-day who can save more coal and have more steam—not blower steam, either—than any compound I have seen as yet. But, of course, I have not seen all the different patterns of compounds. I am speaking merely from my experience with them. Economy is all that the railway managers seem to strive for these days, but such economy as the compounds give costs very dearly, as they will find out later on. My idea of the best plan to secure economy in the use of fuel, would be for master mechanics to hire none but first class firemen, and take them on trial, subject to the report of a traveling fireman—who should be an experienced fireman of good judgment and character—and the engineer. In my judgment, if this plan was followed, the companies would be in a fair way to save coal. But, as it is, they take men from the ranks of the fire knockers, wipers, or coal shovelers, and send them out to fire. Of course they manage to get over the road somehow, and when they return from their first trip they are firemen, and in a very short time you will find them kicking for their rights, and the foreman or master mechanic will come pretty near giving them what they kick for, too. The man on the right-hand side is to blame, to a certain extent, for this state of things, for explaining matters and doing everything in his power to help these students out. I am ever willing to help honest labor, but I think this student labor is a great evil, as it robs those who have went through the mill to learn how to fire, and who are mas-

ters of the business. Firing a locomotive is a trade, and a good one, too, but like in every other trade, there are lots of firemen who are not masters of their business. And why? Simply because this student labor comes in and crowds men out before they have learned their lessons well. This is what has crowded out good brotherhood men, and now it is up hill work for old brotherhood men, on either side, to get work. The master mechanics favor this policy because they can handle the younger ones, and what few old ones they have are running passenger and have got all they can expect. It is impossible to get them on a grievance committee unless they have a "pull" with the master mechanic, or, in some cases, the manager of the road. The old fireman is no better; you mention committee work to him and his heart goes down in his boots. Of course, under these circumstances, the cause of labor must suffer. That the future will bring disaster unless workmen become more fully alive to their own interests, is becoming more plain to the labor world with every passing day.

H. T. Cunningham.

EDWARDSVILLE, ILL.

#### An Automatic Hose Coupler.

MR. EDITOR:—I have received the MAGAZINE for the month of December, and in looking over its pages I read with interest the article captioned "The Deadly Angle Cock," by Mr. Wilfred P. Borland. In reply thereto I wish to inform the readers of the MAGAZINE that I have completed, and also patented, a device which will automatically couple and uncouple the air, steam and whistle hose, and which places the angle cock in the "scrap pile." Besides being a self-coupler, it is so arranged that, in case a train becomes detached while in motion, the brakes will be set automatically on the detached portion of the train, while allowing the engineer to handle the forward part at will. I have organized a company known as the "Automatic Air Hose Coupler Co.," for the purpose of manufacturing this coupling.

RUSSELL, KY.

Lou Sennett.

#### Some Shop Tests.

MR. EDITOR:—You will remember "the boys" got very tired of the "Hammer Blow and Centrifugal Lift and Tangential Throw of the Counter-Balance of a Locomotive's Driving Wheels." My attention has recently been called to a report made to Thos. N. Ely, Esq., chief of motive power, Pennsylvania railroad, by Mr. D. W. Barnes, of Chicago, on certain "shop tests" at the Purdue University, LaFayette, Ind., to determine the above named questions to

which I have given a large measure of theoretical and practical attention now near twenty-two years.

This matter and these tests is very fully treated of in the *Railroad Gazette* of December 15, 1893. Editorially, page 911, "Some facts about counter-balancing locomotives." Page 906, "An important experiment in locomotive counter-balancing, at Purdue University." If I had the time I would like to go to LaFayette, by way of Terre Haute, with the Shaw locomotive, and show "the boys" and professors at Purdue University by a test on their machine how to perfectly balance a locomotive. Should I come I will give "the boys" one or two lectures and prove at these that all is true for which I have contended.

William E. Lockwood.

PHILADELPHIA, PA.

#### Testing Eyesight on the Pennsylvania Lines.

The biennial eyesight test for color and nearsightedness of the trainmen, operators, yardmen, switchmen, watchmen and hostlers employed on the eastern division of the Pennsylvania company was inaugurated yesterday, and all day, at least while the light was good, knots of trainmen were gathered on the platform of the test car, sidetracked near the Allegheny station, awaiting their turns to undergo the examination. The examinations are made by car tracer W. A. Routson, Jr., and operator George Stuck, and about five minutes were consumed with each man. The examinations are compulsory, as the company regards it as imperatively necessary that the eyesight of their employes who have to do with the running of trains shall be good enough to enable them to promptly distinguish all signals. Their hearing is usually tested at the same time, as a good ear is another important qualification in railroading. This examination will result, as have the last one or two, in finding but few employes whose sense of sight is deficient, for previous rigorous tests pretty effectually weeded out the nearsighted and the color blind, and then the company now tests any would-be new employe before hiring him. In case any of the employes do not come up to the standard they are generally given one or two more trials, and then, if it has been thoroughly demonstrated that their sight is too bad to justify them being kept in train service they are given employment in some other capacity. It is often found that the impaired vision may be rectified by the use of spectacles, and as a result a number of the older engineers and other employes on the division are wearing them.

When a representative of the *Post* visited the car, which is spacious, well lighted and designed especially for the test work, Mr.

Routson was putting a robust fireman through a course of sprouts. He had him first toe a mark 15 feet from a card on which was printed letters of various sizes, and told him to read some of the smaller ones, it being obvious if he could do that there would be no trouble with the large letters. Both eyes were tested by shutting off the sight of one. The card was similar to that commonly used by oculists and opticians. He was next given a book of fine print to read at a certain distance. One or two other tests for nearsightedness were applied and then he was tried for his ability to distinguish colors. A stick to which was attached a couple of dozen strands of various colored yarns or zephyrs was laid on the table. From a box was taken a bunch of green yarn, and the fireman was asked to designate its color. He promptly said "green," and he was then told to pick out 10 strands each having a green shade. This was repeated with two other colors, and the examination was completed. The test marks are based on the result of the examinations and a record is kept of them.

—*Pittsburgh Post.*

#### How to Make Rivet Holes.

My ideas have undergone a change on the subject of making rivet holes. I used to think that punched holes in iron plates were weaker than those which were drilled. I now find that they are really a trifle stronger—if they have been properly punched. The reason is that there is a sort of flow of metal around the punch. When it starts in through the plate it makes a slight depression in it before any metal appears on the other side; then when the plug falls out it will be found of less density than the plate from which it was punched. Some of the metal has been forced from before the punch into the walls of the hole, making a kind of bushing of compressed iron which renders that hole less liable to tear when shearing strain is placed upon it than if it had never been so reinforced. For steel plates I still stick to the notion of the desirability of either drilling the rivet holes or reaming them out after punching, the reason being that the operation of punching effects a sort of tempering of the walls of the hole, and the metal thus tempered is more brittle than it was before having this change effected in it.

—*Robert Grimshaw in The Tradesman.*

When an English engineer (driver) reverses his engine to avoid an accident, he says he "fixed" her. In an accident not long since, we note the driver reported: "On seeing shunting engine outside the home signal, I applied the vacuum, fixed engine and jumped off."—*Locomotive Engineering.*

A LARGE profit sharing concern is that of the N. O. Nelson Manufacturing Company, St. Louis. At its works in LeClaire and Mound City, Ill., and St. Louis it employs about 500 hands. During the seven years ending with 1892 it paid to wages a total dividend of 54 per cent. In 1889 the day's work was fixed at nine hours without a reduction of wages. Early in July last, owing to the depression in its trade—plumbing ware—it was mutually agreed that three-fourths of the wages should be paid in cash, the other fourth to be paid whenever the net profits should exceed interest on capital at 6 per cent. during the months of full pay, and at 4½ per cent. during the term of three quarters pay. On October 1st the company's business had improved to a point warranting return to the full cash payment of wages.—*American Machinist.*

FROM what has been learned about the invention of the link motion, by examining the older locomotives at the World's Fair, an impression has gone forth that to America belongs the credit of the invention of the link motion. The manly letter from Mr. Clement E. Stretton, C. E., of Leicester, England, on the subject, published in another column, shows that English engineers are disposed to give honor where honor is due on this important question. From what Mr. Stretton says, it is likely that the invention of James exerted important influence on the development of valve motion in England, since the drawings sent from America by the inventor of the link induced Forrester & Co., locomotive builders, of Liverpool, to adopt the four eccentrics, which prepared the way for the reinvention of the link motion.—*Locomotive Engineering.*

It is announced that the Palace of Fine Arts, in Jackson Park, is to be preserved for the purpose of an immense museum for the preservation of objects of national interest, largely composed of some of the recent exhibits at the fair. Mr. Marshall Field has donated \$1,000,000 toward the museum on condition that another million is raised outside, and Mr. George M. Pullman has given \$100,000 on condition that \$400,000 more is subscribed. The trustees for this museum are actively at work trying to raise the further amounts. The building selected is entirely fireproof, and is 500 feet long by 320 feet wide, intercepted by a transept and nave 100 feet wide and 70 feet high.—*National Car and Locomotive Builder.*

A PLOT of ground at the corner of Broadway and Pine street, this city, recently sold at next to the highest price ever paid in this city. The price was nearly \$286 per square foot, which is equivalent to about \$12,458,160 per acre.—*American Machinist.*

**It Cured the Old Man.**

The railroad superintendent who thinks that every detail of work, from the driving of a spike to the entering of a voucher, the repairing of a passenger car and the building of a bridge are all dependent upon his personal supervision, is fast disappearing, but he still is represented. There was once a superintendent named Pettibone, on a New England road, who was the worst representative of this class I have ever met, remarked the promoted conductor.

Pettibone was one of the small bore men who not only persistently bossed everything, but made himself intensely hateful to the men he was directing in the wrong way.

It came to pass that Pettibone fell sick, and there was rejoicing all over the road, for he was confined to bed. He fretted and fumed and acted like a mad man in bed, exciting himself in a fashion that threw him into a very serious condition. He felt that everything was going to rack and ruin, that office clerks were reading stories in business hours, that the shopmen were talking politics instead of working, and that the trackmen were devoting more time to their garden patches than to raising low joints. These thoughts were gall and bitterness. He felt that if he lay there another week all the locomotives and cars belonging to the company would be battered up in wrecks. There was not a train dispatcher on the system who could keep trains apart without his advice--so he thought; and the engineers would be running like rockets when they knew that he was on his beam ends.

Between a real fever and fretting his condition became so serious that his physician told him that he might die at any moment. On hearing this he sent for Conductor Burns, the only man on the road that he had confidence in. Burns and the super had been brakemen together.

"How are things on the road, Jim?" he asked, when Burns was shown into the sick room.

"First rate," said Burns; "they were never better."

"How many accidents haac there been since I was confined in this cursed room?"

"Accident? Not any accident that I have heard about."

"No accidents! Have there been no collisions or trains getting ditched?"

"Nary a collision, and no ditching except what the trackmen are doing."

"Do people talk much about my sickness?"

"Never heard a man say a word about it except Phil Green, the office cleaner, and he remarked that there had been peace in the place since the old man was laid up."

"But, Jim, you must have noticed that

my illness must have depressed the stock of the road?"

"Depressed? It's up to 71, and it never got above 66 before."

"Well, well," groaned Pettibone. "No man is ever missed in this world. The road just going on as well as if I were around! The stock rising while I am lying here! A man might as well die and be done with it." And he lay down and resigned himself to his fate. Resignation was what his system needed, and he was out in two weeks. The first thing he did was to discharge Phil Green, but he reinstated him next day.

The old man was never quite so domineering after his term of sickness. *Locomotive Engineering.*

**And the Next Day Was a Cold One.**

"If I want to get off at Seventy-second street," said the man with the brown valise, "can I go on this train?"

"You can, sir," answered the jaunty brakeman.

Half an hour later the train whizzed by Seventy-second street at a 30-mile gait.

"I thought you told me you stopped at this station?" exclaimed the man with the brown valise, sharply.

"O, no?" answered the jaunty brakeman, pleasantly. "You asked me if you could go on this train. Anybody can go on this train. Auburn P-a-r-k!"

This was why the jaunty brakeman got a letter next day from the superintendent of the road expressing regret that the company would be compelled to get along without his services from that time forth.

The man with the brown valise happened to be the president of the road.—*Chicago Tribune.*

**Mechanical Skill at a Discount.**

One of the difficulties which all designers of new mechanical appliances seeking to have their ideas carried out in shops now frequently encounter is the want of all-round mechanical skill. Fifty years ago it was common to find in any machine shop claiming to be a first class establishment men, who, if called upon to do it, could construct almost any complicated machine, performing all parts of the work, including drawings, patterns and forgings, and some could be found who, if necessary, could do the molding and casting also. Turning and screw-cutting were not unfrequently done at that period by the use of hand tools, the supremacy of machine tools having not yet become universal. The performance of special work by special machines and by men specially trained to run such machines had only just begun. In those days a machinist was equally good at the lathe or the vise and could chip and file as well as he could drill or turn. Such classes of workmen as lathe-

hands, bench-hands, planer-hands, slotting-machine-hands, milling-machine-hands, etc., were then unknown. With the multiplication of special machinery all along the line, the specialization of labor has kept pace; and although this has resulted in the production of a much finer grade of work at a much decreased cost, it has almost eliminated the old-time, all-round machinist.

In those days a man having an experimental machine to build, would place it in charge of one or two workmen competent to construct any part of it and to assemble the parts together into the complete machine. To keep in touch with one or two minds is much easier than to be obliged to explain and re-explain ideas to many different men; and new ideas constantly demand new constructions which are much more difficult to get produced in workmanlike manner now than formerly, unless they are adapted to be made by existing special tools.

Good mechanics are gradually becoming scarcer in all trades, while the number of more operatives capable of running some particular kind of machine and capable of doing nothing else superlatively well, are multiplying. This is the inevitable result of the replacing of hand labor by machine work; and it is one of the undesirable effects that in some measure counterbalance the undeniable benefits which have accompanied the invention and special adaptation of machines for performing work formerly done wholly by manual labor with hand tools. *Mechanical News.*

A VERY sensible order has been issued by the president of the New York, New Haven & Hartford, to the effect that the heads of departments must not retain their relatives in the employment of the company. If a rule similar to this existed on all railroads, there would be fewer incompetent men holding important positions. For years there was very little of the evil known as nepotism in the railroad world, but it has been growing very rapidly of late. On some roads there is scarcely an officer to be found who is not a nephew or cousin or brother-in-law, or some relative of a man in high authority. The thing is not fair to the company where it exists, and is a real grievance to good men who have earned promotion. —*Locomotive Engineering.*

THE fifth of the large guns for the navy has been completed. The guns are 13 inch calibre. A gun with its carriage costs half a million dollars. The projectile used weighs 1,150 pounds and the powder charge is 550 pounds. It costs \$675 to fire the gun, and it is calculated to be good for not more than 500 rounds. —*American Machinist.*

### An Engineering Blunder.

Colonel L. D. Carver was a passenger on the train to Walldoboro Tuesday, and just beyond Warren he startled those around him by pointing to a good-sized lake that was near the track and said, "Is that a new pond?" "No," was the answer, "it's been there for years." "I can't understand it," said the colonel. "Can't understand what?" "Why, how it was the builders of the Knox & Lincoln lost such an elegant opportunity to build a bridge. By swinging a little to the southward they might have built as pretty a stretch of bridge as there is on the entire road." —*Rockland (Me.) Courier.*

A DECISION has been rendered by Judge Townsend, of the United States Circuit Court, in the suits of the Westinghouse Air-Brake Company against the New York Air-Brake Company for infringement of the patents relating to the mechanism employed in their quick-action brake. The decision decrees that the New York Company's engineer's valve, and all forms of their triple-valve are infringements of the Westinghouse patents. The company using the devices named are enjoined from the sale of them and an accounting in each case is ordered. The decision allows George Westinghouse, Jr., very broad claims as inventor of the quick-action brake. —*Locomotive Engineering.*

ON November 18th there was an official trial of electricity as a motive power for canal boats on the Erie canal. The test was made not far from Rochester, and is declared to have been entirely successful. A trolley line is used, the wire being stretched over the canal in much the same manner as it is stretched over the streets of cities, except that two wires and two trolleys were used, one wire and trolley being for the return current. The motors were of the Westinghouse type, about as are employed for street cars, but in this case used to turn propellers. It is the intention to build electric tug boats to draw other boats, and electricity is expected to be taken from the Niagara Falls plant. —*American Machinist.*

SCENE in a street car. — Conductor comes along asking for fares. A stylish young lady takes a purse out of her bag, deliberately takes out a dime and hands it to the conductor, then closes her purse and puts it back in her bag. Next passenger is a Chinaman, who takes a nickel out of his ear and hands it to the conductor. Conductor hands the young lady the nickel as her change. Her purse is already in the bag and she puts the nickel in her mouth while she unfasts the bag. From Chinaman's ear to young lady's mouth! Ugh. Moral: Never put money in your mouth. —*Locomotive Engineering.*

## Questions and Answers.

The following questions and answers are clipped from *Locomotive Engineering*:

THOS. F. HALL, New York, asks:

Will you please answer following question in your November paper: In the Vauclain 4-cylinder compound engine is it possible to admit live steam to all the cylinders at the same time—if so, where does the high-pressure cylinder exhaust when using steam in that way? A.—Yes. When high-pressure steam is used the low-pressure cylinders do all the work, steam is admitted to *both sides* of the high-pressure pistons and they are thus balanced, or are in equilibrium.

J. LUNDBURG, Gothenburg, Neb., asks:

Does the crank-pin, in passing back dead center, cause the crosshead to rest a longer time at that point than at forward dead center? A.—No. Crosshead stops and starts the same at each center; but it takes longer for it to go from the center of guides to *back* end and return to the center of guides than to go from the center of guides to the *front* end and return—this is because of the angularity of the main rod.

And this from the *American Machinist*:

M. P., London, W. C., asks: Is it theoretically correct that the draught of a given chimney for a boiler varies inversely as the sum of the length of flue and height of chimney? A.—No. 2. What would be the effect practically of increasing the length of the flue from 5 to 100 feet leading to a chimney 120 feet high, all other conditions remaining unchanged? A.—The increase of the length of the flue will decrease the power of the chimney. The effect of changing the length of the flue leading into a chimney 60 feet high and 2 feet 9 inches square is given in the following table, which has been taken from the "Practical Treatise on Heat," by T. Box:

Length of flue in feet.	Horse-power.	Length of flue in feet.	Horse-power.
50	107.6	800	56.1
100	100.0	1,000	51.4
200	85.3	1,500	43.3
400	70.8	2,000	38.2
600	62.5	3,000	31.7

The temperature of the gases in this chimney was assumed to be 552 degrees Fahr., and that of the atmosphere 62 degrees. The effect of changing the length of the flue from 5 to 100 feet in your case will depend on the temperature of the gases in the chimney and the outer air. But the foregoing table will probably indicate sufficiently the rate of change of power caused by the increase of the length of flue.

ONE of the first concerns in Newark, N. J., to give their employes a practical reminder that hard times had come was the Consolidated Traction Company. This company has a practical monopoly of street railway transportation over about 100 square miles of valuable territory and enjoys public privileges of a most money-making character which ought to be accorded to no private corporation. Yet they quickly availed themselves of the talk of hard times to cut the wages of their employes to an unscrupulous extent. There was no falling-off of passengers riding on the cars passing over railroads costing nothing for right of way, there was no reduction of fares and ready cash continues to be the terms on which people can ride, yet the officer of the company have the effrontery to announce that the hard times make it necessary to reduce expenses.—*Locomotive Engineering*.

THE great coal strike in England has been settled, the men gaining their point in so far as preventing the proposed reduction of wages, there being, of course, the less justification for the proposed reduction since the strike has raised prices of coal to fabulous figures. One result of the long struggle has been the serious crippling of many of England's most important industries aside from the mining and transportation of coal, and the great disturbance and suffering entailed have given considerable impetus to the idea of government control of coal mines, which are in England even more than in this country, if such a thing is possible, an absolute essential to industrial operations.—*American Machinist*.

DURING the World's Fair 1,453,611 people paid 50 cents each to ride around in the Ferris wheel, \$726,805.50 was "blown in" this way. After paying off \$300,000, their indebtedness on bonds, they divided \$426,805.50 with the Exposition management, and after paying all expenses of operation divided \$150,000 among the stockholders. Now, William Somers, of Atlantic City, N. J., sues the Ferris Wheel Co. for infringement of his patent, proves that Mr. Ferris rode on his little wheel at Atlantic City, and gets judgment in the Circuit Court—damages not yet decided on.—*Locomotive Engineering*.

A CURIOUS invention, intended to prevent the derailment of railroad cars, has been patented by Henry W. Kirchner, Denver. He proposes to employ a middle rail. Attached to the under part of the truck is a frame that carries two wheels set in bevel shape, one clasp ing each side of the rail. The plan would, no doubt, be effective, but it would greatly increase the expense of operating a railroad.—*Locomotive Engineering*.

## DANGERS ENCOUNTERED BY SURVEYING ENGINEERS.

The reading world has received many romantic stories about the hardships endured and the hair-breadth escapes made by engineers surveying railroads in the western states, when wild Indians and all sorts of other wild animals prowled over the wastes that the railroad engineers were laboring to bring within the supremacy of civilization.

But the perilous experience of engineers has not been confined to the west. The men who located railroads had occasionally exciting experiences in some of the mountainous regions of the south. Moonshiners have always been afraid of strangers, and they never displayed much discrimination between an engineer looking for a practicable route and a gauger searching for illicit distilleries.

A well-known railroad engineer talking of exciting experiences, said:

"I was building a railroad down in Georgia in my younger days. I am a Georgian, you know. Once following our surveys I saw a chance to ride across the mountains, and thence to my home to visit my father. It was early in the afternoon when I started on my long ride. The moon was shining high in the heavens when I began to climb. I was jogging peacefully up the incline, when from a shadow a horse and rider came out from the side of the road and fell in at my side.

"'Good evening, stranger,' said the man politely.

"'Good evening, sir,' I said, glad of even unknown company.

"'Which way you going?' asked my new companion.

"'Over the mountains,' I answered.

"'Reckon I'm going that way, too,' he said, and then I had an opportunity to look at my friend's face. It was a strange face. Smooth shaven, young and yet old. It was calm and placid, as expressionless as stone, and yet there was a certain set about the jaws that kept me uneasy. And no matter how often I looked at him, how quickly I turned my glance on his face, his deep-set eyes were always watching me. I felt, even when I did not look at him, that he was watching me like a cat. We rode for hours, talking as one does with that class of people, until at nearly daylight we had crossed the mountains and were making our way along a comparatively level road. When we came to a river which we had to ford, my friend reined up.

"'This is as far as I go,' he said.

"'I am sorry to lose you,' I replied civilly.

"'Stranger,' he said, when my horse's forelegs were in the river, 'where are you from?'

"'Georgia,' I answered; 'this is my state.'

"'Whose boy are you?'

"'Judge S—s.'

"'Is that so?' he said, in a calm voice. 'Why, do you know what I took you for? Revenue! Yes, sir, and I came near shooting you, sir. Half a dozen times on that ride I made up my mind that you were revenue, sir, and each time I was just ready to do it. But I hated to do it, sir, you looked so square. I'm glad I didn't.'

"'So am I,' I answered, with a false, jerky laugh, for that emotionless man gave me the chills, and I sent my horse across the ford.

"'Good-by,' I cried from the other side.

"'Good-by, sir,' he answered. Then his horse carried him off in the gray light, and I felt a sudden sense of great relief."—*Locomotive Engineering*.

## A TENDER SUBJECT.

A speaker at a meeting of the Western Railroad Club made the following remarks about locomotive tenders: "The American roads have followed the stereotyped design for tenders. There is no originality about them at all. Every tender on any New England road is just like the tender on the Union Pacific or Georgia Central. There has been no attempt made to improve. It is inconvenient in many respects and unworthy, I think, of our American genius in designing locomotives."

We do not take such a despondent view of the American invention of tenders as the speaker quoted appears to entertain. We do not believe that the uniformity in tenders arises so much from poverty of inventive fertility as from the form being susceptible of little improvement. The American tender did not at once assume the form that is now so familiar. It grew up gradually into that form, and the arrangement is the survival of the fittest. We have never seen tenders that were much different from the American form that were not inconvenient to the fireman. He is the principal man to be accommodated in the design of a tender. If it suits him the tender may be considered about right.—*Locomotive Engineering*.

The annual report of the Commissioner of Patents shows that the number of patents granted during the fiscal year, including reissues, was 23,471. The number of expiring patents was 13,672. The total receipts for the year were \$1,288,809, and the expenditures \$1,111,444. The increase in receipts over the previous year was \$20,082, and the decrease in expenditures \$2,690. The balance in the treasury to the credit of the Patent Office, \$4,279,805.—*American Machinist*.

## WOMAN'S DEPARTMENT.

EDITED BY IDA A. HARPER.

Letters for publication should be directed to Ida A. Harper, Stanford University, California.

### ONE PHASE OF THE LABOR QUESTION.

That progressive English writer and reformer, Walter Besant, has been stirring up considerable opposition in a series of articles on the new order of things which permits women to enter the occupations formerly followed by men. He writes somewhat against the innovation, which naturally calls forth a protest from women to whom it is a matter of daily bread. This is a many sided question, it is in an evolutionary state and it is not possible to make assertions on either side broad enough to cover all its varied phases. Mr. Besant attempts to classify working women under the following heads as to their reasons for work:

1. Because their intellectual activity will not allow them to rest at home. Such a woman, for instance, was George Eliot. There are intellectual openings for them in every direction. A woman of this kind may study medicine, science, history; she may teach as well as study; she may write; she may become a journalist or an editor; she may lecture. Any of these lives is better to such a brain than the old-fashioned social round and domestic duties, the embroidery, the piano playing, and the small arts. These are the happy workers; but these are not the average.
2. Because they must earn money somehow. Among these are the unhappy workers, the unwilling workers, who miss the life they would prefer.
3. Because they want to make a little more money for dress or for spending.
4. Because they have taken up a cause, and feel called upon to speak, act, write, and work for it.
5. Because they have become "advanced" women, and they want, above all things, to show that they are as good as the men.
6. Because their home lives are so deadly dull and unsocial, and lonely and vacuous, that they want a change.

The world needs the work of the women included under the first head, and the argument against them is growing weaker, although it was waged violently within the present generation. All the force of scorn, ridicule and denunciation was poured upon the women who first dared to preach, practice law or medicine or speak in public and every possible avenue of preparation was closed against them. The teacher had to advance cautiously from the time when she was permitted to teach only the very youngest children, up to the present, when she fills the position of president in some of our best colleges. She even has had to contend for every inch of the ground which should allow her to have an education. In literary work she has had a fairer field, because, with a pen in her hand, she could strike back. In art the way has not been made easy. Harriet Hosmer, our greatest woman sculptor, could find only one institution in this country which would admit her to pursue the necessary studies in anatomy, and the best art

schools were closed to women until recent years. In music and the drama the struggle has not been so great, because women here could amuse and entertain the public and therefore the public did not object.

But it was when women began crowding into the already crowded ranks of ordinary labor that the protest commenced to assume a serious aspect. This subject is generally considered from two points of view: 1st, the effect it will have upon working men; 2nd, the effect it will have upon working women themselves. The entrance of women into the occupations has worked a two fold injury, they say. It has cheapened labor, and it has made it more difficult for men to obtain situations. These statements have been fully discussed in these columns. Women have to underbid men in order to secure work and they will continue to do so until men protect themselves against the women just as they are protected against other men's doing the same thing. They will have to admit women to their trades unions and thus secure a mutual interest; and they will have to obtain the franchise for women in order to lift them out of their present dependent and servile condition. We have one example of a class of disfranchised men in this country, viz.: the Chinese, and the result upon labor is apparent. If the Chinese were voters they would not have to take lower wages than other laborers, because a host of politicians would be on hand to look after their interests in exchange for their votes. The entrance of three million women into the ranks of bread-winners undoubtedly has displaced some men, but it has lessened, by that many, the number of consumers and changed them into producers. In many instances these women are taking care not only of themselves but of families, and thus it is a very nicely balanced question to decide whether men have lost or gained by this new order of things.

When it becomes a matter of work or starvation for herself and those she loves, it is criminal to interpose any objection or obstacle to the woman's having a full and free opportunity to do whatsoever her hand findeth to do. The other classes that Mr. Besant mentions must be disposed of briefly. The third class are often condemned, those who are not compelled to work but want a little more spending money. It is said they have no right to take the work that poor girls need. When the question is asked, "Shall these first named girls live in idleness?" the answer is: "Let them be employed in the home, and let them engage in the charitable work of the world which needs helpers?" At first glance this seems reasonable, and then at once the inquiry arises. "Are the tastes and inclinations of the girls themselves not to be consulted?"

We do not make out a cut and dried programme for boys to follow. Perhaps these girls have no taste for household drudgery or for the endless tasks of the needle, which they can have done for a few dollars per week by some poor girls who need the money just as much as the poor girls whom they are supposed to displace in the store or office. If the father is a man of moderate means, why should his daughters be deprived of all the little luxuries which girls enjoy, when they are amply able to earn them for themselves? And is it not true that men of wealth are sometimes so parsimonious with their families that if the latter have any spirit they gladly assert their independence? Is it not just as natural for girls, as it is for boys, to feel that the laborer is worthy of his hire, and that they have a right to exchange their time and labor for its equivalent in money? It is as impossible to crush out this feeling in women as it is men, and it is no more right to do it with the one than the other. We condemn the rich man's son who lives in idleness, but when his daughter wants to work we say she must not do it because she will deprive some more needy woman of employment. Where shall we draw the line? Just how much must a man be worth so that his daughters shall not become wage earners?

The fourth class who, having taken up a cause, feel called upon to speak, act, write and work for it, cannot be blamed, for that is the only way to make a cause succeed. It is exactly what men do for the causes in which they are interested. It would be a poor sort of a woman who would not do these things for a cause which she believed to be right, and if women should stop doing them the world would very soon begin to degenerate. The fifth class are not very numerous. Women do not have to take very much trouble to prove that they are as good as men. The world generally accepts this fact without proof. But men have been saying to women for centuries, "You shall not do this or that, because you cannot do it," and it is only natural, when the chance offers, for women to demonstrate that what they lacked was the opportunity, not the ability. This is only human nature, and women are human, although they have not always been treated as if they were.

An immense number of women belong to the sixth class, more than most people imagine. Some of them are not naturally domestic and would be restless and discontented no matter what the home surroundings were. This is unfortunate if they happen to be wives, but, as girls inherit from the father rather than from the mother, perhaps they are not to blame for this disposition. The vast majority of women, however, are, by nature, fond of domestic

life and willing to do their part in rendering it pleasant. If home life become "deadly dull and unsocial, lonely and vacuous," it is because the husband does not do his part toward making it otherwise. If a woman is left alone day and night, if she receive no affection, encouragement, sympathy or companionship, if she is thrown entirely upon her own resources for entertainment, it is not surprising if she grows desperate and demands a change. If she is satisfied with some honest, wage-earning employment, the husband, possibly, has reason to congratulate himself that it is no worse. You can not stop a ferment by sealing up a bottle. Men are not going to check this increasing restlessness and discontent by refusing women an opportunity to work it off. Husbands must go to the root of the evil, ascertain how far they themselves are responsible, and where the remedy is to be found. They must divide the earnings fairly with the wife, divide their time also and give her a fair share. The average business man has so little leisure for social courtesies and pleasures that it is not worth while to divide it, his wife is entitled to enjoy all of it with him. If husbands would spend less time in standing on the corners and discussing these things, and more in considering how far they are to blame for them, they might do a great deal to check this modern tendency among women to exchange the domestic arts for those which bring in more acceptable returns.

The saddest feature of this whole question of wage-earning women, the one which makes us lay down our pen in despair, is that relating to those wives and mothers whom poverty compels to work outside of the home. We find them in the factories, in the mines, in the sweat shops, bearing the three-fold burden of house keeping, of maternity, of wage-earning, a condition worse than slavery. Broken down and miserable themselves, they bring weak and sickly children into the world, to die in infancy or make the race in life handicapped by enfeebled constitutions and wretched environment. The infant mortality among these people is many times as great as among those where the mothers can give their time and strength to their families. These women do not go outside of the home from choice but from necessity. There is not space here to discuss the reasons for this deplorable state of affairs. It must be charged in part to the imperfections of our present industrial system, but in part it is due to generations of ignorance, improvidence, intemperance and the many evils through which the poor and degraded continue to fasten upon themselves and their descendants, their poverty and degradation. Theirs is a con-

dition which cannot be cured by charity or abolished by laws. Their salvation calls for the application of scientific and ethical, as well as legal remedies. Social questions, of which this is but one phase, are beginning to take precedence of all others; and we find much hope for the future in the fact that they are engaging the attention of able minds, not only in religion and philanthropy, but in science and statesmanship, and promise practical results.

#### THE FRANCHISE FOR WOMEN.

The movement for woman suffrage is extending into many parts of Europe. At Vienna, a short time ago, a public meeting was held, attended by over a thousand women, including many wealthy property owners. They resolved to petition Parliament. Let us hope it will not be half a century before their petition is answered, as has been the case in this country. It is over forty-five years since the women of free America began to petition the legislatures for the privilege of a vote. In the December number of the *FIREMEN'S MAGAZINE*, in his able article on "Trades Union and State Socialism," Geo. C. Ward refers to that "God given gift, the American ballot." If it is a "gift from God," how does it happen that men have monopolized it? "Organized labor's salvation lies in the direction of united action at the ballot box," he says. If the ballot is so powerful an agent of protection for one's interests, how is it that it is persistently refused to women? Have they no interests to protect? Will not Mr. Ward give us an article on this subject? The strongest hope that woman has for the ultimate possession of the ballot lies in the action of the workmen. The great Federation of Labor, with Mr. Gompers at its head, declared, in its national convention, for the franchise for women. Let us hope this will be done at some national convention of firemen in the near future. The Central Trades Unions of New York, of Massachusetts, of Michigan, and of other states, have passed strong resolutions favoring the suffrage for women. The labor periodicals, almost without exception, are in favor of it.

During the recent fight in Colorado, to secure the passage of an amendment which should enfranchise the women of that state, the Knights of Labor made this cause their own and worked heroically for its success. Under their auspices Mrs. Leonora Barry Lake canvassed the state, addressing open air meetings where no buildings could be found large enough to hold the crowds. A reliable report from there says: "In those parts of the state where organized labor and a high order of intelligence prevailed, suffrage gained the day; in those sections where labor was unorganized and the intellectual

standard was low, it met with a crushing defeat." The measure carried by a majority of between 6,000 and 7,000. It grants to women the right to vote for every official, from constable to President of the United States. Colorado is the first state in the Union to confer the franchise upon women by popular vote. Prominent women speakers were sent into the state, and the State Equal Suffrage Club did splendid work. At a mass meeting held in Denver, the day after the election, a vote of thanks was adopted to the leading Republican and Populist papers, to the trades unions and to the ministers, all of the more prominent of whom advocated the amendment from the pulpit.

The Farmers' Alliance, as an organization, advocates equal suffrage. It has its precedent in the Grange. This was one of the very first organizations to admit women to membership and to the offices on equal terms with men and it has always been consistent in this regard. In New York, Massachusetts and Connecticut, where the Grange is very strong, their state associations have repeatedly declared for woman suffrage and have petitioned the legislatures to grant it. The Prohibition party is an advocate of the franchise for women. It remains to be seen which of the two dominant parties, the Democratic or Republican, will be the first to recognize the inevitable and declare for equal suffrage. As we have said before, the party which secures this privilege for women will perpetuate itself for many years, and we shall see before a great while which will have the sagacity to avail itself of the tide that is so plainly setting in toward this long delayed act of justice.

There is reason to believe that at the coming constitutional convention of New York an equal suffrage amendment will be adopted. This will have to be submitted to a vote of the men of the state, and there is not much hope that the saloon element of New York City, which practically controls the politics of the state, will permit it to pass. Kansas will vote, at the next election, on an amendment giving full suffrage to women, and there is a good prospect that it will be carried in this progressive state. The bill was lost by a very small majority in a number of state legislatures last season and will be brought up again this winter. It may properly be regarded as one of the leading questions of the day, and both men and women should inform themselves in regard to its merits and demerits.

#### BY THE WAY.

In Italy the ministry resigned and, the dispatches tell us, the house was in an uproar, the men shook their fists, hurled insults at each other and made threats of personal violence, until the president was compelled hastily to adjourn the meeting.

Similar scenes were enacted in the French Chamber of Deputies and a disgraceful riot was barely averted. And yet what a wail goes up from the press if there are some differences of opinion at a meeting of a W. C. T. U. convention or the Board of Lady Managers. "It will never do to let women take part in our councils," say the men, "they are too emotional and too much lacking in calmness and poise and dignity and deliberation and other masculine attributes."

A short time ago Governor Flower, of New York, appointed Susan B. Anthony one of the managers of the state industrial school for girls. When she visited the school she found that seventeen of the girls stood over the wash tubs and ironing tables six days in the week the entire year, doing the laundry work for the institution. At the boys' industrial school, a short distance away, was a laundry fitted up with all the modern machinery. Miss Anthony finally convinced the authorities that a few of these girls could take the clothes over to this laundry and do the whole washing and ironing in two days. This was done, and in place of the wash tub there are now being established a cooking school, millinery and dress-making departments, so that these girls may be fitted to earn an honest living when they go out into the world. And yet people will go right on arguing that we do not need women on the boards of our public institutions.

The papers continue to assert that cigarette smoking is becoming a common practice among women. There probably is no way of proving this assertion. We hope it is not true. Men not only ruin themselves by the intemperate use of tobacco, but they entail upon their children weak and diseased minds and bodies. If mothers also are to form the tobacco habit, there does not seem to be much hope for the coming generations. Girls, as well as boys, are likely to inherit from the father a taste for tobacco or liquor. Men have set the example for centuries, and the wonder is that women have not long ago taken to drinking and smoking in self-defense. Women have been the preservers of morality and decency for untold ages, and we believe they will continue so to be, but there is no especial reason why this should be required of them, except that it is easy for men to shift the responsibility.

The Iowa Columbian commission, by a unanimous vote, presented Mrs. Emma P. Ewing with a valuable gold medal, in recognition of her excellent series of lessons in the use of corn meal during the World's fair. They attracted large audiences and

suggested undreamed of possibilities in the use of this most edible grain. There is not enough corn meal used in the average household. It should appear on the table in some form almost every day. It is worthy of comment that at the woman's congress the hall was at no time large enough to accommodate the audiences of women anxious to hear Mrs. Ewing's lectures on cooking. The domestic instinct is the most largely developed of any in woman. If the men will provide the homes, there will be no difficulty in finding the women who will gladly take care of them.

When Lucy Stone and Antoinette Brown, two public speakers and ardent reformers, who married the brothers Blackwell, became mothers, the world heard nothing of them for a few years. With wise looks they said "That is the end of women; when they marry their public work is ended." But in a few years they were back at their work again, one as an editor, the other as a preacher, and their most efficient helpers were these same children. A long list of so-called woman reformers might be given whose children, both boys and girls, have become as active and successful as the parents in the same line of work. It is often said that the sons of distinguished men are apt to be failures, but this does not seem to be true of the children of distinguished women.

There are 185 men teachers and 1,372 women teachers in the city of Boston. The average salary of the former is \$246, of the latter, \$70.69. It is not claimed that the men are any better teachers. A similar discrepancy in wages exists in all large cities. In Chicago, women are not permitted to occupy the high salaried positions, no matter how superior their qualifications. And yet there are people who wonder why women are not satisfied.

There are more than 5,000 women gardeners in England, and this is recommended as an especially suitable occupation for women. It is evidently a very old one. It was in a garden that Eve got into all that trouble; but perhaps if she had been at work hoeing the vegetables she would not have had time for that little conversation with the serpent, which has brought so much repentance to her descendants.

The news of the recent victory in Colorado was received with great enthusiasm at Wellesley college. Of 622 girls who were interviewed, 506 declared themselves in favor of woman suffrage, and a telegram of congratulation was sent to the Equal Rights Association of Colorado. Miss Anthony sent the girls a letter of love and thanks.

## NOTES.

An interesting letter from Oakland, Cal., signed B. L. E., awaits permission to use the writer's name.—The poem, "Write Them a Letter To-night," signed M. C.—, San Antonio, Texas, is not original and can not be used.—Letters frequently reach me which are directed simply to Stanford University, but it is safer to put the name of the state also, as there may be some mail clerks who do not know that this University is in California.—In the Woman's Department for December in the sixth line of the first article, please read "carelessly" instead of "earnestly;" and pardon the two or three errors in grammar which are due to the eccentricities of the type. In the third paragraph of "Current Notes" the sentence should read, "Who laid down the law that millinery is strictly woman's work?"—One of my New Year's resolutions was not to worry over trifles but it is sometimes difficult to decide just what should be considered a trifle.

---

*Little Things.*

Small things are not to be despised. The coral reef which has caused many ships to founder is the work of tiny insects. Springs are little things, but they are the sources of large streams.

Little drops of water, and little grains of sand,  
Fill the mighty ocean and form the solid land.

So it is in character. It is the little things that make that which is great. Words, looks and frowns are little things, but they wield a powerful influence for good or evil. Little acts are the elements of true greatness, and the tests of character, which help to make the true man. If we will make the little events of life beautiful and good, then the whole life will be full of beauty and goodness. Discoveries are made mostly by little things. When Franklin made his discovery of the identity of lightning and electricity, it was asked: "Of what use is it?" To which he replied: "What is the use of a child? It may become a man." The secret of success in business and every pursuit in life, is the close observation of little things.

McDONALD, TENN.

*Eugenie Hawk.*

THE members of Ft. Pickering Lodge, No. 206, were treated to a most agreeable surprise, December 26th, in being presented with an altar cloth and four station scarfs by Mrs. J. A. Murray, wife of Brother Murray. The articles are very handsome as well as useful and the members, in expressing their grateful appreciation, wish Mrs. Murray every blessing that a noble woman merits.

*A Day Dream.*

I have gazed upon the mountains,  
Capped with everlasting snow;  
Then down to the beautiful valley,  
Many hundred feet below.

I have watched the sun go down,  
Behind the mountain far away;  
Leaving skies more grand and glorious,  
Than did artist e'er portray.

I have seen the river gushing,  
Through its bed so deep and wide;  
Down between the great dark mountains;  
Kissed by willows on each side.

I have loved the little wild flowers,  
That around the dark rocks twine;  
For they speak to me of One above,  
And tell of Love Divine.

When I note all nature's grandeur,  
Placed on earth to make us glad,  
From my soul the question rises:  
Why is it; some hearts must be sad?

LEADVILLE, COL.

*Nellie M. Lucless.*

*Flirting.*

Perhaps the readers will say this is an old subject, yet it is one on which much can be said. I am sometimes astonished at young ladies who are honest in every other respect, but think it no harm to flirt. They seem to think if they can engage themselves to three or four young men and keep them ignorant of the fact, they have accomplished a great deed. Do not consider it a sign of your popularity to be accompanied by several escorts, for popularity is not gained by flirting. I have seen a young man place all his confidence in a young lady and believe she was in earnest, and that she would be true to him. But when she could find a new suitor she would tell the first "she was only joking," or "she didn't love him," and then he would realize that he has been "building on the sand." Of course, he is glad she didn't marry him, but it will be a long time before he can place so much confidence in another woman. How often the victims of such cruel jokes have sought relief in the saloon, or have put an end to their miserable lives. Is it any wonder that we often meet men who say "they haven't any confidence in anything a woman says?"

But girls do not do all the flirting. Quite often I have seen men seem to do unto young ladies, and after they had won their affections they would say, "I didn't think she would care for me, or I would not have gone so far." We should remember to "do unto others as we would they should do unto us."

Now, I know there are some who think there is no harm in a flirtation, but show me the man or woman who are willing to give their pure and ardent love to a regular flirt. To be sure the fairy prince will probably come, but not in a flirtation.

FEBRUARY, 1894.

## ARBITRATION.

We have on our table *Transportation* for September, 1893, in which appears the thoughtful article captioned, "Arbitration as Applied to Railroad Corporations and their Employees," by Edward A. Moseley, Secretary of the Interstate Commerce Commission.

Mr. Moseley is in a position to write instructively and entertainingly of railroad affairs. His position as Secretary of the Interstate Commerce Commission enables him, in many matters, to be approximately correct, where others are left to wrestle with statements, which, to put it mildly, are often vague, and so elastic that they can be twisted about in a way to suit a great variety of views and conclusions. Railroad employees will feel under obligations to Mr. Moseley for giving certain importance to their calling which it has been the ambition of railway magnates to deny, especially at such times as the employees have had a grievance which they have desired to have removed by the said magnates.

Moseley recites numerous propositions relating to "combinations of capital" and "organizations of labor," stating that "they represent the two great interdependent and interacting forces of industry," and adds:

Overwhelming power in the hands of the first means unbearable oppression to the other, while extreme advantage conferred upon the latter would, if unwisely used, inflict ruin upon the former. Each side is governed by the dominant motive of self-interest, and they should be placed and kept upon equal footing. To do this full recognition of labor organizations is essential. A corporation which has brain and sinew for its capital should be regarded as similar. In a legal sense, to a joint stock concern with a

paid up money capital. This much I believe is due to labor in any branch of industry.

The term, "overwhelming power," we suppose means autocratic, absolute power—the power to grant, the power to withhold—and this power corporations possess in certain cases, or, if limited at all, it is only when labor organizations have interfered to check its sway. It is impracticable to parallel a money corporation and a labor organization. They are essentially dissimilar. They cannot be "placed and kept upon a similar footing," not even when "a corporation with brain and sinew for its capital" is pronounced, in a "legal sense," the equal of "a joint stock concern with a paid up money capital." True it is that capital is unproductive without labor, and that, in so far as great industrial enterprises are concerned, labor is unproductive without capital, but such statements are the merest platitudes in the discussion of the comparative power of a capital corporation and a labor organization, or, if you please, a labor corporation. Mr. Moseley refers to Homestead, and Homestead confirms our position, vividly illustrates our idea. Say, for instance, the capital corporation of Homestead represented \$10,000,000, and the labor corporation at Homestead represented 10,000 men of "brain and sinew." There are the two "corporations" side by side, dominated by "self-interest." The capital corporation possessed "overwhelming power," the corporation of "brains and sinew" in the contest had, in fact, no power at all, or if it had power, by exerting it did so to its own injury. True, it stopped the productiveness of capital, which, demanding neither food, clothing, nor shelter, subject to neither sickness, sorrow, pain nor death, could retire, keep quiet and wait, while the labor corporation starved, froze, went naked, took sick and died. What "extreme advantage conferred" upon the labor corporation could have inflicted ruin upon the capital corporation that would not have been equally ruinous to itself? and even suppose it had utterly wiped out of existence the Homestead mills, the comfort of Carnegie and Frick and those identified with them as capitalists would not have been marred, while the stock-

holders in the corporation of "brain and sinew" would have perished.

In discussing troubles arising between labor and certain capitalists—never between labor and capital—it is readily admitted that parties to the controversies are governed by "self-interest." This self-interest question presents widely different phases when discussed from points of observation occupied by a capital corporation and a labor organization. Mr. Moseley is well aware that the estimated value of the railroads of the United States represents not less than four billions of dollars of *water*—of fraud. It is called "capitalization," and capital corporations perpetrate the frauds. Labor corporations exhibit to the world no such "self-interest." They have never demanded more than would afford their "stockholders" of "brain and sinew" a respectable living. Hence it is seen that on the one hand capital corporations are animated by a "self-interest" essentially different from that which characterizes labor corporations or organizations. Labor corporations carry no watered investments. Congress nor the states give them land. Their schemes to wreck and rob have not called for congressional legislation nor state legislation to put an end to their perfidies—they have only "brain and sinew," and it is Mr. Moseley's idea to legislate in such a way as to bring about an "equality of power and force" between the two corporations and thereby establish arbitration. He says:

One is the full recognition of railway labor societies as corporations. The other is the settlement of disputes between railway employer and railway employees by means of compulsory arbitration between the men represented by their labor corporation as one party and the stockholders of the company represented by the railway corporation as the other party. We then obtain that *equality of power and force which compels* the essential requisites of friendly relation, respect, consideration and forbearance. Disputes between employers and employees can be satisfactorily adjusted only upon the basis of fair concession and mutual advantage. The strict rules of law are wholly inapplicable to such controversies, and so far the only plan which appears to offer a solution of the difficulty is arbitration. It is not conceded to be practicable to compel the parties engaged in productive enterprises to accept arbitration, but that objection loses all its force when it is proposed to limit it to those engaged in railway transportation.

There is associated with the term "arbi-

tration" that which smacks of justice, equity, fair play; the same is true of courts established to administer justice even handed, but pity it is that courts are uncertain, so unreliable that men are advised to "keep out of court"—but there is this thing about judicial proceedings in courts of law—men may *appeal*, and the propriety of exercising the privilege is shown in the fact that the decisions of lower courts are often reversed, but if we understand Mr. Moseley, his idea is to have the decision of arbitrators *final*. He says:

But so far as the settlement of disputes in which the public has direct interest is concerned, like those arising in the course of railway employment, congress unquestionably has power to compel arbitration. The tendency of congress to recognize labor associations has already been shown. It is but a step further to provide that organizations of railway employees shall, when disputes arise with railway managers, file approved bonds with designated officials for and in behalf of the men, that they will abide by the decision of the board of arbitration; that the railway corporations shall likewise file similar bonds; and that awards made under such conditions shall be enforceable in the courts.

It does not require a *seer* to see at once that Mr. Moseley maps out a stupendous job. It may be true that congress has the power to compel railroad employees to arbitrate, to single them out from all other classes of wage earners and rob them of their right to choose their own methods of settling their own grievances. Says Mr. Moseley: "It is not conceded to be practicable to compel the parties engaged in productive enterprises to accept arbitration, but that objection loses all its force when it is proposed to limit it to those engaged in railway transportation." Why it "loses all its force" Mr. Moseley does not inform the public, but it is easy to fathom the omission. When the railway corporation, being a "common carrier," oppresses its employees, and the employees quit work, the "common carrier" and the *public* are inconvenienced, hence, it is necessary for congress to pass a law providing that railway employees shall *not* quit work, but shall apply for arbitration and *remain* at work pending a decision. He says:

Moreover, questions arising between employer and employe demand the most prompt method of settlement; and pending final settlement the relations existing at the time the disputes arise should be maintained and the parties should bear their griev-

ances patiently during that period and rely upon just and proper revision and adjustment by the board of arbitration.

It is worthy of remark that when railway corporations have grievances against an employee they discharge him, or subject him to some penalty—*lay him off* for a period of time, which is simply a *fine* of so many dollars, but the *grievance* of the corporations against their men is, that the men annoy the corporation with their grievances, and insist upon sending their grievance committees to "headquarters" to obtain redress. This action, on the part of the employees, through their organizations has become so *ubiquitous* that the corporations desire the utter overthrow of the organizations, as has sometimes been accomplished. The organizations are thoroughly equipped to arbitrate, to compromise, to give and take, to settle every difficulty, but, as in the case of the Lehigh Valley corporation, the officials utterly refused to talk matters over with the officials of the organizations, President Wilbur contending that to make concessions would be, in effect, to abandon the control of the road to the organizations. To overcome this difficulty, organizations of railway employees are to be regularly *chartered* by congress, the intimation being that when so chartered they shall be empowered to make contracts for the men who are members of the organizations, and this idea is emphasized by Mr. Moseley when referring to the "pecuniary" irresponsibility of individual members, which he suggests would be removed when the organization is empowered to "treat with the corporation," which, *boiled down*, means, simply that the officials of an organization of railway employees shall have the authority to *hire out* the members of the organization, make all needed contracts for them—a species of chattel slavery that would decimate the organizations as if struck with the plague.

Manifestly, arbitration of a voluntary character is well enough, but the instant compulsory arbitration is suggested, manhood, citizenship, independence and self-respect revolt. We have already, as has been suggested, the courts, all the way up from a justice of the peace to the silk-gowned body known as the Supreme Court of the

United States, and we have laws enough, if they were woolen blankets, to keep the frigid zone warm. An arbitration court or courts, for to do any good there would have to be a multitude of them, would make a complex problem more complicated. A moment's reflection will confirm the conclusion. The statistician of the Interstate Commerce Commission informs the public that there are 171,503 miles of railroad track in the United States, controlled by 1,822 corporations, employing 821,415 persons. These employees, on lines sufficient to encircle the earth seven times, have a great number of grievances, and since Mr. Moseley says, "questions arising between employer and employe demand the most prompt method of settlement," it would seem advisable to have a Board of Arbitration for each railroad corporation, or 1,822 boards, ready to adopt "the most prompt method of settlement." If each Board of Arbitration consisted of three members then there would be spawned upon the country 5,446 arbitrators, or, if the Boards of Arbitration were to itinerate, their traveling expenses and hotel bills would be enormous; bills would peep o'er bills, and bills on bills arise, until there would be a revolt.

But there is another thing to be considered. Mr. Moseley suggests the giving of bonds by the organizations of railway employees to abide by the decision of the Board of Arbitration. To illustrate: take a railroad, say of 1,000 miles, on which the firemen have a grievance; suppose there are on the road twenty lodges, or organizations, of firemen. Is it to be understood that each one of the twenty organizations is to give bond before arbitration can begin? The inquiry is pertinent—grows out of the arbitration question—or is it to be understood that the Grand Lodge of the firemen's order is to give the bond and be held responsible? If the latter idea is to be adopted, the Grand Lodge, if it had wings and could out-travel a homing pigeon, would not be able to respond to the demand. In a word, is the proposition, compulsory arbitration, as suggested by Mr. Moseley, or any other gentleman, practicable?

Moreover, Mr. Moseley makes some suggestions which to our mind upset the

superstructure. He seems to have an idea, after all, that there are insuperable difficulties in the way, found in the fact that the right sort of men to act as arbitrators are about as scarce as watermelons in Greenland. He says:

To make arbitration effective and just, the arbitrators should be drawn from the vicinage and with particular reference to the particular case. A man who knows nothing about the work involved is not qualified to decide the question. When the matter in controversy involves how many hours a man should work, what pay he should receive, or any of the questions which cause dispute between the employer and the employee, those questions should be considered by men familiar with the particular employment under consideration as well as with the needs and situation of the employer. Such well informed persons are to be found in every locality, and when questions arise between employer and employees they are best qualified to decide what concessions are fair and what will redound to the mutual advantage of the parties. As a rule men who hold office for life or a defined term are unfit for such positions. A person to be a good arbitrator must be directly responsible in every case. Men who hold definite terms of office are placed in a position where they regard mankind as divided into classes, and they have, too often, but the instincts and sympathies of their "class." The ultra-conservative man, the man whose whole interest lies in maintaining the present order of things, is prone to look through the closed window of his richly furnished apartment, and in this refracted light and perverted view to imagine that he sees in the workman passing by with blouse and dinner pail a member of "the dangerous classes." Arbitrators, on the other hand, should be men who know no class, but who represent the great sovereign whole. The utmost publicity should be given to such awards, and to attain this end the law regulating arbitration might contain provision for a report by all boards of arbitration of the awards made by them to the executive head of the government and for the formal and official promulgation by him of all awards so made.

Any one who will read the foregoing carefully, will, we think, conclude that compulsory arbitration is not the way out of troubles between railroad employers and employees; that the scheme is largely visionary; that arbitration, well enough under certain conditions, would likely prove worse than valueless when made compulsory without the right to appeal.

Suppose the grievance of the employees should be opposition to a reduction of wages of say, 10 per cent. Arbitration is demanded. Thousands of the men are not organized, can give no bond and are not, therefore, in the contest. They simply submit. Some of the employees receiving

\$3 and \$4 a day accept the reduction. We will say the firemen demand a board of arbitration to sit in their case. Who are to be selected? According to Mr. Moseley, men "familiar" with the work, duties and responsibilities of firemen, as also with "the needs and situation of the employer." In such a case about the best that could be done would be to have one fireman on the board, one railroad official and one—anybody that the fireman and the official might select. The case is begun. The fireman says "to reduce his pay 10 per cent., 20 cents a day, \$60 a year, is to subject him and family to serious privations; that at his present wages he is barely able to live." The railroad corporation says "business is dull; that it pays no dividends, and that in reducing wages it is governed by necessities that can not be overcome." The board takes the case and decides that the railroad corporation must be content with 5 per cent. reduction, and that the fireman must submit to a loss of \$30 a year. The corporation is happy because it expected its demands to be reduced 5 per cent., and therefore made the cut 10 per cent. It has got what it expected in the case, and is serene. It employs say, 1,000 men, and by the cut makes a clear gain of from \$30,000 to \$75,000 a year. True, it may be said that because of arbitration some of the men, at least, saved 5 per cent. that otherwise would have been lost. This is assumption. It may be that with a strike and a tie up in full view no reduction would have been demanded. Victories for the right have been gained in the past for courageous men who knew their rights and dared to defend them.

One of the hallucinations of the period is that the government is clothed with such absolute power that it can by statute provide employment for the idle, regulate wages and do all other things that an autocrat may do. There is heard from many quarters a wild hue and cry in favor of a paternal government, such as exists in Europe, where the individual is lost sight of and the government overshadows everything, and compulsory arbitration is in that line: the term "compulsory" has that significance.

There are those who think that railroads should have at least a *semi-military* government, and that men should be *enlisted* for a term of years. Gods! The military idea was illustrated at Homestead, Buffalo, and other localities. Still, scabs might enlist.

There are those who seem to be of the opinion that the relations existing between the government and the corporations, and between the government and the individuals are practically the same, and that legislation, with equal propriety, may include both. There is, however, this difference: The government *creates* the corporation, but does not *create* the individual, and ours is a government of the people—of the individual. When the people become so degenerate as to passively submit to have their individuality wiped out, to be herded like cattle, no matter what plausible arguments are used to accomplish their degradation, the time will have arrived to sing again the old song addressed to the flag—

"Haul down that flaunting lie."

BUILD a railroad at a cost say, of \$10,000,000 actual cash. On that sum earnings are sufficient to pay good wages to employes and fair dividends to investors. Now, then, the "Board" wants money; ostensibly for cars, betterments, etc., and bonds are issued for \$10,000,000 and sold at 50 cents on the dollar, usually taken by the "Board." To pay dividends on \$20,000,000 wages must be reduced, etc. Next the road is wrecked and sold. Bondholders get it for \$5,000,000; profit, \$5,000,000. That's business.

SOME of our representative workingmen must remember that when they get their legs under the desk of a millionaire, that it is by no means a solution of the labor problem.—*Chicago Rights of Labor.*

But that is just what "some of our representative workingmen" don't remember, and as a consequence become the most abject lickspittles to be found in the world.

A LADY living at Benton Harbor, Mich., has ten thousand worms employed spinning cocoons. They are quick and steady and work cheaper than dagoes, besides they tell all other orders of silk worms to "mind their own business."

## GOV. LEWELLING, OF KANSAS, AND THE TRAMPS.

We take special pleasure in making room for Governor Lewelling's famous letter to the police commissioners of Kansas, relating to the treatment of unfortunate men called tramps. It is as follows:

The man out of work and penniless is, by this legislation, classed with "confidence men." Under this statute and city ordinances of similar import thousands of men, guilty of no crime but poverty, intent on no crime but that of seeking employment, have languished in the city prisons of Kansas or performed unrequited toil on "rock piles" as municipal slaves, because ignorance of economic conditions had made us cruel. The victims have been the poor and humble for whom police courts are courts of last resort—they cannot give bond and appeal. They have been unheeded and uncared for by the busy world which wastes no time visiting prisoners in jails. They have been too poor to litigate with their oppressors, and thus no voice from this under-world of human woe has ever reached the ear of an appellate court, because it was nobody's business to be his brother's keeper.

But those who sit in the seats of power are bound by the highest obligation to especially regard the cause of the oppressed and helpless poor. The first duty of government is to the weak. Power becomes fiendish if it be not the protector and sure reliance of the friendless, to whose complaints all other ears are dull. It is my duty "to see that the laws are faithfully executed," and among those laws is the constitutional provision that no instrumentality of the state "shall deny to any person within its jurisdiction the equal protection of the laws." And who needs to be told that equal protection of the laws does not prevail where this inhuman vagrancy law is enforced? It separates men into two distinct classes, differentiated as those who are penniless and those who are not, and declares the former criminals. Only the latter are entitled to the liberty guaranteed by the constitution. To be found in a city "without visible means of support, or some legitimate business," is the involuntary condition of some millions at this moment, and under the law we proceed to punish them for being victims to conditions which we, as a people, have forced upon them.

I have noticed in police court reports that "sleeping in a box car" is among the varieties of this heinous crime of being poor. Some police judges have usurped a sovereign power not permitted the highest functionaries of the state or of the nation, and victims of industrial conditions have been peremptorily "ordered to leave town."

The right to go freely from place to place in search of employment, or even obedience to a mere whim, is part of this personal liberty guaranteed by the constitution of the United States to every human being on American soil. Even voluntary idleness is not forbidden. If a Diogenes prefer poverty; if a Columbus choose hunger and the discovery of a new race rather than seek personal comfort by engaging in "some legitimate business," I am aware of no power in the legislature or in city councils to deny him the

right to seek happiness in his own way, so long as he harms no other person.

If men commit offenses let them be arrested and punished, whether rich or poor, but let simple poverty cease to be a crime.

In some cities it is provided by ordinance that if police court fines are not paid or secured the culprit shall be compelled to work out the amount as a municipal slave, and rock piles and bull pens are provided for the enforcement of these ordinances. And so it appears that this slavery is not imposed as a punishment, but solely as a means of collecting a debt.

Such city ordinances are in flagrant violation of constitutional prohibitions. The rock pile and the bull pen would never have been used in defrauding the friendless and poor. Let these twin relics of the departed auction-block era cease to disgrace the cities of Kansas. And let the dawn of Christmas day find the "rock pile" and "bull pen" and the crime of being homeless and poor, obsolete in all the cities of Kansas governed by the metropolitan police act.

It is confidently expected that their own regard for constitutional liberty and their human impulses will induce police commissioners to carry out the spirit as well as the letter of the foregoing suggestions.

L. D. LEWELLING, Governor.

The state of Kansas was never more fortunate in an election than when her citizens conferred the office of governor upon L. D. Lewelling. All along the ages men who have won fame and honor, though they may have done many notable acts, find at last that some one particular act has preserved their name from oblivion. We are not familiar with Governor Lewelling's history. We do not know how proudly he has borne himself in political battles—nor of any great principle he has enunciated not held in common by those with whom he affiliated. It is not a very great achievement to be a governor of a state—nor a congressman or a senator. Very small and inconsequential men have held and are still holding such positions. Even as presidents men of small calibre have been boosted into the great offices, but for which they would have sunk into irretrievable obscurity. Governor Lewelling's letter makes his name immortal. He at once takes rank with Abou Ben Adhem—simply because he has shown that he lives for his fellow man. And he loves God best who loves his fellow man best, and in this we refer to fellowmen who are the victims of misfortune without regard to the causes of their adversity.

True, it may be said that others are as philanthropic as Governor Lewelling—as

humane and benevolent. We do not doubt it, but only a few are in positions to command state and national attention when they write letters voicing their good will to all men, and particularly those in need of friends. Governor Lewelling is the first and only chief magistrate of a state who ever wrote a letter having for its object the mitigation of the woes of a tramp, and the fact, alike creditable to his head and heart, gives him the most honorable distinction. It gives him fame, it makes him illustrious. Unlike all other governors, unlike presidents, judges, mayors, or even church dignitaries, Governor Lewelling, of Kansas, dared to speak generous words for tramps. If they are guilty of crimes he would have them punished for such crimes as they are guilty of, but he proclaims that misfortune is not a crime, that poverty is not a crime, that walking the highways in search of work is not a crime. And in this the governor antagonizes a popular infamy, a species of infernalism well calculated to make devils blush, but tolerated and practiced throughout the broad land—and Governor Lewelling is the first and only man in authority to brand the cruel, savage, heartless wrongs in fitting terms.

Governor Lewelling's letter ought, in the very nature of things, to arouse everywhere the inquiry in this country: Why are there so many tramps? If investigations were set on foot and conducted for the honest purpose of ascertaining facts, the report would convict our boasted civilization of a series of wrongs without a parallel in the history of the world. It is not required to probe the far-away past, nor rake over the rubbish and ruins of by-gone ages. Only a few years have intervened since the tramp was heard of. He came with the success of concocted conspiracies of the rich to prey upon the poor. Never was the army of tramps so great as now, and when men ask: Wherefore the business and financial earthquake that has paralyzed industries, thrown men by the ten thousands out of employment to face famine, to increase the ragged and homeless army of the country, Grover Cleveland says "it is because of congressional legislation"—and congressional legislation continued until the mining industry

ceased as if by a decree of Jehovah, and almost in a day thousands of men who were working for themselves and their families and adding to the wealth of the nation, became tramps, and the hue and cry began again, to arrest men, to imprison men, add to the horror of their misfortunes, because, in their utter despair, they started out in this rich and Christian land, in the hope of finding work, food, and shelter and clothes to keep them from freezing.

Governor Lewelling speaks for these unfortunates. His great and generous words ought to have a good effect. Will such be the result? We doubt it. The cry of "mad dog" has gone forth, and we note that one Kansas official says the governor's plea will have no effect in Kansas. Every poor devil of a tramp will be required "to move on" or take the consequences. Nevertheless, we congratulate the governor of Kansas. He is, to-day, we do not doubt, the broadest gnaged statesman, philanthropist and Christian in the United States, and were he to die suddenly, with his boots on, it would be a splendid sight to note with what alacrity St. Peter would open the pearly gate, swing it back on its golden hinges and urge the governor to enter and make himself entirely at home in the city of God.

#### J. R. SOVEREIGN, GENERAL MASTER WORKMAN.

The Omaha *Western Laborer* has this to say about the new general workman of the Knights of Labor.

J. R. Sovereign, elected grand master workman of the Knights of Labor upon the resignation of T. V. Powderly, is without doubt the strongest man that could have been proposed.

Mr. Sovereign, at the time of his election, was state master workman of the state of Iowa, and also labor commissioner, which latter office he had filled four years. He was made a delegate to the general assembly which honored him with the highest position on the national triangle, but did not attend. The choice of the assembly will be hailed with satisfaction by Knights throughout the land. He is able, progressive, and not afraid to act.

Mr. Sovereign is an orator of uncommon powers, an expert statistician, and a newspaper man. About ten years ago he was one of the editors and proprietors of *The Industrial West*, a labor paper published at Atlantic, Iowa, where on the issue of equal rights in that hotbed of partisan serfdom he planted the seeds of political independence and caused a peaceful revolution in his senatorial district. He is just the man to

guide the order of the Knights among the shoals that seem to mark its course. Harmony is now assured.

Most certainly the MAGAZINE felicitates the great order of Knights of Labor upon the election of Mr. Sovereign in which there is no purpose to make insidious comparison between him and Mr. Powderly, only this, if Mr. Powderly deemed it prudent to retire, the order is to be congratulated upon finding a man of the character of Mr. Sovereign to take his place.

Mr. Sovereign has issued the following address to the order which has the right ring. He says:

A great struggle is being waged between two great forces—organized monopolies, struggling to make slaves out of men, and organized labor, struggling to make men out of slaves. The interest is between the dollars of Shylock and the bone and sinew of the industrial masses: a contest between organized land monopoly and the natural rights of God's homeless poor—between the federated trusts and oppressed humanity.

With the menacing influences and the monopolization of natural bounties, I appeal to you to rally to the rescue under the shield of our noble order. Go out in the highways and hedges and call the weary wanderers to the sanctuary and marshal the hosts of toil for a final and triumphant struggle for everlasting freedom from the thralldom of greed.

Meet the money power in the middle of the road with the demand for the free and unlimited coinage of gold and silver at a ratio of 16 to 1, and such other additions to the volume of money as the exigencies require without the intervention of banking corporations. Let there be no compromise on these lines, and we will put industry above idleness and elevate the servile from groveling pursuits to the rights and dignity of men. We will reduce the hours of toil commensurate with the improved mechanical devices for production, transfer the millions of weary and wan children from the dingy and unwholesome rooms of our factories to the schoolhouse on the hill, abolish penitentiary competition with free labor, and destroy the sweat-shop system of serfdom forever. We will bring the great avenues of distribution within easy reach of the masses, elect all legislative, executive officers and judiciary officers of the general government, and take away the veto power of the president. Thus we will give to the industrial a system menaced by no tramp at one end and no princely duke at the other, inspired by the justice of our principles, love for humanity, and hope for the ultimate triumph of our noble order, I am yours in a fight to the finish.

J. R. Sovereign,  
General Master Workman.

Every lover of the cause of labor will wish for Mr. Sovereign the largest possible measure of success in increasing the numerical strength and vital forces of the Knights of Labor.

### SENATOR ALLEN, OF NEBRASKA, AND THE RIGHTS OF THE COMMON PEOPLE.

United States Senator Allen, of Nebraska, was a lawyer of twenty years' practice before he was called to the bench, from which he was promoted to the United States Senate. "The rights of the common people" is Senator Allen's way of referring to workmen when their rights are invaded by employers. Senator Allen states what he believes to be a sound legal proposition, that when workmen are lured to a locality by the promise of work and wages, and build their homes in close proximity to their work, constitutes a moral and a legal obligation on the part of the employers, which could be enforced in a court of law. Senator Allen, referring to the Homestead infamy, said:

The mills of Carnegie were evidently fortified, a great fence around them, with portholes, and everything indicating a purpose to defend the place against the honest workmen who were engaged in work there. The men who were engaged in work at Homestead were induced to go there, to locate, and to invest in property in consequence of the promises of Carnegie and his officers and managers that they should have employment in those mills, and it was not only a moral obligation, but it was a legal obligation, which, in my judgment, could be enforced.

If a man says to me, if you will come to a certain place, invest your money in property there, in consideration of that you shall receive employment by me, it is a legal contract which I can enforce, or at least for which I can recover damage if he violates it. It is not only a moral obligation, but it is a legal contract, that may be the subject of litigation and recovery in a court of justice.

The United States Senate is known as the "Millionaire Club," and it is refreshing to know that one of the club dared to lay down propositions which, when uttered in the lodges of workmen have been scouted as the outgrowth of anarchism, and when announced on the rostrum, by men pleading the cause of labor, have been treated with contempt as the vagaries of labor agitators, and therefore entitled to no consideration. Senator Allen, proceeding to what followed the Homestead strike, pleaded the cause of the strikers in a way to make the "Millionaire Club" prick up its ears. He said:

Yet here were thousands of honest people who had constructed their homes that would be worthless

to them as soon as they were out of employment in the mills. The moment they refused to have their wages cut down, the moment they began to murmur, as such people will murmur and must murmur, because it affects vitally the interests of their families, the moment they began to protest, the great Carnegie, who lives in Clunie Castle, Scotland, most of the time, procured through his agents an unlawful force of marauders and banditti to come upon the shores of Pennsylvania under the false pretense of protecting his property. What ensued? One of the most disgraceful scenes that has occurred in this country for many a day.

Then, Mr. President, witness the great state of Pennsylvania calling out its entire military force, amounting to some thousands of men at least. I do not pretend to recall the number, but I think 8,000 or 10,000. All of this military force was called out for what purpose? For the purpose of stifling the cry of hunger and the cry of distress; for the purpose of overawing American citizens who were clamoring for the protection of their rights; for the purpose of overawing one portion of the people of this country who were unfortunate enough to be compelled to labor for a living in the interest of aggregated capital. There for a month or more stood the carpet knight Snowden, with his forces overawing the honest citizens of Homestead. Not only that, but similar scenes have occurred all over this country, manifesting a disposition to ignore the rights of the common people.

The Homestead infamy has passed into history—but is not yet ancient history—though sufficiently old to be repeated in a thousand ways, not identically reproductions, except in so far as the spirit of Satan is disclosed in cruelty to workmen—and in this regard, Homestead infernalism, with modified horrors, is seen in every direction.

Senator Allen refers to the fact that workmen built their houses at Homestead, believing that Carnegie—the hybrid monstrosity, a combination of tiger and tarantula, saint and satan—would be as good as his professions, but Frick, who came so near being cooked, saw in the fact that men having their homes near the mills, would be loath to part with them, and that the manly virtue of loving their homes could be used to secure their degradation. Unable to sell their homes or take them away, they would be compelled to remain, and finally accept such wages as the freak, Frick, might choose to offer when starvation began its work, and to aid such devilish designs the great (?) state of Pennsylvania contributed by ordering out its standing army. What good comes of such reminiscences? It is hard to tell. They ought to bind working-

men together, and unify them as one man. Has it accomplished such a devoutly wished for end? Nay, verily. Faction festers in the very marrow of labor organizations. Federation appears lovely on the outside, like a whited sepulchre—but within, conspiracy, more offensive than putrefaction, dressed in grand robes, formulates its scheme to wreck some organization which has excited opposition, and corporation, organization and cupidity lock arms and chuckle over the victory. Will it be ever thus until the corporation has blown out all the lodge fires that organization has ever lighted? It looks that way to the superficial observer. But there are redeeming principles at the bottom of labor organizations. There must be more love and less lucre. There must be less pomp and parade, glitter and sham, and more practical common sense, less taxation upon toilers to sustain grand establishments, and a policy that will reduce expenses and cease to multiply enemies of organization by taxing their incomes, until exhaustion drives them again into the ranks of the unorganized.

It is held that experience is an expensive school, and to none, we conclude, is it more expensive than to organized workmen. If they have not learned wisdom in it, we shall be willing to confess that the maxim about the school of experience is misleading. Till then, we shall enthrone patience and look forward to the time when labor, emancipated from blindness, will discover that leadership does not mean princely salaries wrung by taxation from toil, and that the fraternization of labor is not promoted by antagonistic banners in its ranks.

---

ESTIMATES relating to the population of the world, which put the total at 1,480,000,000 are largely guess work. It is said that 55 per cent. is fairly reliable and that 47 per cent. of the estimates are largely conjecture. The annual increase of population of the world is set down at 6,000,000.

---

It is stated that the United States has 800 labor and reform papers. They ought to be able to persuade workmen that their safety from poverty and degradation depends upon organization and federation.

#### T. V. POWDERLY AND THE KNIGHTS OF LABOR.

For fourteen years T. V. Powderly had been the general master workman of the great order of Knights of Labor, up to the time that he voluntarily laid down the trust at Philadelphia, and during the entire period Mr. Powderly gave his great abilities unstintedly to the cause of labor education. He had a lofty ideal. He believed in the vast mind forces, laying practically dormant, in the great body of American workmen. This latent, unexerted force he sought to arouse, bring into action, unify and harmonize for the good, not only of labor, but of society at large. Education was first, last and all the time his theme, his inspiration. He was always in the van of the marching hosts. A pathfinder, he was forever blazing out new pathways to higher elevations. Never content with a slow, ambling, hesitating gait, he strode forward, for to his vision the goal was always in sight. And it should be said, without reference to the cohesiveness or the disintegration of the order of the Knights of Labor, Mr. Powderly won victories all along the line. He sent forth an army of new ideas, new forces, which are still on the war path and are achieving ceaseless victories for the right.

Goldsmith said those who think govern those who toil, and Powderly's mission was to set toilers to thinking that they might govern themselves. There may be bleary-eyed croakers who are unable to discover the fruitage of the educational nuts Powderly had planted, but that does not count. They have taken deep root in thousands of minds, and although Mr. Powderly is no longer general master workman, he is not less an educator and a force and a factor in the conquering ranks of labor. In saying this of Mr. Powderly we institute no parallel between him and others who are engaged in the same laudable work. All honor to the courageous men as captains, lieutenants or privates in the ranks of labor who have ideas, convictions and the courage to express them. They are the salt of the earth. Living, they challenge the admiration of men whose good opinion is worth having, and, though dead, their great words and generous deeds are invincible.

The MAGAZINE, without regard to organization, delights in commending men of the Powderly type. They are not infallible nor free from mistakes, because they are human, for human mistakes are within the realm of human remedies, and when made in the cause of human progress they are near of kin to truth and all manly virtues, and men are often to be beloved, if not canonized, for the enemies they have made. In the future, and in the near future, we, with thousands of others, will expect to hear Mr. Powderly's voice ringing along the lines of organized workingmen.

#### THE AMERICAN FEDERATION OF LABOR AND GOV. ALTGELD.

The great organization of American workmen, known as the American Federation of Labor, in session in Chicago during the month of December, 1893, and which has a membership of about one million, adopted unanimously, during the early hours of its session, the following resolutions indorsing the action of Governor Altgeld of Illinois for pardoning the men who were tried and condemned as participants in what is known as the Hay Market Riot:

WHEREAS, The pardoning of the so-called Chicago Anarchists by Governor Altgeld of the State of Illinois is but a simple act of justice.

WHEREAS, The conviction and incarceration of Fielding, Schwab and Neebe was the result of class prejudice and persecution at a time when the public mind was influenced with passion; and

WHEREAS, The Governor of Illinois, in the face of a set resolve of the capitalist class to the contrary, has had the courage to defy power and opposition in defense of innocence and justice, thus proving the honesty and sincerity of heart; therefore be it

*Resolved*, That we indorse Governor Altgeld's action and accept the reasons he assigns as in line with the true facts of the case; and be it further

*Resolved*, That a copy of these resolutions be sent to Governor Altgeld.

There is no misunderstanding these resolutions, as expressing the conviction of workingmen throughout the length and breadth of the land. Governor Altgeld, in pardoning the men, evinced no sympathy with acts of violence. He simply said the unfortunate men had been condemned without a *fair trial*, and to condemn men for any alleged crime whatever, without giving them a fair trial, is simply infamous beyond expression, a crime in itself which none but

the vicious, ignorant and depraved will indorse. The American Federation of Labor, by indorsing the action of Governor Altgeld, is entitled to the applause of every workingman in America. A fair trial is the last hope of workingmen. Debauch the courts of the country, let it be understood that trials in court are organized to covet the poor and let the rich go free, and America is at once Russianized.

On December 16th Mr. Samuel Gompers, president of the great organization, known as the American Federation of Labor, was re-elected president of the organization. There were 2,536 votes cast, of which Mr. Gompers received 1,314 and Mr. John McBride 1,222, Mr. Gompers' majority being 92. The other officers were all re-elected as follows: First vice-president, P. J. McGuire, Philadelphia; second vice-president, G. L. Drummond, Fort Wayne, Ind.; third vice-president, James Brettel, Pittsburg; fourth vice-president, William H. Arden, Boston; secretary, Chris Evans, New York; treasurer, J. P. Lennon, New York.

Mr. Gompers did not escape the ordeal of an investigation relating to finances. Charges were formulated and presented, a committee appointed to investigate, etc. Before this committee Mr. Gompers appeared armed with every required voucher, and when a vote was taken Mr. Gompers stood forth without spot or blemish—an honest man, and by a unanimous vote of the convention was vindicated. Just the way to treat that sort of a thing.

The convention thought Mr. Gompers was the right man in the right place, hence his re-election. The MAGAZINE sends its congratulations.

Is a lion in the way?

Keep cool;

Tell him you respect his pride,  
Tell him that the world is wide,  
And that he must stand aside.

Keep cool.

—George W. Light.

BUT,

Is a foot pad in the way?

Draw your gun;

And if the gaboot  
Don't scoot,  
Shoot.

Draw your gun!

### The Northern Pacific.

Below we give the full text of the injunctions issued by Honorable Melville W. Fuller, Chief Justice of the Supreme Court of the United States, and served on F. P. Sargent, Grand Master of the Brotherhood of Locomotive Firemen. These documents bear date of December 19 and December 22, and by all the pagan gods in a pile, it is recited, "IN THE YEAR OF OUR LORD, ONE THOUSAND, EIGHT HUNDRED AND NINETY-THREE!" Whose Lord? It is simply blasphemy to involve in any way the LORD JESUS CHRIST. If He had been in Milwaukee on the dates named He would have worked another miracle, in which He would have yanked the devils out of the court, and directed them to take possession of Wisconsin hogs, and let them go to their native hell via Lake Michigan.

When lawyers—no matter what their station—introduce into their decrees to rob poor men by playing into the hands of the rich in the name of "Our Lord," they make it exceedingly proper to quote what "Our Lord" said about lawyers generally. After denouncing the pharisees, "Our Lord" turned upon the lawyers and said: "Woe unto you, also, ye lawyers, for ye laid men with burdens grievous to be borne, and ye, yourselves, touch not the burdens with one of your fingers."

The language of "Our Lord" hits the injunctions issued by Hon. Melville W. Fuller square in the eye. His autocratic orders should have been dated December 19 and December 22 in the year of the rule of Christless corporations, and of the court and corporation alliance to rob labor, not only of its honest earnings, but to make the very term "independence" a synonym of shame.

What were the incidents which led up to the culminating fulminations of Judge Fuller? They are few in number and relate specifically to the rights of employes on the Northern Pacific. The wages of the men were to be reduced from five to ten per cent. in mid-winter and in a northern latitude. The Northern Pacific had been robbed and wrecked by gangs of men succeeding each other, and, to make good the stealings, the men who performed the laborious and perilous work were to have their means of living reduced. The receivers pretended that no other way could be found to put the miserable concern in funds but to cut the wages of the men. Naturally the men, feeling the cruel injustice of the scheme to rob them, sought redress by sending their grievance committees to headquarters. This proceeding was orderly, commendable and business-like, but their appeals fell upon hearts of stone. To raise money by robbing employes was feasible and

certain. As to the honesty of the proceeding, neither corporation nor courts cared. The men talked and grew restless—they had not struck, they were performing their tasks. The receivers, knowing the cruelty of their scheme to rob the men, said, doubtless, "these men will give us trouble; they will resist oppression and degradation; they will strike as a last resort; they would be less than American freemen if they were to hold up their hands and have their pockets rifled without doing all in their power to resist this footpadism. They have done no wrong so far, therefore we cannot call upon the authorities to call out the militia to kill them as if they were so many vagabond dogs, but he can appeal to the courts in this year of 'our Lord' and of the 'independence of the United States' to reduce them to the condition of slaves, and this we will do." Promptly the United States courts were appealed to, and quick as lightning from a storm cloud Judge Fuller responded, and every employe on the Northern Pacific stood cold and silent in his tracks, as if frozen to death in the grasp of a blizzard—and there he stands, or, rather, there he bows his head in token of submission. He dare not strike, he dare not quit work—he dare not talk. "Life, liberty and the pursuit of happiness" to him is to submit in silence—to realize that he is a bondsman. It might be regarded "contempt of court" for these Northern Pacific slaves to repeat the language of "Our Lord." "Woe unto you, also, ye lawyers."

True, in defense of this civilized slaughter of liberty, the claim is set up that the public must not be inconvenienced by strikes, and as for being inconvenienced by robbery, the cause of strikes, it were folly so much as to intimate that the public cares a fig for such injustice. We have now advanced to a point where we find corporations, the militia, and the United States courts compactly federated. The corporation or the receiver acting for it, can starve men, the militia can kill men, and the courts can imprison men. What more is required to Russianize America? We give it up. Reform is demanded. As it now appears, the power of the government is directed to crush labor, to create a white slave class, and certainly the courts are doing their share of the work. It will go on, but scarcely forever. As yet we can hardly fancy 20,000,000 of white slaves in the United States. The United States courts, unrestrained, are working along that line, and they are nearing a danger line. It is to be hoped that they will not reach it. If they do not, it will be because labor unifies, and with the ballot wrests the dangerous power from the courts, and the sooner it is done the better.

UNITED STATES CIRCUIT COURT, )

CIRCUIT COURT  
EASTERN  
DISTRICT OF  
WISCONSIN.

The President of the United States of America, to the officers, agents and employes of Thomas F. Oakes, Henry C. Payne and Henry C. Rouse, as Receivers of the Northern Pacific Railroad Company, and to the engineers, firemen, trainmen, train dispatchers, telegraphers, conductors, switchmen and all other employes of said Thomas F. Oakes, Henry C. Payne and Henry C. Rouse as Receivers of the Northern Pacific Railroad Company, and to each and every one of you, and to all persons, associations and combinations, voluntary or otherwise, whether employes of said Receivers or not, and to all persons generally and to each and every one of you,

(GREETING: Whereas, it has been represented to the United States Circuit Court for the Eastern District of Wisconsin on the part of Thomas F. Oakes, Henry C. Payne and Henry C. Rouse as Receivers of the Northern Pacific Railroad Company, as by their certain verified petition filed in said cause on December 18th, 1893, and that said Thomas F. Oakes, Henry C. Payne and Henry C. Rouse as Receivers of the Northern Pacific Railroad Company ought to be relieved touching the matters in said petition more particularly described;

And whereas, the United States Circuit Court for the Eastern District of Wisconsin, in a certain cause there pending in which the Farmers' Loan and Trust Company is the complainant, and the Northern Pacific Railroad Company, Phillips B. Winston, William C. Sheldon, George R. Sheldon, William S. P. Prentice and William C. Sheldon, and Thomas F. Oakes and Henry C. Payne and Henry C. Rouse as Receivers of the Northern Pacific Railroad Company, are defendants, did make an order directing that the writ of injunction issue as prayed for in said petition of said Receivers.

Now, therefore, in consideration thereof, and of the matters in said petition set forth, you, the officers, agents and employes of Thomas F. Oakes, Henry C. Payne and Henry C. Rouse, as Receivers of the Northern Pacific Railroad Company, and the engineers, firemen, trainmen, train dispatchers, telegraphers, conductors, switchmen and all other employes of said Thomas F. Oakes, Henry C. Payne and Henry C. Rouse as Receivers of the Northern Pacific Railroad Company, and each and every one of you, and all persons, associations and combinations, voluntary or otherwise, whether employes of said Receivers or not, and all persons generally, and each and every one of you, in the penalty which may ensue, are hereby strictly charged and commanded that you and each and every one of you do

absolutely desist and refrain from disabling or rendering in any wise unfit for convenient and immediate use any engines, cars or other property of Thomas F. Oakes, Henry C. Payne and Henry C. Rouse as Receivers for the Northern Pacific Railroad Company, and from interfering in any manner with the possession of locomotives, cars or property of the said Receivers or in their custody, and from interfering in any manner by force, threats or otherwise, with men who desire to continue in the service of the said Receivers, and from interfering in any manner by force, threat or otherwise with men employed by the said Receivers to take the places of those who quit the service of said Receivers, or from interfering with or obstructing in any wise the operation of the said railroad or any portion thereof, or the running of engines and trains thereon and thereover, as usual, and from any interference with the telegraph lines of said Receivers or along the lines of railways operated by said Receivers, or the operation thereof, and from combining and conspiring to quit, with or without notice, the service of said Receivers with the object and intent of crippling the property in their custody, or embarrassing the operation of said railroad, and from so quitting the service of the said Receivers, with or without notice, as to cripple the property or to prevent or hinder the operation of said railroad, and generally from interfering with the officers and agents of said Receivers or their employes in any manner by actual violence or intimidation, threats or otherwise, in the full and complete possession and management of the railroad, and of all the property thereunto pertaining, and from interfering with any and all property in the custody of the said Receivers, whether belonging to the Receivers or shippers or other owners, and from interfering, intimidating or otherwise injuring or inconveniencing or delaying the passengers being transported or about to be transported over the railway of said Receivers or any portion thereof by said Receivers, or by interfering in any manner by actual violence or threat and otherwise preventing or endeavoring to prevent the shipment of freight or the transportation of the mails of the United States over the road operated by said Receivers, until the further order of this Court.

This process is directed to the marshal for the Eastern District of Wisconsin, who is hereby commanded to execute the same within his jurisdiction and to make due return thereof without delay.

Witness, the Honorable Melville W. Fuller, Chief Justice of the Supreme Court of the United States, at the City of Milwaukee in the Eastern District of Wisconsin, this 19th day of December in the year of our Lord one thousand eight hundred and nine-

ty-three, and of the independence of the United States the 118th.

Rouse, as Receivers of the Northern Pacific Railroad Company, and the engineers, firemen, trainmen, train dispatchers, telegraphers, conductors, switchmen, and all other employes of said Thomas F. Oakes, Henry C. Payne and Henry C. Rouse, as Receivers of the Northern Pacific Railroad Company, and each and every one of you, and all persons, associations and combinations, voluntary or otherwise, whether employes of said Receivers or not, and all persons generally, and each and every of you, in the penalty which may ensue, are hereby strictly charged and commanded that you, and each and every one of you, do absolutely desist and refrain from disabling or rendering in any wise unfit for convenient and immediate use any engines, cars or other property of Thomas F. Oakes, Henry C. Payne and Henry C. Rouse, as Receivers for the Northern Pacific Railroad Company, and from interfering in any manner with the possession of locomotives, cars or property of the said Receivers or in their custody, and from interfering in any manner, by force, threats or otherwise, with men who desire to continue in the service of the said Receivers, and from interfering in any manner, by force, threats or otherwise, with men employed by the said Receivers to take the place of those who quit the service of said Receivers, or from interfering with or obstructing in any wise the operation of the railroad or any portion thereof, or the running of engines and trains thereon and thereover, as usual, and from any interference with the telegraph lines of said Receivers or along the lines of railways operated by said Receivers, or the operation thereof, and from combining and conspiring to quit, with or without notice, the service of said Receiv-

ers, with the object and intent of crippling the property in their custody, or embarrassing the operation of said railroad, and from so quitting the service of the said Receivers, with or without notice, as to cripple the property or to prevent or hinder the operation of said railroad, and generally from interfering with the officers and agents of said Receivers or their employes, in any manner, by actual violence or by intimidation, threats or otherwise, in the full and complete possession and management of the said railroad, and of all the property thereunto pertaining, and from interfering with any and all property in the custody of the said Receivers, whether belonging to the Receivers or shippers, or other owners, and from interfering, intimidating, or otherwise injuring or inconveniencing or delaying, the passengers being transported, or about to be transported, over the railway of said Receivers, or any portion thereof, by said Receivers, or by interfering in any manner, by actual violence or threats, or otherwise preventing or attempting to prevent the shipment of freight or the transportation of the mails of the United States over the road operated by said Receivers, and from combining or conspiring together, or with others, either jointly or severally, or as committees, or as officers of any so-called labor organization, with the design or purpose of causing a strike upon the lines of railroad operated by said Receivers, and from ordering, recommending, approving or advising others to quit the service of the Receivers of the Northern Pacific Railroad Company on January 1st, 1894, or at any other time, and from ordering, recommending, advising or approving, by communication, or instruction, or otherwise, the employes of said Receivers, or any of them, or of said Northern Pacific Railroad Company, to join in a strike on said January 1st, 1894, or at any other time, and from ordering, recommending or advising any committee or committees, or class or classes of employes of said Receivers, to strike or join in a strike, on January 1st, 1894, or at any other time until the further order of this Court.

This process is directed to the marshal for the Eastern District of Wisconsin, who is hereby commanded to execute the same within his jurisdiction and to make due return thereof without delay.

Witness, the Honorable Melville W. Fuller, Chief Justice of the Supreme Court of the United States, at the City of Milwaukee, in the Eastern District of Wisconsin, this 22nd day of December, in the year of our Lord one thousand eight hundred and ninety-three, and of the independence of the United States the one hundred and eighteenth.

[Signed] EDWARD KURTZ, Clerk.

UNITED STATES OF AMERICA, )  
Eastern District of Wisconsin. ) ss.

I, Edward Kurtz, Clerk of the Circuit Court of the United States of America for the Eastern District of Wisconsin, do hereby certify that I have compared the writings annexed to this certificate with their originals now on file, and remaining of record in my office, and that they are true copies of such originals and correct transcripts therefrom.

In testimony whereof, I have hereunto set my hand, and duly affixed the seal of the said Court, at the City of Milwaukee, in said District, this 27th day of December, in the year of our Lord one thousand eight hundred and ninety-three, and of the independence of the United States the 118th.

EDWARD KURTZ, Clerk.

THE January issue of the *Switchmen's Journal* for 1894 comes to us with a well written New Year's article touching upon many of the infelicities which distinguish the records of 1893. Brother Sweeney asks and answers as follows:

Why is it that in a land of milk and honey—for such are the riches of this country that the term may be properly applied to it—why is it that the ugly word "charity" attains such prominence? Some financial statistician figured out recently that the annual production of wealth in the United States amounts to about \$50,000,000,000, or a little less than \$1,000 per head of population. At the same time the chief of the Bureau of Labor statistics puts the average earnings of working people in ordinary times, when there is no financial depression, at less than \$300 a year. What becomes of the difference? Somebody gets it. And it is those who get this vast majority of the wealth of the country who organize charities.

"What becomes of the difference?" Ask Rockefeller and the rest of the trust freebooters. They may not answer directly, nor even at all—but they get the difference all the same. We notice that Brother Sweeney has some doubts about the men winning the strike on the Lehigh Valley. He says:

We fail to see that organized labor gained any great amount of justice in this settlement, much less a victory. Quite a number of men have been re-employed since the trouble was ended, but those who were active in the organization and took leading parts during the trouble were not employed and will necessarily have to seek employment elsewhere. The company was successful in destroying system federation on its road, and it is not likely that committees will appear for some time before the officers of the company to have their grievances adjusted, so that the concession which the president made to the men scarcely amounts to anything. After he reserved the right to re-employ men at his discretion and had broken up federation, it was a very easy matter for him to make this slight concession of modifying his proposition in this respect, and it is the only point on which he made any concession.

**William Baugh.**

The portrait we introduce is a life picture of William Baugh, the veteran engineer, who began life's pilgrimage in Wott county, Virginia, near the North Carolina line, February 22d, 1818, just 86 years after the birth of George Washington, also a native Virginian, born February 22, 1732.

In 1829, when William was a boy 11 years of age, his parents left Old Virginia, the "mother of Presidents," and settled in Madison, Indiana, on the Ohio River, then and for many years subsequently, the most enterprising town in the state, and a steam-

boat town, with not more than three rivals from Pittsburg to Cairo. Nothing could have been more natural than for young Baugh to enter upon the life of a steamboatman. There were no railroads and the demand for water transportation, kept pace with the rapid development of the great west.

In the life of a steamboatman in those early days, there was a deal of romance as well as peril and hard work, in the recitation of which facts take on the glamor of fiction, and the few who remain of the old-time river men, are listened to with interest

by the present generation, when they tell their experiences. In the various trades on the Ohio, the Kentucky and Green Rivers, William Baugh served in various capacities, ranging from cabin boy to pilot, including engineer. In this work he continued till 1844, when he abandoned it for railroading and took the position of fireman on the Madison & Indianapolis, under the tutelage of George Ramsey, engineer, when Samuel Thomas was master mechanic. Firing then was on "mixed trains," freight and passenger combined, at a time when few of the most prescient so much as dreamed of what we now behold in palace cars and the splendors of vestibuled trains. At the time of which we write, the building of railroads was a slow business, necessarily so, as work, owing to transportation, could be carried forward only from one end of the line. The iron on the Madison & Indianapolis road had to come to Madison and be hauled out on the road from that point.

Mr. Baugh fired an engine for nine months when he was promoted to the "right hand side" and henceforth was a "runner." The locomotives in those days would scarcely be recognized by the modern engineer. They were minus cab and pilot, and had no heater pipes. How to get over the road in those primitive times was a far more serious problem than the "boys" of to-day are required to wrestle with, as, for instance, Mr. Baugh, on one occasion when the pumps were frozen, had to saturate his shirt with oil and set fire to it to thaw them out; and when caught with a limited supply of water, there being no water tanks along the line, it became necessary to fill the tank by bailing the water from the pools along the road; and when the snow encumbered the track the snow-plow consisted of men standing on the bumpers, one on each side, holding boards between their knees in a way that would clear the rail.

In 1849 Mr. Baugh quit the Madison & Indianapolis road and took service on a little road called the Shelbyville & Knightstown, where the late C. R. Peddle was running an engine. Mr. Baugh had known Mr. Peddle on the Madison & Indianapolis where he (Peddle) ran an engine for several years. Mr. Baugh's connection with the Shelbyville & Knightstown road continued only about four months, when he returned to Madison where he again met Mr. Peddle who had been employed by Chauncey Rose as master mechanic on the Terre Haute & Richmond railroad. Mr. Peddle was bringing two engines, the "Clay" and the "Marion," to Indianapolis. At that time the T. H. & R. railroad had four engines. The Clay and the Marion were working westward from Indianapolis, and the Hendricks and the Putnam were working eastward from Terre Haute. Mr. Peddle, knowing the sterling

qualities of Mr. Baugh, at once gave him employment, placing him in charge of the locomotive "Clay" and on the 1st day of May, 1851, forty-three years ago, Mr. Baugh began running the "Clay" out of Indianapolis. The road was then not yet completed between Terre Haute and Indianapolis. That part of the road between Indianapolis and Richmond afterward became the "Pan-handle" and is now a part of that system. The T. H. & I. was completed in the latter part of February 1852, the two ends of the road being joined together about one and a half miles east of Greencastle. The first train went through from Indianapolis to Terre Haute March 1st, 1852, and Mr. Baugh, in charge of the Clay, had the distinguished honor of making the first run over the road, in association with a conductor named Wilson. Mr. Baugh ran between Terre Haute and Indianapolis continuously until the fall of 1871, being then 53 years of age. Two years previous Mr. Baugh's wife had died and he concluded to retire from active road service.

From 1844 to 1871—a period of twenty-seven years—Mr. Baugh had been a pioneer in railroading. The work had been arduous to an extent that few can realize now, who see the splendid equipment of our great trunk lines and the thousand and one new appliances for speed and safety.

Having abandoned the cab and throttle, Mr. Baugh went to work in the shops at Terre Haute, where he performed some service in hostling, etc., subsequently taking a round-house position, and engaged in repairing engines. In these positions he had, by his genial disposition, become a great favorite with the "boys," who gave him the flattering sobriquet of "Uncle Billy," by which he, now, 76 years of age, is still known.

In the month of March, 1893, when "Uncle Billy" had reached the advanced age of seventy-five years—awaiting the summons that can't be long delayed—President W. R. McKeen, of the Vandalia System, retired the veteran on FULL PAY.

We see in this generous act on the part of President McKeen, a wealth of nobility of soul that challenges our admiration, and enables us to comprehend with what unflagging fidelity, William Baugh—from youth to manhood, and to old age, performed his daily tasks in the interest of his employers.

The subject of this sketch has long been a member of the great Brotherhood of Locomotive Engineers, having joined the order at Indianapolis, and subsequently becoming a charter member of Division No. 25, at Terre Haute, and is now an honorary member of the order.

In closing this brief sketch of a veteran engineer, we can only add, that he enjoys in his green old age, the respect and ven-

eration of all who are so fortunate as to enjoy his acquaintance. His sun is setting serenely—no clouds are obscuring the horizon—a life well spent will leave to those who treasure his many manly virtues, memories of priceless value. The *MAGAZINE* tenders to "Uncle Billy," its congratulations and wishes him still many years of health and happiness and that as "Boss of the Vandalia's Tool Room," he will remain in touch with the men who are carrying forward the great interests of the Vandalia, with which he has been so long and so honorably identified.

### Noble Women.

The world is brighter and better because women are in it. Tom Moore sang:

O woman! whose form and whose soul  
Are the spell and the light of each path we pursue;  
Whether sunn'd in the tropic, or chill'd at the pole,  
If woman be there, there is happiness too.—

Women are always striving to make the world more beautiful, and life more worth the living, nor do they forget the dead—those who have sought to make homes types of heaven by drying tears and assuaging woes, and such was the life work of Wm. D. Robinson, the first Grand Chief of the great order of the Brotherhood of Locomotive Engineers. He toiled through storm and shine not only for engineers, but for their widows and their orphans when the hands of their protectors could no longer grasp a throttle. We are led to such reflections by the act of Criswell Division No. 41, Ladies' Auxiliary of the Brotherhood of Locomotive Engineers at Newark, Ohio. This lodge contributed \$17.50, the proceeds of an entertainment, to the Robinson Monument Fund to perpetuate the name and fame of one of the grandest men that ever worked in the cause of organization. Should the wives and daughters, the mothers and sisters of locomotive engineers and firemen take the matter in hand the monument that would rise above the dust of Wm. D. Robinson would be one of the most beautiful monuments that gratitude ever erected to the memory of a hero. The *MAGAZINE* thanks the ladies who made the contribution, which is hereby acknowledged.

THE *Railway News-Reporter*, Dan Honin's enterprise, published at Omaha, is not only a news paper, but may be called an institution, as George D. Prentice once said of his *Journal*. The Christmas issue of the *News-Reporter* contained 48 pages, each one of which was as entertaining as the "Midway" on a bright day, with all of its attractions in full sway. To say that it was a "dandy" is altogether too tame—it was superb through and through, and a splendid illustration of its proprietor's snap, get up and go qualities—and as a holiday enterprise, was a success.

### Consoling Strains.

There's no use in grumbling and growling  
Whenever things fail to go right;  
We but make our lives bitter by scowling,  
And keep our poor hearts in a fright:  
Let us fancy the sun ever shining,  
Without any clouds in the sky,  
It is better, my boys, than repining,  
And wiping the tear-moistened eye.

When launched upon life we've no knowledge  
Of how on the voyage to steer;  
Perhaps at some hedge-school or college  
Good counsels even thrust in our ear,  
Should we let them all out through the other,  
It proves in our youth we were boys;  
Be lenient, then, with a brother,  
Who thought less for learning than toys.

Let us not keep our tongues ever running,  
And fancy ourselves all saints;  
Let us never be fluent in pursuing  
Unfortunate human complaints;  
For we know not the moment the blessing  
Of health and good fortune may end;  
If it should, don't you think it distressing  
To not at our side have a friend.

If a brother feels faint on life's highway  
Do not tumble him into the mud;  
There are many who plod on a by-way  
Who'd march with the crowd if they could;  
We can wrestle with selfishness bravely  
If we all to do right are inclined;  
Let us study our frailties gravely,  
And banish them off from the mind.

Boys, this world is a world full of sorrow,  
And sufferings grow with our years;  
To-day we may laugh, but to-morrow  
Our eyes may be flooded with tears;  
But a feeling of calm resignation  
Shall aid us our ills to endure,  
No matter where e'er be our station,  
Or whether we're wealthy or poor.

*Shandy McGuire.*

THE *Twentieth Century* is always a welcome visitor to our *sanctum* and it grows better as the months go by. The editor says:

An advertisement in any leading daily paper for 1,000 able-bodied slaves, to work without compensation, but board and clothes, the period of slavery to last one year with privilege of renewal, would receive more than ten thousand applicants for the position. White persons at that. To such a state has our boasted freedom brought us that slavery would be a welcome escape for a million or more of our citizens. In fact we have all the horrors of slavery with none of its compensating features of security in food and shelter. Only horses, mules and asses are so protected now.

Is that true? Who will deny it? What a picture! Is it too highly colored? Is it too black? Do men turn shuddering away from its contemplation? Hunger! Woe, in any of the great centers of population, does not hear its moanings? Rags! Who does not see them fluttering in the zero blasts of winter? Shelterless—Gods! Horses, mules and asses. Are the Vanderbilts and Astors compared with thousands of the poor, who thank God for some place of rest where freezing may not be the penalty of poverty? Is this progress, prosperity, civilization, Christianity and a 'that?

### In the Hands of Receivers.

The St. Louis *Globe-Democrat*, an eminent conservative paper, in an editorial article, remarks that "the record of railroads that have passed into the hands of receivers during the past year is the largest that has ever been known, comprising over 25,000 miles of track, with an aggregate indebtedness of about \$1,200,000,000. Included in this schedule of wrecks are the three principal trans-continental lines, and seventy other roads of different degrees of importance." The *Globe-Democrat* further remarks, in considering the causes which have led to present conditions, that "thousands of miles of track have been laid in localities where paying traffic was not reasonably to be expected. Many roads have been built for speculative purposes only, under the stimulus of bonds voted by the people. The larger corporations have absorbed the smaller ones to an imprudent extent and at a heavy cost." In this it is seen that the railroads have been, by the greed of their managers, the chief factors in bringing about disasters. To bring about more auspicious conditions the *Globe-Democrat* believes the various receivers have a great task upon their hands, and adds:

There is a probability that this can not be satisfactorily done without squeezing the water out of the stocks that has been freely injected into them to serve improper purposes; and that is a process that will be generally indorsed, and which will be to the advantage of all concerned. The opportunity is an excellent one to remove a large burden of fictitious capital with a view to putting the insolvent roads in a healthy financial condition, and the receivers will be justified by the people in pursuing such a policy, subject to the supervision and direction of the courts.

We italicise a sentence, because the suggestion it contains has been repeatedly made in the MAGAZINE. The *water*, the *fraud*, that has been "injected into" the stocks and bonds must be *squeezed out* before an honest business policy can be adopted. This done, railroading will be prosperous. Honest dividends will be paid upon honest investments, employes can be honestly paid and an enormous amount of railroad rascality will disappear.

### The Santa Fe.

The great Santa Fe system of railroads is in the hands of receivers. Its history begins February 11, 1859, when Kansas was a territory, the legislature of which passed an act creating the Atchison and Topeka Railway Company.

To aid in building the road, Congress, in 1863, passed an act giving the road 6,400 acres of the public land per mile of the road, and in 1873 the road was completed to the boundary line of Colorado, 470 miles, and therefore became the owner of 3,008,000 acres of the people's land, worth at least

\$4,508,000, and probably three times that sum, enough for 18,800 farms of 160 acres each. To show how Kansas people felt toward the enterprise, counties along the line voted enormous subsidies to the corporation, five counties voting a sum total of \$950,000, and taxing the people to raise the money. At present what is known as the Santa Fe system consists of the Santa Fe proper, the Chicago, Kansas & Western, Chicago, Santa Fe & California, St. Joseph, St. Louis & Santa Fe. The lines which are leased and operated by the Santa Fe are the Gulf, Colorado & Santa Fe, St. Louis, Kansas City & Colorado, New Mexico & Arizona, Sonora railway (in Mexico), Colorado Midland & San Francisco, Atlantic & Pacific, Wichita & Western, and the Manhattan, Alma & Burlingame. The capital stock of the Santa Fe has a par value of \$102,000,000, worth about 13½ cents on the dollar, or \$13,770,000, and its indebtedness demanding immediate payment, and that which brought about the collapse, amounts to \$16,500,000. But in addition to this, taking the indebtedness of the Santa Fe proper and all the lines of the system the sum total is placed as high as \$540,000,000. The total mileage of the system is 9,345 miles, hence the indebtedness amounts to a sum of about \$58,000 per mile. The various roads have been built and equipped for not over \$25,000 per mile. As a result, the indebtedness of the road is \$306,375,000 more than the total cost of building and equipment. Hence, if any one wants to find the difference between cost and indebtedness they will have to go fishing in the vast sea of water which the Santa Fe carries.

---

ABRAHAM LINCOLN, the martyr president, once wrote the following prescription to a friend in poor health, which is worth a drug store: "Do not worry. Eat three square meals a day. Say your prayers. Think of your wife. Be courteous to your creditors. Keep your digestion good. Steer clear of biliousness. Exercise. Go slow and go easy. May be there are other things that your especial case requires to make you happy, but, my friend, these, I reckon, will give you a good life."

---

Is 1843 the Millerites got their ascension robes ready and went out on the hills on a certain day to see the earth go back to star-dust while they winged their flight moon-wards. But she didn't burst, but just held on to her shining pathway around the sun and is still doing business at the old stand, and now another set of cranks have calculated that within ten years we are to see sights such as Barnum never dreamed of.

*I'll Get There.*

What's the goal of your ambition, Tom?

What's the burden of your prayer?

"I'm going to be an engineer.

And dad tell's me I'll "get there,"

I've sworn off drinking whisky,

I never play a game of pool—

And by the holy Moses, Bob, I'm

Done playing the durn'd fool.

You see, I've got a sweetheart, Bob,

Never a lily was more fair,

When I ask'd her would she wed me,

I told her "I'd get there,"

And I told her what I would do

When promoted to the throttle;

But the tears were in her eyes, Bob,

When she said "But for the bottle."

Then you should heard my vows, Bob,

You should have heard me swear,

By pick and scoop, and all the Gods,

I surely would "get there,"

And Ellen, she believed me, Bob,

But said "I fondly think"

You surely will get there, Tom,

Provided you don't drink."

Her dimpl'd hand I held in mine,

And right there and then,

I ask'd my God to help me,

In trying to "get there,"

And my prayer is answered, Bob,

And Nell will be my bride,

For the M. M. said to me to-day,

"Tom, mount the right hand side."

John L. Buck.

**Cy Warman on a Flyer.**

In *McClure's Magazine* for January, 1894, we find an elaborately illustrated article, captioned, "A Thousand Mile Ride on the Engine of the Swiftest Train in the World—From New York to Chicago in the Cab of the Exposition Flyer. By Cy. Warman, formerly Engineer on the Denver & Rio Grande Railroad."

We are in the habit of reading magazine articles—some of them—but it is rarely the case that we have perused a magazine article with the relief that Cy. Warman's contribution has afforded us, and in attempting a synoptical presentation of the article for the delectation of the readers of the *FIREMEN'S MAGAZINE*, we confess to no little embarrassment. Manifestly, Warman intended to write prose, and, in so far as the omission of rhyme is concerned, he has written prose; and yet, running through the article, from the opening to the closing paragraph, it sparkles with Cy. Warman's poetic genius. Take this for instance, a minute before leaving the Grand Central Depot in New York:

"I found a little, wiry engineer standing right in under the boiler of the *Big*, oiling his link motion. A hundred-pound engineer, and a hundred-ton locomotive. A little bird chasing an eagle across the sky. Each seems to exaggerate the other. How different was this mammoth machine from the mountain climbers I had been used to."

In this, the pictures are perfect, the contrasts vivid, everything going to prove that a poet, as well as mountain-climbing engineer, had started out to ride a thousand miles from New York to Chicago on the engine of a "flyer."

Readers of the article, though they may be railroad trainmen, will have new impressions of fast running. A number of years have intervened since Warman ran a locomotive on the scenic Denver and Rio Grande; newspaper and literary work, including courting the muses, had occupied his time, but in the cab of the "Flyer" his old time love for the machine returned, to which he refers by saying: "Absence we are told makes the heart grow fonder. The pain of parting is all forgotten in the joy of meeting; and now as we begin to swing round the smooth curves, all the old time love for the locomotive comes back to me. The world will never know how dear to the engineer is the engine. Julian Ralph says, 'A woman, a deer and a locomotive.' The engineer would say, 'A woman, a locomotive and a deer.'"

Being a few minutes late, as the "Flyer" sped on to Albany affords Warman an opening for the exuberance of his fancy in speaking of the engine. "Steam is wanted, the fireman gives her coal, then the pointer goes round to 190, and the white steam begins to flutter from the relief valve at the top of the dome. She must be cooled a little now, or she will pop, and waste her energy. An extra flow of cold water quenches her burning thirst, and she quiets down. How like a woman when her heart is hurt! She must be soothed and petted, or she will burst into tears and sob herself away." The "Flyer" responds to the fireman's labors to create steam, and Warman sees "the sun sink behind the big blue mountains, the shadows creep across the valley, and up to our window comes the faint perfume of the fields—the last scent of summer in the soft September winds. Here and there we can see the lamps lighted in the happy homes by the Hudson, while the many-colored signal lamps light up our way." Thus throughout the article, facts and fancies are happily blended. The description of fast running is graphic, as, for instance, from Syracuse to Buffalo—"It was nearly midnight now" says Warman "and the frost on the rail causes the swift steed to slip. When we had reached the speed of a mile a minute, and gone from that to sixty-five miles an hour, I thought she would surely be satisfied; but every few minutes her feet flew from under her, and the wheels revolved at a rate that would carry her through the air a hundred miles an hour. The engineer stood up now, with one hand on the throttle, the other on the sand lever; for it is not quite safe to allow these powerful engines to slip and revolve at such a rate.

"We've got twenty-eight miles up hill, now," said the engineer, as he unlatched the lever and gave her another notch. The only effect was a louder exhaust and a

greater strain on the machinery. It seemed the harder he hit her the better she steamed, and we went up the hill at almost a fifty-mile gait.

"Now it is down hill to Buffalo," said the driver, and as the speed increased to sixty-five, seventy, and then seventy-five miles an hour, the sensation was delightful.

"We've got thirty-six miles, now, and thirty minutes to make it in," said the man at the throttle.

"And you've got your nerve, also," said I in a whisper. Orchards, fields and farms sweep by, and the very earth seems to tremble beneath our feet. The engine fairly lifts herself from the rail, and seems to fly through space.

We stopped at Buffalo at 11:30, just one minute ahead of time, and this remarkable run was made over the poorest piece of track on the main line of the New York Central and Hudson River railroad. Eight hours and forty minutes, and we are four hundred and forty-four miles from New York."

Mr. Warman's reference to over time work on the part of engineers, is well timed and should be heeded. Having referred to train accidents, he says:

Of course there will always be wrecks so long as mortal men tend the switches and hold the throttles, for it is human to err; but the mind should be on the work at all times. No man should be compelled, or even allowed, to remain on duty more than twelve hours, or eighteen at the most. After twenty-four hours the eyes become tired; after thirty-six hours the brain is benumbed.

I have been on a locomotive forty hours, and all desire to sleep had left me, but I felt that I was dreaming with my eyes wide open. The fireman had to speak twice to get my attention. I was not asleep, but my mind was away, and when called to note a signal it returned reluctantly. The brain seems to feel the injustice of such abuse, and simply quits—walks out. Of course, it can be compelled to work, but it will not work cheerfully or well. Just as any other striker may be forced to submit to a decrease in wages or an increase of hours, so it may work, but will "soldier" enough to put its employer on the losing side.

After such a strain I have gone to bed at eight in the evening, and have rolled and tossed and beat about until midnight, unable to sleep.

The article is replete with entertainment. It sparkles throughout. There is nothing dull or languid. Cy Warman is taking a wonderful ride—a thousand miles in twenty hours—and from New York to Chicago, only once, for a minute, did sleep dally with his eyelids—from Toledo to Elkhart, Ind. Of the speed of the "94," Warman says:

The speed was so great that she touched only the high places, and the ride down the long stretch of straight track was a delightful one. The sun, that I had seen drop down behind the Catskills, as it seemed, but a few hours ago, swung up from the Atlantic, and shone on the Hoosier hills, "where the frost was on the punkin and the fodder in the shock." The train-master, from Toledo, came over to ride with me, and showed me where the daring train robbers held the train up in an open prairie, on a straight track. We held our watches on the 94, and found that she made

ten miles in eight minutes, and eleven miles in eight and one-half minutes. Old and lame as she is, she manages to limp over eight thousand miles a month, at an average rate of a mile a minute.

The 94 reminded me of a Jack rabbit. When he gets up he is so stiff and lame that a well-trained greyhound is ashamed to chase him. He will wobble about, stumble and fall, put down three and carry one, until the dog is ready to eat him. Then he lays his ears down along his spine, and skims over the sage-brush with the speed of the wind.

In closing the article Warman says: "But, behold, here in full view are the glistening domes of the White City and the mammoth, high-mounted Ferris wheel! The last of nearly a thousand miles of steel has slipped from under our faithful steed, and at precisely ten o'clock A. M. we stop at the Chicago station—on time. It has taken twenty hours, eight engines, and sixteen engine-men to bring us through, and it has been a glorious trip—the best of my life." The article of Cy. Warman in *McClure's Magazine*, dates a new departure in writing of railroad journeys. He has set the example. We are to have descriptions of engines, of engineers—of tracks and scenery—so harmoniously blended—as to awaken interest, command attention and benefit those who read.

#### Enslavement of Workingmen.

MR. EDITOR:—The question of the slavery of the working people of the United States is no longer one of discussion. It has been settled, beyond a doubt, by the act of the court that issued the injunction against the N. P. employes, commanding them to neither quit nor strike. It matters not to the principle involved that another court, which had the power, set aside the injunction. The all important point is that our liberty has become a question for courts to decide in the same manner as they do a criminal case, putting us in the same position as was our colored brother in chattle slavery in "de good old days befo' de wah," when the courts said to his master, if your slave runs away and you want him back we will see that you get him, except that we are a little worse off than he was, inasmuch as the court furnishes our masters guards to prevent us running away. Our masters have thrown off the mask and gone into court to ask the government of this "great and glorious free land" to whip us into subjection to their sweet will, and it has responded, in effect, with right good will. And why should it not? Is it not the property of our masters, as was the government previous to our "late unpleasantness," the property of the slave holders? "But," says General Weaver, "a call to action, the sword came and liberated both the court and the slave." Will we have to invoke the power of the sword again to liberate the present court and slave? It is as clear as daylight that our government to-day in the United States is

nothing more nor less than what all the governments of the world are and always have been, a tool manufactured by thieves, robbers, pirates, and so forth, to be used by them in their nefarious pursuits of pillage and plunder of the masses, and it has done and is still doing its work well, indeed, far better than any government has ever done before, no matter what its form or name, for no government that the world's history gives us any account of has ever robbed its victims so unmercifully and of so much of their property in the same length of time as ours has, for no other people have ever been able to produce so much as we have in the same period of time, and consequently, could not have had it to lose. We have boasted of our freedom in this country, but it was the boast of ignorance, as our present condition proves, beyond question. Our liberty has been to us what Santa Claus is to children. It has been a myth, nothing more, and the "older ones" are beginning to learn the truth about the pleasant delusion. If we are now or ever have been a free people, then has there never been any such a thing as slavery in this world, and Santa Claus is a howling actuality and not a mere figure of a child's imagination.

But we are not, or never have been, a free people, for freedom can never be in any country where private ownership in land exists which gives to private individuals the power to appropriate to themselves the joint earnings of the community in the form of land values, thus breeding and developing a class of people—landlords—to whom all the rest of the people, who have to live upon the land they own, must be slaves. Now since private property in land has existed in this country from the moment it has been discovered to the present instant, it never has been a free country, but always has been and (until we get the single tax) always will be a nation of masters and slaves. Let us call ourselves by our right names—slaves. There can be only two classes, industrially considered, in any country, and those are masters and slaves, whatever the grade of the latter may be. So that when we discuss the relations existing between "employer" and "employee," we may use the only terms that will describe the fact. And that when we speak of successful strikes, for instance, we will say "the slaves of such and such a corporation have been successful in their revolt against a reduction of their rations by their masters," or vice versa. Let us look the truth squarely in the face. It is the most manly thing to do. True liberty has never made its appearance in this world. Yet that which we have looked upon as liberty since July 4, 1776, bears no more resemblance to the genuine article than a hog does to an eagle. The thing

born on that eventful day was not liberty, but a miscarriage of parents not fit (because not sufficiently enlightened) to become the progenitors of such a thing. But the monstrosity has lived and thrived and is now fully matured and producing its natural fruit—the degradation of those who worshiped it as a fetish at the bidding of its high priests—the politicians and their pals in iniquity, the above mentioned thieves and robbers. Can we gain our freedom? Yes. How? Through the ballot-box, after we have learned what freedom is—freedom is the wiping out of all those laws that make men slaves; that enable their masters to go into court and get the government to herd them as cowboys do cattle; and the gaining of free access to natural resources through the single tax. Through these means, and these only, can we ever become free. *P. W. Monahan.*

GRAND JUNCTION, COLO.

#### Class Organization.

MR. EDITOR:—In the January number of the MAGAZINE one W. S. Carter, hailing from Taylor, Texas, endeavors to defend class organization and to discredit the efforts of Brothers Debs, Howard and Keliher to introduce through the American Railway Union the brotherhood of man.

While his views on the points at issue are superficial, I shall not take it upon myself to answer them further than to correct statements he makes concerning the Brotherhood of Railway Employees. As a member of Protective Board, Winslow Lodge No. 1, B. R. E., telegrapher at Winslow during the stormy period which resulted in the extermination of the B. R. E., and a member of Division 201, O. R. T., I am certainly in a position to give Mr. Carter the "straight tip" on A. P. affairs.

In the first place, these very class organizations which, in Mr. Carter's eyes, are the great remedial agents for the ills that afflict railroad mankind, were the identical organizations that made the B. R. E. a necessity. To make a long story short, the O. R. T., through its accredited representatives, could not secure justice from its grand officers or the railroad management; this applies, also, to the B. R. T., the firemen, and, outside a select *coterie*, the engineers. Why did they treat their members thus? Because they, the members, believed a schedule meant something and required the corporation to take a similar view! Betrayed by the grand officers the men, as a last resort, founded a new brotherhood which was to include the seven classes of the transportation department, allied with the shopmen. All were yet members of their respective class organizations. Hardly had their declaration of principles been published to the world than the heads of the present "fake"

federation conspired with the railroad company to kill the movement.

One night a passenger train was detained two hours at Winslow by a number of employees who wired the trainmaster that it should not proceed until a brakeman whom, they asserted, had been unjustly suspended, was restored to duty. They carried their point temporarily, and I shall always believe it was a put-up job on the corporation's part to afford them the pretext for securing the injunctions which followed. This action was sanctioned by no organization and was promptly repudiated by the B. R. E., upon whom the censure for it was bestowed. Shortly after this episode, a committee of the B. R. E. requested the superintendent of transportation and general master mechanic to meet them at Winslow to discuss grievances. They came, and after a three hours' conference, signed a paper binding themselves to right things, which they meant to live up to in a Pickwickian sense, just as most railroad schedules are regarded by the managements to-day. Two weeks after the conference referred to, the wires were one day grounded east and west of Winslow, and trains began to arrive, dumping off armed Mexicans, deputy sheriffs and U. S. marshals. Every bridge, water tank and coal chute had its quota of hired marksmen, and the road was patrolled by armed men from end to end. All the hard characters of Arizona, New Mexico and California were enlisted in corporation service, and a number of O. R. C. men gallantly volunteered to guard the scrap iron and shoot down, if need be, the dastardly B. R. E. men who had the audacity to found a superior labor organization. One O. R. C. conductor turned in a bill for six days' guard duty at Gallup, N. M., at the rate of \$1.50 per day. He's still running a train there. All B. R. E. men were enjoined from interfering with the running of trains or those who took their places, and Ramsay, Arthur, Clark, Wilkinson, *et al*, did the rest—they furnished the men—the official (?) scabs.

You see, Mr. Carter, there was no strike, simply a corporation and class organization combining to kill a better labor organization, just as they'd like to throttle the A. R. U. to-day, if they could. Aided by the O. R. C. and the inner circle of the B. L. E., the saw-mill hands, ham operators and tramps the company employed were "assisted" until the "loyal" men (scabs) could be imported. Thus class organization won some of its scanty laurels and more desirable places for its members and a victory, the first, for the corporation. Both feared the prestige of anything organized for business and something besides a mere intention of drawing fat salaries, parading a tubful of abdomen and a gnat's head of brains. To-day the A. & P. has dropped back into the old ruts of a "stake" road and the "tools" who so

ably assisted the corporation are carrying harpoons for each other. A fitting sequel to a dirty, damnable outrage!! To rid itself of sober, industrious employees and find places for its creatures cost the company \$1,000,000 and several men their lives in wrecks caused by incompetents. If you are searching for facts, Mr. Carter, I can drop a few more chunks in your vicinity, which, if you are sincere, will prove the utter rottenness of class organization. Are they a failure? Is a graveyard a failure? Yours for reform and the A. R. U.

HELENA, MONT.

A. S. Dowler.

#### A Pleasant Surprise.

MR. EDITOR:—The members of No. 25 are ambitious, proud, and extremely happy at the present time. Why? Well, we are having good business; all doing fairly well financially, employers and employed seem to be satisfied and all working harmoniously. However, No. 25 was imposed upon at our regular meeting on December 17th. While the lodge was in session there came an alarm at the door, and upon investigation we found a delegation of twenty-one ladies from Headlight Lodge No. 16, who requested admission—no desire being manifested for initiation—simply to impress on our minds that our regalias, which we had been wearing lo, these many years, were looking rather soiled; and, in a neat and well delivered speech, Mrs. Cross presented our lodge with a full set of very fine regalias as a token of respect, esteem and necessity from Headlight Lodge No. 16, Ladies' Society of the B. of L. F. You can imagine the suspense, agony and despair endured by the stokers under such circumstances. They all had lumps in their throats and blushes on their faces, and a general panic was about to ensue, when the members became aware that these intruders were their wives, sisters, mothers and daughters, and there was no cause for alarm. Then the members responded with all the energy and ability at their command, many getting up and addressing the meeting who had never before attempted such a thing. Long live the ladies! God bless them! Through their journey in life may they be happy mates for mankind, and may the members of No. 25 never mar their token of esteem by an unmanly act nor a disregard of the motto of our order—"Protection, Charity, Sobriety and Industry."

BOONE, IOWA.

B. H. Smith.

The Railroad Telegrapher comes out for January in a complete change of dress and form and makes an altogether creditable appearance. The mechanical features are up to the best styles of the art and the contents give evidence of the prosperity of the order it represents. A sturdy labor literature is the hope of the labor world.

**Welcome Lodge, No. 72, B. of L. F.**

Dear journal, will you grant me a little space, just here,

To show you the love we have for our Brotherhood most dear?

With hearts made all aglow with love, and friendship ever true.

We rally 'round our standard—sustained in 72.

We have a little railroad, its pleasant unto me;

It runs across New Jersey, from the river to the sea.

Our boys are all employed thereon, and with hearts that's pure and good.

They never once regret the day they joined the Brotherhood.

We meet men here in summer, of every kind and stamp.

From the highest railroad magnate to the common modern tramp.

We extend our hands to one and all; it can be noted, true.

That they'll always find a welcome from the boys of seventy-two.

I want to speak of F. A. Potts—the Master of our lodge; he's a little loud around his work, but duty he don't dodge.

A Willets is another one we can't well do without, and C. K. Wright is always there, for rights to raise a shout.

I have a friend, an honest friend, whom I can always trust.

He is simply honest-hearted, faithful, true, and just; he always has a kind word for those who downward look.

He hails from Acto, on this line, and his name is Joseph Cook.

There's Johnny Hoyle then comes along, but for him we have our fears.

That he will leave our lodge quite soon, and join the engineers.

As he is running on a road where first class men can't go.

For the compensation is too small and the time is much too slow.

Mike Kennedy, with the ladies he always cuts a dash, and when he sees a fair face he's sure to make a mash.

Now Mike, be careful what you do, for we'll watch your quiet game.

And tell you if you walk aright when not out on your train.

Mike McGovern then tells us how awful fast he ran last summer, with a special, while on with Jim Horan.

Jack English then comes looming up, his duties he can fill.

And Preble, being a light-weight, they put him on the drill.

Bill Lovett, on the Medford branch he always can be seen.

Along with Eli Thomas on engine 516; he's always ready to respond, or lend a helping hand

To any who are found in need, wherever they may stand.

And now it's time that I should close and seek a little rest.

And meet the boys of Welcome lodge all fixed up in their best.

For when we're in the lodge room our energy is new, so we'll welcome every brother who's enrolled in 72.

CAMDEN, N. J. T. Fitzgerald.

**His Conscience Troubled Him.**

Judge Duffy—You admit you broke a chair to pieces on your wife's head. Don't you feel any remorse?

Mr. Thompson Street—Yes, I has lots ob remorse. I paid a dollar for dat chair, an' hit was as good as new.—*Texas Sifting.*

**Railroads in Africa.**

While surveying parties are examining the routes by which it will be possible to connect the railroads of Mexico with those of Chili and the Argentine Republic, and Russia is about to make a road across Siberia to the Pacific, it is not surprising that the eyes of engineers should turn to the virgin soil of Central Africa and to the vast regions there which cannot forever remain undisturbed by the railroad builder. The London *Engineer* has recently published a series of articles by W. Wiseman, a civil engineer, in which the construction of a transcontinental road in Africa is considered, and a well-informed writer in the *Railroad Gazette* of this city criticises these articles severely. The main line proposed by Mr. Wiseman follows quite closely the parallel of latitude which lies ten degrees north of the equator. Beginning at Lagos, on the Gulf of Guinea, a point on the coast about 200 miles above the mouth of the Niger, it crosses the Niger and follows the parallel of ten degrees north through the Soudan, crossing the Nile at Fashoda, and going on through Abyssinia to Berberah, on the Gulf of Aden. This line would be about 3,000 miles long. Mr. Wiseman has also in mind another road, beginning at Fashoda and following the Nile down to Cairo, a distance of about 1,800 miles. His estimate of the cost of the east and west line is \$90,000,000. Both lines would lie in those parts of the continent which are under British influence, and Mr. Wiseman appears to have reached the conclusion that the time is near at hand when British capitalists can be induced to invest money in them.

But scarcely anything is known of the region in which the proposed east and west road would lie for four-fifths of its course. For a few hundred miles, beginning at Lagos, fairly accurate information as to the topography, climate and products is available, but from Bornu "right on to the Nile, say 1,200 or 1,400 miles, the tenth parallel," says the writer in the *Railroad Gazette*, who has marched thousands of miles in the Soudan, "has been crossed by white men only at intervals of from 200 to 400 miles, and from the Nile to Berberah, say 1,000 miles, the country is even less known. To say that in these great unknown gaps will be found materials for construction, and 'teeming millions' ready to work cheaply and hungry to trade with the civilized nations, is not only pure assumption, but is absurdly improbable." The inhabitants of these regions grow nothing that would have enough value to endure transportation, and they produce no surplus. If crops fail there is a famine. Even if they should produce more than they need for their own use the surplus would have no value in European markets. "The gum arabic,

ostrich feathers and other local products which are gathered in the whole zone that could be made tributary to the 'Central African Railroad' would not fill one freight train a week," and what could the returning trains carry that could be sold to the inhabitants?

Exploration of this route would be very difficult, and the cost of construction would be enormous, because the means of local transportation are notoriously inadequate. The limit of the camel's usefulness is passed at the tenth parallel. South of that line the camel dies, and on the line he is feeble and of very little value as a beast of burden. Mr. Wiseman remarks that "cheap labor would be available throughout the entire length of the railway." But the testimony of those who know something about the region is that as workmen the inhabitants would be worthless and uncontrollable, and that the labor required could be procured and retained only by force. Surveyors and builders would "have to face not only the indolence, the ignorance and the poverty of barbaric people, but often their bitter hostility." In the neighborhood of the proposed crossing of the Nile, and for 400 or 500 miles along the southern frontier of the Egyptian Soudan, power is held by the successors of the Mahdi, who would make short work of getting rid of a railroad surveying or construction party. In other parts of the zone there are warlike tribes that have established their reputation in battles with troops. For hundreds of miles there is no timber suitable for cross ties, and in some parts of the route, timber could not be used even if it could be found, for the white ants would destroy it.

The entire zone is a region of deadly fevers. One-third of the men in an Egyptian battalion in Darfour died of disease in one year. They were in latitude 13° north, where the general altitude of the country is about 2,000 feet, and the soil is light and the rainfall small. In the swamp regions of the White Nile and Bahr El Ghazal the fevers are far worse than in Darfour, Kordofan or Wadai. Between these extremes lies the line of the proposed railroad. As for the proposed road from Cairo to Fashoda, it is reasonably clear that an army of conquest and occupation would have to go before the surveyors and builders from Wady Halfa southward. The native warriors, whose assistance could have been procured when Sir John Fowler caused surveys to be made for a road to Khartoum, are now hostile, and it would be necessary to overcome them. Since the loss of Hicks' army and the expedition for the relief of Gordon, the world has known how formidable they are and how they can fight.

Neither British capital nor capital from any other country can be obtained for the

construction of the transcontinental road planned by Mr. Wiseman. It would not be possible to build the road for any sum that could be regarded as reasonable for the cost of railway construction, and the road could earn no dividends even upon an investment no larger than is required for track laying on our western prairies. But it may be profitable to build several short roads from the coast—like the road from Mombassa toward the Victoria Nyanza, for example, or a road from Lagos eastward to the Niger—and for military use as well as for trade there will be constructed sooner or later a road from Suakim, on the Red Sea, to Berber, on the Nile. It is folly to say that trade with the inhabitants of Central Africa can support such a railroad as Mr. Wiseman has described. The building of the proposed road would not cause the country to be settled by white men. The roads in our western states and territories were not built with the expectation that the trade with the Indians would support them. But the trade that could be reached by the proposed Central African road would be of no greater value than that which could have been brought to some of our roads years ago by the Indians living in the regions through which they passed.—*New York Times*.

### Genius and Training.

The training of men for work which requires the highest possible nicety of hand is not really training. It is far more the selection, by experiment, of men born with the true touch. For example, we doubt whether the very greatest surgeons—the men whose success depends upon their ability to make sharp steel as sensitive as a finger-tip—perform their hundredth operation better than their first. They have more confidence, no doubt, but the sleight-of-hand is inborn. Nobody can train a medical student into a great oculist. It is only the ordinary man of whom it can be said that practice makes perfect. The man with the special gift is born perfect. But genius is only the mental side of this gift, apart, and if the people whose business is with mind were as honest and as unsophisticated as those who deal with horse-racing or brick-laying, we should not hear anything more about genius being merely the capacity for hard work. To say that the bricklayer with the "knack" is only a bricklayer who takes pains, would be a patent absurdity. It is not less an absurdity, though a less obvious one, to say that a man with a genius for style and literary form is only a man who knows how to take pains. The poet, no doubt, must take pains, but no amount of taking pains will give him the genius of verse.—*London Spectator*.

### Chances of Getting Killed.

In view of the fact that many people stayed at home—or said they did—during the past summer on account of the frequency of railway accidents and the consequent danger of getting killed or injured, and because people naturally think of the number of victims of an accident without figuring out the proportion to the number of persons traveling, the following question becomes pertinent: "If a man takes a ride of the average length, which is almost 24 miles, in a railway train in this country, what is his chance of getting killed?" The *Pittsburgh Times*, which propounds the question, proceeds to answer it as follows, displaying not only an aptitude for figures but a smattering of knowledge of human nature:

According to the interesting report of the interstate commerce commission, just out, it is one chance in 1,491,910. If a young man of 20, jilted by his sweetheart, should determine to commit suicide without sin by getting accidentally killed in a railway accident he might do it. Certainly he might do it. If he were to get on a train as a passenger and ride, ride, ride at the rate of 35½ miles an hour, day and night, every hour of every day and every day of the year, if he had average luck he would eventually get surcease from the gnawing pain at his heart somewhere in the course of passing over 35,542,282 miles, for according to these official figures, one passenger is killed for every 35,542,282 miles that a passenger is carried. According to the same he would be injured in some way eight and three-quarter times, or eight times and a bad scare. His possible journey would have taken him around this weary world and past the place where she went to housekeeping with the other fellow 1,421 times, and would have cost him, at the rate of 3 cents a mile and \$2.50 a night for a sleeping berth, \$1,087,016.48. In this melancholy state of mind he wouldn't care how his shoes looked, and the porter needn't disturb his grief for a daily quarter.

For the benefit of those who consider that the only safe place to stay is at home "down on the farm," it may be added that the classification of risks maintained by most accident insurance companies places farmers either in the same class as trainmen or in the one next to it, and that where the office man who rides forty to fifty miles a day by rail to and from his office pays five dollars, the farmer pays twelve for the same amount of insurance. As insurance tables are figured out from well established statistics, the tendency of the evidence seems to be that even in the worst of times it is safer to travel than to stay at home.—*Railway Age*.

### Curious Railroad Accidents.

In an article on "Train Running for the Confederacy," by Mr. Anderson, published in this issue, a curious accident is mentioned where, in a collision, the body of a box car was thrown forward upon a flat car, and was drawn through in the position it took on the jump.

There are various authentic records of cars jumping out of trains and going down the bank without being missed. Among the records of curious train accidents there are two mentioned by the *Railroad Gazette* as having happened last month, which are well worthy of mention.

A west-bound freight of the Pittsburgh, Fort Wayne & Chicago, on arriving at Alliance, Ohio, was found to have one empty car under which there was only one truck. Investigation brought to light the fact that the truck jumped out on a descending grade, near Garfield, and had sufficient momentum to carry it completely across the adjoining main track and into the ditch. No other damage was done.

This is a stunning argument in favor of the link and pin coupler, as a verticle plane-coupler must inevitably have let the car body down upon the rails.

Another curious accident occurred near Massillon. While descending a grade, the men on the rear cars discovered that the train had parted and went out to set the brakes. The first brakeman had gone only one or two car lengths, when there was a shock which knocked him down and extinguished his lantern. He recovered, however, and was setting another brake, when there was a second shock, the forward portion of the train having been stopped by a train ahead of it, and the two parts running together. Two cars were damaged, and the conductor, in examining his list preparatory to setting them off, found that he was short two cars. They were found about two and a half miles back, standing clear of the main track. These cars also were empty, and it is supposed that they were derailed by a drawbar falling on the track. The momentum of the cars behind them pushed them clear of the track and the connection was broken without any injury to the draft rigging. The night was quite dark, so that the two men on top of the train passed by the unruly cars without noticing them.—*Locomotive Engineering*.

THE Japanese government has in hand plans for the construction of fourteen new railway lines. At present the railway mileage of the empire is about 1,500 miles, of which 994 belong to various companies. It is proposed that these shall be taken over by the state.—*American Engineer*.

### What Is Thunder?

This is one of the disputed questions of the day, and one that has not been investigated as thoroughly as many others, no doubt, because it is not specially important.

The crackle that precedes the main report has attracted some attention recently, and may lead to something.

A thought in this connection was advanced in this column four or five years ago that may be presented again. It was suggested by the crackling that accompanies the conversion of hydrogen and oxygen into water, which, as you know, is done by burning these two gases when mixed in certain proportions.

Is it not possible the crackling heard before a peal of thunder is caused by the conversion of these gases into water by means of an electric flash or blaze? The fact that each sharp peal of thunder is followed by a suddenly increased down-pour of rain goes to prove that something has caused the rapid conversion of gases, or vapors, into water.

The report that follows when sufficient quantities of these gases are united to form a single drop of water may be heard throughout a room of ordinary size. How great would be the report when a sufficient quantity is united to produce a barrel, or several barrels? Might it not equal the "crackle" referred to? Or even the sharp peal of thunder that so quickly follows a blinding flash of lightning?

The London *Electrician* contained an article some time since in which it was said that "notwithstanding the phenomenon of thunder is as old as that of rainfall, and notwithstanding that the science of electricity has drawn to the ranks of its devotees the brightest genius and the most powerful minds of the present century, there are still disputed points in regard to thunder, the one point of universal agreement being that it is caused by discharges of electricity from cloud to cloud, or between the clouds and the earth. In the first place, as regards the distance at which the most violent thunder can be heard, the author of the article under consideration thinks that four miles is the limit.

"A still unexplained phenomenon is the 'crackle' which precedes the main report in lightning discharges." The article under review attributed this to minor local discharges, which always occur, although they can be heard only when the discharge is very near. "To prove that the mechanical force of lightning discharges is much less than that of artillery, it is alleged that glass in windows is never shattered by thunder, whereas this is a frequent result of the firing of cannon. From this and other reasons it is concluded that, after all, thunder 'is a small scale operation, and as much inferior

to the manufactured article as lightning is for all useful purposes to a 30,000 volt rotary current."—*Pittsburgh Commercial-Gazette*.

### Boring to a Depth of 6,560 Feet.

The deepest boring of which we have any knowledge up to the present time is at Parvachowitz, in the district of Ribnik in western Silicia. The depth attained is 6,568 feet, and the diameter of the hole is only 2.75 inches. The work has been temporarily stopped in order to lower especial thermometers, which have been made with great accuracy, into the hole for the purpose of obtaining the temperature at different depths. The boring will then be resumed, and it is hoped that a depth of 8,200 feet will be reached. The method of operation is that the Hammersmann tubes are used, great lengths of which can be operated at once. The first tube has a diameter of 11.8 inches, and is provided at its lower end with a diamond cutting edge which acts as a drill. The pipe is then screwed, as it were, into the ground, and when it has been entered completely a small special mechanism permits the cutting off of the column of *débris* at the base, whence the core which has been formed in the interior of the tube, and which exactly represents the geological formation, is removed. This is then raised to the surface of the ground and the diamond-pointed cutting edge is raised to the surface and a second and longer tube screwed on, having as its outside diameter the inside diameter of the first one, and it is also provided, on its lower extremities, with a new diamond-pointed cutter. This tube is then dropped into the hole, it is stopped by the first boring, and they begin to screw it down as in the case of the first. When the two tubes are thoroughly imbedded in the ground, the first operation is repeated and the core withdrawn, and thus by successively screwing on to the end of the tube one whose external diameter is equal to the internal diameter of the preceding one, the work is carried on.—*Revue Scientifique*.

EVERYTHING is about ready for the beginning of the work upon the Simplon tunnel. The conditions of the contract are that the tunnel, with a single line of rails, shall be ready for traffic in five and one-half years, but it is to be so constructed that it may be widened for a second line in four years more. The cost of the first enterprise is estimated at a little more than £2,000,000. The construction of this road will render the present pass superfluous. The road over this pass is the one which was constructed by Napoleon in the early part of the century at a cost of £720,000.—*American Engineer*.

## GRAND LODGE.

## ASSESSMENT NOTICE FOR FEBRUARY.

OFFICE OF THE GRAND LODGE, B. of L. F.,  
TERRE HAUTE, IND., February 1, 1894.

ASSESSMENT No. 43, \$2.00.

To: *Rectors of Subordinate Lodges:*

**SIES AND BROTHERS:**—You are hereby notified of the death and disability of the following members entitled to all the benefits of the order, viz.:

CLAIM No. 1156. J. A. McMahon, of Two Republics Lodge, No. 413, was killed in a Railway Accident, September 3, 1893.

CLAIM No. 1157. Wm. M. Hall, of Harrisburg Lodge, No. 174, was killed by Gun-shot Wounds, September 20, 1893.

CLAIM No. 1158. Frank Young, of Stone Mountain Lodge, No. 232, was declared totally disabled by Injury to Back and Hip, September 20, 1893.

CLAIM No. 1159. Dennis Collins, of J. J. Manning Lodge, No. 472, died of Peritonitis, September 21, 1893.

CLAIM No. 1160. John W. Bradley, of James T. Watt Lodge, No. 196, was declared totally disabled by Deformity and Impaired Mobility, September 26, 1893.

CLAIM No. 1161. Joseph S. Drake, of Byram Lodge, No. 271, died of Hemorrhages, October 15, 1893.

CLAIM No. 1162. W. H. Smith, of Cherish Lodge, No. 149, was declared totally disabled by Loss of Hands, October 20, 1893.

CLAIM No. 1163. J. W. Buchanan, of Tombigbee Lodge, No. 125, was killed by Boiler Explosion, October 22, 1893.

CLAIM No. 1164. James O. Culhane, of E. C. Fellows Lodge, No. 143, died of Consumption, October 22, 1893.

CLAIM No. 1165. George Alberts, of Ann Arbor Lodge, No. 420, was killed in a Wreck, October 25, 1893.

CLAIM No. 1166. Patrick W. Kenney, of J. J. Manning Lodge, No. 472, died of Congestion of the Brain, October 26, 1893.

CLAIM No. 1167. R. C. Chase, of A. G. Porter Lodge, No. 141, was declared totally disabled by Injury to Skull, November 1, 1893.

CLAIM No. 1168. William Keeshan, of Overland Lodge, No. 123, was declared totally disabled by Catarrh of Eyes, November 2, 1893.

CLAIM No. 1169. George J. Keebler, of J. J. Manning Lodge, No. 472, was killed in a Railway Accident, November 4, 1893.

CLAIM No. 1170. Charles E. Harmon, of New Hope Lodge, No. 37, was killed in a Wreck, November 5, 1893.

CLAIM No. 1171. Charles J. E. Hart, of Eau Claire Lodge, No. 68, was declared totally disabled by Loss of Foot, October 27, 1893.

CLAIM No. 1172. W. I. Davis, of A. R. Cayner Lodge, No. 356, was killed in a Collision, November 8, 1893.

CLAIM No. 1173. Daniel Coughlin, of Granite State Lodge, No. 306, was Run Over and killed, November 9, 1893.

CLAIM No. 1174. Henry A. Martin, of Kit Carson Lodge, No. 257, was declared totally disabled by Atrophy of Eyes, November 10, 1893.

CLAIM No. 1175. John W. Lynch, of Lucky Thought Lodge, No. 232, died of Typhoid Fever, November 11, 1893.

CLAIM No. 1176. J. P. Sondergard, of Border Lodge, No. 32, was declared totally disabled by Loss of Arm, September 12, 1893.

CLAIM No. 1177. S. M. Lyon, of Union Lodge, No. 183, was declared totally disabled by Fracture of Knee Joint, November 14, 1893.

CLAIM No. 1178. Jeremiah J. Leahy, of Enterprise Lodge, No. 75, was declared totally disabled by Loss of Eyesight, November 11, 1893.

CLAIM No. 1179. Z. T. Gordon, of Chestnut Ridge Lodge, No. 310, died from Injuries received in Railway Accident, November 14, 1893.

CLAIM No. 1180. Edward Vankirk, of Adopted Daughter Lodge, No. 3, died of Typhoid Fever, November 20, 1893.

CLAIM No. 1181. James O. Lewis, of Trinity Lodge, No. 83, died of Malarial Fever, November 24, 1893.

CLAIM No. 1182. Charles W. Ryan, of New Hope Lodge, No. 37, was killed in a Railway Accident, November 26, 1893.

CLAIM No. 1183. Harry W. Lender, of New Hope Lodge, No. 37, died of Catarrhal Pneumonia, December 8, 1893.

CLAIM No. 1184. Edward Piatt, of Excelsior Lodge, No. 11, was declared totally disabled by Loss of Hand, November 24, 1893.

CLAIM No. 1185. Henry Dingwall, of Pine City Lodge, No. 81, died of Consumption, November 22, 1893.

CLAIM No. 1186. John Smith, of Industrial Lodge, No. 21, fell from Engine and was killed, July 30, 1893.

CLAIM No. 1187. Frank G. Lyon, of Stillwater Lodge, No. 182, was killed by Blowing Out of Nozzle Tip, August 17, 1893.

CLAIM No. 1188. Thomas Higgins, of Falls City Lodge, No. 103, was killed in a Collision, October 6, 1893.

CLAIM No. 1189. Samuel E. Powell, of Smoky City Lodge, No. 219, was killed in a Collision, October 14, 1893.

CLAIM No. 1190. Thomas McCue, of Custer Lodge, No. 191, died of Consumption, October 23, 1893.

CLAIM No. 1191. Harry D. N. McGregor, of Standard Lodge, No. 158, was declared totally disabled by Stricture of Rectum, October 21, 1893.

CLAIM No. 1192. John D. McCune, of Nottoway Lodge, No. 435, died from Injuries received in a Collision, October 31, 1893.

CLAIM No. 1193. Wm. M. Schaeffer, of Pride of the West Lodge, No. 6, was killed in a Boiler Explosion, November 2, 1893.

CLAIM No. 1194. Joseph R. Bibb, of Hinton Lodge, No. 236, was killed in a Collision, November 8, 1893.

CLAIM No. 1195. Daniel V. Hartman, of Patasco Lodge, No. 432, died of Typhoid Fever, November 8, 1893.

CLAIM No. 1196. William Melone, of Anchor Lodge, No. 64, scalded to death in a Wreck, November 8, 1893.

CLAIM No. 1197. John W. Hall, of Violet Lodge, No. 365, was drowned, November 14, 1893.

CLAIM No. 1198. James Walsh, of Quickstep Lodge, No. 500, was Run Over and killed, November 15, 1893.

CLAIM No. 1199. James Bailey, of Plain City Lodge, No. 238, fell from Engine and was killed, November 17, 1893.

CLAIM No. 1200. Charles W. Moore, of Blooming Lodge, No. 40, died of Typhoid Fever, November 18, 1893.

CLAIM No. 1201. H. G. Mudwilder, of Red Mountain Lodge, No. 329, was killed in a Wreck, November 22, 1893.

CLAIM No. 1202. S. L. Warsham, of Red River Lodge, No. 8, died of Typhoid Fever, November 26, 1893.

CLAIM No. 1203. J. M. Gaines, of Lake Shore Lodge, No. 183, was killed in a Railway Accident, November 27, 1893.

CLAIM No. 1204. Wm. A. Kirk, of Lake Shore Lodge, No. 183, was killed in a Railway Accident, November 27, 1893.

CLAIM No. 1205. James F. Casey, of Riverview Lodge, No. 330, died of Heart Disease, November 30, 1893.

CLAIM No. 1206. R. L. Hamilton, of Hinton Lodge, No. 236, was killed in a Railway Accident, December 4, 1893.

CLAIM No. 1207. Joseph Shinsky, of Spokane Lodge No. 501, was killed in a Collision, December 7, 1893.

CLAIM No. 1208. Perry L. Baumgardner, of Albany City Lodge, No. 220, died of Heart Disease, December 13, 1893.

CLAIM No. 1209. P. F. O'Brien, of Mayflower Lodge, No. 415, died of Peritonitis, December 15, 1893.

CLAIM No. 1210. W. J. Turner, of S. M. Stevens Lodge, No. 150, was killed in a Wreck, December 22, 1893.

CLAIM No. 1211. Jacob O. Bibler, of Emporia Lodge, No. 53, was declared totally disabled by Injury to Arm, December 22, 1893.

CLAIM No. 1212. Fred Lawton, of Mount Sopris

Lodge, No. 503, fell from Engine and was killed, December 30, 1893.

An assessment of Two Dollars (\$2.00) has been levied for the payment of the above claims, and you are required to forward said amount for each member whose name appears on the rolls of membership FEBRUARY 1st, 1894 (also for all members having taken a withdrawal (limited or final) after FEBRUARY 1st, and for all members who died or were totally disabled since that date), said remittance to reach the Grand Lodge not later than FEBRUARY 20th, 1894, as provided by Section 50 of the Constitution. Any lodge failing to make returns as above provided will stand suspended from all the benefits of the order, as per Section 52 of the Constitution. Yours fraternally,

F. P. SARGENT, G. M.

F. W. ARNOLD, G. S. and T.

### Addresses Wanted.

MICHAEL D. CARRIGAN.—When last heard from, about two years ago, he went to Escanaba to fire an engine on some road in Michigan. Any information concerning him will be gratefully received by his anxious mother, Mrs. M. H. Carrigan, 1625 East William street, Decatur, Ill.

WILL HEENAN.—His brother, John Heenan, was lately killed on the Maple Leaf, and the widow is anxious to locate the brother of her deceased husband. Any information regarding his whereabouts will be thankfully received by Julia Heenan, 1507 N. Twelfth street, St. Joseph, Mo.

### The Robinson Monument Fund.

The following subscriptions to the Robinson Monument fund have been received since our last report: Miss Mary Cunningham, Edwardsville, Ill. . . . \$1.00  
Division No. 41, Ladies' Auxiliary to the B. of L. E., Newark, Ohio. . . . . 17.50  
Previously reported . . . . . 967.92

Total . . . . . \$986.42  
Remittances should be directed to the LOCOMOTIVE FIREMEN'S MAGAZINE, Terre Haute, Ind.

It is with pleasure that we note our old friends and patrons, the Matchless Metal Polish Co., whose ad has appeared so long in our MAGAZINE, have won the highest award and medal on their exhibit at the World's Columbian Exposition.

We have personally used this polish, and know that it fulfills all that the manufacturers claim; in fact, it has been a boon to the labor of the fireman, as well as to his wife and handmaid. Their announcement is found elsewhere.

Is another copy will be found the advertisement of Theo. Audel & Co., the New York book publishers, which will be of special interest to engineers of every class. The books advertised are standard publications and would be a valuable acquisition to any mechanical man's library.

### Saving Money.

Mrs. Swiftly.—I'm making all my hats myself to save money.

Mr. Swiftly (much pleased).—Indeed!

Mrs. Swiftly.—Yes; this one I got on only cost me twenty-five cents.

Mr. Swiftly.—Well, I declare!

Mrs. Swiftly.—And I put all the trimming on myself.

Mr. Swiftly.—Where did you get the trimming?

Mrs. Swiftly.—At Treghead's. I got it for eighteen dollars.—*Chicago Record.*

## Beneficiary Statement.

OFFICE OF GRAND SECRETARY AND TREASURER, )  
TERRE HAUTE, IND., January 1, 1894. )

To Subordinate Lodges:

SIRS AND BROTHERS:—The following is a statement of the Beneficiary Fund for the month of December, 1893.

## RECEIPTS.

Balance on hand January 1, 1894 . . . . . 4,247 75

Respectfully submitted,  
F. W. ARNOLD, G. S. and T.

THE world still has room for an increased amount of railway building, as an examination of the map will show. At the recent annual meeting of the Junior Engineering Society of London the president, an eminent engineer, gave some suggestive figures in this direction. He pointed out that within the past forty years the capital of British railway companies had increased from 248 millions sterling to 919 millions, or 270 per cent., and the number of passengers from 85 millions to 845 millions, or 900 per cent., while the mileage had only increased 4,500 miles, or 29 per cent. In the meantime the population had increased from 27 millions to 38 millions, a difference of 11 millions, or 37 per cent. In their great Empire of India they had at present but some 17,500 miles of railway; in South Africa only about 3,000 miles; in Australia, New Zealand, and Tasmania, about 13,000 miles; and in Canada, 14,000 miles. It was obvious from such figures that only the fringe of railway development had yet been touched in these huge countries, while in the vast fields of China and the remainder of Africa the problem had not even been reached. The speaker might have drawn similar conclusions in regard to the American continent, north, central and south, while even in the United States, extraordinary as has been its railway development, the map shows room for additional railways to the extent of tens of thousands of miles. Railway building is still in its infancy, and its wonderful work of development will go on in generations yet to come.—*Railway Age*.

## GRAND LODGE.

- F. P. SARGENT . . . . . Grand Master  
Terre Haute, Indiana.
- J. J. HANNAHAN . . . . . Vice Grand Master  
5949 Princeton ave., Englewood, Ill.
- FRANK W. ARNOLD . . . . . Grand Secretary and Treasurer  
Terre Haute, Indiana.

## BOARD OF GRAND TRUSTEES.

- WM. F. HYNES . . . . . Chairman  
935 Eleventh St., Denver Col.
- CHAS. W. MAIER . . . . . Secretary

## To Firemen's Wives and Daughters. SHEET MUSIC FOR YOU!

There are numerous offers of cheap music this season, but here is the cheapest and best of all. The small sum of ten cents will bring you our charming musical and literary magazine three months on trial. You will also receive absolutely free 163 pieces of popular sheet music, including *That is Love*, *After the Ball*, *You Will Never Know a Mother's Love Again*, *Twixt Love and Duty*, *Ever Faithful*, *Old Madrid*, *Sweet Heather Bells*, *Two Little Girls in Blue*, *Better Bide a Wee*, *Comrades*, *Ta-ra-ta-Boom-de-ay*, *Little Fisher Maiden*, *Pussy Cat*, *Annie Rooney*, *Bob Up Serenely*, *I Whistle and Wait for Katie*, *Bonnie Doon*, *Stop Dat Knocking*, *Kissing Over the Garden Wall*, *Five O'clock in the Morning*, *Let Me Dream Again*, *When Red Leaves Fall*, *In a Cottage by the Sea*, *Speak to Me*, *Maiden's Vow*, *Brave Old Oak*, *She Wore a Wreath of Roses*, *Take Back the Heart*, *Love Among the Roses*, *Anvil Chorus*, *Daddy Wouldn't Buy Me a Bow-wow*, *Think of Me*, *Nevermore*, *Lullaby*, *Old Zip Coon*, *On to the Field of Glory*, *Swiss Boy*, *Oh Day of Joy*, *Douglas*, *Tender and True*, *Annie Laurie*, *The Parting*, and many others. In addition to the 3 months' subscription and 163 songs (words and music), we will send an elegant art production in 8 colors (worth \$1.00) entitled, "The Interruption." All the above will cost you only 10 cents. Get the most for the least money by sending a silver dime to AMERICAN NATION COMPANY, 325 B Washington Street, BOSTON, MASS.

**A Scalded Engineer,

Will find a comforter and healer in a cleansing and refreshing wash with

**Glenn's - - -  
Sulphur Soap.**

It is not a fancy toilet soap, but a plain, every day remedy for the mechanic, the busy housewife, and the children. No household should be without it. Ask your druggist for it; he keeps it.

## JUST PUBLISHED. LOCOMOTIVE CATECHISM

By ROBERT GRIMSHAW.

Containing nearly 1,300 questions and answers concerning Designing and Constructing, Repairing and Running various kinds of Locomotive Engines.

Intended as examination questions, and to post and remind the engine runner, fireman and learner.

**A STANDARD BOOK, FRESH FROM  
THE PRESS. FULLY UP TO THE  
TIMES. EVERY TYPE OF LOCO-  
MOTIVE TREATED.**

Nearly 400 pages; filled with Cuts, Diagrams and Illustrations. Tells all about the Locomotive in language any school boy can understand. Difficult problems made easy. A popular book for the masses.

**Price, \$2.00,  
prepaid to any address.**

## AGENTS WANTED.

We want an agent at every round house in the country. Liberal commission and exclusive agency given. Several agents sold more than 50 copies each the first week. SEND NOW for copy and full particulars to

**NORMAN W. HENLEY & CO.  
Publishers.**

150 Nassau Street, NEW YORK.

# Engineers and Firemen!

## STANDARD LITERATURE.

**These Books Will Help You to Master Your Calling and Get "On Top."**

***"Locomotive Catechism,"*** by ROBERT GRIMSHAW. Nearly 400 pages. Full of cuts and illustrations. Fresh from the press and fully up to the times; **Price, \$2.00.**

***"New Catechism of the Locomotive,"*** by M. N. FORNEY. More than 700 pages and more than 500 engravings. Greatest book published **Price, \$3.50.**

***"Compound Locomotives,"*** by ARTHUR T. WOODS. The only book on the subject. Should be in the hands of every student of the locomotive. **Price, \$1.25.**

***"Air Brake Practice,"*** by J. E. PHELAN, of the Northern Pacific R. R. An exhaustive treatise on the Air Brake; explains in simplest language how to operate it under all conditions. **Price, \$1.00.**

***"Progressive Examinations of Locomotive Engineers and Firemen,"*** by JOHN A. HILL. A capital little book for new beginners. An excellent pocket companion. **Price, 50 Cents.**

***"Alexander's Ready Reference,"*** by S. A. ALEXANDER, for engineers and firemen. This book contains more valuable information in fewer words, and is easier understood by railroad men than any other book now in print. **Price, \$1.50.**

***"Twenty Years with the Indicator,"*** by THOS. PRAY, JR., M.E. Copiously illustrated and containing many rules as to the best way to run any steam engine to get the best results. **Price, \$2.50.**

***"Simple Lessons in Drawing,"*** by ORVILLE H. REYNOLDS (Chief Draftsman, Northern Pacific Railway). A splendid book. Every student of locomotive engineering and every explorer in the field of mechanics should have it. **Price 50 cents.**

***"Roper's Hand Book of the Locomotive,"*** by STEPHEN ROPER. One of the most valuable treatises ever written on the subject. It is fully illustrated, and contains a description of the most approved locomotives in use. **Price, \$2.50.**

***"Locomotive Running Repairs,"*** by L. C. HITCHCOCK. A splendid little book for locomotive men. **Price, 50 cents.**

**SEND ORDERS TO**

**DEBS PUBLISHING CO.,**

**TERRE HAUTE, INDIANA.**

# IMPORTANT.

In view of the present uncertainty of business, we have decided to offer the two works of Professor N. Hawkins upon easy and liberal terms of payment to the patrons of **POWER**, and others, who will furnish a reference as to reliability, i. e., part of the cost with the order when the books will be sent, and balance monthly.

It is a proverb that "he stands strongest who stands on his head"—this has been well illustrated in the case of the owner of these two books. In the numerous changes which have taken place in the past half year, and which are still going on, the practical knowledge which has been acquired from the Hawkins works has enabled many of their possessors to hold over in good positions where others have been forced to resign.

The "*Hand-book of Calculations*" (now selling in its sixth thousand), and the "*Maxims and Instructions for the Boiler Room*" (now selling in its third thousand), are educational works of the rarest value, and have already, in scores and hundreds of instances, proved the stepping-stone for permanent advancement (Firemen to be Engineers, Engineers to be Superintendents, etc.).

The "*Calculations*" teaches first, the principles on which steam-engineering is founded, i. e., mechanical philosophy, and beginning with the figure one, proceeds with rules, examples, and plain directions to the most essential problems relating to steam-engineering.

The "*Maxims and Instructions*" teaches how to "fire" all kinds of furnaces and the different varieties of boilers, gives details of construction and dimensions of boilers. It deals with the details and management of pipes and piping, steam-pumps, injectors, tanks, steam-heating, distilling, etc. The book has hundreds of definitions and illustrations of appliances used in and about the boiler room.

These books are each provided with a ready reference index, which renders their hundreds of practical suggestions instantly available; hence they are works of both instruction and reference.

These two books are each strongly and handsomely bound in green cloth, with gold titles; they weigh over six pounds for the pair and are almost a library in the making. The price is \$5.00 for the two, and \$2.50 for a single volume, post or express prepaid to any part of the world.

Persons wishing them on "part payments" will be informed of the terms upon application. Club rates also given on application. Correspondence solicited. We send a descriptive catalogue free.

### \$100 REWARD, \$100.

The readers of this paper will be pleased to learn that there is at least one dreaded disease that science has been able to cure in all its stages and that is Catarrh. Hall's Catarrh Cure is the only positive cure now known to the medical fraternity. Catarrh being a constitutional disease, requires a constitutional treatment. Hall's Catarrh Cure is taken internally, acting directly upon the blood and mucous surfaces of the system, thereby destroying the foundation of the disease, and giving the patient strength by building up the constitution and assisting nature in doing its work. The proprietors have so much faith in its curative powers, that they offer one Hundred Dollars for any case that it fails to cure. Send for list of Testimonials. Address,

F. J. CHENEY & CO., Toledo, Ohio.

Sold by druggists, 75c.

## FORTUNES FOR RAILROAD MEN.

Enormous prizes are paid for many varieties of United States and foreign coins dated before 1899. Railroad men who keep their eyes open can make a small fortune if they run across the proper coin. There are good sized premiums also on Confederate and fractional currency as well as old stamps. There are many dealers who buy the above. One of the most reliable concerns in the United States is the NATIONAL COIN CO., 833 N. Exchange Building, Boston, Mass. By sending stamps to them you can get a 16-page illustrated pamphlet full of interesting and valuable information, which if taken advantage of, may make you many dollars wealthier. It will show you how to keep your eyes peeled.

## COOK REMEDY CO

## Blood Poison!

Primary, Secondary or Tertiary permanently cured in 15 to 35 days. We eliminate all poison from the system, so that there can never be a return of the disease in any form. Parties can be treated at home as well as here, (for the same price and under the same guarantee,) but with those who prefer to come here, we will contract to cure them and we will all money and pay entire expense of coming, railroad fare and hotel bills.

**Our Magic Remedy** **Eight Years in Use** and **Never Failed** to cure the most obstinate cases. We challenge the world for a case we can not cure. Since the history of medicine a true specific for **BLOOD POISON** has been sought for but never found until our Magic Cyphlene was discovered. We solicit the most obstinate cases and challenge the world for a case we cannot cure. This disease has always baffled the skill of most eminent physicians.

**\$500,000 CAPITAL** behind our unconditional guarantee. Absolute proofs sent sealed on application. Address,

YOU ARE WELL SATISFIED.**

## LOCOMOTIVE ENGINEERING,

ANGUS SINCLAIR, )  
JOHN A. HILL, ) EDITORS.

5 Beekman St.,

NEW YORK.

# YANKEE HILL.

## 'TIS THUS THE GOLDEN LEGEND RUNS:

Even as in the wilderness, the life-giving water flowed from the smitten rock when Moses spake, so the golden stream begins to flow.

From every quarter of the mountains of Colorado it comes pouring down and before the fateful year of 1893 was closed the great state of Colorado had added \$8,000,000 to the gold volume of the world. Regions that a few months ago had neither name nor place on our maps are to-day alive with the thump of the drill and thunder of the dropping stamps. It is a wonderful story—this golden legend of Colorado.

Every one should read it. The *Gold Nugget* tells all about it—replete with strangely fascinating stories of the mines; tells of the wonders of Cripple Creek, producing \$300,000 a month; of the gold belt of Leadville, with its monthly output of \$200,000, and of Gilpin yielding \$5,000,000, and of Yankee Hill, the crown of Gilpin, teeming with possibilities. Three months ago it was only a name; to-day it is a fact; to-morrow Yankee Hill will be dividing honors with Cripple Creek. And a year hence men will say, "In those swift days we made our millions."

Three towns have sprung up like magic in the district; fifty stamps are already pounding on its ores. Shafts and drifts are running in every direc-

tion. Strikes are reported almost daily; at three different points ore bodies yielding \$400 to \$500 in gold are reported. Capital is coming in and by the first of June 3,000 people will be on the ground.

The Whale, the General Ives and Alice groups of gold mines belonging to the Orphan Boy Extension M. & M. Co. lie in the very center of this wonderful new gold camp. The largest and richest body of ore yet uncovered in the camp is at the bottom of the 40-foot shaft on the Whale lode—eight feet of ore between the walls.

The systematic development of this mine alone will be sufficient to establish the claim of Yankee Hill to the first place among the new gold camps of the state.

Have we interested you? Do you want to know more about gold and gold mines? Do you want to get in on the ground floor, before stock advances, and ever after receive dividends in gold? If so, send for a copy of the *Gold Nugget*. Address,

THE ORPHAN BOY EXT. M. & M. Co.,  
29 and 30 Kiltredge Building, Denver, Colo.

## THROW AWAY TRUSSES!

I am an engineer—running an engine on the Western Division of the Fitchburg R. R. I had a severe case of double hernia; still, have always worked along with them until this winter. One side was of twenty-five years' standing—the other of about eight years.

This winter I was laid up sick with pneumonia: in coughing so much, which of course was made necessary by that terrible disease, I strained myself so that after getting up from my sick-bed, I was not able to go to work, as I could get no truss that would hold the rupture.

I was talking with Brother Staggs one day. He asked me "why I did not go to Dr. Pierce's Invalids' Hotel and Surgical Institute, at Buffalo, N. Y.?" I went, and in three weeks was cured, so that I could dispose of my truss entirely.

I wish to say this comes from me direct; it was my own proposition that this letter be made public.

Respectfully yours,

F. S. AUCHENPAUGH, Division 418, B. of L. E.

ROTTERDAM, N. Y.

## RUPTURE.

HERNIA (Breach) or RUPTURE, even if old and large, is speedily and radically cured in every case undertaken by our specialists, without dependence upon trusses, and without danger. 385 cases of Rupture cured by us in 1892.

There is no longer any need of wearing clumsy, awkward, chafing old trusses. There is no safety in any kind of a truss, for there is constant danger of strangulated hernia.

Abundant references, by permission of those whom we have cured, will be furnished to any one wishing to call upon or write them.

VARICOCELE, or false rupture, and HYDROCELE are permanently cured by new and painless methods.

An illustrated Treatise on Rupture, Varicocele, or Hydrocele, sent to any address on receipt of ten cents.

## THE WHEEL

Of progress too often becomes the Wheel of Destruction, and at such times the possession of a staunch true friend, to whom the

### RAILROADER'S FAMILY

Can appeal in their sorrow, is the greatest boon on earth. Such a friend is the **RAILWAY OFFICIALS AND EMPLOYEES' ACCIDENT ASSOCIATION**, of Indianapolis, whose unparalleled growth during the past year, showing an increase of

**\$21,000,000,00**

Over the previous season, unanswerably demonstrates its overwhelming popularity with the Railroaders of America.

### THINK OF IT!

If you should get caught in that fatal accident which visits so many noble men, and leave nothing to your dear ones, what would become of them? A Certificate of Membership in the **RAILWAY OFFICIALS AND EMPLOYEES' ACCIDENT ASSOCIATION** is as safe and certain as a landed estate, and the relief it secures to the bereaved family is flashed over the wires the very moment the news of a stroke of misfortune reaches the Home Office. No Sensible Railroader longer doubts it his duty to carry first-class Accident Insurance. Do not postpone until it is too late, but take a membership with us

## THE FIREMEN'S FRIEND—

That never tears,  
rips, or leaves him  
in the lurch—

The Sweet, Orr & Co.  
OVERALL.

R. R. men wear them  
and one writes:

NEW YORK, }  
June 3, 1893. }

Sweet, Orr & Co.:

DEAR SIR:—I have been wearing your make of overclothes for fourteen years, and never had any of them to rip or any buttons to fall off. I am satisfied that I get full value for my money. Hoping you will accept this as my appreciation of your goods.

Yours respectfully,

FRANK AUSTIN,  
197 Lex. Ave., N. Y.

Member of New York City  
Division, 106, B. of L. E.

## The Great Union Overall Manufacturers of the World are SWEET, ORR & CO.,

But everybody does not wear overalls, so it must be remembered that this firm makes the best pants, the best shirts and the best wearing sack coats that are made.

N. B.—Everything guaranteed never to rip. If your local dealer does not keep our goods, do us the favor to write direct.

Offices and salesrooms:

NEW YORK CITY.

CHICAGO, ILL.

NEWBURGH, N. Y.

Say, Joe, why don't you get the OVER-ALL with the  Brand, same as I do, and  you won't have to go around looking like a tramp.

For sale only at

**HAMILTON CARHARTT & CO., Detroit, Mich.,**  
479, 481, 483 and 485 Michigan Ave

Samples of cloth and self-measurement blanks sent free to any address, provided this Magazine is mentioned. This also includes linen tape measure.

## OVERALLS FREE

By Mail or Express,

**FOR 75 CENTS.**

We are large wholesale manufacturers of Overalls and Coats bearing the "Carhartt" Brand. These goods are designed and made especially from suggestions made to us by members of the Brotherhood.

To introduce them to many members to whom their excellent qualities are unknown, we will for a short time send (all charges paid), to any one who will show them and help us increase their sale, one or more garments made of the best blue denim upon receipt of the following prices provided your clothing dealer does not keep them on sale:

Overalls—(any size) . . . . .	\$ .75
Overalls—(with apron) . . . . .	.85
Apron Overalls—(with elastic in the suspenders) . . . . .	1.00
Sack Coats—(perfect fitting, to match) . . . . .	.85
Sack Coats—(made of blue and white Amoskeag check) . . . . .	.75

In ordering, give waist measure and inseam (crotch to heel) for overalls, and for coats the breast measure under arms, saying whether regular or long sleeves are wanted. Address all letters plainly to

## Don't Forget That the Brotherhood Overalls

**Are NOT Made by Chinamen,  
Are NOT Made in "Sweat Shops."**

**But are made by the BEST PAID  
WHITE LABOR in the Business.**

They are made by a Brotherhood man, and were officially endorsed by the B. of L. F. Convention at Cincinnati, September, 1892. If no dealer keeps them in your town, insist upon getting them. The dealers anywhere will handle them if the Brothers will insist. Won't YOU insist on the Brotherhood Overalls made by **H. S. PETERS,**

**Hinsdale St., Brooklyn.**

Lodge No. 3, B. of L. F.

Div. 419, B. of L. E.

## The "WORKER'S"

The New 25 Cent Suspender. Made for Active Men. IT PAYS to wear it.

PATENTED NOV. 29, '92.

It is the simplest, completest, most comfortable and most serviceable low-cost suspender made.

**Easy on Buttons.**

**Does not Slip Down on the Shoulders.**

**Has no Rubber in Web to Induce Perspiration  
Has a great stretch in back Elastic Graduated Cord.**

**Holds Trousers up Firmly.**

It has just been put on the market and your dealer may not have it, but ask him. If he does not, send 25 cents in stamps for a sample pair. Say if you like back.

**Chester Suspender Co.,  
60 Decatur Ave., Roxbury, Mass.**

 1 Fenchurch Ave., London, England.

The **Pocahontas Coal** is acknowledged by all railroads that have used it to be the best American coal for Locomotive use. It generates steam with great rapidity, and at the same time holds the fire an unusually long time. The merits of the coal are shown by the unprecedented growth of the mines, which were not opened until 1883. Since that time the out-puts have increased over 1,200 per cent. beyond all precedent, amounting during 1892 to 3,000,000 tons. During the present year it will be at least 2,000,000 tons. We are therefore prepared to fill all orders with prompt dispatch.

## Galena Oil Works, Limited.

FRANKLIN, PA.

## SAFETY, SPEED, ECONOMY

Are the results of the use of Galena Oils. Scientific and practical tests of the past twenty years have demonstrated the fact that Galena Oils are superior to any other oils in the market.

Galena Oils in winter stand a cold test of from ten to fifteen degrees below zero, and will not freeze in the coldest weather.

The superiority of Galena Oil is demonstrated by their exclusive use upon a large majority of the railways of this country. They are in use upon three continuous lines of railways from Boston and New York to the Pacific coast and on one to the City of Mexico, thus demonstrating their adaptability to all climates and all temperatures.

We also supply our patrons with Sibley's Perfection Valve Oil, which is in exclusive use upon a large majority of the leading railroads of the country.

## Schenectady - Locomotive - Works,

SCHENECTADY, NEW YORK.

Locomotives of Standard Design for all Classes of Service, or from  
Designs Furnished by Railroad Companies.

### **COMPOUND - LOCOMOTIVES,**

Showing an Economy of 15 to 25 Per Cent. in Fuel and Water.

===== **ANNUAL CAPACITY, 400** =====

===== **ESTABLISHED 1831** =====

## Baldwin Locomotive Works.

ANNUAL CAPACITY, 1,000.

## *Locomotive Engines*

Adapted to every variety of service, and built accurately to standard gauges and templates. Like all parts of different engines of same class, perfectly interchangeable. Broad and Narrow Gauge Locomotives. Mine Locomotives by Steam or Compressed Air. Plantation Locomotives. Noiseless Motors for Street Railways, Furnaces, etc. **Compound Locomotives.**

**Burnham, Williams & Co., Proprietors,**  
**Philadelphia, Pa.**

MARCH, 1894.

## AN EPISODE IN THE LIFE OF THE GODDESS OF LIBERTY.

BY S. D. GUION.

As I neared my native shores, after long wanderings abroad, the first object that greeted my eager gaze was the light held aloft by our goddess of liberty. The erection of the statue in honor of Liberty is the fulfillment of a prophecy uttered ages ago. It is altogether befitting that Liberty, the goddess of beneficence, should be thus honored in this country; that at the gate of the mighty metropolis of these United States should be reared this monumental colossus, for it was to this country that she received her first commission; it was here that first her influence was felt and appreciated; here that first her sway was acknowledged.

The early life of Liberty is shrouded in mystery, indeed it is almost wholly mythical, but from this mythical history we are able to group many incidents which formed an episode in her life of great interest to the people of this country.

First, a short sketch of her life previous to being commissioned to this country. By studying this mythical history we learn about as follows: Liberty was the daughter of the goddess Juno, and her father was Jupiter, the mighty. At the time the Mythology was given to the Greeks she was quite young. The earlier histories make mention of her and orators some times spoke of her. In the later histories there are instances recorded of her having inspired love for her in the hearts of a few to such a degree that they were willing to fight for her, to even lay down their lives for her, but it never became general in ancient times, and until quite recently she was never able to obtain the love of a whole people or of any considerable portion of any people. The love she did inspire was but spasmodic, her lovers were easily seduced from their allegiance by others whom they supposed to be of heavenly origin.

It appears from the first definite and

authoritative account we have of her, that she must have been roaming to and fro around the world seeking a permanent home, but having become heart-broken from ill success had returned to Mount Olympus and to her father, Jupiter, and poured into his ear her tale of woe. Jupiter had just finished his breakfast and had retired to his bower of indolence, situate on a pleasant plateau upon the side of the mount, through which the gentle breezes wafted the spicy and fragrant perfumes from the plains of Araby, and when Liberty came within the vision of his august eyes he was smoking his pipe of comfort and consequently was in a fit mood to sooth and comfort the disappointed and discouraged spirits of poor, unappreciated Liberty.

He placed her upon his knee, enfolded her in his arms and pressed her head against his bosom, throbbing, as it was, with emotion so god-like, and listened to that voice, once so angelic, but now hoarse and broken by the wailing sobs of despair, as she recounted her sad experience among the nations of mortal men. There were none that would love her, she cried, though she had courted them with all the seductive arts of a goddess. If, said she, at any time there should happen to be some who professed to love her, and to desire her friendship, it was only that they might the more easily gain some selfish end or achieve some sinister object. Peoples have called me to them and have declared unchangeable, undying love, have raised my banner aloft and marched to victory, but when victory was gained they have let my banner trail in the dust, have gone back into slavery again and driven me from among them. I have often been tempted to leave this world and to call on Charon to ferry me across the Stygian sea. Overcome with emotion, and her frame convulsed by wailing sobs, she ceased to speak, and throwing her arms around Jupiter, she clung to him with the energy of despair.

Now came Jupiter's opportunity to comfort her, and when, by his soothing caresses, she had in a measure become calmed, he opened his mouth and spake. Said he: "This day you shall go to a country the largest and most wonderful in the world, the people of which will eventually give you great honor and sing your praise; the longer you are with them the more they will honor you and the louder will be their songs of praise. They will love and cherish you and exalt you to the skies. The time will come when their banner—the insignia of your sway and of their devotion to you—will float over every sea and be unfurled in the uttermost parts of the earth. They will rear your image on high, so that all nations may gaze on it, and their great love for you will cause to shine from your very image a great light that will radiate over the whole world, and at last all the nations of the earth will bow to you and the very atmosphere will be burdened with hosannas to Liberty." He spake no more, but his words had sunk deep into the heart of Liberty, and from her eyes there shone a new light and the gloom that had overspread her countenance was chased away by the radiance born of hope.

There is mighty power in hope. It cheers the saddest heart, dispels the deepest gloom, and imparts to the spirit that courage which will impel to undertake even the impossible.

Liberty, becoming inspired with hope, sprang with a glad shout from the knee of the mighty Jupiter and besought him to name the favored land that was to be so greatly blessed. Tell it me, she cried, and I will fly to it on the wings of the wind.

Then the great Jupiter arose from his couch and seizing Liberty by the hand strode with her to the top of the mount, chained a chariot to the lightnings, placed Liberty therein and bade her hasten to America. With the last word he turned the electric throttle and he stood alone amid the lightning's flash.

With Jupiter I am done. Whether he ever came down from the mountain top, whether he took another chariot and went off on a visit to his brother Mars or his brother Saturn and left the throttle open, thus allowing the lightnings to play around the mountain top even to this day, I do not know and I do not care. I bid good-by to Jupiter, the mighty.

As Liberty neared the shores of the new country she reined in her fiery steeds and alighted on its rock-bound coast. Before her was the vast primeval forest. Roaming through the forest she saw multitudes of the native red men. She made her way to them and told them that the report had reached Olympus that Hiawatha had taken them all away with him to help him in his

new opera. They said such was the fact, but that Hiawatha proved to be a fraud so they had all come back again to their hunting grounds, their tomahawks and their scalping knives. Yes, said she, all the arguments you know or can understand are arguments with tomahawks and scalping knives. You would delight in the orgies of the infernal regions. The demoniac screech of the inhabitants of hades would be music in your ears. To you only tears and blood and the contortions of agony have power to minister to the highest pleasure of vision. Strife and havoc your hearts naturally long for. The liberty to murder is the only liberty you can understand. Peace and thrift you never did, you never can know. Your very presence is a curse to the land. You shall be driven from your hunting grounds, you shall dwindle and waste away until there will not be a red-skin left to mourn the fate of his people.

She turned her back on Lo and went to search for the people of whom Jupiter had told her. When she reached the coast she sat down upon a rock and gazed upon the sea. Far out on the rolling billows she discerned a tiny speck. As it neared the shore she saw it was a ship and on its deck a multitude of people. It was heading directly for the place where she sat.

Liberty had the power of becoming invisible to mortals and now she exercised that power, while at the same time diffusing about the place the spirit of liberty which eventually spread over the whole country and became the controlling spirit of the new world.

The ship came on, and guided by Providence it came alongside of, and the people moored it to, the rock. When they had all left the ship and had assembled on the rock they bowed their heads and the chief, Pura Pilgrimageus, stretched forth his arms and raised his eyes towards heaven and gave thanks to God for giving them a safe passage across the sea, for guiding them safely to the shores of the new world, where they could worship Jehovah according to the dictates of their own consciences and where they had been assured was the dwelling place of Liberty. Then all the people shouted for joy and sang songs of praise and thanksgiving. When Liberty saw that they had landed on the rock from which she had first discovered their approach, she declared that it should yet become famous; that it should become renowned in history; that poets should sing of it and that its story should be told to the latest generations.

Under the direction and guidance of Pura Pilgrimageus the people felled the forest, built themselves houses and temples, tilled the land which yielded abundant harvest,

and commenced the work which was to be kept up for centuries of driving "Lo, the poor Indian" westward farther and farther into the forest.

Time rolled on, and although Liberty had diffused her spirit abroad in the land, the people were slow to perceive, having never had a proper conception of the essence or attributes of liberty. It seems that in those olden times people must have believed—and even now at the dawn of the 20th century a majority of the people seem to believe so still—that liberty not only gave the right to demand and enforce justice and to do that which their judgment told them was the right, but also gave them license to treat with contempt the rights of others, and to set aside all restraint when it came in conflict with opinions, practices or passions. So now, although they were in the land where Liberty had made her home, where they had come ostensibly in search of her, and where they themselves had declared her home was, yet in her name they committed most horrible and shocking acts—acts the most wicked and unjust. The arch spirit of evil, whose abode is in hades, oft appeared to them, and imposing on their credulity, made them believe that he was the spirit of righteousness and at his dictation deeds were done the recital of which would make us sick with horror. At such times Liberty would seek to hide herself even from herself, and fain would have left them to their own degradation and destruction, but would think of the words of Jupiter and take hope. She saw that the people were intensely earnest and honest in their search for the right, and she felt sure that when they had once come to know what liberty was, what liberty really meant, that when Liberty in all her glory had become fully revealed to them, no power on earth could compel them to give her up. She had read the innermost thoughts and aspirations and knew the spirit that animated the heart of this young nation.

Now Pura Pilgrimaticus and all the people had sent greetings to their friends and neighbors in their fatherland. They had told them of the beautiful country they had found, how prosperous they were, that here liberty was to be found; that here, and here only, could all men worship God according to the dictates of their own consciences, and besought them to come over to this beautiful country and revel in its liberty, rejoice in the freedom of conscience, help build up this young, this new nation new that had sprung up on the shores of the world, until it should become a mighty power among the nations of the earth and be a refuge for the oppressed of all lands.

Hosts came over. Cities and towns sprang up. On the banks of every stream

there arose a mill, the roar of furnaces, the whirr of machinery and the hum of the toiling thousands were heard throughout the land. A degree of prosperity was reached unprecedented in the annals of history, and the national heart had become so thoroughly imbued with the spirit of Liberty that to eradicate would require no less than the destruction of the nation itself.

The country from which the people came who had settled in this new world and had planted this new nation, was familiarly designated by them as the mother country and was ruled by Britannia. Now Britannia wanted to rule the whole world, and proclaimed and demanded the right to rule this young nation. Knowing its prosperous and growing condition sought to enforce the right; essayed to impose upon the people most grievous taxes; to place over them obnoxious governors, and menaced them with the presence of his troops as a threatening reminder that the demand must be complied with.

The rule of Britannia became so unjust and galling that not to resist would have been to acknowledge themselves slaves. But the spirit of Liberty had become so generally diffused and had taken such deep root in the hearts and such a firm hold on the minds of the people that it was impossible to subject them to the will and rule of a foreign tyrant. They had experienced some of the blessings of liberty and were not in a mood to relinquish them, so they took counsel together and resolved that they would no longer suffer the tyrannical rule of Britannia. They declared that this was the land of liberty, and to maintain their declaration and to more firmly establish liberty they pledged their lives and their sacred honor.

And now Liberty revealed herself to Pura Pilgrimaticus. She stood before him in all her dazzling radiance. From her shoulders there hung a mantle of scarlet and white, on her brow there gleamed a crown of stars, and in her right hand she held a torch that was to be the beacon to light the nation through the darkness that was to come. It was the light of liberty that was yet to fire the national heart, inspire the people to perform heroic deeds, illumine their minds so that they could the more readily understand the dictates and intelligently perform the behests of Liberty. And now, as Liberty stood before him in all her majestic grandeur and gorgeous beauty, Pura Pilgrimaticus was wrought up to an enthusiasm in his devotion to, and his love for, Liberty beyond what he had ever before experienced, and he made a solemn vow that all his life and all his powers should henceforth be dedicated to the cause and spent in the service of Liberty.

Then Liberty took the mantle from her shoulders and gave it to Pura Pilgrimaticus. She took the stars from her crown and, giving them also to him, told him to weave them into the mantle and it should be the ensign of the nation. If, said she, at any time you waver in your devotion and in your allegiance to me that flag will droop and a stigma will attach to the whole nation. Maintain your honor, hold fast to virtue, be steadfast in your allegiance to me and you shall never know defeat, your borders will extend from sea to sea, your flag shall be known as the flag of the free and your land as the home of the brave.

Pura Pilgrimaticus having declared that he would no longer be subject to the rule of Britannia, Britannia became very wroth and sent her armies here to wreak vengeance on Pura Pilgrimaticus and the people. Then Pura Pilgrimaticus marshaled his men of war and many a bloody battle was fought. The army of Pura Pilgrimaticus was outnumbered by the hosts of Britannia, but what his army lacked in numbers it made up in spirit. The soldiers of his army were filled with the spirit of liberty. It is a well known fact that whoever is filled and animated with the spirit of liberty is a host in himself.

The emblem of Britannia was the lion. Seeing which Liberty caught an eagle, gave it to Pura Pilgrimaticus and declared that it should be the emblem of this new nation; that it should be the emblem of American liberty, and that henceforth whenever the lion of Britannia should roar the American eagle should scream. And now, even to this day, the people boast of the screaming power of the American eagle.

With the powerful aid of Liberty, the courage, heroism and endurance begotten by love for her, enabled the people after a long struggle to drive the hosts of Britannia from the land. The people rejoiced greatly, songs of praise to liberty were on every tongue. Bonfires blazed from every mountain-top. Liberty-poles were planted all over the land. From every tower and fortification, from every dome and flag-staff floated the stars and stripes, above which was perched the eagle, the emblem of American liberty. They erected temples to liberty. To liberty they reared great columns of lasting granite for enduring memorials. In the minds and hearts of the people liberty was indeed exalted to the skies. And now, at our most important gate, at the principal gate of the nation, has been erected this colossal statue to our Goddess of Liberty, outdoing an ancient trophy of monumental wonder and over-towering even any of the colossal wonders of this, the 19th century.

Now let us cherish and jealously guard this liberty of ours. Let us maintain our

honor and hold fast to virtue that thus we may be enabled to hand down to future generations, unimpaired, this great boon that we possess, our American Liberty.

But our goddess is still with us and is ever lighting and relighting in the brains of her followers sparks which will yet blaze into a more glorious liberty; is ever inspiring the minds and hearts of those who love her to reach a more exalted, a grander liberty, a liberty that the people of no past age have ever dreamed of being possible. As the ages revolve people are becoming educated up to a higher plane. Less and less does the animal, the brute nature, manifest itself in human conduct, although selfishness and greed have a firm hold on the hearts of men, and that, too, with imperious sway, yet the civilizing, humanizing influence of the spirit of liberty has, in a great degree, eliminated the boldness and brutality once invariably displayed in their exercise. The selfishness and greed may be as strong, the power to exercise them as great, and indulged in even more universally, yet it is done with such refinement and semblance of philanthropy that its victims have the impression that they have been blessed.

But the sparks are still being lighted, the inspiration is still going on, and the victims are becoming enlightened. Through the opening vista is the sheen of Liberty's light, and there begins to dawn on the gaze a scene of bewildering brightness giving premonition of splendor and glory. It has not yet taken shape and form; the imagination can only conjecture how beautiful and glorious it may become. It is the grand, good time coming of which prophets have foretold, poets sung and mankind so prayed and longed for. It will be ushered in in all its fullness with the adoption of the single tax unlimited. Then justice and liberty will reign supreme.

"Then shall wars and tumults cease,  
Then be banished grief and pain.  
Righteousness and joy and peace;  
Undisturbed, shall ever reign."

## SOCIALISTIC SCHEMES.

BY JOSÉ GROS.

In a conversation with an old friend on economic subjects, the writer was once asked: "Would you be willing to improve humanity through any other process than your own?" The friend in question happened to be one of the many American citizens who have for long years been perfectly infatuated with one of the two old parties. The writer has never cared a tallow candle for either. He has voted for different parties according to the conditions of the day, and he has often abstained from voting, when he could not really see how he could do any better. Naturally enough, the above sally

of our party friend revealed to us the mental condition of all men blindly infatuated with and attached to any given sect, party or clique. Such men don't seem to care much for humanity at large, unless their school of thought can carry the field and attain a victory regardless of general good results.

We are afraid that many reformers to-day are in that undesirable mental condition. If we suspected to be in such a box, we would not take the trouble to write any articles. We would consider it time lost, and could derive no joys whatever from our labors in that line.

We did not become attached to our school all at once. For some time we could not see any beauty in it, any real good point. It was only through slow mental processes, and at the expense of giving up many of our old ideas, that we became convinced of the intrinsic truth of such school of thought. Before that, and for about 40 years, we were familiar with all socialistic schemes. Very often, most especially in the last five years, we have let our minds enter into the spirit of such schemes, with all their details and ensemble, for the purpose of carefully weighing their value and practicability, so that to make sure of what was best for the future of the human family.

One central thought has presided during all our investigations, for nearly 20 years anyhow, whether in the field of history or that of science, in physical or in moral developments. We have noticed that in both realms success was to be found along the line of least resistance. That fact is more prominent in nature than in historical developments, only because the latter have been a mixture of two elements, the human and the divine, or rather the orderly and the anarchal. By the last one we mean human volitions led by greed and seldom by that altruistic and noble element which we can only fully develop when we try to co-operate with natural laws and the eternal principles of truth. Because even if we wish to eliminate God from the universe, that is, even if we prefer to believe in truth apart from any grand personality presiding over all phenomena, even then we must try to be logical with ourselves, and accept a certain order with its immutable connections of cause and effect. And we must extend that order and immutability both through the physical and the moral, through nature and through history, through all the routinary mechanisms in the cosmos and all the changing chemistry in historical developments.

We are are now ready to ask, from all reformers, as follows: Are you sure that you follow the line of least resistance in your schemes for the improvement of humanity? If you don't, then all the forces of nature

are against you, because nature invariably follows that line, in all its works and processes, and men as well as human societies are part of nature. You can suppress God if you like. That will not help you in the least. You will yet find nature with its laws as immutable as the horizons around yourself, bringing out certain effects from certain causes. When connected with men, the effects will be painful or joyful, according to our adaptation or repudiation to natural laws. And perhaps the most transcendent law of nature is that of working along the line of least resistance. Can we say that socialistic schemes work along that line? Let us quietly investigate that.

The schemes in question are as old as civilization itself, even if known by other names and only applied in rudimentary forms. The patriarchal social status of over 3500 years ago was socialistic. Abraham and Job, etc., etc., were the great captains of industry in their times. Joseph transferred that social status to Egypt, while he was all powerful under Pharaoh. Grant that all such socialistic schemes lacked the finished touches devised and concocted by modern socialists, lacked the mechanism of the popular vote, and were simply based on traditional social conceptions, on the silent common consensus of the masses, because of men's lack of individuality as yet. All the same we see there the property of the working masses, resulting from their own labor, handled by the classes, a combination of the priest and the aristocrat, under paternalistic principles. And communism, socialism, nationalism and what not, are essentially paternal. The mechanism of the popular vote would not change that, as we propose to prove in a few moments.

The French say: "*Le nom ne fait rien à la chose.*" Names never change the essence of facts. And what is the grand fact which permeates communism, socialism, nationalism or anything like it? That a few shall handle the property created by the many, as if the latter were a pack of babies. That a few shall direct and superintend the labor of the many, as if they were a group of wheels in a big machine. That a few shall fix the earnings of the many, because the former alone shall be able to see what the grand totality produced, because they alone shall be able to manipulate the wealth created by the many, and so they alone shall develop administrative skill, brain power, individuality, mental magnetism, etc. Only one man in forty or fifty shall evolve capacity to handle other men in large groups, and so large quantities of labor products.

Just as muscle only grows through muscular activity, so brain power only grows through mental action. And all socialistic

schemes imply that thirty-nine men out of forty, or forty-nine men out of fifty shall simply move and have their being according to orders received from the respective bosses at the head of each department or sub-department in each locality. And only one man out of a thousand or ten thousand shall develop capacity to be at the head of a large department in each district, and so on to the very top at the head of the colossal departments in state or nation! There you have nothing but industrial militarism with the mechanism of the popular vote for the election of officers, etc., giving them the power to manipulate the wealth produced by millions of human beings, politically free if you like, industrial slaves, as a matter of actual fact, deprived of the most cardinal natural rights, that of handling the wealth they produced.

The idea that the bosses in question should have more zest in the correct handling of wealth than the very creators of that wealth, when such bosses could not obtain any extra profits, because all profits must be exterminated under the socialistic regime! There is nothing natural, nothing logical, in that assumption. It sounds very poetic, very dreamy, very fantastic. It reads like a novel. That is all. Life is something far more solid than a novel. It should be anyhow, if life is to mean positive joys.

As a corroboration of the above thoughts, look at the results of our political system with that very mechanism of the popular vote as the foundation of all power. Have we developed healthy, intelligent citizens? We have developed parties handled by machines and bosses. We have totally failed to evolve the individual with political brains of his own. We have built up the political bigot, the infatuated party man, political corruption, national, state and municipal, such as history has seldom exhibited under monarchical systems without any popular vote. And socialists pretend that the mere extension of that vote, as a mechanism, into industrial life, shall convert the earth into an Eden with no serpent, no forbidden tree! Well, no wonder that humanity smiles at the pretensions of our socialistic friends, while letting them go on with their harmless dreams. Our plutocratic masters, who know where the shoe pinches, have always a few soft words for socialism. They know that all natural forces, and all natural human aspirations, are against socialistic plans. They realize that the individual is to-day somewhat stronger than ever before, as the inexorable result of social evolution, even if twisted and deformed; that men are more than ever attached to the wealth they may have individually created, and revolt at the absurd conception of society taking possession of the wealth, be it great or small.

As a matter of fact civilization is but the evolution of the individual, hungry and thirsty, to be his own master, the arbiter of his own destinies. To be sure, under a correct, because anti-monopolistic, civilization, the above tendency would develop in parallel lines with the perception of social duties and that spirit of justice towards all men without which civilization is bound to be a mass of incongruities, a pyramid of varnished crimes with less and less room for men towards the top, leaving the many forever down into broader and broader bottoms of tears, desolation and despair. All because of both political and industrial monopolies, the latter resulting from land monopoly, the former from insufficient political freedom. (See article on Government in the MAGAZINE for January, 1894.)

Forced co-operation, suppressing free competition, there you have the real essence of all socialistic schemes through all centuries, on a large or small scale, through the plateaus of Asia, India, Southern Europe and North and South America. The modern schemes have added a great paraphernal of details which would simply make them totally impracticable, however theoretically charming in some respects.

Forced co-operation when the divine plan is free co-operation, hence the individual with freedom of choice to obey or disobey God's laws!

And what about competition? Is not that one of the fundamental laws permeating the universe, through which nature improves all types, and evolves the highest forms of beauty? Our pen would drop from our fingers if we could not compete with other writers in the field of thought! Then why not to discriminate between free and forced competition, between the natural and the cut-throat one, when we deal with human activities? Why not to strive for competition under laws of freedom and equal rights, and thus suppress the unnatural one fed by laws of favoritism, monopoly and repression?

Socialism attempts to reverse the course of civilization backwardly to those historical periods when the individuality of man was yet in its inception, when most men needed to lean on each other and the masses tried to evolve one or more chiefs upon whose judgment to rely. Socialism would revive the human babyhood of primitive days, of days gone by, never to return. Revolutions go forward, never backwards. Grant that the tendency of modern industrialism is to convert men into machines. Yet every labor organization is a solemn protest against that. The whole drift of modern thought repudiates that tendency. To-day more than ever each man wants to be his own master, his own boss, his own man, with his own home and his own capital. Socialism is an attempt to strangle

such noble aspirations, constituting the full man, with his cognizance of what he owes to the social group for universal happiness.

Well, are socialistic schemes working along the line of least resistance, the line of nature in the cosmos and in history? Far from that. Do not they repudiate all natural law? If so, are not they a flagrant, self-evident impossibility? Let each one of our readers give his own answer to himself.

## ECONOMIC FALLACIES.

BY MARIE LOUISE.

In a time like the present one, when hundreds of thousands of working people are deprived of the necessities of life, when the gaunt hand of starvation stretches out and sweeps, with one stroke, thousands of them into eternity, two things appeal immediately to the heart and the action of the intelligent and the humane: Firstly, to promptly succor the hungry and save their perishing lives; secondly, to seriously investigate the cause or causes which are accountable for so heartrending a social condition.

It will be conceded by all that the hunger which to-day pinches the faces of so many men, women and children does not result from a famine in any department of agricultural or industrial production. Necessaries and luxuries of life are plentiful. What fails is the money to buy those necessities, and money fails because workmen are forcibly idle. The present destitution, then, is not due to impotency to work on the part of the workmen, nor is it due to nature's freaks, for the harvest has been satisfactory.

Politicians exert themselves to explain the cause of this industrial cataclysm. The Republicans affirm that the people have willfully brought on this curse by placing Democrats in power and ousting them. The Democrats, on their side, claim that the political atmosphere was cloudy and gathering for a storm previous to their entering into office. "This crisis," says the Republican, "is the work of Democratic incapacity." "This crisis," says the Democrat, "is the legacy of Republican misrule."

These wranglings among politicians, however, ought not to occupy the minds of the workers for a single moment. What concerns them is the fact that the crisis has been produced, not through bad harvest, nor through the insufficiency of their labor, but through the machinations of their political and industrial rulers. What concerns them still more is the fact that the crisis reduces their own class to beggary, despair, starvation and death, whilst the capitalists not only escape these horrors, but are able to enjoy much luxury. How the crisis affect the toilers and why it so

affects them, is the proposition which all workers ought to study analytically, inductively, *i. e.*, by reasoning from fundamental principles.

Economists (professional and amateur) prescribe, for the remedy of the existing industrial disorder affecting labor, a better adjustment of the relations of the capitalists and the workers.

This theory, I claim, is an absurdity and a snare. Just as well might they advise a compromise between a man and a cancer that gnaws at his vitals. The malady that convulses the realm of production is not seated in the lack of equilibrium between the wages of the workers and the profit of the capitalist. It is seated in the very existence of capitalism and of proletarianism. That aggravating complaint, called the labor question, never can be cured until the producer receives the full amount of his product and owns the instruments necessary for his labor. Capital is an instrument, a tool needed by the worker to produce wealth. By itself, capital produces nothing and, consequently, has no right to a share of the toiler's product. Labor alone creates bona fide wealth. The so-called wealth produced by stock-jobbing, speculation and other financial gambblings is merely artificial; it is a bubble, it is a dogma of the capitalistic creed which the ignorance of the masses has permitted to become an article of faith.

The Deity, who designedly created one portion of mankind to toil and the other portion to live in idleness, feeding on the product of their toiling brothers, that Deity has now turned its face towards the west and trails behind the whole fabric of religious, political, economic and sociologic superstitions. Soon the portals of the setting sun shall close behind the unsightly mass, for lo! towards the east a new day has dawned. Superstition and faith recede and vanish before the radiance of approaching reason and knowledge!!

Economists base their speculation on the fact that the industrial world is divided into two classes: *one which sells its labor and the other which buys it.* This assertion naturally implies that labor is a marketable commodity, subject to the economic laws of demand and supply, like cotton or lumber, or any other merchandise. This they accept as a social dogma and, consequently, they neither question nor reason it. Advancing on the line of logical deduction, they find that labor is the tool with which capital works and produces wealth. Proceeding with their mental gymnastic, they arrive at a conclusion perfectly logical as flowing from their premises, *viz.*: that labor is an implement of production to be used in the same manner as a locomotive that speeds the space, whose breath is its steam

and whose soul is its impetus. These dogmatic and fossilized economists stand in the position of a physician who, called to treat a case of small-pox, proceeds to argue that small-pox is in the patient's system, is a part and parcel of it; but to preserve the patient's life the virulent fever must be checked, and to preserve his good looks, the harrowing eruptions must be confined within, and lastly the general temper of the disease must be adjusted permanently to his power of endurance. By such a line of reasoning the physician overlooks the most important fact, viz.: that small-pox in the human physiology is an alien and must be cast out without compromise.

Such is also the attitude of our modern economists. They accept a dogma and completely ignore the law natural which makes motion in the realm of physics and progress in the realm of morals absolutely inevitable. They fail to recognize the axiomatic truth that a fact does not constitute a moral right.

Historical records, religious and secular, show that the theory of absolutism has been the base of human actions and ethics since the earliest period of the existence of our race. The shadow cast around by absolutism is fatalism. These two inflexible principles have benumbed the consciences of the people in general, and of the masses in particular. They took for granted that existing conditions, such as they were, were pre-ordained by an all powerful, immutable force. To the religious minded that force was embodied in a personal God, to the practical minded it was the law natural. Different, and even opposed, though these seem to be, both of them came to a junction on the theory of absolutism. They admitted, tacitly or otherwise, that God, or the great creative natural force, created animals to feed one upon the other, the strongest upon the weakest. The same decree, they found, applied to the human animal, but, lest so crude a definition awaken the lion in the breast of the oppressed masses, the rulers and teachers gave the decree a milder definition, one more genteel, and said: "The human race is divided, by the will of God, into rich and poor." This article of faith is the last and crowning term of absolutism—it is the exaltation of fatalism, it is the deification of despair.

The inoculation in the human mind of doctrines so baneful is responsible for the present misery we endure. Three millions of men and women in this republic depending on wagework to live, are unemployed and, therefore, suffer all sorts of privations down to hunger. Three millions of free born citizens! And yet so benumbed is the intelligence of these three millions and of their brother workmen that they suffer

and bear, waiting for the politicians and the economists to adjust the unadjustable wheels of a thoroughly dislocated machinery.

Who is he who dares to tell us that poverty and toilsome work is the pre-ordained condition of a portion of the human race whilst plenty and idleness is that of the other portion? On what first principle is this abominable falsehood grounded? I will tell you. It is grounded on the craftiness of one portion of mankind and the imbecility of the other portion. The entire structure, political, economical, ethical and religious, is erected on hypotheses and empirical speculations. One word of the eternal truth that lies in first principles can shatter the sand bed on which the construction is based.

Man, like any other creature, must procure his food by laboring. This is a first principle.

What an individual has produced by his own labor is his own property, since he and not the other man produced it. This is another first principle.

A man, to appropriate to himself a part or the whole of another man's product of labor must use violent means. He must, in some way, manacle his victim, he must gag him, either physically or mentally. This is another of the first principles.

The logical outcome of these three propositions, which are pure axiomatic truths, is the radical overthrow of the fallacies upon which our economists raise their theories of adjustment between the relations of the capitalists and the toilers. Capital is a factor necessary to industry, but the capitalists are not a factor, they are intruders. Capital, as I have said, is a tool of industry and when a tool is placed above the intelligence of the worker which, alone, directs his arms, a condition has obtained where the base is uppermost and collapse inevitable.

The question of the hour is to put labor (not the proletariat) on its proper and legitimate place in the world of industry.

Every thought involves its contradiction, so does every fact. This is by virtue of the incessant effort of nature to produce equilibrium, i. e., a balance in the order of things. A thesis is not destroyed by its antithesis, but is either affirmed or denied by a chain of reasoning on the two contradictories, or on a series of contradictories which the primary thesis involves. Thus our capitalistic system of industry, a thesis, involves its antithesis, the proletariat. Capitalism, so-called, is an economic contradiction, an anomaly; the proletariat, its antithesis, is likewise an economic contradiction, an anomaly.

A thesis is not negated by its antithesis, but the contrary is true, for the latter adds

to the content of the former and emphasizes it. But the thesis, by absorbing its antithesis and adding to its content, admits within itself the germ of disorganization which ultimately destroys both.

If we reflect a moment on this phase of nature's operations we shall soon be convinced of the utter futility of efforts tending to eliminate proletarianism and pauperism, and, at the same time, retaining capitalism. Our present economists are striving to operate a miracle. Were their field of labor in the mystic realm, they might hope for success, but in the realm of science and realism they are doomed to disappointment and ignominy. The sooner we dismiss dreams and deal with realities the better for us all, capitalists as well as toilers. Labor cannot be adjusted to capitalism; it must be adjusted to itself, *i. e.*, be itself. Labor is one of the greatest principles in the human economy; it is the preserver of life, the creator of ideas, and the perfecter of the intelligence. It has been said, and with reason, that *the idea is born of the action*, and not the converse, as was held by the adherents of absolutism in religion and politics. Civilization is born of industry; philosophy is born of labor. Object lessons in kindergartens develop ideas in the child, where the old routine system of committing rules to memory failed to evoke a single spark of knowledge. Tools are used as emblems and allegories of the profoundest principles of nature by mystic societies and educational fraternities. Tools are analytical in their teachings and in their operations; labor is the process by which man is preserved and achieved. The latest divinity devised by man is a great architect, wielding all the instruments of labor. Thus labor has been deified. Now, let us humanize that Deity.

## CHURCHES AND WAGE EARNERS.

BY W. A. ENGARDE.

A late number of an English magazine contains an excellent paper by the popular and talented Professor W. Gordon Blaikie, on "The Relation of the Church to Social Questions," in which he presents a few commendable remarks on the subject of wages and strikes, and these allusions are especially applicable and appropriate to the labor situation in the United States at the present time, and all working men should carefully peruse and digest them.

Admitting, as Professor Blaikie does, that the proportion of profit which bread winners receive in the form of wages is small, and that they merely exercise an entire legal right when they refuse to work for insufficient compensation, he yet comes to the conclusion that it is very unreasonable to expect that the churches and clergy

should intermeddle when the workingmen are compelled to institute strikes in order to secure due and proper recognition of their claims. He does so on the ground that the churches and clergymen are not competent to decide when an aggressive movement is or is not warranted. That declaration of inability on the part of the churches and ministers might, possibly, be accepted, were it not the case that too frequently the influence and resources of the churches and pastors are thrown adversely in the scales against the workmen in their struggles with employers. This is especially so in connection with cases where corporations are concerned. The churches were established as a bulwark against the perpetuation of injustice in any and every form. That they have not proved themselves so is strongly evident to every one who has given the least attention to their past history. Within, they have always been prone to give seats in the synagogue to the wealthy amongst their members. To the world outside their deference has only been displayed toward those who possessed the greatest wealth. Those men who have reduced the wages of their poorly paid and suffering workmen and workwomen, and then made a substantial donation to the church to ease their consciences have been eloquently eulogized.

This deference to Mr. Moneybags has been the main and dominant reason why the Christian church has made so little progress in the work committed to its care. Nor will it ever be able to leaven the community with the spirit of its founder until it returns to the just and true principle of the gospel, which is reverence for inner character and not for outward circumstance. Complaint is frequently made that working people are forsaking the churches. That this is, to some extent, true, we may admit. But who is to blame? Let it not be supposed that the absence of the hard working, honest and deserving wage workers from the churches is an evidence of growing irreligiousness on their part. That is not so.

The chief and indisputable reason is to be discovered in the lack of interest shown by the churches in all that concerns the social and material wellbeing and advancement of the working classes. In the early centuries of the church's history there was a glow of enthusiasm of humanity which is now absolutely and entirely absent. When that is again restored the church will emerge from the cloud of indifference which now overshadows it, and will enter upon a new career of conquest. Let it accept and act upon the motto of the Roman pagan: "Nothing that interests man is foreign to me."

If the church is to fulfill its proper mission it can do nothing less. The church is

the symbol of universal brotherhood, and its bounden, sacred duty is to protect all oppressed brethren. When it leaves that undone, no matter under what pretense, it is unworthy of that respect to which it would otherwise be entitled. We sincerely long to see the church assume its true and elevating position as the messenger of peace and good will among God's people. But before it can do that it must hurl aside all those entangling chains of gold by which it has permitted itself to be ensnared and fettered by Dives and his designing, unscrupulous and grasping brethren.

### WHY ARE MEN IDLE AND STARVING?

BY W. H. STUART.

To answer this question intelligently, it will be necessary to examine briefly the conditions under which wealth is now produced.

The starting point of the socialist theory is the proposition introduced into the science of political economy by Adam Smith, that wealth, economically considered, is the product of labor exclusively, and costs nothing but labor. This theory was endorsed and more firmly developed and established by Ricardo, and upon this base, succeeding economists, as Sismondi, Rodbertus, Proudhon, Lassalle and Karl Marx, have successively demonstrated that our present industrial system is based on the robbery of the producer.

If, then, it is admitted that wealth is the product of labor alone, the logical deduction follows that the actual producers have in justice and equity a just claim to the total product. But as under our systems of minute sub-division of labor, under which many co-operate in the production of one commodity, it is technically impossible that each laborer should receive his product *in natura*, there must, therefore, be substituted for the claim for the whole product the claim for the whole value of the product.

This natural and equitable claim is not recognized under our present industrial and social system. The laborer of to-day receives only a part of the product in the shape of wages, while the remainder and major portion flows as "surplus-value," i. e., rent, interest and profits, into the pockets of the owners of land and capital. Both rent of land and interest represent an income obtained without personal exertion, solely by virtue of possession.

It must, however, be understood that by "labor" is meant all exertion, whether mental or physical, that is necessary for the production of wealth. More unnecessary exertion would not be considered "socially necessary labor." For instance, the business of a burglar requires both mental and physical exertion, it is also a dangerous oc-

cupation, they are frequently shot at, and sometimes captured, yet, they are not laborers in the socialist meaning of the term. Then there is the business of wrecking railroads, it requires ability of a high order, superior shrewdness, cunning and *finesse*. The road to be wrecked has its stock depressed by skillful stock manipulations, and combinations against its business, then, when the stock has been sufficiently depressed, and the small holders of stock frozen out, the stock is bought up and inflated by means of a process known as "watering." Under our present industrial system such ability is highly rewarded, one man having made in a few years fifty millions of dollars, a sum equal to the salaries of our presidents for a thousand years. Yet this kind of exertion would not come under the socialist definition of "labor." Like the labor of the burglar it merely consists in appropriating wealth already created by others. So, also, the business of "cornering" products, requiring great "nerve" and capital.

And then land grabbing, which requires excellent judgment and foresight, and a thorough acquaintance with the natural trend of business, and of localities likely to become valuable by increase of population. The mental exertion required in this business is so great that unsuccessful operators have been known to have taken their lives, owing to disappointment over the failure of their schemes. Yet, again, this would not be considered "labor" from the socialist point of view. By none of those means has a particle of wealth been created. It has merely been appropriated by non-producers, and by means as morally indefensible as that employed by the burglar. The labor of a million such parasites would not produce as much wealth in a year as that produced by, say a locomotive fireman, in one day.

And yet, on the other hand, the socialist would consider the man who wrote a useful book, or an inspiring poem, or composed a symphony, or a drama, or who does anything to instruct, or amuse, or to elevate taste, morals or intelligence, a laborer, and "worthy of his hire."

I trust I have now made clear the socialist definition of labor, and laborer. The wealth of those societies in which the capitalist mode of production prevails presents itself as an immense accumulation of commodities. Therefore, as under the wage-system the laborer receives as wages only part of the product, he is unable to buy back what he produces. For instance, it is estimated that the product of every adult male of this country is worth ten dollars, but the landlord, the profit-monger, and a host of unnecessary middlemen and parasites have to be supported out of the ten dollars so

that the share that the actual producer receives is only sufficient for a bare subsistence.

It is evident, therefore, that under this system of unjust and unequal distribution, commodities are continually accumulating in the hands of the capitalist, or non-producing classes, who are, of course, anxious to dispose of them. For this purpose all commercial nations are engaged in a perpetual struggle in the endeavor to dispose of their surplus products and commodities. Nearly all wars are the result of this endeavor to extend trade, and jealousy of rivals having the same object in view. It was for this purpose that England conquered India, and forced, at the cannon's mouth, her trade on China, and it is for this purpose that the leading European nations are now engaged in dividing up Africa and massacring its unfortunate inhabitants; this is why we want Hawaii, to rob the natives of their land and reduce them to wage-slavery. They can now live on bread-fruit and bananas without much exertion on their part, but when we gobble up the land we will make them work ten or more hours for the same bread-fruit and bananas. Great scheme! Won't that be cheap labor! All done in the interests of Christianity and civilization?

But to return to our laborers. Why are they forced to produce under such conditions of injustice and robbery? We have before explained that under our present systems of private property in the means of production—land and capital—the laborer is divorced from all means by which he can make his labor effective, so that we have to-day in our country two distinct classes; one of capitalists who possess nearly all the natural sources of subsistence; all the machinery, factories, railroads, telegraphs, telephones, the medium of exchange, in a word, all valuable land and capital, and everything that is necessary to carry on the great work of production and distribution. On the other hand, the wage workers, composing the great bulk of the population, the members of which are disinherited, without the means of obtaining an independent living, cut off from all the natural sources of subsistence and culture.

Under this system of private capital and competition we are all engaged in a fierce and bitter struggle for the possession of those means which are alike necessary for the sustenance of all. Those who have developed the most sagacity, cunning and unscrupulousness; in whom the truly human instincts are the least active, and who take the most delight in this scramble, euphemistically called "business," are the ones who come to "the top" and succeed in crushing and overpowering those who have little or no fighting experience, and

having thus gained the advantage over their weaker brothers, they undertake to make the latter their slaves for all time. Having obtained the mastery over their fellows in this way, and holding as they do all the material resources in their possession, they hire sycophants to teach their ignorant slaves how important it is "that the poor should be contented and the rich secure" in their plunder. That the interests of capital and labor are identical, which is true, but by "capital and labor" they mean "capitalists and laborers," in which they are liars and the truth is not in them. To amuse the laborers and keep them from examining the real methods by which they are plundered they subsidize speakers and the press to howl about "free trade," "protection," "free coinage of silver," and other catch-penny phrases to distract the attention of their dupes. Other well-meaning men waste their time in denouncing our financial system, urging that contraction of the currency and inflation in the value of gold is the cause of all our trouble, but even admitting our financial system to be rotten, this is not the real reason of the poverty of the masses; the reason is to be found deeper, it is in the fact that labor receives back only part of what it produces, and as long as this robbery continues the best financial system that the wit of man could devise would not prevent the continual flow of wealth into the coffers of the capitalists. The man without capital would still be forced to work for a subsistence, whether his nominal wages would be fifty cents, or five dollars per day.

Owing to the continual introduction of labor-saving machinery into productive processes, we have now reached a stage where even during prosperous times it is impossible to furnish all work, so that for the past five years we have had on an average a million of idle men, and lately, more than twice that number. Now the point I want to distinctly impress on the reader is, that never again, while the competitive system lasts, will all willing workers be able to find employment. Our industrial system is breaking down. Men are becoming superfluous and unnecessary; we are no longer receiving skilled laborers from other countries; American wages are rapidly sinking to the level of European countries. Only the unskilled and common laborer is emigrating to this country, and even now, Italians are returning to their native land, preferring to starve among their own kindred.

Every new invention of labor-saving machinery is throwing workmen out of employment, and making labor more uncertain and precarious. Is, then, machinery a curse to the wage-earner? Under present conditions—yes. Let me illustrate. A man

owns a factory and employs one hundred men, he introduces a machine that will do the work of ten men, he accordingly discharges ten men, one or two of these men may get employment making the new machines, the other eight or nine will form an industrial reserve from which the employer can draw in case he lowers the wages of his ninety other employees. But if the men are united in a strong union they may succeed in keeping wages up by allowing the idle men half wages while they are idle. But suppose another machine is introduced that displaces ten other men, we have now, say, 15 per cent. of the men idle, result: competition for work grows fiercer, the union breaks up; the employer lowers the wages, if the men strike the "scabs" take their places. But under such conditions there will not likely be a strike, the men will submit, as Carnegie's men are now doing, although up to a year ago the "Amalgamated Iron Workers" was the strongest labor organization in America.

The day of the strike is over. See the complete failure of the Lehigh Valley men, although they stuck together like heroes, over one thousand of the old employees now are idle.

Is, then, machinery, *per se*, a curse to labor? No, under a better industrial system it would be a blessing. Take the case of the factory employing a hundred men. Under the co-operative system each man would be an equal owner in the factory. How would the introduction of a machine doing the work of ten men effect them? It would enable them to produce 10 per cent. more than formerly with the same amount of labor, or, their hours of labor could be reduced 10 per cent. and still do as much work as formerly. Under the capitalist system all the improvements in the productiveness of labor effected by labor-saving machinery inures to the benefit of the capitalist exclusively, while enabling him to reduce the laborer to a lower standard of living. While under socialism, every labor-saving device would not only serve to increase the general wealth, but the wealth of every individual worker. It would increase leisure; work, instead of being a hated toil, would be a pleasure which none would seek to avoid.

Reader! is it now clear to you why in a country like ours, of unbounded resources, that men are idle and starving, and that there is no future to which we can look with confidence, as long as our present unjust industrial conditions remain unchanged. Will you do anything to change those conditions for the better? or will you continue in the old rut of apathy, indifference and ignorance, until perhaps goaded to desperation you set the laws that you helped to make, or at least tacitly assented to, at defi-

ance, and be perhaps shot down by another wage-worker as ignorant as yourself. For don't be deceived, a man who has not the intelligence to use his ballot right, cannot be depended upon to shoot right. Remember that among the militia that were called out to overawe the Homestead strikers were a regiment of iron-workers who, while in full sympathy with their brother workers, declared they would "shoot to kill" if necessary! and why should'nt they, indeed? We are living under a competitive system. The system of "free contract," a system in which the employer is under no compulsion, either legal or moral, to pay one man more than another is willing to work for. Labor under our present system is a commodity and has its prices like raw material. In reality labor produces all wealth, but has itself no value, and under proper industrial conditions it would be as meaningless to talk of the "value of labor" as to talk of the value of the earth. Now, if you are satisfied with those conditions, you have no right to quarrel with the laws that are made to enforce them. If you are ground to the earth, don't repine, if you have to starve, do it peaceably and quietly, and don't curse the laws and conditions that you have helped to sustain, and that you were too ignorant or indifferent to protest against, as long as you yourself were not pinched.

But if you are dissatisfied with capitalism, and the wage system, and its inevitable degradation, or if you at least desire to leave your children a heritage better than that you were born into, come out boldly and intelligently on the side of those who are trying to make this a world where justice, humanity and human brotherhood would triumph and prevail.

Mr. Geo. C. Ward shows in the February MAGAZINE that the votes of the railroad men alone, if intelligently cast, would have elected a judge of the supreme court, in Nebraska, at the late election, but instead, a judge backed by the railroad interests was elected!

The man who is too indifferent to vote in the interest of his class, and against oppression and injustice, is a traitor, and should be held in contempt. I tell you, men, the economic question is the bread and butter question. Every hour devoted to intelligent examination and discussion of those questions is worth more to you than a day's pay. Nor is there any excuse for ignorance on these questions. Any fairly intelligent worker with an earnest desire to learn can do so easily. Subscribe to the papers and magazines devoted to the interests of your organizations, and of labor generally. Having subscribed for them, read them. Many of you firemen never tear the wrapper from your magazines;

now don't deny it, because some of your mothers and sisters and landladies have told me so more than once. Don't be distracted by the demands and arguments of the petty bourgeoisie, who are trying to maintain an existence against the assaults of the capitalists, and still continue to live at your expense. Nor let yourselves be led astray by the arguments of the college professors of political economy. They are paid, or it is their interest to defend the present system of exploitation. No professor of political economy could hold his chair for a month in any American university who should teach socialism, and expose the system of industrial robbery by which his patrons are enabled to endow colleges and universities.

Nor do I think it should be difficult for the average workman to decide whether it would be better for him and his children, that the land of this country should be the property of a few capitalists who could levy a tribute for its use, that would keep you and your children slaves forever. Or, that the people should own it jointly to be administered for the benefit of the living. Nor should it be difficult to decide whether it would be better that the transportation interests of this country should be in the hands of a few private capitalists to be managed in their interests and for their exclusive profit; or, that the people themselves should own and operate the means of transportation in their own interests exclusively. Or, whether it would be better that one man should own a factory employing, say one thousand men, paying them one dollar per day each, and making \$1,000 profit per day himself, or that the 1,000 men should own the factory jointly, and divide the product equitably among themselves. Or whether, finally, it would be better for us to continue our present capitalist system, by which a few control all the means and instruments for the production of wealth, and are thus enabled to confiscate all surplus wealth over the bare cost of the subsistence of the actual producers; or, that those means of production should be used for the benefit of all.

It seems to me there is no room for choice to the intelligent workman. As a preliminary measure, however, every railroad man should join the American Railway Union. Not until the men are so thoroughly united that they can stop every wheel on every road from Maine to California can they expect to succeed. In your organization caste should be abolished. The interests of every workman is identical; their enemies are the same. Then when you are so organized, and then fail, it will compel the government in self-defense to step in and assume control and ownership of the roads. This, in my judgment, will be inevitably the final out-

come and solution of the question, and that before many years have passed.

Under the caption "Some Consequences of Socialism," Mr. W. P. Borland, in the February MAGAZINE, is generous enough to admit that the theory of socialism "is indeed a noble one," but fearing that this admission might unduly elate us, he proceeds to raise, *a la* Middleton, the gaunt spectre of religious persecution as a necessary, or at least a possible result of the adoption of socialism. To both of my critics the doctrine of total depravity is something to believe in and cling to. In ages of ignorance and fanaticism, men persecuted those who differed from them in religion, *ergo*, while humanity exists, human nature under all conditions will remain the same. The logic is weak, and my critic's pessimism discredited by experience.

There is no more reason why religious persecution should obtain under socialism in America than it does at present; on the contrary, there are many reasons that could be urged why it would be less likely under a social democracy. He admits that "modern socialism is truly a purely economic movement," and then somewhat inconsistently asks "if the frankly materialistic ones are not the only real logical socialists," and quotes "The Religion of Socialism" in support of that view. This book, he asserts, is much better authority on the subject than I am. Let me assure Mr. Borland that he is mistaken. "The Religion of Socialism" is a clever book, by a clever author, but it is not a classic on that subject, for the reason that the title of the book is a misnomer. There is no "religion of socialism," any more than there is a religion of chemistry, or physics, or of the differential calculus. There is a morality, and a humanity of socialism, but no religion of socialism. Socialism is concerned solely with this earth and its inhabitants; of the political economy of the skies it knows nothing, and has no theory on the subject.

All the difference between the "frankly materialistic," and the Christian socialists, is that the latter claim that socialism is merely applied Christianity; that the precepts of the New Testament, if carried out, would evolve in socialism, and they call Christ the "first socialist." The materialists demur to this, they point to the fact that slaves and their masters have been attached to each other with an undying affection, yet without any sense on either side of injustice in their reciprocal relations.

The Rev. W. D. P. Bliss, an orthodox Christian, and an authority on socialism, says: "I am a socialist because I am a follower of Jesus Christ, and a Christian, because I am a believer in Karl Marx." Mr. Bliss is quite as good authority on the sub-

ject as Mr. Bax. Mr. Borland, however, appears to think that if the Bax men are in a majority in the socialist state, that they will make Mr. Bliss recant his belief, that the ethics of socialism and Christianity are identical, or burn him at the stake, or at least expatiate him. The subject is really not worth discussing seriously. It is merely an effort to apply the *odium theologicum* to socialism.

Mr. Borland concludes his article by "pointing out a fallacious assumption of Mr. Stuart's . . . although our government is theoretically one of the majority, practically it is not so, and when Mr. Stuart makes the assumption that he does with respect to our government, he displays as complete an ignorance of the canons of criticism as that of which he accuses Mr. Middleton." To which I reply, first, that the "canons of criticism" have nothing to do with the matter, it is a mere question of fact. Secondly, in making the assertion he was quite as captious and probably less sincere than when he raised the religious question. I assert, on the contrary, that not only theoretically, but practically, the majority rule in this country. If Mr. Borland replies that the multitude merely follow a few leaders, and that practically a minority rule, I reply: that fact does not vitiate my statement, it is still the majority of votes that counts. There is not a law desired by a decided majority of the American people that could not be enacted and put in force within six months. That so much vicious legislation is enacted is not because the majority does not rule, but because the majority is economically ignorant, and consequently apathetic and indifferent. The power, however, rests with the people all the same, as the changes in the electoral rule within the last two years clearly prove.

Mr. Borland is quite as well aware of this fact as I am. In an article in the *Twentieth Century*, of January 11th, he says: "Why, if there was any such universal awakening among the masses as many reformers assume to be the case, our present economic conditions would not endure for a month. We should certainly have a rearrangement of our social system or a bloody revolution within that space of time . . . They are apathetic, indifferent, they want no change in the existing social status, because they are utterly unable to conceive of any different state of things than the present as a possibility."

Mr. Borland has stated the case accurately, it is not because the majority do not govern, both practically and theoretically, that they do not change present conditions, but because they don't want to. When they want to, and are in earnest about it, the conditions will change quick enough, and here I would like to answer Mr. Borland's query, why, in view of the admitted apathy and indifference of the masses, "intelligent socialists predict the coming of the co-operative commonwealth within the space of a dozen years." Socialists do not, for a moment, suppose that so great a change in our industrial system will be effected solely as the result of their propaganda. Mr. Borland, however, should take into consideration the forces that are working in our favor. See the object lessons the trusts are in—showing the ease and economy with which large businesses can be managed. The elimination of competition renders the control of those large aggregations of capital a matter of a few simple rules. Then think how insignificant our efforts are in making socialists compared with the splen-

did work done by Rockefeller, Vanderbilt, Whitney, the Standard Oil Co., *et id genus omne*. While we are appealing to the brains and intelligences of the workers, those gentlemen, our auxiliaries, are converting them through their stomachs. Those we fail to reach one way we will be sure to the other. The evolution and tendency of industrial conditions are inevitably forcing us to socialism as an alternative from starvation, or a bloody revolution. Even that astute apostle of individualism—Herbert Spencer, predicts the "coming slavery," as he is pleased to term it. The capitalist system is rapidly breaking down over the whole world, and I shall be greatly surprised, as well as disappointed, if it lasts a dozen years longer.

Mr. Borland concludes his criticism, in the February MAGAZINE, with the statement that:

But even in theory the majority has now no power to decide, absolutely, what the people shall eat, drink or wear, while under socialism they unquestionably would have such power; and the question up for discussion is, would it be in the interests of humanity to give such an extension to the principle of majority rule as social democracy (ochlocracy) requires?

To which I reply, that under our present political system the power of the majority is absolute. The majority, providing it is strong enough to enforce its action, can now absolutely prescribe what the people shall eat, drink and wear, and what religion shall prevail. No extension of the power of the majority is contemplated, or would be possible under a socialist regime. All devices and checks against hasty legislation that now obtains would be retained under social democracy. I know of no class of people who would be more likely to guard their individual freedom than socialists. No such interference with freedom of action as now obtains would or will be permitted in the co-operative commonwealth. So that Mr. Borland's somewhat querulous query, "Would it be in the interest of humanity to give such an extension to the principle of majority rule?" is as unmeaning as it is unnecessary. Unless Mr. Borland can explain why the majority, having now the power, fail to use it in the manner referred to, and why they will do it under the admittedly better social and material conditions that will prevail under socialism; he should frankly admit that he has been raising bugbears to frighten the timid and ignorant. It is barely possible that he has underestimated the intelligence of his fellow workmen. *Quem scire!*

In the March, 1893, number of the MAGAZINE, Mr. Middleton closed his first article with the statement that:

I know of but one panacea for social ills, and that is the elimination of ignorant selfishness and unscrupulous greed in the individual. Without the moral intellectual elevation of the individual, the most per-

fect form of government might prove the worst form of exploitation and ruin.

It would appear that a year's defense of the single tax method of exploitation has not raised his opinion of the value of economic changes as a "panacea for social ills;" on the contrary, his conviction that moral improvement is the basis upon which humanity must principally rely for any betterment of "social ills" is strengthened and confirmed, for in the December MAGAZINE he declares:

That state will be reached only when the golden rule shall be the guiding principle of all intelligent workers. When that shall be, then nations also will be controlled by the same principle, and not till then. The individuals compose the nation, and the nation cannot be long above the average moral standard of the individuals that compose it.

"Methinks I have heard something like this before. 'First make men individually good, then justice will prevail and all injustice will cease,' is the universal cry of the canting hypocrites and Philistines as an excuse for them to continue the present system of exploitation and robbery. To such sanctimonious snivellers all efforts to improve our material and social conditions are futile. Its 'a' a muddle," and there is no use in human efforts; better leave it in the hands of the Lord, who, in His own good time, and His own way, will bring all things right, if not in this world, then in the next world, without an amen. This is the parrot cry heard from a thousand pulpits by men who have either not the brains and inclinations to help make this world fit to live in, instead of fitting us for another world, or who think it is wicked to try to improve humanity by mere earthly measures.

Yet, there is no fact in sociology more scientifically established than that no improvement in moral or intellectual conditions can be effected among those who are in the grasp of continual poverty. No mental or moral improvement can be effected in a man with an empty stomach. Material improvement must precede moral or intellectual. Man is a creature of circumstances. It is everywhere admitted that vice, crime, mortality, are the direct result of environment, and that with every improvement in the environment crime will decrease.

In the tenement districts of New York City it is possible to predict the small percentage of the children that are brought up under such conditions that will become respectable members of society. Remove the children from such conditions before they have become contaminated, into better environment and it is possible to completely change the ratio so that it will be the small percentage who will turn out bad.

Forty years ago an earnest Christian commenced work among the slums of English towns for the purpose of saving souls

for Christ. He started with the idea that a soul once "soundly saved" would likely remain saved regardless of earthly conditions; that, indeed, salvation would so fill his whole soul that he would consider earthly things as dross in comparison with the everlasting joys in store for him when this wicked and fleeting life was ended.

After forty years of experience among the poverty-stricken "submerged tenth" of England, General Booth has written a book—"Darkest England," in which he states after an experience greater than any other man on earth, that no moral or spiritual improvement can be expected of a man unless he is permanently raised out of a state of continual poverty. A man's material wants must first be attended to before any appeals can be made to his moral nature, and not only so, but any improvement in his moral nature, to be permanent, must be accompanied by better and continuous material conditions.

So that for the mere purpose of saving souls, General Booth has been compelled to appeal for help, to put into practice an immense project for giving employment to the outcasts of London and other cities. He is not a philanthropist, or a humanitarian in the ordinary sense of the terms. He merely wants to save souls. If poverty would help him in that effort, he would gladly abandon his social schemes, and devoutly pray the Almighty to bless us with poverty, but he has been literally compelled, as a condition precedent to the saving of men's souls, to adopt measures to permanently save their bodies.

A withering indictment of present industrial and social conditions is, that the ambition of General Booth is to raise the condition of the lowest orders of English society up to the level of comfort of the London cab horse! Think of it, one-tenth of the population of London whose condition in regard to food and shelter are below that of the London cab horse.

General Booth's experience has furnished an unanswerable argument to every reformer who is trying to improve humanity by purely secular and economic changes in our present industrial and social conditions. Our competitive system puts a premium on dishonesty, self-assertion, cunning and unscrupulousness. The possessors of these qualities are the "fittest" to "survive" under present conditions. Let us substitute for this system one of human brotherhood; of fraternal co-operation, in a word—the social democratic state.

The public debt of the United States is authoritatively stated at \$1,588,464,144. Labor can look at the figures and remember, if the debt is ever paid, it will be by working-men out of their earnings.

## AN INTERRUPTED LOVE FLIGHT.

*A Manx Story.*

BY FRANK A. MYERS.

Isle of Man! O, yes, I know a great deal about it, for I was born there, and lived for over thirty years in that delightful land. When I came to America, forty years ago—that is a long, long time—I spoke very poor English, and my life has been a very hard working one, so that I've had few opportunities for learning the language and its literature as I would like. But I know much about the customs, the legends, the genii, and the romances of that proud little world in the Irish sea.

Just a word about the Isle, then I'll tell you a romance. I will not say it is mine, but I know a good deal about it.

This beautiful little world is twenty-six miles from England, sixteen from Scotland and twenty-seven from Ireland. A ridge of mountains traverses the whole length of the Isle and terminates in Mt. Sneafeld, 2,004 feet high, from the summit of which can be obtained a panoramic view of the Island and England, Ireland, Scotland and Wales. To think of a little kingdom of over 50,000 people all dwelling on an area of 227 square miles, and blessed with every variety of scenery, and pursuing every pleasure that belongs to mankind elsewhere on this big, round ball. This teeming, populous land is only eleven miles wide and thirty-one miles long, but its men, in my day there, spent their lives principally on the sea in the herring fishery business. Its capital is Castletown, at the southern end of the Island, and its principal cities are Douglas, Peel and Ramsey. It has a delightful climate, but on account of the gulf stream its sun is almost always obscured by impenetrable fogs and clouds. The Island was originally peopled by the Manx, a Celtic tribe, whose language, a sub-dialect of the Gaelic, or Celtic, forming one branch of the Erse and Irish, is still spoken in parts of the Isle. Their speech is much like the Welsh.

It is a little kingdom, I might say, by itself, having all the beauties and glories of nature and all the manly independence and sturdy good sense that belong to a race of fine physical beings. Look at me now, even in my old age. When I straighten up I'm six feet six in my stocking feet, and I'm a fair sample of the Manx race, and a pure lineal descendant of that early, hardy people.

Knowest thou that green spot, 'mid the billows of ocean,

Whose valleys are wild, and whose mountains are bare:

Ever shrin'd in my heart's deep, undying devotion,  
The lonely lov'd mist gem of Mankin Mac Leirr!

Knowest thou where Holm Peel's proud ruins rise hoary,

Where the ghosts of the princely at dead midnight mourn?

Knowest thou where Rushen still frowneth in glory  
Hast thou heard where the death-shot laid low  
William Dhoane?

Knowest thou the spot where the rose and the thistle,  
The leek and the shamrock are lovably bent;  
Where shrill on the hills is the hollow wind's whistle,  
Where the fairies by moonlight dance over the bent?

Well, now—I suppose that is the way to begin a true tale—a little portion of the early life of John Ramsey will be a page torn out of the history of the Manx people, an epitome of all that they are and do—I mean socially. Look at me and you will see a fellow about like John; tall, athletic, strong, spirited, bold, a good runner, a good swimmer, and shapely and of the manly weight of about 180 pounds. Many saw him catch a sheep by outrunning it, so swift was he on foot. The beauty of his manly face was a strength to the beholder, and of course all the girls—it is their way, you know—fell in love with him. Indeed, an Aaron Burr in his general make up, they very naturally fell in love with him, and I never blamed them. But the close circumstances of life, I might say, drove him to a sea life, and he became a fisherman at fifteen. Every Saturday he was on the Isle to spend Sunday, and then was when he did his courting.

No one ever got a better recommendation from his parish for good behavior than John Ramsey, and he was always beloved for his religious benevolence and broad, human intelligence. He was at sea fifteen years, and in that time he had many adventures. You have never been overboard at sea, have you? No. Well, you don't want to be, I can tell you. John was overboard once, when the sea was surging like a monstrous boiling cauldron of his Satanic majesty, and he floundered in this "measureless expanse" for fifteen minutes, an age to him then, and had he not caught in the nets and been pulled in by his mates he would have been lost, lost in this "image of eternity" in its ever changing aspect of "breeze, or calm, or storm." The last seven years of his sea life he was captain of a vessel, and while he was captain the boat never made better runs, and not a man was lost. That was a proud record.

Farmer William Kian lived a mile up the river from Douglas. The road was elegantly macadamized from Douglas to Peel, across this lovely and scenic Isle, and Farmer Kian lived on this road, in the midst of the beautiful river scenery. He had a lovely young daughter, Ellen, with cheeks as sweet as the sun-blushed peach, and a disposition as pure and modest as the rose that embraces the sun's bright rays.

One Sunday, just after church, John Ramsey made her acquaintance in an accidental way, and that led to further communication between the two. A small thing sometimes

hinds young, untethered hearts for life. It all happened this way. Just as Ellen was about to enter her carriage after service, to drive home with her parents, who were already seated in the vehicle and waiting for her to step in, a son of a nobleman, admiring the lithe, shapely, airy, divinely beautiful maiden, stepped up and bowing and scraping in a simpering way, and making a courtly obeisance to her, asked if he "might be permitted to hand her to her carriage." Her foot was already on the step. John Ramsey, standing near, saw all this and smiled inwardly at the fustian-like antics of the serious son of a nobleman. I'm not sure but a visible smile also glimmered upon his lips, which opened, we will say, like a pretty-by-night after the sun sets. Bith Fintain, that was the name of this scraping son of a nobleman, put out his delicate white hand, that never knew the joy of labor, and offered to take her hand and aid her to get into the carriage. Here the impatient, restless pair of blacks dashed suddenly forward, perhaps scorning such a piece of luncheon human flesh as that which they saw approach Ellen, and hurled the girl to the ground with stunning force. As was to be expected, Bith Fintain stood in helpless pain and simply gazed at the prostrate girl. But John Ramsey ran up quickly and lifted her to her feet. Fintain gave him a reproving look and knit his eyebrows threateningly. The truth was, he felt the reproof of John's manful act.

Ellen turned her lovely eyes upon her helper, and said sweetly: "I owe you many thanks."

In response to her John said: "I'm sorry—are you hurt?"

"Oh, no, sir; but I—I— might have been, but—"

The beautiful mercurial dappled blacks were checked within a rod, and John assisted her to the carriage, and she took the occasion to ask his name.

"John Ramsey," he answered.

"I hope to see you again, my friend, under more favorable circumstances," and away she sped behind those fine horses.

From the peculiarly happy light on John's face I should judge he was lifted up into the seventh heaven of prospective and imaginary love. The ugly scowl on Bith Fintain's face was a joyful proof of the significance of his triumph over him, and John walked carelessly away, thinking more about the girl than anything else in the world. All that week, with every swash of the waves against his fishing smack, he heard her sweet voice, and, dreaming in his bunk at night, he was assisting to her feet one of the purest and loveliest maidens in the universe. His rough mates twitted him all day long about the beaming smile that turned up the corners of his lips, and declared he

must have seen an angel last Sunday. With unequivocal good humor John always responded to their banters that he did see one.

The next Sunday night about nine o'clock John stole softly into the yard of Farmer Kian. It was the custom there for the young men to visit the young girls quite late, and then not stay very long. These visits were kept profoundly secret from the girl's parents up to the time of the engagement, and I must say, for I know, that a more honorable and respectable attitude toward each other never was practiced by any other class of young people on God's green footstool. There was no particular reason for it that I know, save that it was the custom of the Islanders, and had been practiced by our parents and long before them. A young lady, you may be assured, knew pretty well who were acceptable to her parents and who were not, and it was not very often, perhaps a little more frequently than the appearance of comets but not very much, that she willfully and utterly disregarded their wishes. Now and then one of Mother Eve's lovely daughters who permitted her untamed affections to carry her away into by and forbidden paths would consult her own feelings and, as it often happened, her better interests, and thus clandestinely meet her proscribed lover; and sometimes taking the bit in her teeth, would marry him. These buxom, lilting, blithe, sweet Manx daughters knew what the decorum of courtship was, and any young fellow who did not "walk the chalk" of these common, unwritten laws was at once most effectually ostracized and marked off their acquaintance books. No apologies, no sort of apologies, could amend boorishness or impropriety. His reputation was no less dependent on his conduct than his chances of winning the heart and hand of the fair damsel. Such a strict, ostracizing sentiment in this great land of ours I fear would get rather a cold shoulder. And I do not say this in a bold, senseless way, for I believe that America contains the finest type of beautiful, modest and chaste women; I defy the world, not to beat them, but to equal them. They are as pure as Penelope, who undid her importunate suitors by her knitting, and like St. Pulcheria, they are as eminent for nobility as worthy of unqualified admiration.

Now, on this Sunday night, John, as I said, stole softly into the yard of Farmer Kian, not as a criminal hiding from justice, but as a lover who would win Ellen, who, in his fresh, young imagination, was the peer for beauty and loveliness of any maiden who ever trod the echoing chambers of some ancient castle or hall. He tossed a pebble lightly against her window pane, a custom to notify the awaiting beauty of the pre-

ence of her gallant knight, and in a moment he had the unalloyed satisfaction of seeing her window raised silently and a maidenly form framed therein for a moment in expectant hesitancy. It was but a black shadow in the darkness, but the conscious knowledge of who it was not only made him rejoice but bow in worshipful adoration. You see, not to open the window and not to appear at all is a flat and peremptory refusal to see the petitioner for an hour's *tete a tete* with her. No wonder, then, that John felt at the instant that the word Ramsey had a new, and broader and more significant character than it ever had before. No wonder he imagined the Isle of Man was the center of the universe. If before he thought Ellen the most proper young lady in the world, he now conceived she was as wise as she was beautiful and charming. Bowing her noble and queenly head through the window near him, she whispered gently:

"Who?"

"John Ramsey."

Immediately turning, she walked away, leaving the window open, which was not only welcoming him in by an act that spoke louder than words, but a silent admission on his first call that if his purposes were right he might not in vain lay siege to her unpledged heart. The girls there scorn to coquet and dally with numerous lovers. They do not squander their sacred love on one and another till they cannot count the number, and finally bring to the altar a mere fragment of honest love for the one they finally make choice of. They are not omnivorous lovers. They pledge their plight to a man whole-hearted.

The open window was soon darkened by his strong form climbing in. Closing the window the two were alone in the dark chamber. A light, you see, might disclose them to the young lady's parents. The hazard in this regard made their meeting all the more pleasant and memorable.

She did not know whether to expect him or not, she naively confessed in modest undertones, but she had often thought of him since that awkward accident in Douglas last Sunday. Hope sprang eternal in her breast that she would see him again some time and renew her thanks to him for his gentlemanly behavior on that occasion, and here this opportunity was most benignly, as if an angel had heard her sighs and brought her wish to a happy reality, granted to her.

With a rather stammering tongue, unused to the felicities of speech prevalent in the social circles, he declared he only did at that time what he saw the emergencies demanded, but that ever since then, he acknowledged, with humble frankness, he could not but think that her gracious manner then, the outcropping of a sweet nature, was a warrant for his call on this evening.

Then he began to tell her of his life on the sea—it was his fad since he had become a sea captain, which was a new and honorable experience to him—and before they were aware of it the allotted hour—by custom allotted—had passed away into unforgettable sweet memories. They were now well acquainted, and when he climbed out the window and disappeared in the darkness it was well understood between them that he would make regular Sunday evening calls.

The parents—it may seem strange to you—did not ask their daughters who visited them. They respected the daughter's secret, and trusted her upon her honor. They were not unhappy Paul Prys. But if the father could unravel the secret for himself, he would do it more for a joke than as a personal gratification. Gifted with as much honorable and investigating curiosity—nothing of the itching kind—as fellow mortals can boast of elsewhere on the green globe, they took what they considered a fair and sportive way of discovering the young lady's secret. After a time—sufficient for the lover to have made a path by his numerous comings had not so much space of time between each call permitted the grass to grow again—Farmer Kian decided he would exercise a prescriptive right belonging to parents and turn the light of discovery on the young man. So one night as hapless John, at the end of his sweet hour with blest Ellen, climbed out of the window to return home, he was not a little astounded to find a masculine hand reaching out of the darkness for him. The patient-tempered lady, standing at the window and seeing the unexpected event, comprehended what was in the wind, and boldly cried out:

"Run!"

John's wits were not dull, and he knew the meaning of the grasp made a little vaguely by reason of the night shades. By a lithe and dexterous swaying of the body he escaped the black arm that merely brushed his simple frock coat, and the next moment he dashed away with all his speed, leading Farmer Kian a splendid race across the fields and hedges and goss. The farmer was not a clumsy sprinter, and John's feats in rapid leg motion were well known by his friends, and the chase was a very close one. Here they went, hurry-skurry, jumping and leaping, flying right on, the one close upon the heels of the other. Spurred by the glowing sense of keeping fair Ellen's secret inviolable, John ran with a laughing but spurring heart, and Farmer Kian, feeling the exulting pride the young man would have in the event of his escape, trebled his efforts to capture him. An unsuccessful joke is no joke at all. But with all he could do he could not overhail him, and after wearing himself utterly out in his vain effort

he at length gave over the chase and sat down far from home to rest. John disappeared in the darkness. Farmer Kian's purpose was to catch him and discover his identity. His hoary incognito should no longer be a proud secret. Though he did not tell Ellen, yet she knew when the exhausted jester returned from the race that her secret was still her own, and she thanked John's excellent running gears. The next day her father was so stiff and overcome with his unwonted exertions in the race that he could not go to Peel, though he had some important business there on that day. I want to say now that he never again attempted to run Ellen's beau down to the daylight of discovery. The next Sunday evening John and Ellen had a big laugh over the affair.

One night while sitting by their little peat fire—peat is turf dug out of the bogs—John proposed to Ellen, and after some little halting and limping—a sort of fashion among the ladies (I know no other reason for it)—refusing to consent yet consented. There are emotions of the human heart for which words have not been coined, and these sweet echoes of the divinity in him he experienced for some time afterward. These feelings, sweet and pure and deep down in the heart, clog and grow heavy when weighted down with imperfect words. Every ethereal thought has not yet been caught in the meshes of a word to be uttered by the lips, and therefore John, in his limited vocabulary, was as happy as the lover gifted with linguistic gymnastics, if not happier.

That night as he went home he was wrapped in a sensation that was heaven itself. Passing slowly along, head down, in deep, meditative thought, he was startled from his reverie of blissful love by a dancing light a few rods away near the edge of the bog. Lifting up his eyes in doubt of his senses, and pausing to view the flashing, flickering lamp of the morass more closely, he saw it move gently back and forth, with a motion of quivering nervousness. It was not as high as the amphitheatre where his heart was trembling, divided between his love-bliss and this ghost-like light, and there was no person near it as far as he could determine. It was a pale, mellow, yellow light, but sparkling like an infinite brilliant in the azure dome circumscribing the opaque earth. His pulsing life-ventricles started up a little more lively, a shiver of inexplicable mystery chased up and down his vertebrae, his hair under his wideawake became porcupine quills, and he had a general sense of having been met in the dark alone by an unknown enemy. In a minute this unpleasant sensation was succeeded by a desire to know what the light was, and how it could be there like a warning from the

grave of some ancient Norseman or Druid, or bold warrior of the days of good King Orry, who once wisely ruled this beautiful "sea-girt Isle." Its motions were not unfriendly, and he imagined it beckoned him to follow. If it was a spark let down from God's own throne, it would do him no harm; if it was a light of this earth he was not afraid of it; if it was a lamp from Dante's Inferno there was no reason why he might not cease following it at any moment. And if it was the fairy lamp of Robin Goodfellow, who often held mystic dances with the fairies on the bogs at the witching hour of midnight, when graves yawn and ghosts walk, and the long past dead hold their saturnalia, he would simply be disturbing a fancy frolic of these night waifs, and Friar Tuck would not hold malice against him for that. The first step was taken, the Rubicon crossed, and he started toward this wavering lamp. But he had not reckoned with his host very well. As he approached the mystic light, quivering, it receded gently deeper into the bog. Quickly he followed after, getting deeper and deeper into the wet and marshy ground and the impenetrable darkness. Now, as if under the influence of an unwilling charm, impelled by a spell he could not throw off, he followed after, whithersoever it went, here and yon, up and down, round and round, until he was wet and muddy from feet to head. Then he became conscious that the fairies had him, these merciless elves of the night, and that he was moving along without a will, a mere atom of blind fate, like a man of destiny. Another power ruled him, the night-dancing fairies. He was perfectly self-conscious, knew who he was, thought as he always did, but a dumb, ague-like feeling possessed him, and his legs moved on and on in spite of himself. And now he felt the little urchins of midnight festivities clinging to his hair in myriad numbers, and his whole body was fairly weighted down with them. One was perched on each eyebrow, and the master of ceremonies sat astride of the bridge of his nose. An aroma like the sweet incense of the finest perfumes that ever tickled the coarse sense of the human nose pervaded the air. The bit of a fairy bridle, made of the finest impalpable material and brought from a kingdom brighter than the human imagination can invent, was pressed between his teeth, when his subjugation to fairy whims was complete. There was no alternative but to tramp and trot at their whimsical dictation all night long, till the god of the orient drove them away with his first gray beams of the morning. Up and down he went, through water and slush and fog-damp grass, now speeding along a little plateau like a horse under galling spur, now winding through a tangled growth of bog brush as docile as an Orkney

pony, and now splashing into water that he could not predetermine the extent of on account of the black, Cimmerian night—always and forever onward. Rest! My dear friends, fairies are merciless riders. Drearily and all too slowly the long night hours move away. There was Hobson's choice, and that was *on, on*. First the fairy bridle bit pulled him to the right and then again to the left, and sometimes these midnight prowlers and whisperers in lovers' ears of foolish things turned him entirely around, and made him retrace his steps, sportively unmindful of the comfort and wishes of their human horse. It was a night of hilarious jollity to them. They blessed the *ignis fatuus*, now long deserted in the edge of the bog, for bringing them a horse to ride in gleeful mirth till old Sol drove them to their hiding places. It was not often they had such a rare and racy privilege, but when it did come they made the most of it, like a young girl does of her first love. They tangled his hair in hopeless knots, and now and then the proud rider on his nose would make that member tingle with his dainty quirt. Occasionally the taunting little fay beneath his chin would make his throat smart with his sylph-like whip, and spring around in glee over his shirt bosom, in ecstasy over his own activity. The irrepressible little sprites on his ears kicked their heels against that member like idle boys on a large pine box, and now and then they would race over his cheek bones in a mad spasm of glee and tickle the winkers of his eyes. O, sirs, I only tell you what I know. You have never lived in that grand old ocean-washed Isle, I have. There were the scenes of my fond love life, trebly sweet now because they occurred in my hopeful youth. It is a pity, I say, that youth and love cannot last always, notwithstanding the elfins of the bogs. Well, lovers do sometimes fall into bogs, nought their efforts to keep out. Poor, fairy-riden John was sustained in this trying ordeal by the fond remembrances of Ellen, that lily of the heaven, who had only that night promised to be his for better or worse, a partner of his joys and sorrows as long as they lived. Trudging, stumbling on wearily, like a night demon of the swamp, he knew no rest till jocund day stood tip-toe on the misty mountain tops, and the broad, expansive morning came like a new birth from God's own eternity. Then the spell was gone and this fairy victim was, like Richard, himself again. But what a miserable, unrepresentable plight he was in! What a crestfallen appearance he wore! How overtaxed his physical strength! And what a stress of mind he endured—conscious but yet helpless! His father and grandfather before him had often told weird and uncanny stories of their experiences with the fairies—those ghosts of genera-

tions long ago mouldered back to mother dust—but they always seemed so far away that he never imagined he would have similar experiences. Great heavens! When he began to understand the force of what had actually occurred to him he shuddered. Ridden by fairies all the night long—was he sane, or was this the awkward delusion of a dream? Look at himself! No, his outward condition and his stunned feelings were orators of too forcible eloquence to impeach by argument. As the gray beams of day shot up along the eastern sky like streamers from the battlements of heaven, and began to arouse sleeping nature enrobed in the pall-like ceremonies of night, the twin brother of hades, and shadowed forth in the misty morning the hills and valleys, the dark spots of leafy timber and the cleared farms, gradually unrolling a beautiful panorama of the earth to waking eyes, he began to wonder where he was. What was the flower-flecked earth to him, or the gorgeous scenes of ample and omnipotent nature, that he should pause to behold these glories? Where was he? In the fullness of time he "picked himself up," as the phrase of the stupid goes, "two or three miles from anywhere," in the midst of the bog, where the echo-mocking night bird pipes his jarring flute of inharmonies, and the storied monsters of imagination dominate, and the shades of Pluto in hapless disorder are the regnant spirits. And what a shock to his high-keyed senses after full arousalment to his true situation! A week, a month, scarcely sufficed to tone down his sense of that event to the ludicrous view of it, but in time his chaotic apprehensions assumed form and body, and he could smile to himself a little. Then he told Ellen about it. At first she was disposed to be wonder-touched, and anon laughed with him, and by and by rallied him over it as an infinite jest.

After the announcement of their engagement to the parents of the pure Ellen, a storm cloud began to gather over their heads. Farmer Kian, remembering his bootless race, had no unerring predilection for John Ramsey, and roundly berated his daughter for her unwise choice of a life partner. With parental malignity, such as presumptuous parents sometimes exercise, he assumed to make choice for her, just as if she had no right in the matter that he was bound to respect, and as if he had a holy prerogative to spoil her happiness for his own if he so desired it. He urged her to take Bith Fintain, the nobleman's son, who was pouring honeyed words into her unwilling ears, and in language more forcible than elegant sought to compel her to yield to his imperialism. As a dutiful daughter she had the too well trained sense that obedience to her parents was a divine injunction.

tion, and with reluctance she began to loosen her good heart from its entwinements with the simple heart of her betrothed who knew no better than to love with all his mind and soul and strength. She endeavored to chop up the roots of her love, as a gardener does certain obtruding grasses in his well watered and carefully tended flower bed; but which the more he cuts the more prolifically they recreate themselves, but, poor girl, the work was greater than the seven labors of Hercules, or the "evic" or fine demanded of the three sons of Tureen by Luga, for the murder of his father, as faithfully recorded in the forgotten yesterday of Irish legend. It is not for me to tell you of her sorrows and repeated efforts and failures to conquer herself, of the tears and crashes in her tempest-tossed soul, of the reverberations and dreads that populated her aching, joy-blasted heart, of the gorgeous and solemn crowned demons of wrath and cheerlessness that sat supreme in her love now, and issued ukases against her outlawed bolier feelings, of the epiciedial ditties ever ringing in mournful mockery of her dead first great love like wind requiems in the solemn pines in God's half acre, of the burnings and midnight wakings in her vanishing soul-life, of the listless eyes and half-formed faith in the insincerity of all earthly hopes, of the slow, cruel process of burying all the best she had so far found on earth—her first young love—of the echoes of the clods on the coffin in the new made grave in her heart of hearts, of the abuses and sneers and commands and loud, heartless words of her misguided father—what we might call father storms—of all these things which were the dowry portion of a ruthless, dead, unthinking parent; but I will let you imagine a little for yourself.

John Ramsey noted her loss of something toward him, he could not conceive what, and finally, after persistent requests to divide her sorrow with him, she told him the whole story. Tempest-riven, shocked as the earth is by a great seismic quake, he felt like going forth and plucking up the world by the roots and hurling it into the sea. Where was Adam Cupid now, that the whirlwind of death had swept away his love hopes into the abyss of pain, and why could he not stay the tinkling death knell on his heart as well as begot bright hopes that were never to be realized? Where were all his fond dreams as he paced the deck of his little fishing smack at noon and at night, under the midday sun and under the twinkling stars of heaven? These pleasant and life-stimulating imaginations, that peopled his brain as thick as the studied baldrick of the nightly sky depths, were swept overboard in the storm and lost. At one word Ellen had been removed from him as far as the antipodes. What was his by

all the honorable laws of love, by a *finesse* of parental interference had been snatched away, and the flowers and beauties and glories of the earth that still nourished him from her bosom had vanished as by the trick of a prestidigital manipulator's wand. His soul had gone up in smoke and in its ashes had arisen a stone—a cold monument over the grave of his love. He surrendered to the fates, and he knew no better. In the simplicity of his heart he respected the parental decree, because he knew not how to escape it. The license of elopement was not a custom there among the youth to escape the galling chains of paternal tyranny—not a vigorous, highhanded means of self-assertion—as it is in America. John bowed his head to the yoke like a dull beast of burden, and went on with his existence without an animating, life-giving purpose. Unspeakingly unhappy was his aimless being now, with the glad, inspiring sun of hope everlastingly obscured in his love life. He was passing under the rod.

An old man longs with aching sadness to tread once more before he crosses the river of death, whose murmurs echo a painful cadence in his age-hardened ears, the paths his youthful feet danced over in sprightliness and bounding joy—his dead youth revives in him with his expiring throes,—and John could not refrain from going to Farmer Kian's, if but merely to look on the face of her who was dead to him. Ellen, Ellen, what a ruin you wrought!

One Sunday afternoon his feet, by a half-unconscious motion, carried him to the farmer's home. He stayed around the premises for some time, indecisive, wounded, bleeding, almost like a prowling thief. Bith Fintain was there, and others, and among them his brother from another parish. At length his dumb feet carried his wearied frame languidly up the walk among the unobserved flowers to the door. He was looking for Ellen, and was met by the proud, haughty, overweening young Fintain. This son of a nobleman, upon whose land Kian dwelt, confronted him with a lowering frown and gruffly demanded:

"What do you want here?"

The poor, forlorn fellow stared stupidly at him, scarcely understanding anything, in his colorless, wordless, dumb state, and answered nothing. Reiterating his insolent interrogatory, Fintain said:

"Sir, what brought you here?"

"I don't know," answered the simple fellow unconsciously, after a pause, as if under compulsion.

"What do you want?"

The tone awakened John.

"By what right do you ask?"

"I'll show you, you impudent puppy—lying around here for no good purpose, I'm perfectly satisfied—trying to see Miss Ellen,

who would spurn you with her dainty foot as she would a repulsive whelp—hoping to get some clew to rob her of her good name and trail it in the dust of foul disgrace—spying out what you may be able some dark night to steal from Farmer Kian's plentiful larder or—"

"You lie in your throat deep down as your boots," broke in John with simple anger. The arousalment was complete, but in his trustful, respectful nature he felt prohibited from laying his heavy hands on one of the scions of the nobility—they were too powerful to resist in any way. A quiver of dread already stole into his heart over what he had just uttered.

"You vile cur of the damned! I'll show you." As quick as a flash of light the young blood—that is the way you would say it here in America—threw his large silk handkerchief—none but the noble could afford such an article of luxury and distinction—threw it over John's fated neck, and drawing it close, pulled him near to him. John could have lifted his brawny arm and spread the pretentious young man full length upon the floor, but the long-drilled dread of the land proprietors restrained him. In his credulous mind resistance was fatal. The silken noose tightened.

"Murder! Murder!" he screeched, half strangled. The noose was thrown as dexterously as if done by a strangler of India.

"Murder! Murder!" he gurgled. But his brother offered not to come to his assistance, because they were of different parishes. Humanity and family ties extended not across imaginary parish boundaries there then. It may be no better yet in such a case, for aught I know. Religious enthusiasm went only as far as the limits of the parish, so narrow and restricted were they. A little touch of grand American tolerance and charity would help that people, and liberalize their short-sighted and circumscribed views of humanity. Conquered by his social restraints, imposed upon him by a scornful and purse proud aristocracy, and held in check by the long indwelling sense that non resistance was the proper attitude of the lower toward the higher class, John was literally the victim of wrong training and erroneous conditions of society. But he understood by instinct that his brother ought to come to his relief, and when he did not a wound was made in his heart that cicatrized and remained a scar forever. Parish regulations and social habits, in this case as in numerous others, sealed a scorching hatred between members of the same family. These two brothers sundered their ways here forever. It was the forks of the road, each going different directions on to the end. And nobility—so called—did it.

Thrown entirely upon the law of self-defense, and preferring life to the observ-

ance of the rule of passivity, John strove to free himself from the hands of a rival, who was successful, not by honorable methods, but by the interests and power of a father, and in a helpless, child-like manner began to kick the shins of his antagonist and strike him about the body by throwing his elbows backward. This was in nowise to the taste of Fintain. This farcical, simple manner of resistance had no meaning to him, nothing unmanly and humiliating in it, nothing unfair about it, but he felt horribly outraged that any opposition should be offered to him, a nobleman's son, and more especially on his father's own land and at the threshold of his prospective father-in-law. With a whimpering "ouch" and an infantile cry of pain, lifting his too-ready mouth to a vicious oath, he gave the murderous silken noose a vigorous jerk and pushed John away from him. Freed but restrained by false impressions of his own manhood as compared to the wealthy class, John walked away with an abased air. Not a word in retort escaped his socially sealed lips. Ashamed that he had given occasion to such an unhappy event, he shouldered all the blame upon his own broad and charitable back. It could not exactly be said of him that of the *peras* Jupiter placed about his neck the front one was swelled to bursting proportions, nor that the rear one was unnaturally distended like a gormand's stomach. There was no disposition in him to search out his own faults or find delight in singling out the peccant steps of others. As he strode meekly away the last rounds that greeted his soul dead ears were:

"You imp of the old boy! Now carry your worthless carcass away from here to the carrion crows!"

The worst of all was that Ellen was in the room at the time and lifted not up her voice against the accursed assault on his life. She was a cold statue to him ever afterward.

Just as he reached the gate he heard the snarls and yelps of the two dogs kept by Farmer Kian, and he knew that they had been slipped from their leashes for devilish purposes toward him. Springing over the gate at a bound, like a frightened deer he started down the road toward Douglas on a dead run. His hope was to get beyond the usual limit of dog guardianship before they overtook him, in which event they would not be so vicious. The idea of being driven away from Ellen's door by dogs! What a change! What would not the world come to, if you gave it time!

Chance placed a stout, short club in his way, which he snatched up as he ran. Bounding along with all his assembled strength, he felt it was a race for life. In the event of being overtaken by the clamorous, ululating brutes, his club was his weapon of warfare. Their sharp teeth must

not rend his body like they would the flesh of the unthinking hog. He passed the limits of Farmer Kian's farm, skimming along like a mist cloud before the mast, the hounds bellowing closer and closer behind him. Now one had approached near enough to make a heavy lunge at him. The brute, enraged, missed its spring. With the rapidity of thought, John halted, and the dogs shot past in their accumulated momentum. As they turned one made a bound at his face, but a well-timed sweep of the club, dexterously handled, fell upon the animal's head and stretched him sprawling in the highway. The other brute, seeing the fate of its brother, fought more cautiously, but before it could fasten its fangs in him he had dealt it a sounding rib-roaster, and with a howl it turned back and galloped away. The other one, having recovered in a degree, crawled up, and giving John a wide berth, also slunk away home, an undignified, whipped cur. He almost wished the hound had been Fintain. The remainder of his way to Douglas was made without incident.

Connected with his priggery and his poor imitation of cockneyism Bith Fintain had the mean trait of revenge. Indeed, his undesirable qualities placed in the balance against his higher attributes would make his virtues fly up as if they were but of the weight of a feather. He was not only cowardly and mawkish, but he was an ape with male toggery on his useless frame. If he had a heart he never knew it, nor did anyone else. His capacity for proper and noble things was cracked in his creation, and there is, perhaps, an excuse for one who has only half a talent for better things, when others, less showy and theatrical in constitutional composition, possess ten or more.

To glut his craven and sandless maw, filled with the slag and filth of the base, he sent a valiant knight of mutiny, a veteran in sin and crime, to brew evil against John.

"With smooth dissimulation, skilled to grace,  
A devil's purpose with an angel's face."

This henchman of Fintain secured a place on Captain John Ramsey's boat and went with them on a fishing expedition. In a week's time he had poisoned, as with the deadly nightshade, the minds of all on board except the incorruptible friend of the captain, known by the name of Richard McCorkin. Things were ripe for a mutiny, and this henchman, who for humanity's sake shall be nameless, and further because I do not wish to perpetuate his identity—let it be buried in the dead past—had laid plans to throw the captain overboard and then steer his vessel to port and say he was lost by falling into the sea. In Richard McCorkin this schemer struck an unseen rock.

"The best laid schemes o' mice and men  
Gang aft aglee."

and this was one of them. One day at noon, while John was taking his accustomed mid-day nap, the gang of mutineers, headed by Fintain's moneyless dupe, surrounded McCorkin and began a struggle with him to hurl him overboard. This accomplished, they could the more easily work out their purpose of tossing John into the wicked sea. McCorkin fought with such life-defending grit that he knocked three or four down with his mallet like fist before they could seize him. Just then John appeared upon deck. He came as if the good angel, whom the Moslems believe attend every human creature, had warned him and brought him in the nick of time to the rescue of his friend.

"Ye devils!" shouted John, in a stentorian voice, and sprang toward them as if he would eat them alive like an orang-outang. The act gained him a moral victory, for bravery subdues evil-minded cowardice as a cyclone levels a forest, by superior force. Instinctively he knew what was in the wind, for he had observed beclouded brows and unfriendly faces for several days. There was not the shadow of a doubt in his mind but Fintain's friend—and what a fitting, soul-companionable friend he was—was at the bottom of the whole trouble.

"Cowards!" hissed the sturdy captain, awakened from his love-dead lethargy to a sudden, renewed object in existence. The cowards, detected in their plot by the very one of all they would have concealed it from, fell back, and as it happened, enclosed McCorkin in a ring. There they stood, sullen, defeated, rage-riven, like a whipped army glaring in the cannon-jaws of death, and awaited the new birth of the next moment from the womb of time.

By a shake of his arms behind him John's coat, or sailor jacket, dropped from his shoulders to his hands, and with a sweep of his arm it flew twenty feet away and into the sea. His piercing eyes, set on fire by the discovery of the mutiny, never wavered from the mad crowd.

"We'll kill the first man that enters this ring," Fintain's henchman at length found tongue to utter, more in the spirit of bragadocio than real purpose. When he spoke, John saw that they quailed before him, and, with the deliberation practiced by a young lady primping before her psyche in her boudoir, he loosened his suspenders and tied them tightly around his waist and pushed his sleeves to his shoulders. Now, with a bound, he leaped into the ring, and the mutineers moved back a pace further. Grasping McCorkin's dutiful right hand, he said to him:

"I've lived with you, and now I'll die with you."

The unwavering determination in his bold tone struck their wavering souls as ef-

fectively as the war-club of the unconquerable Atrides did the bony heads of their enemies. This act seemed like braving ruthless odds, like tempting the parcel, but it was his only safe course. He did not stop to reason; instinct and friendship guided him. Friendship was his pole-star, his Charles Swain. His classic soul, simple in its habits, never vacillated in the course it determined as the right one.

"Now, you hellians," turning about as he spoke, "to your places, every mother's son of you, or by St. Neptune's trident I'll throw you all into the briny deep. Go!" stamping his foot on deck till it sounded almost like the drop of the anchor on board.

Slowly, sullenly, one and another slipped away, till the last one had gone, and John and McCorkin were the only two remaining on the scene of this tragic act. These minions of Fintain—such unconsciously, but none the less contemptible and revolutionary for that—had no real grievance against their faithful captain, but like most men—in truth all men at the bottom of their hearts—they were foolish-witted enough to heed the specious propositions of their new seaman, who, with an oily tongue, promised them "changes" and "something new," the whole earth, for that matter. And they too readily accepted. Like fish, men bite at "bait," and sometimes they get caught, which is no more than a matter of unmixed justice. Detected and defeated in their scheme, as unprincipled as the African slave trade, they not only felt themselves to be devils, but they knew it. They consequently stole away to secret places, and there stared the heinousness of their contemplated deed directly in the face. One, and then another, repented, and these met and consulted, and decided that this "new man" was the cause of all this vengeful fury that had fallen on their thick-shelled numbbates.

After they were gone, John seized McCorkin's strong right hand, and looking through the windows of his soul, with the shades or lace-curtains drawn back, into the innermost depths of his friend's untainted bosom, saw the unspeakable language of fear written on one page and the measureless joy of escape on another.

"That master-mechanic of the bottomless pit of death is at the bottom of this—you know who I mean," said John, an electric fire leaping in indescribable corruscations from his eyes.

"But, thank God, you saved us both," acknowledged McCorkin, the seriousness of eternity in his face and manner.

The little bark rocked upon the waving, restless sea, and the wind, hissing fitfully through the rigging, filled the crescent sails.

Walking to the compass, John made an

observation of their locality, turned his eyes to the cloud-bleared sky, and then said to McCorkin:

"To Douglas at once."

Their friends were surprised to see them enter port a day sooner than usual, and few ever understood why.

Not long after this, in Bith Fintain's presence—as if it were a visitation of divine providence—this foolish, unprincipled henchman was kicked to death by one of Fintain's herd of horses. Fintain himself, whom the unfortunate wretch served so faithfully, did not mourn for him. All the mutineers, who humbly acknowledged their unmitigated crime, were restored to their places on the vessel, each accepting all the conditions required. The "Wave Sweeper" proudly rode the bounding billows as before, Captain John Ramsey still directing her destinies.

The hands on the dial-face of time had not moved far after this incident when John received this invitation, written in a dainty, smooth feminine hand:

"I'm to be married next Wednesday, and I extend to you an invitation to be at my infare that same evening."  
ELLEN KIAN."

At first the recipient of the note imagined it a heartless joke, then as his Cyclopean forge hammered on it a little he was inclined to get angry, and at last he concluded to show it to his unfailing friend, McCorkin.

"What do you think of this?" he inquired, handing the formal, cold, bloodless note to his friend. After perusing it, he replied, more forcibly than elegant:

"A cool insult, by the powers."

"How is that? Is it not a joke?"

"Joke! That a joke! No, by St. Mary. no."

"How an insult, then?"

"Was she not yours by fair promise once?"

"Yes."

"Now she's to be married to Fintain?"

"Yes."

"And now she has the hardihood to ask you, her first choice, to her marriage to your enemy, as if to torture you and heap coals of fire on your innocent head. Does she suppose you will be pleased to see her marry another? Then why does she ask you? Why, to show you she has utterly and wholly forgotten you. That, my friend, is a heartless insult—eh?"

"But it shows she has not forgotten me, or she would not ask me there."

"It shows she *has* forgotten you, for if she regarded your feelings she would not heap this pain on you."

"I cannot believe Ellen has forgotten me. Her father ruled her choice."

"O, no doubt. And I'd go, too."

Seated at a table in the bar of the Royal Hotel, drinking a pot of porter, much more

conversation of a similar character occurred between them. At McCorkin's suggestion, a plan was adopted which should govern John's conduct and dress at this infare. It was late Saturday night when this fraternal conference ended.

On account of some repairs the "Wave Sweeper" did not sail the week of Ellen's marriage, and this circumstance afforded John the opportunity to carry out the scheme adopted. The plot agreed up was unique, and I might say outlandish, but John was socially unsophisticated enough to carry it out to the very letter.

That evening, never to be forgotten by him, came, not a pause or a jar in the clock of time delaying it, and the merry dancers assembled from all the surrounding country. The hilarious, uproarious, windy laugh was there, the fanciful feet of youth tripped lightly to the strains of discordant music, the rosy lips of maidens fresh from the mint of innocence gurgled sweetly like rippling, purling waters, the unclouded brow as yet untouched by the ploughshare of carping care shed a beautiful spring-glow over the entertainment, the god of mirth and pleasure was enthroned supreme arbiter of the evening.

In the early part of the undignified, clear-cut-down revelry, careless freedom and frail abandon stalking like giants through the hall, John Ramsey appeared in the midst thereof.

"The cynosure of neighboring eyes."

conscious of his grotesque, extravagant guise, he boldly walked into the midst of the merriment clad in the garb of green cabbage leaves—green, forsaken. As an invited guest he had a right to be there. Everybody looked their objections to his fantastical, if not insulting costume, but no one ventured to make open remark about it. He approached Ellen, who was moving alone to another room for some temporary purpose, and as her eyes fell upon his fastidious habit she paused and looked down understandingly. John, almost with animal instinct, detected a faint blurring discolor of sadness in the foreground of her life, and in his own way he placed himself at the easel where her life portrait was undergoing the last finishing touches. The stylus of pity pierced his heart as he gazed into that face that was once his pride and joy, the glory and prefiguration in all his dreams, the glimpse of beauty from heaven itself, but now forever and forever uprooted and cast out from his life that with her in it had promised so much, and with a forgiving sympathy and an innocent smile he caught her hand.

"Ellen! Ellen!" What was not in those words! After a slight pause, that seemed long enough for words to perish and be forgotten, he reiterated:

"O, Ellen!" Tears brimmed over her lowered eyes. She could not lift up her head and look him in the face, but faintly and in hollow tone she sobbed:

"I deserve your worst thoughts."

"You are another's now—and forever. Is it *your* wish? Tell me, Ellen. Just this, and I'll be satisfied." Had he spoken from his coffin in his yet uncovered grave, he could not have shivered her soul more.

"No!" He dropped her hand. Tears, that always lie so close to feminine eyes, fell at their feet—an unwilling shower that nourished their grief.

"Say it again—was it your father?"

"Yes."

"And your heart is still mine, if not your hand?"

"I am Mrs. Fintain now, and I must not speak more." Still she did not look up. The consciousness of her feeble nature accused her. She painfully pressed a handkerchief to her tear-stained, down-pressed eye-lashes.

"Forgive me. I overspoke myself. This green suit speaks a silent language to you. I am here at your bidding, and I would spare you pain. The past is the past forever. I will live. Farewell forever—farewell."

"John!" in great anguish. The name, trembling on her lips, sounded like a call from the beyond.

"It is over, Ellen. Your father willed it, Fintain desired it. You have made your choice, and—it was not me. So be it. This is your marriage day. Go to the dance—and be merry, for life lasts not always. This is the last"—here he gulped down a great lump in his throat—an accumulated sob—an inhospitable pang that took root in his bosom like a parasite when their trouble first began and grew ever since—"the last that shall ever occur between us. Go your way and I will go mine."

They parted.

Just then Bith Fintain, who impatiently saw this brief conference, thrust his unwelcome presence upon John.

"You are gay," turning his little head to one side with a babyish leer that was meant to be insulting.

"Yes," simply.

"You are green."

"I grew in a cabbage patch, and have just walked in."

"In that cabbage suit, sir, you have insulted the kindness of Mrs. Fintain that invited you here."

"That is your opinion."

"That is *my* opinion, and it is backed by the power to avenge the injury. You're a brute, and a whelp."

"Take care."

"I saw you just now, with clownish effrontery, talk to her. I wonder that even her goodness permitted her ever to speak to you."

"Jealous, eh? We were engaged before you were."

"I have long suffered at your hands. You tried to get your betters, but thank fortune you were timely prevented and the dear girl was saved from a ruined life with you. I saw all that, and I nipped it in the bud. Now, sir, we have no further use for you here, and you can go. You understand that." Fiercely and with smothered rage did these cutting words fall from his thin, closely-pinched lips. His little, angry head nodded in futile hate.

"I remember your henchman and his mutiny, but, thanks to the god of waters, he has gone to his fate. I don't fear you one bit, but your station saves you." In John's voice there was a presence that made the little soul before him quake. But John's admission of the saving grace of his birth emboldened him. This young sprig of nobility, so in law but not in nature, now ranted like an excited termagant, and he swore and berated the hapless, helpless John till his bluster and noise brought a crowd of young men to the scene. Of course as Fintain's guests they were his friends, and John was the innocent object of their opposition and displeasure. Fully comprehending the situation he turned and walked out of the lighted hall into the night, merely pausing long enough in the door to say:

"I, the subject of your jealous hate, go and leave you alone to your drunken frolic."

As he stepped out a hideous yell, something perhaps like our Indians gave when they rushed with murderous tomahawk and scalping knife upon defenseless pioneers, arose upon his ears, and the motley crowd of young men dashed out after him. This yell lifted his feet and he ran as lightly as if a rubber-pad were under each foot. Eighteen howling, screeching, aimless young fellows dashed after him, but he soon left them behind in the darkness. Had they caught him they would have used him roughly.

This was the everlasting parting of John from Ellen. Her subsequent life was not happy.

Not long after this, in a spirit of revenge perhaps, John married his cousin, Jane Ceasair, and moved to America, where he prospered mightily and became a true republican king.

And this, my good friends, is my short romance about a Manxman.

---

THE legislator who travels on a railroad pass and draws his mileage from the public treasury obtains money, "technically," under false pretenses, and in the eyes of honest men is "technically" in the penitentiary, and metaphorically wearing stripes.

## INSPIRING WORDS.

BY WILFRED P. BORLAND.

Were it possible to fully estimate the extent to which the destinies of the human race have been influenced by those simple words which, from time to time, have been brought forward with the object of exciting the emotional side of man's nature, it would undoubtedly prove to be the most interesting psychological study of the age.

Man is a singularly emotional creature; and, under the influence of his emotions, he has been led to support the wildest vagaries, and even commit crimes which, were he influenced by calm reason alone, he would denounce with vigor. Men have sacrificed home, family, honor, country, even life itself, in obedience to sentiments which have been aroused by a successful appeal to their emotions; and it is not too much to say that, thus far in the world's history, man's emotional nature has been his greatest curse. Those who have been the leaders of men have, all along in the world's history, been quick to take advantage of this peculiarity; and they have recognized the fact that, when the conditions for a successful appeal to the emotions are present, any appeal to the intellect is not only superfluous, but quite useless. The means of exciting man's emotional nature have always been simple, in the extreme; first, the people are presented with some grand ideal; some sentiment calculated to arouse all the nobler feelings in man's nature; some picture of millennial happiness, for the attainment of which men might well sacrifice even life itself. The human intellect is so constituted that comparatively few men are capable of fully grasping and analyzing these ideals, when presented in their entirety, and it thus happens that some simple word, or words, comes to be used as a rallying cry for the masses; which cry becomes, in the common mind, invested with all the significance of the ideal itself, and is thus capable of arousing the very excess of enthusiasm. These inspiring words are sometimes put to strange uses, and it is through such uses that man's emotional nature rises up to do him injury. Originally, these inspiring words have a real connection with the ideals they are intended to represent, and they are of real service in holding men together for the attainment of a common purpose. But, sooner or later, (such is the experience so far, anyhow), the nexus between the word and the ideal is broken; and the masses, not perceiving the fact, are rallied to the support of measures totally foreign to their wishes and interests, while under the delusion that they are still pursuing their ideal. The history of the world is full of instances of whole masses of men being led away and duped into becoming the

tools of selfish and designing men by means of those inspiring words.

Take those great religio-military movements of the middle ages—the crusades. Men were held together for these movements for nearly two centuries—from the council of Clermont, 1095, to the fall of Acre, 1291. The ideal which rendered these movements possible was, for the age in which it was conceived, grand and noble; it was to rescue the tomb of Christ from the hands of infidel Turks; to place it under Christian control and protection, that the Christian pilgrim might visit the hallowed spot in peace and quietness. The ideal was first presented by Peter, the hermit. It acquired dignity from the papal sanction at the council of Clermont; and there arose that rallying cry which inspired men to undergo all the awful hardships of the crusades for nearly two hundred years: "God wills it."

The ideal soon became a subordinate consideration; indeed, in the very first crusade, the action of the leaders, Baldwin and Boamund, was sufficient to demonstrate that the idea of personal gain and foreign conquest had much more weight than any idea of rescuing the Holy Sepulchre, but still the multitude answered to the inspiring words, "God wills it," and continued to assist in furthering the ambitious schemes of their leaders, under the delusion that they were all the time pursuing their ideal.

"God and St. George!" Who can estimate the influence of those inspiring words upon the sturdy yeoman soldiery of medieval England? It nerved their arms for the wonderful victories of Crecy and Agincourt. They supposed they were striking for their own salvation and the honor of their native land. Alas! history tells another story! "Death to heretics!" This inspiring cry was the very incarnation of the ideal of Roman Catholic unity. It produced such monsters as Wallenstein, Alva, Phillip II, and Catherine DeMedici. It lit the fires of the inquisition, and filled the world with untold horrors for centuries. In consenting to these horrors, that stain the pages of history, the masses supposed they were all the time nursing their ideal, when, in truth, they were but lending themselves to the support of the ambitious political schemes of their leaders.

Liberty! Freedom! Ah, my fellows, here are words to conjure with! Here are words to arouse all the nobler feelings in man's nature! Here are words which give expression to the grandest ideal of which the human mind can conceive! It is not strange that some of the grandest deeds of history have been committed under the inspiration of these magic words; and it would indeed be strange if they had not sometimes been put to selfish uses. Under the inspiration

of those words, a band of noble Spartans defied the Persian army, and perished to a man in defense of their ideal. Under the inspiration of those magic words, a mere handful of Greeks overcame the Persian hosts at Marathon and Salamis; and, at a later period, this same race of Greeks accepted the iron yoke of Rome, without a murmur, because it was presented to them inscribed with the inspiring word "liberty."

It was under the inspiration of those words that Spartacus—that first representative of the fourth estate—and his band of heroic followers, defied the united power of Rome so successfully; it was this that caused the Gracchi to sacrifice their lives in defense of the rights of their fellow men; led the heroic Winklereid to immolate himself upon the sheaf of spears; planted a race of free men upon the western continent, and nerved the arms of our revolutionary fathers to secure their independence. Well may we sing psalms of praise in honor of words which have inspired the human race to the performance of such noble deeds; and strange, indeed, would it be if the powers of despotism had not, sometimes, borrowed the cloak of liberty with which to cover itself while performing some of its most despicable acts.

The French Constituent Assembly, in 1789, borrowed the cloak of liberty with which to clothe itself while abolishing tithes, and imposing a burden on the whole people that rendered real liberty impossible; it was liberty for the classes, not for the masses. The same thing happened in England during the long parliament after the accession of Charles II. They invoked the name of liberty while sweeping away the feudal dues; it was liberty for the few, but the many were, by that act, bound hand and foot and delivered over to their masters.

But it is here in this boasted land of freedom and equal rights where the word liberty is put to its most incongruous uses. Men and women are here toiling their lives away for a mere pittance; just barely sufficient to keep soul and body together; joyless, hopeless, and in a condition scarcely above the level of the brutes, they pass away their lives; and yet they are expected to praise Almighty God because they are allowed to live under a government which guarantees them the liberty of quitting their employment any time they choose. The word "liberty" is indeed fallen from its high estate when it is distorted in such away as to make the acceptance of industrial conditions, totally abhorrent to every true sentiment of humanity, assume the character of a free contract.

We talk about the "liberty of the press," and yet we have a censor, in Washington,

who presumes to decide, after the manner of a Russian autocrat, what literature a free people shall read, and what they shall not. We say we have "liberty of the ballot;" and yet, to avoid the humiliating spectacle of men being led to the polls in droves and counted like sheep, we are compelled to enact secret ballot laws. We do, indeed, enjoy liberty when a free American citizen dare not stand up and announce his vote before all the world.

We talk about "religious liberty," and yet we send men to the penitentiary because their religion prescribes the fast, instead of the first, day of the week as a day of rest and worship, and they are thus led to scandalize the community by the high crime of breaking "the Lord's day."

Not only this, but the whole power of the general government, is invoked to sanction a particular form of this observance of this so-called "Lord's day," which form is dictated by the morbid intellectual perceptions of a few dogmatic Christians (?).

Oh liberty! truly you have shed but a partial light upon this American continent, when your power of arousing men to the performance of grand and noble deeds is fallen so low!

"Patriotism!" Here is an inspiring word which has played an important part in the world's history. It gives expression to one of the noblest of man's ideals: the love of country and the honor of native land.

"Breathes there a man, with soul so dead,  
That never, to himself, has said  
This is my own; my native land."

While this word has, next to "liberty," inspired men to the performance of some of the grandest deeds in history, it has also been more often and more successfully used than any other to justify and perpetuate the most revolting deeds of oppression. It is a peculiarity of this word that it inspires sentiments which take no account of abstract notions of right or wrong, but sink every consideration into the ruling one of love of country. Probably the best illustration of what I mean is contained in those words credited to Decatur: "Our country, right or wrong."

This peculiarity has rendered the word an exceedingly dangerous one, as regards its influence upon the liberties of mankind. Those who have been entrusted with the government of nations have recognized the fact that when the people are driven to the point of desperation by deeds of oppression they have but to invoke this magic word and in an instant all is forgotten under the inspiration of love of country.

Let them once succeed in bringing about conditions which render an appeal to patriotism possible and they are saved; the people forget all their wrongs in the presence of the new sentiment, and rally, to a

man, in defense of their native land. Probably nine-tenths of the wars which disgrace the annals of history have been inaugurated for this very reason. The people becoming restive under the oppressions of their rulers, those rulers have sought pretext for war and thus caused the people to forget, or lose sight of their wrongs, in the presence of the higher sentiment of patriotism. So true is this that it has long been a recognized policy of statesmanship (?). It is well understood that the simple people are easy to forgive the most notorious local iniquities of their government in the event of that government inaugurating what is known as "a vigorous foreign policy." Thousands, ay, millions, of human lives have been wantonly sacrificed in order that the rulers of men might pursue their selfish schemes undisturbed by the murmurs of the people, because they—the people—when once controlled by the emotion of patriotism, are not capable of subordinating it to any other emotion. England furnishes the most notable example of a people being ruled, robbed, and slaughtered through successful appeals to patriotism. Her rulers have, time and time again, gone deliberately to work to provoke foreign war in order that some despicable scheme of robbery might be covered over with the cloak of patriotism. The immense public debt under which England grows to-day, and which forms the bulwark of her aristocracy, was made a possibility only because of the patriotic emotions of the people. The English statesman to-day as fully counts on "a vigorous foreign policy" as the main factor in holding his government together as at any period in the history of the country. England has had many imitators in this line of state policy, but none have been so uniformly successful as her in attaining the desired results. The Franco-Prussian war of 1870 was precipitated upon the most frivolous pretext by the French emperor with the avowed purpose of uniting the French people and securing their wavering allegiance to his government. The event did not exactly answer to his expectations, but this war furnishes a good illustration of how readily a people may be led to sacrifice blood and treasure in obedience to a bastard sentiment, which they mistake for the real.

While it would probably be unjust to say that our civil war was of this character, it is at least certain that the patriotic emotions of our people were taken advantage of during that struggle for the passage of measures which, in the absence of patriotic impulse, would have been rendered impossible. It is quite certain that conditions were fastened upon the people during our great war which they would have utterly repudiated at any other period; and it is also true that those persons who have been

foremost in taking advantage of the conditions spoken of did very little of the fighting. Oh patriotism! verily, the greatest crimes known to human history have been committed in thy name!

Closely allied with those words, "liberty" and "patriotism," are other inspiring words which are useful as a means of keeping the masses in subjection and furthering the political ambitions of the few. Many of such words as "the people's friend," "the incorruptible citizen," "the valiant warrior" and "the upright judge," have done duty for centuries. Others are of quite modern origin, but they all have the same purpose, viz.: the stimulation of the emotional faculties and the subordination of the intellect to them. Many of the modern inspiring words are indigenous to our country, and if the American workingmen could but rid themselves of their influence, and learn to estimate them at their true worth, the labor problem would soon be in a fair way of solution. For years and years workingmen have been deluded by the inspiring cry, "Protection to American industry;" time after time has it been demonstrated that the cry was a delusion and a snare; time after time have workingmen been furnished with indisputable evidence that the "protection" which they established with their votes meant no protection to them; time after time has the American workman seen the party, which his votes placed in control of the government, legislate in direct opposition to his interests and in opposition to specific pledges given to the whole people, and yet, when election time rolled round again, he has once more answered to that inspiring cry, "Protection to American industry," and cast his vote so as to forge anew the fetters with which he is bound. Those who have been prominent in labor affairs have often pointed out the dangers of patriotism; they have appealed to every sentiment of logic and common sense to induce workingmen to lay aside party prejudice and use their political power for the common benefit, but all their arguments have availed nothing when confronted by such inspiring words as "the party of the people," "party of equal rights," "equal rights to all, special privileges to none," and other inspiring sentiments calculated for campaign purposes only.

Time after time have workingmen been betrayed by their representatives in the legislative bodies of the nation and yet, under the inspiration of "workingman's friend," "the foe of monopoly," "the enemy of privilege," or some other sentiment suited to the occasion, they have returned—"like a dog to his vomit"—and rallied to the support of a known enemy to their interests.

The inspiring power of "protection to

American industry" seems to be on the wane, but "the party of the people" may be counted on to invent something to take its place before 1896. In the meantime the American workingman will have leisure to note the course of events under "the party of equal rights" and see how nearly his ideal of "equal rights to all, special privileges to none" is realized.

Of late the inspiring word, "patriotism," is coming nobly to the front and it may be put to some strange uses within the next few years; indeed, it has already been used to induce workingmen to shoot down his fellows in various sections of the country, and it would, at no time, be surprising to see one of our great states launched into all the horrors of civil war through differences between rival political factions within her borders, each of which claim to be acting under the inspiration of that noble word, "patriotism."

The emotional nature of man is the best part of him; all the nobler, more refined feelings of humanity find expression through the emotions. When man is ruled by reason alone he is no better than a block of stone. It seems a part of the divine plan that man's emotional should dominate his intellectual nature, and the fact will probably exist as long as humanity itself, but it does seem hard that the nobler side of man's nature should be turned against him.

The remedy seems to be either the cultivation of such a high standard of honor as would cause men to scorn to take advantage of the weakness of their fellows (the application of the true spirit of Christianity) or the cultivation of the intellectual faculties of the masses to such a pitch as to enable them to instantly perceive the difference between the false sentiment and the real, or perhaps a little of both.

## SOCIAL ILLS AND THEIR REMEDIES.

BY B. C. STICKNEY.

I commend to those interested in social questions the address delivered by Mr. Louis F. Post before the recent Single Tax Conference at Chicago. It is a clear statement of the causes that lead to hard times; and these causes must be better understood on the part of the professedly intelligent portion of the community before remedies can be successfully applied. The address gives a true explanation of the gradual decline in wages, notwithstanding the activity of trades unions. Those who have in former numbers of the MAGAZINE attacked the position of the land reformers, will here find a complete answer to their cavilling; and, if they are not averse to receiving elementary instruction in these matters, will perceive that social disease centers in the private appropriation of land values. Here is the address:

## I.—THE OLD SCHOOL.

Though economic speculations are traced to the time of Aristotle, the mercantile system which flourished between the sixteenth and nineteenth centuries, is in history the oldest school of political economy; and that has passed away. Some of its fallacies survive in arguments for protectionism and the patter of financiers who worry over "favorable" and "unfavorable" balances of trade; but the school itself was long ago supplanted by the classical school, of which Adam Smith was the founder and John Stuart Mill the principal expositor, whose system Ricardo enriched and Malthus distorted; and which is now called "the old school" to distinguish it from efforts like those of the Austrian economists to establish new ones. To this school the single-tax, with which I am invited to compare it, is by both friends and enemies often placed in opposition. But they are in error. So far from being at war with the essential principles of the old school, the single-tax idea proceeds logically from them. It is in fact the true development of the system—the ripened fruit of the tree that Adam Smith planted; and as an economist Henry George is really what an adversary has dubbed him, "Henry George the Orthodox."

## II.—FUNDAMENTAL PRINCIPLES OF THE OLD SCHOOL.

Dividing the subject into the general departments, production and distribution, the old school of political economy assigns to each a fundamental principle, the truth of which cannot be successfully disputed. The fundamental principle of production is the postulate that human effort and appropriate natural objects—labor and land—are the requisite factors; the fundamental principle of distribution being Ricardo's law of rent. And though prior to George no economist of the old school had formulated the law that "men seek to gratify their desires with the least exertion," nor definitely made it the touchstone of economic reasoning, it has nevertheless always held a place of vital importance in the system.

## III.—DISTORTION OF THE OLD SCHOOL SYSTEM.

But in the earlier development of old school doctrines these simple and axiomatic principles, when not wholly ignored, were distorted almost beyond recognition. Labor, the term for human effort, came to mean not the whole body of labor—employer and employed, skilled and unskilled, mechanical and professional, agriculturist and trader, sailor and farm hand—but hired workmen alone; and not all hired workmen either, but only those of certain grades in certain occupations. And while labor was made to include less than all labor, land was made to include both more and less

than all land, urban land being usually not considered at all, while improvements were reckoned in; as if land, the natural material, and improvements, the artificial product, were economically identical.

From such confusions it was an easy step to the absurd notion that accumulated capital, as well as labor and land, is a requisite of production. Capital was supposed to provide tools and subsistence for labor during production, it being inferred that labor could not work until subsistence and tools had been accumulated. By thus assuming that man gathers subsistence to enable him to work, instead of working to gather subsistence—that he eats to labor instead of eating to live—labor was made to depend, for opportunities to produce, upon the supply of accumulated capital and the disposition of its owners to devote it to productive uses. And, by way of strengthening this puerile notion, the impious theory of Malthus, and its concomitant error, the so-called law of diminishing returns, were introduced. Capital being in this way made the master of labor instead of its servant, the farm hand who said, "The 'squire is a good man; he gives me work!" was regarded even by political economists as an oracle of economic wisdom and a paragon of gratitude. The rich man's function in society was taken to be the giving of work to the poor, while the poor were expected to be grateful for the work the rich allowed them to do; for without rich men it was gravely inferred that there would be no work and that the laborers would suffer and die. What would have happened to the rich but for the work done by the poor was never regarded as a question of sufficient importance to call for an answer.

Not one of these doctrines was in itself sound. Capital does not employ labor; labor employs capital and produces it in character and quantity as required. Population does not tend to outrun subsistence, as the theory of Malthus has it; on the contrary, as all economic history shows, the inventive genius of man—a phase of labor—draws from the exhaustless fountain of matter and force—the "land" of political economy—increasing supplies of wealth, coincident with increasing demands and corresponding to them. And land does not yield diminishing returns to labor: this or that spot of land may temporarily yield diminishing returns of this or that product, but the earth as a whole does not yield diminishing returns of anything, and while the indestructibility of matter and the physical laws of growth persist it cannot.

Neither have these doctrines the faintest logical connection with the fundamental principles of old school political economy; so far as they are related to those principles at all the relationship is one of antagonism.

To the confusion of economic reasoning and the inversion of natural justice they secured temporary lodgment in the system, and were long advocated by its eminent teachers; but they never really belonged there, and as of doctrines in jurisprudence, which, when discredited, are said by lawyers to have always been "bad law," it may now be said of them that they have always been "bad economics."

The logical strain to which they subjected the system while they had lodgment in it, was shown in the attempts to formulate the laws of distribution. First of all, capital invested in production was replaced from the produce. Then one part of the produce, its proportion to the whole being determined in accordance with Ricardo's law, was taken out for rent. Another part of the produce, quite regardless of the doctrine that labor is employed by accumulated capital, was assigned to wages, without any law for determining its proportion, but upon the extraneous theory that wages are high or low as the amount of capital devoted to the employment of labor, relatively to the demand for employment, is much or little. Still another part was allowed to the owners of capital as interest, not for something that the capital had produced, but as "compensation for saving." Then a share was set aside for insurance, as if it were any more possible for the community to insure itself against loss than for a man to lift himself by the boot straps. And finally come wages of superintendence, which, if not already paid by accumulated capital, must at least have been covered by the general item of wages in distribution, for what are wages of superintendence but wages for labor? There was not the least approach to a mutual relation between any one of these shares and any of the others, and the distribution was in utter defiance of the principle that the whole is equal to the sum of its parts.

#### IV.—TRUE DOCTRINES OF THE SCHOOL.

On account of such logical aberrations as these, the old school political economy was long made to serve the interests of those who get wealth without earning it, by silencing with the voice of economic authority the complaints of those who earn it without getting it. But a thorough re-examination of the system has displayed its symmetry and harmonized its teachings with the moral perceptions of mankind. Let us consider its leading doctrines as now understood.

##### (A) THE CENTRAL LAW.

The central law about which the system revolves is the familiar truth that

Men seek to gratify their desires with the least exertion.

By this law every economic doctrine is tested and all industrial phenomena must

be judged. It governs both in production and in distribution. A universal law of human nature, which has only to be stated to be accepted, is, as George describes it, "the metaphysical expression of the physical law that motion seeks the line of least resistance." What that physical law is to students of the material universe, this law of human nature is to students of political economy.

##### (B) PRODUCTION—ITS PRIMARY LAW.

The first law in the department of production is the simple proposition that—

Men gratify their desire for wealth only by the application of labor to land.

As modified by the central law, it may be stated in this form:

Men gratify their desire for wealth by the application of labor to that land which, under all circumstances, and to the best of their knowledge, yields the most desirable results to a given expenditure of labor.

Political economy in the department of production is but the aggregation, or perhaps more correctly, the interlacing of individual economies. Its fundamental law, therefore, must be identical with the fundamental law of individual economy. A man cast upon an uninhabited island would be obliged, in order to procure continuous supplies of food, clothing, shelter and other wealth, to apply his labor to the land of the island; and in doing so, guided by that natural instinct which leads men to seek the gratification of their desires with the least exertion, he would, within the scope of his knowledge, confine his labor to the localities on the island that yielded the greatest satisfaction to given effort. Likewise, mankind cast upon this rolling planet, which is to man as a whole what uninhabited islands are to individual men, must obtain all the wealth that it or any of its units enjoys, by the application of labor to the land of the planet; and the same instinct that governs the island cast-away will, within the scope of human knowledge, tend to confine the labor of mankind to the localities that yield the greatest satisfaction to given effort. The principle is the same in its application to mankind at large as to individuals; the same to the people of a village, of a city, of a nation, of the world, as to a Robinson Crusoe. Produced by his labor and by that alone, from the land and only from the land, come at all times and under all circumstances all the things that minister to man's wants, from frugal food to rich apparel and palatial shelter.

##### (C) PRODUCTION—CO-OPERATION OR DIVISION OF LABOR.

It is co-operation and not accumulated capital that really makes the difference between the simple individual and the labor of a Crusoe and the complex labor of the whole community. Co-operation in production, or division of labor, as Adam Smith called

it, augments the productive power of labor. As a thousand men working co-operatively produce more than a thousand times the wealth that one man could, if working alone, co-operation is economy of labor. Hence, in obedience to the central law, we have that differentiation of employments at which political economy, as distinguished from individual economy, begins. But in co-operation, labor is still dependent upon land, and only upon land. The first law of production is never abrogated. When men co-operate to build houses or to make food or clothing, or, as is the case in general co-operative industry, to make all these things and many other kinds beside, they secure better results in proportion to numbers than one of them working alone could secure; but just as his work, from first to last, is the application of labor to land—of human effort to natural material—so is theirs.

This is the law:

In seeking to gratify their desire for wealth, men co-operate in the application of labor to land, because co-operation yields to a given expenditure of labor better results than isolated effort.

#### (D) PRODUCTION—TRADE.

We do not make things, however, for the sake of making them, but for the sake of enjoying them; and until completed products reach final consumers the purposes of production are not attained nor its processes at an end. And, that this may be accomplished in co-operative industry, we must have trade. The surplus products of every worker must be traded for the surplus products of other workers, until each has received what he would have made for himself had isolated production been more economical than co-operative production. It is impossible to think of a form of co-operative production that excludes trade. Even in communistic forms the essential principle of trade is active. To prevent trade is to prevent co-operation, and to the extent that trade is obstructed co-operation is obstructed. It is a necessary factor of co-operation and is therefore a mode of production. To transfer commodities from those who want them less to those who want them more is in reality to assist in the production of those commodities. It is to produce them from a place of less to one of greater usefulness; and essentially that is all that can be said of any other phase of production. Transforming cloth into clothing or flour into bread adds to the usefulness of the cloth or the flour, by changing the less into the more desirable form. Trading bread for clothing adds to the usefulness of each, by transferring it from the less to the more desirable place. There is no economical difference.

From the law of co-operation or division of labor, therefore, this law of trade pro-

ceeds: To attain the purposes of co-operative production, men trade the products of their labor.

#### (E) PRODUCTION—DEMAND AND SUPPLY.

Trade also automatically regulates the supply of products. No one would make a surplus of anything without reasonable expectation of trading it for something that he desires. When he finds or anticipates difficulty in doing this, he contracts his production. Consequently, there is a constant tendency toward a supply of labor products in accordance with the demand for them, which gives rise to the law of demand and supply, formulated by George as follows:

Demand for consumption determines the direction in which labor will be expended in production.

It is from the operation of this and the preceding law that the idea of value is derived. A relative term, by means of which any given commodity is, for purposes of trade, compared with other commodities, value is not inherent in anything. It merely expresses the ultimate exchange relation of things to labor. In the first instance, the equilibrium between the demand for a thing and the supply determines its value. But inasmuch as the supply of labor products is dependent upon the ordinary cost, in labor, of reproducing them in form and place, it follows that the value of a labor product oscillates about the ordinary labor cost of production. This gives the following law of values as regards things produced by labor:

The value of a labor product is ultimately determined by the equilibrium between the demand for it and the supply, and oscillates about the cost in labor of reproducing it in form and place.

Thus value becomes an economic barometer, which indicates the state of demand for products. When demand for any kind of product arises, the equilibrium between demand and supply is so disturbed as to tend to raise the values of that kind of product above the ordinary cost of reproducing it; when the demand falls, the disturbance of equilibrium is such as to tend to reduce its value below the labor cost of reproduction. And labor, observing these fluctuations, alters the direction of its efforts toward the production of those things that are rising in value and away from the production of those that are falling, until a new equilibrium of demand and supply is established.

#### (F) DISTRIBUTION—RENT.

Value expresses the idea whose boundaries lie partly within the domain of production and partly within that of distribution. Engendered by trade and furnishing a barometer of supply and demand, characteristics which connect it with production, it extends over into the department of distribution, and regulates the division of products, primarily by indicating and measuring economic differences in land. As the

value of an object of ownership produced by labor oscillates about the ordinary cost in labor of reproducing it, so the value of an object of ownership not produced by labor—economically “land”—oscillates about the ordinary saving of labor that it affords the owner in securing a given result. These are two manifestations of one principle, that value is an expression in trade of the labor required for the production of things.

With the beginning of co-operation or division of labor, which becomes more and more minute as civilization advances, producers desire less of the particular things that they make themselves and more of those that others make. If, now, labor were the sole factor of production, or if all land were equally easy to utilize, each producer would receive, in any desired products, brand and force aside, the labor cost equivalent of those he made himself. The whole produce of labor would then be the wages of labor. But land as well as labor is a factor in production, and all land is not equally easy to utilize. Superiority of location, therefore, gives an advantage, the value of which differs from wages and must be distinguished. The usual distinguishing term is “rent.” Hence we have the following classification:

Wealth is primarily distributed in wages, corresponding to labor, and in rent, corresponding to land.

The productiveness of land so varies that a given expenditure of labor at some points yields more wealth than the same expenditure at other points, a phenomenon which is by no means confined to agricultural land, but finds its most emphatic expression at centers of trade, where land in the agricultural sense may be and often is entirely barren. Pursuant to the laws of production, labor flows to the most productive places; but as all labor cannot use the most productive places at the same time, some labor is obliged to resort to those that are less productive, and economic rent, or the value of land, forthwith rises. What the whole body of labor produces in excess of what it could produce if all land were neither better nor worse than the poorest to which labor is forced to go, is due to the superior productiveness of the lands to which some laborers to the exclusion of others gain access. It is this that constitutes rent, the law of which is as follows:

The rent of land is determined by the excess of its produce over that which the same application of labor can secure from the least productive land in use.

#### (G) DISTRIBUTION—WAGES.

The law of wages, a necessary inference from the law of rent, takes the following form:

The wages of labor applied to land are determined by the return which the same application of labor can secure from the least productive land in use.

#### (H) DISTRIBUTION—CORRELATION OF THE LAWS OF RENT AND WAGES.

Under the operation of these two laws, wages and rent rise and fall conversely. Considering them as proportions of product, this is invariably true, for a larger proportion of product in rent necessarily implies a smaller proportion in wages, and as both rent and wages, as proportions, are determined by the opportunities for earning that are offered by the least productive land in use (which is said to be at the margin of cultivation) the two laws are correlative, and may be united in one statement as follows:

Both rent and wages depend on the margin of cultivation, rent as a proportion rising as it falls and falling as it rises, and wages as a proportion falling as it falls and rising as it rises.

#### (I) DISTRIBUTION—EFFECT OF INCREASED LABOR POWER.

The margin of cultivation is normally lowered only by the advance of labor from better to poorer lands, as the better fail to yield wealth enough to meet the demand. But the withdrawal of better lands from their best uses, which forces labor to poorer lands before the demand for wealth is greater than the better lands are capable of supplying, abnormally lowers the margin of cultivation. This process may continue until the margin of cultivation coincides with land that will yield only a bare living to ordinary applications of labor, in which case ordinary applications of labor will return to the laborer no more than a bare living from any land. This is the lowest point to which wages, either proportional or quantitative, can fall without a rise in the standard of labor or a fall in the standard of living.

Meantime as proportional wages are falling, the rise, fall or maintenance of quantitative wages will depend upon the changes in productive power. If, with the fall of the margin of cultivation, productive power so increases as to enable ordinary labor to secure, at the lower margin, equivalent results to what it received at the higher, quantitative wages will be maintained, though wages as a proportion fall; if the result at the lower margin is greater than it was at the higher, quantitative wages will rise, though wages as a proportion fall; but if the lower margin yields less than was formerly secured at the higher, quantitative wages will fall when the margin of cultivation falls.

The force that operates to maintain and even to raise quantitative wages, in spite of a falling margin of cultivation which proportionally reduces wages, is the tendency of improved processes and more minute co-operation to raise labor power high enough to counterbalance or more than counterbalance the effect of the falling margin of cul-

tivation. Water in a vessel, for example, remains at one level if the supply always enlarges equally with any enlargement of the discharge; and the level will rise, no matter how much the discharge may enlarge, provided the supply be enlarged in greater degree. But if the discharge expands and the supply does not, or does it in less degree, the water level necessarily falls. Somewhat so it is with quantitative wages. They may be maintained or may even increase, as rent increases; but not unless improvements in labor power keep pace with increase of rent or advance beyond it. If improvements fall short of this, quantitative wages decline when proportional wages do.

And in any progressive community there must come a point at which, if land in that community is treated as a commodity, improvement in labor power will fall short. Lands lying at and to some degree below the margin of cultivation, are, by improvements in labor power, raised above it. The common perception of this fact makes investments in land especially desirable. They are found to be not only the safest, but also the most profitable. In prosperous times, therefore, all productive lands, those that lie above the margin of cultivation, and even unproductive lands, those that lie at and below the margin of cultivation, are in demand at valuations based not upon their present but upon their probable future productiveness. This demand generates an upward movement of land values, which, disturbed only by recurring periods of hard times, spreads to lower and lower grades of land until the best lands to which value does not attach are those which, even with all improvements in productive power, will not yield ordinary wages to ordinary labor. When that point is reached, it is difficult to secure ordinary wages for ordinary labor from any lands. The low grade lands being at the margin of cultivation, while better lands are withheld from use, they, instead of better lands, determine wages on the one hand and rent on the other. There is no limit to this process short of the depression of ordinary wages to the level of a bare living; pressed below that level, and the laborer is in the dilemma in which Malthus placed him. Here is the true explanation of the industrial phenomena from which the discarded Malthusian theory and the obsolete law of diminishing returns derived the only plausibility they ever had.

Following is a formulation of the law:

The appropriation of land without fully utilizing it tends to so lower the margin of cultivation as to reduce wages as a quantity as well as a proportion, and to lower wages for ordinary labor to the level of a bare living.

#### (J) SUBORDINATE LAWS.

Most of the leading principles to which I refer have not heretofore been formally

stated, and few of them are formally recognized by college teachers or found in college text books. They are nevertheless essential leading principles of the old school, which none of its latter day teachers would be apt to dispute; and they constitute the skeleton of the system. They are, of course, not all the laws of the school; but every other law, and the number is limited only by the possibility of sub-dividing the subject, is subordinate to these, and harmonizes with them if it does not proceed logically from them. Failing in this, no matter by whose authority published, it cannot be rightly regarded as a legitimate law of the old school, unless we agree to substitute authority for reason. Examples of subordinate laws are those relating to capital, which is but a sub-division of labor; to its product, interest, a sub-division of wages; to money, a sub-division of value; to the incidence of taxation, also a sub-division of value; and to differences in individual wages due to the exceptional skill of the laborer or the exceptional disagreeableness or danger of his employment, which, like interest, are sub-divisions of wages. But none of the subordinate laws require any consideration here.

#### (K) SUMMARY.

Summarizing the leading principles of the old school as I have presented them, we find that men gratify their desire for wealth by the application of labor to land; that in doing so they apply labor to that land which under all the circumstances and to the best of their knowledge yields the most desirable results to a given expenditure of labor; that in the application of labor to land they co-operate, trading their products to secure their object, because co-operation yields to a given expenditure of labor better results than isolated efforts; and that demand for consumption, indicated by values of labor products, determine the direction in which labor will be expended. This with reference to production. In distribution we find that wealth is primarily distributed in wages, corresponding to labor, and rent, corresponding to land; that the rent of land is determined by the excess of its produce over that which the same application can secure from the least productive land in use, and conversely that the wages of labor applied to land are determined by the return which the same application of labor can secure from the least productive land in use; rent as a proportion rising as the margin of cultivation falls and falling as it rises, and wages as a proportion falling as the margin falls and rising as it rises; and finally that the appropriation of land without fully utilizing it tends to lower the margin of cultivation so as to reduce quantitative as well as proportional wages and to lower the returns for ordinary labor to the level of a bare living.

## V.—APPLICATION TO THE SINGLE-TAX.

From these leading principles, considered with reference to our industrial conditions and with a view to solving the social problems that beset us, the single-tax idea is a natural and necessary inference. To accept them is to approve that. There is no alternative but to stop short of applying the principles to practical affairs, which would be to political economy much as mere stargazing is to astronomy.

## (A) THE NATURAL LIMITS TO PRODUCTION.

Inasmuch as men gratify their desire for wealth by the application of labor to land—co-operating, and trading, and expending their labor in the direction of demand—the only natural limit to wealth production is the power of all labor and the productiveness of all land. Therefore, demand for wealth in any producible form cannot naturally co-exist with lack of employment for labor, until all productive land is in full use. If they do co-exist, the difficulty is not with natural conditions, but with human laws which in some way obstructs labor in its efforts to obtain access to productive land and to interchange its products. This is the answer of the single-tax philosophy to the explanation that such phenomena as unemployed labor, "cut throat" competition, stagnant business, and insufficient wages are attributable to pressure of population upon subsistence. It is an answer that admits of no logical reply while its premises are allowed to stand.

## (B) JUST OWNERSHIP OF WEALTH.

For the same economic laws, in the light of the simplest principles of morality, the single-tax philosophy teaches that wealth belongs to the laborers who produce it, in proportion to their contribution to production, as automatically indicated in the processes of trade by values. It can justly belong to no one else, and it can be fairly measured in no other way. But this proposition depends upon equality of opportunity to produce. When rent arises, that fact shows that opportunities to produce are unequal, and so long as this condition exists some wealth does not belong to the laborers who produce it. To each laborer, then, justly belongs so much of the wealth he produces as falls into the category of wages, for this represents what he could produce from the best free land; but so much as falls into the category of rent is not justly his, for it represents the advantage, over men who have access only to the best free land, which the possession of better land has given him. Normal rent is not a burden upon labor. It is an equalizer of the wages of labor, taking from laborers who use the better lands so much and no more of their produce than is due to the superiority of those lands over the lands

that other men are forced to use, and leaving to each exactly what his labor, as distinguished from his opportunity, is worth.

But that rent may equitably equalize wages, so that laborers shall receive in proportion to their earnings, it must be made a common fund. If this be not done, one part of the community, the owners of land lying above the margin of cultivation, obtain labor products in excess of their contribution to production. And since the proportion of wealth that goes to rent increases as the margin of cultivation falls, every extension of cultivation will increase the unearned income of this class. Conversely, the proportion of wealth going to labor as wages will decrease. This, in itself, would be unjust. Still, if it went no farther, it might not be practically harmful. Though the land owning class lived luxuriously upon labor products without contributing their production, and the community were plundered of its just revenues, yet the condition of laborers might advance. While they would retain as wages for a given expenditure of labor only a diminishing proportion of the product, what they retained would nevertheless be an increasing quantity; for such improvement in labor power as we have a right to expect, would more than counterbalance the effect upon quantitative wages of a normally receding margin of cultivation.

## (C) SOCIAL DISEASE.

But the effect of such distribution would not stop at practically harmless injustice. It has not stopped there. It could not, for social injustice is the living germ of virulent social disease, and nothing but extermination can stay its destructive course. Increase in labor power, the very force that should naturally lift all men higher and higher above poverty and the fear of poverty, the force that in just conditions would do it, only tends to make poverty deeper and the fear of poverty more hopeless. For increase of labor power implies more extended uses of land, the effect of which, by lowering the margin of cultivation and increasing rent, is to augment the value of land; and expectation of higher land values, excited by this generally observed tendency, induces the withholding of land from use, or what is to a degree the same thing, from its full or best use. In this way the margin of cultivation is forced so far downward that quantitative wages, despite improvements in labor power, are driven toward the level of a bare living. Here the disease touches the vitals of the social organism. Unemployed labor perpetually burdens and menaces employed labor; fluctuating business, with occasional failures, recruits the army of the unemployed, and makes employment harder to get; debasing poverty is seen, and felt, and feared; the

pure become corrupt and the innocent fall into crime; independence gives way to servility, and as men in their struggle for subsistence lose interest in public affairs, government, though nominally popular, becomes autocratic and irresponsible.

The only check upon this tendency is the periodical depressions it generates. These act directly upon the cause of the disease. They are to inflated land values what war, pestilence and famine were in the theory of Malthus to overpopulation. When the margin of cultivation is, by the withholding of land from use, carried to a point so low that labor can no longer secure accustomed returns, a falling off in production results and is perpetuated until it culminates in a commercial crash, the apparent cause of which may be any petty disturber of public confidence from a broken bank to a controversy over government purchases of silver. This ends in a contraction of land values. In a sense, it begins with contraction of land values, for buyers are "timid," as it is called, at a very early stage; but as sellers hold stubbornly on, values do not actually fall until hard times become so hard that all but the strongest sellers are forced to unload at the best prices they can get. Then market values begin to fall; the margin of cultivation begins to rise. When the rising margin of cultivation reaches a point that leaves to wages sufficient to stimulate labor into activity, there is for a time a revival of business. Or, without a contraction of land values, labor power may be so increased or the standard of living so reduced that labor becomes active upon a lower plane of living or a higher plane of production. In this way so-called good times may revive without a rise in the margin of cultivation. But in either case this revival is only the beginning of a new industrial period, which terminates as did the one before it. The probabilities, however, always favor a lower margin of cultivation and consequently a lower level of ordinary wages, at the close of each period.

Thus we find the leading principles of old school political economy pointing to the private ownership of rent as the fundamental cause of social diseases.

#### (D) THE REMEDY.

The single-tax philosophy, founded as it is in the principles of old school political economy, and following the common sense policy of curing diseases by abolishing causes, proposes to remedy the social disease by abolishing the private ownership of rent. This is the essence of the single-tax idea. But the mode of operation, from which the name is derived, is the abolition of all taxes save a single tax on the owners of land, in proportion to the value of the land they own, and regardless of its improvements.

Such a tax, by encouraging the full utili-

zation of land and discouraging mere ownership, would raise the margin of cultivation from the abnormally low toward the normal point, thereby tending to advance wages toward the level of the actual value of labor in the freest conditions. This would stay the course of the disease by impairing the vitality of its germ. The higher the single tax the more complete would be the effect. When it had reached a point at which it was no longer profitable to hold land out of use it would also have reached a point at which rent would be taken for common uses, and the essential purposes of abolishing the private ownership of rent would be completely realized.

Meantime, all taxation upon labor having been abolished, the law of demand and supply would operate freely, so that the most profitable avenues of production would be continually open and easily accessible to labor; unhampered trade would raise the possibilities of co-operation to the highest; and the vast supply of very productive free land (for the productiveness of land at the then margin of cultivation would be far superior to that of the present margin) would unite with improvements in machinery and the extraordinary facilities for trade to enormously increase the product of a given expenditure of labor. And quantitative wages, instead of falling with a receding margin of cultivation as they do now, would rise; because land at the margin of cultivation, even as that receded with fresh demands for land, would with enhanced labor power yield more wealth to given expenditure of land than land at the previous margin.

Finally, under his single-tax system, the community would come into its own. An immense and growing common fund would no longer be diverted to private use, to the embarrassment of the state, the impoverishment of labor, the enrichment of a useless class, and the constant menacing and ultimate destruction of social order.

#### VI. CONCLUSION.

All the consistent principles of the old school, those that I have neither mentioned nor alluded to, alike with those that I have tried to formulate, admonish us that if we would establish justice and really save society, we must embody the essential principles of the single-tax in our legislation. So plain is this admonition that old school economists who insist upon opposing it are either drifting into socialism, which clings to the unnatural and antiquated doctrine of the supremacy of capital, or are wandering helplessly in the metaphysical labyrinths of the Austrian school. The old school, divested as it now is, of the absurdities that for a time attached themselves to it, affords no logical ground for opposition to the single-tax idea. That idea is, as I said at the

outset, the true development of the system which, rudely sketched by Adam Smith and strengthened by Ricardo, has been logically adjusted, harmoniously rounded out, and practically applied by Henry George.

## GOVERNMENTAL BANKING THE SOLE ENTIRE REMEDY.

BY GEORGE C. WARD.

In a recent issue of the *New Nation* the following paragraph appeared:

A bank bill is a note, bearing no interest, that the bank owes. Now if you go to your neighbor to borrow \$100, he says, "All right, make out your note with good security at 8 per cent." You do so, and give it to him and he gives you his note bearing no interest for yours. Wouldn't you think your neighbor rather cheeky? Well, that is just what you do when you borrow of a bank. They have had some law put behind their note to make it better than yours, and they draw interest on their notes while you pay interest. Do you think a law that gives your neighbor that advantage over you a fair one?

Commenting on the foregoing the *Locomotive Firemen's Magazine* says:

Manifestly the bank has a decided pull on the borrower. But as matters stand just now the banks decline to loan money for the purpose of carrying forward industries, and as a result men are idle by the million. The proprietors of factories say "We can get orders, but cash down is out of the question." Customers require time but the banks refuse to loan money to help the proprietors, hence men are idle. Within the past few months four or five hundred banks failed. Why? Because, when their depositors called for their money it could not be had; it was loaned out. The idea is to do away with banks. Just how it is to be accomplished, and what is to take the place of the banks, if anything, remains unevolved.

Said a not very well informed American, to an Irish friend of his, "Who is this Irishman, Luck O'Confidence, that is raising so much devilment in this country?" "Shure! an' I dunno," said the Irishman; "I used to hear av him in the ould counthry, but I niver saw him. He was always doing devilment in ould Ireland."

And this is the gentleman whose antecedents and habits we wish to investigate.

Ever since the late panic was in its incipient stages, we have been told that it was not money that was lacking, but confidence; that there was money enough in the country to do the business of the country, but that the people lacked confidence.

But the Populists have ever claimed that it was not confidence the people needed, but money; and they have ridiculed and belittled the idea that confidence was all that was lacking. And when Gov. McKinley, himself an ardent believer in the confidence theory, failed and had to make an assignment for the lack of sufficient money to meet his claims and utter inability to obtain the same, it was cold comfort that he found in the gibes and sneers of the Populist. And yet it was lack of confidence that caused his downfall. And when Ex-Secretary of the Treasury Mr. Foster had to make an assignment, and

gave as the reason, his failure to raise money to meet his maturing obligations, there were those who were unfeeling enough to taunt him with the fact that he had been one of the loudest in proclaiming that all that was needed was confidence, and that there was plenty of money if people would only have confidence.

And yet, in spite of the fact that it was apparently a lack of money caused their failure, Messrs. McKinley and Foster were right, everlastingly and irrevocably right. It was confidence that was lacking; but the trouble was that no amount of confidence possessed by them could possibly have saved them, from the fact that the confidence must be exercised by the other fellow. They were would-be borrowers, and the confidence that saves must be in the possession of depositors. I take square issue with all those who assert that an increase in the volume of money in circulation will prevent panics. First: because, an increase in the volume of money simply increases prices, without increasing the number of distinct exchanges, or business transactions, or their relative ratio to the volume of money. Second: because savings and commercial deposits and time and call loans will ever bear about the same relative proportion to such volume of money; that is, provided the banking system of a country is fully developed and systemized.

Savings and commercial banks are the most vital portion of the body social and politic, and have the most important functions to perform. Banks have fitly been compared to the heart of the social community, or nation; and the several and various channels of commercial, productive and distributive activities to the arteries and veins. Money is the life-blood of a nation; and even as in the human body, the blood is pumped into the arteries and veins by the heart, to return to the heart again and be again pumped out, so also money is loaned out by the heart (banks) and returns again to the heart (banks) in the shape of deposits, to be again loaned out. But even as heart disease is one of the most dreaded and fatal diseases, so also, when the heart of the nation (the banks) refuses to perform its functions, the life-blood of the nation (money) becomes stagnant and ceases to flow and circulate in the arteries and veins, and the nation, or body politic, becomes sick unto death; so that, if circulation is not speedily restored, all (business) life, activity and energy must cease and the nation die, or relapse into barbarism. And this death may be caused in two ways. First: by lack of confidence in the soundness and stability of the government hence in all forms of wealth-security protected by the government; but this form of disease and death is rare.

Second: by lack of confidence, on the part of depositors, in the soundness and solvency of the banks. This is the common and prevalent form of the heart (bank) disease, and the one from an attack of which we are just now recovering. But what should we think of such a freak of nature as a human body with no heart within itself, but dependent for life upon a precarious and intermittent connection with the heart of another. Such an anomaly seems beyond our power of imagination; and yet, just such an anomaly is a nation with its banking system in the hands of private corporations, or individuals. If not, why not?

The power that controls the issue of a nation's money has, to a great extent, all productive and distributive industry at its mercy. But if the power conferred by the control of *issue* is great, greater by far is the power inhering in the control of *distribution*. If any power, other than the nation itself, has the control of both the issue and the distribution of the nation's life-blood—credit—money—then that power has the nation by the throat. There is no other mode of distributing a nation's token-credit (money) than by loaning such credit owned by those who do *not* wish to use it, to those who *do* wish to use it in the productive and distributive industries of the country and in the development of its resources. This function—power—the banks now possess in their system of deposits, loans and discounts. An unsecured pledge is given by the banks for the safe return of this token-credit (money deposit) at such time as those owning it may demand it. This pledge is secured by the actual wealth-credit of those who thus borrow the token-credit (money), such actual wealth-credit being a portion of the entire wealth of the whole people, upon which all token-credit (money) is based. Thus the people furnish the credit, while the banks get the credit of furnishing it.

There is no way of dispensing with, or avoiding, the continued utilization of the people's surplus credit, or savings, erroneously termed "bank credits," unless we should adopt the altogether absurd and impracticable policy of issuing new money to take the place of the money, or token-credit, saved by the people; leaving such savings to constitute an uncertain, though potent, factor in producing intermittent periods of inflation and contraction. Specially fallacious is the theory expressed by a leading Populist paper, as follows:

General Warner shows that the "lawful money" in the country amounts to \$1,500,000,000 (only \$1,100,000,000) and that bank credits before the panic amounted to \$4,000,000,000. What a lovely banking system this is, to be sure! For every one dollar of the people's money they hold, they lend eight dollars of their credit, upon which the people transact their business.

This makes a total of money and credit, the people require, amounting to \$5,500,000,000, or \$81 per capita. If the population is sixty-eight millions. If this \$81 per capita was lawful money, gold, silver and paper, we would be on a safe, sound and stable financial basis.

Under our present system of banking the result of such a policy would be that bank deposits and loans and discounts would be multiplied by four, as expressed in terms of money units, or dollars, although representing, as deposits, or as loans being secured by the same amount of wealth-capital. It is a popular misconception that this fund of four billions of dollars, erroneously called "bank credits," is fictitious money. It consists of individual holdings of the common credit of the people, actually deposited in the form of money; or token-credit, and loaned out in the same form. Were there four times as much actual money, or even of gold and silver coin, in existence as at present, this common-credit fund of the community would continue to be, as it is now, four times as large in volume as the volume of money. The issue is not the elimination of the factor termed "bank credit," but by whom and for whose benefit shall such fund be controlled and distributed—by private corporations for their own benefit, or by the people's government for the common benefit of all, at the cost of administering the trust.

The issue is squarely drawn between the people and the banks. As to money: shall it be based upon bank credit, or upon the credit of the nation—the people's wealth? As to the deposit and security and loan distribution of the people's several surplus savings, or token-credit—money: shall its safe keeping and judicious, careful loan distribution be undertaken and guaranteed by irresponsible banking corporations, or by the people themselves, in their sovereign capacity, as a co-operative banking corporation, through government agencies.

Consider the violent fluctuations in price and the terrible demoralization and destruction of values, with the consequent *rich harvest* of unscrupulous and piratical "bull and bears," speculators and money lenders, the inevitable concomitant of these intermittent, or periodic, panics and booms. Take, for instance, the following statements of the New York associated banks:

	MAY 20
Loans . . . . .	\$416,961,300
Specie . . . . .	71,281,100
Legal tender . . . . .	62,861,900
Deposits . . . . .	439,651,300
Surplus reserve . . . . .	\$21,422,17

	AUG. 12	Aug. 19
Loans . . . . .	\$411,750,700	\$400,540,300
Deposits . . . . .	372,236,500	370,562,000
Legal tender . . . . .	22,860,700	22,177,000
Specie . . . . .	31,624,800	34,332,800
Reserve deficit . . . . .	\$16,545,375	\$12,044,000

	SEPT. 30.	OCT. 7.
Loans	\$382,494,400	\$383,341,800
Deposits	390,980,400	400,195,900
Legal tender	41,079,400	44,305,000
Specie	80,786,200	84,372,700
Surplus reserve	\$24,320,500	\$28,628,725

	DEC. 31.	DEC. 30.
Loans	\$416,287,000	\$417,608,900
Deposits	498,847,700	506,437,800
Legal tender	98,129,000	101,108,200
Specie	104,520,700	106,316,400
Surplus reserve	\$77,937,775	\$90,815,150

This inflow of money to the banks and plethora of money in the money centers, with the resultant scarcity of money in circulation, may be an unavoidable incident of a private banking system. It is true, perhaps, that, Mr. "Lack O'Confidence" moves his headquarters, and that he is domiciled with the banks, instead of, as just previously, with the depositing public; and that, while those having money have regained confidence in the banks, the bitter experiences of the panic and the vivid remembrances of the "run," restrain the banks from again loaning out the people's deposits. Be that as it may, whether avoidable, or not, the condition exists and constitutes an unanswerable argument in favor of a system of governmental banking, under the operation of which these intermittent panics and booms would not allow speculators and holders of unbanked money to buy in the people's wealth at panic prices and sell it out again at the fancy prices of a boom. With governmental banks, there would be a mutual confidence steadily and continuously existing between the people and the banks, and a run upon a bank would become an altogether unlikely, if not an impossible event, while panics would become a thing of the past. Nothing but natural causes could then boom or depress values, and prices would remain steady.

Under the present system of banking, all these banks have to do to produce hard times, and, if they wish, a panic, is to call their loans in and refuse further accommodations. They can produce flush times, or a "boom," by loaning out their reserve funds to the minimum amount required by law. This power is too great to be lodged with any other depository but the nation, or government itself. To a lesser extent, the banks can make good or bad times, by expanding or contracting the volume of their circulating notes. These combined powers make them masters of the situation.

The banking combine, with the Rothschild syndicate as its head center, is what is vaguely termed "the money power." The ultimate aim of the money power and the goal toward which it is hastening, is the absolute control of the finances of the

world. The means to this end are the destruction of all actual money but gold money, and the substitution thereof of bank notes based upon interest-bearing, long-time bonds, issued by the nations of the earth and payable in gold.

The demonetization of silver is but a step in the direction of the coveted goal, and was instigated in England, Germany and the United States by the bankers, headed by the Rothschilds. Already demands are being made for the destruction of our green-back currency, and all other forms of paper money but bank notes. With the volume of money-issue dependent upon their selfish interests, and the distribution of all money under their control, the nation must do the banks homage and all interests bow subservient to their will.

Already, in their Associated Bank Clearing House, the banks possess the most powerful and effective weapon of aggression and defense in the world, and the battle may be said to now be fairly on between the money power and the people. "Eternal vigilance is the price of liberty." Now is the time to strike, before it is everlastingly too late.

Consider for a moment the appalling net results of the panic that was deliberately brought on by the banks for the purpose of creating public sentiment adverse to silver and forcing an issue of interest bearing gold bonds.

In its recent issue Bradstreet's has this to say about the record of failures for the year that closed on December 31, 1893:

What will doubtless be known as the "panic year 1893" has brought with it, as was to be expected, the largest number of business failures ever recorded in the United States since records of the same have been kept, the total as reported to Bradstreet's amounting to 15,560, in which are included only commercial, industrial and financial business failures in which estimated actual assets are smaller than reported liabilities. For this reason about 240 banks and banking institutions which have been forced to suspend since May 1st last, owing to restricted credits, hoarding of funds and panic, because they were not able promptly to liquidate their total indebtedness, are not included among institutions reported failed, their aggregate liabilities amounting to about \$65,000,000 in round numbers, as contrasted with corresponding assets of about \$100,000,000. But more than 370 remaining banks and banking institutions out of more than 600 reported suspended during the past twelve months are included in the accompanying statistics of business failures for 1893.

The increase in the number of mercantile failures in 1893 as compared with the year before is more than 51 per cent., which, it is unnecessary to explain, is the heaviest annual increase on record. The proportion of individuals, firms and corporations having a recognized place in business communities throughout the United States, which failed during the past year, has been 1.51, or 1½ in every 100, as compared with 1 in 100, or 1 per cent. in 1892, and as compared with 1.32 per cent., or nearly 1⅓ in every 1,000 in the last preceding important panic year 1884.

The grand total of estimated liabilities of individuals, firms and corporations in business, including banks which reported liabilities in excess of their actual assets, amounts to \$103,000,000 in round numbers, or nearly four times the corresponding total of 1892, when the total number of failures was two-thirds as large as this year. The next largest aggregate of liabilities was in the panic year 1884—\$248,700,000, and

after that in 1891—\$193,100,000, next in order in 1882—\$175,900,000, and fifth in the rank in 1890—\$175,000,000.

This number of failures, vast as it may appear, does not represent one-fourth of the failures that have taken place. It takes no account of the thousands of mortgage foreclosures, the most disastrous of all failures, the thousands of liquidations through deeds of trust and other well-known methods. In fact the above report represents only the larger commercial failures. If the truth could be definitely ascertained the number of business wrecks during the past year would amount to more than 100,000. The coming year promises no better.

It is, indeed, a ghastly and fearful record. But this was written not so much for the purpose of setting forth the causes and results of the panic, as to emphasize the lesson taught thereby and epitomized in the statement, or the assertion, that *these events could never have happened under a system of governmental banks.*

The burden of interest-bearing debt is crushing the life out of the people of this nation and of the world. Interest—accursed of God and a curse to man—has ever enabled the idle few to live in luxurious splendor, at the expense of the toiling masses, who make out a bare existence in penury and want.

It remains for the United States to present to the world a realization of Bartholdi's dream, "Liberty, enlightening the world," by banishing forever from America's fair land, the robbers and spoliators of humanity—rent and interest. Armed with the mighty weapon, the freeman's ballot, labor, hitherto robbed and despoiled, can crush and obliterate all present dynasties and systems and erect and inaugurate upon their ruins the temple of human freedom and an industrial system under which "those who sow will reap" and those who work not, will not have to eat. Then shall be made to bear equally and alike, the Divine injunction, "in the sweat of thy face shalt thou eat thy bread," and no man shall thereafter be compelled to furnish sweat to moisten another man's dough.

Interest can be destroyed only by the people, as a community, or government, entering into competition with individuals in the business of loaning to each other, severally, their collective credit, or money, at the cost of carrying on the business.

Let us have governmental banks, operated at cost by the people, for the people. All that is needed is an educated people and an intelligent ballot.

THE law ought to provide that railroad corporations should state under oath, the amount they pay out to purchase legislators, courts and congressmen. The public ought to know the price of such "commodities."

## AN IDEAL CURRENCY.

BY JAMES MIDDLETON.

The true ideal in a currency is to have it as stable as possible and to have it so sound that it will be desired by every one within the nation or who has commercial relations with the nation or its citizens.

Until some way can be devised that shall insure the same return for each hour's labor in any given employment one year with another, it will be impossible to have a unit or dollar that will not fluctuate. Take for instance a socialist time check or labor certificate, it would get only half of the wheat in a year when the wheat crop was short as in a year when crop was double.

So long as human labor varies in productiveness from year to year, or period to period, so long will the currency that measures it vary. It will take more or less labor to get the things for which we labor.

The soundness of the national currency will always depend upon the action of the government that issues it or determines its legal tender qualities, and upon the soundness of that government's credit. Even commodity gold or silver money is not free from the action of that law. To illustrate I quote from the "American Cyclopaedia" Vol. XI., page 736. speaking of money:

Aristotle says of it that "It exists not by nature but by law." How true is this doctrine, or, at least, how potent is the law under a civilized government in imparting the quality of acceptability for the payment of debts, and the purchase of commodities to that which it recognizes as money, is clearly proved by the operations of the bank of Venice during several centuries, throughout which time its deposits, which were never payable but only transferable on the books of the bank, were at a premium over coins, because they were the standard of payment furnished by the state and used for all large transactions. Indeed, this bank money was that which established the money of account and in which the value of all coins was expressed. Further, on the testimony of Thomas Baring, we are assured that it was found impossible during the crisis of 1847 in London to raise any money whatever on a sum of £60,000 in silver. During a similar crisis in Calcutta in 1864 it was equally impossible to raise even a single rupee on £20,000 of gold. The former was not a legal tender above 10 shillings while the latter was not so for any sum whatever.

If the government's credit is good and the currency is limited to the actual needs of business a paper dollar redeemable in taxes will float at par or above a commodity money, and that even though it have no other legal tender quality except as to taxes and dues against the government.

History presents such examples and even those cases, such as the French assignats, the continental currency and the Confederate greenbacks when fully understood only serve to show that truth. The paper of the bank of Venice inconvertible in specie remained for centuries at or above par and ceased only when Venice was conquered by Napoleon.

The colony of Pennsylvania under the advice of Dr. Franklin issued a paper currency or "Proclamation money" or "Re-

solve money" to its citizens in amounts of \$100 or less based upon

Real security of at least double the value for a term of sixteen years to be repaid in yearly quotations or installments with interest. Thus one sixteenth part of the principal was yearly paid back into the office, which made the payment easy to the borrower. The interest was applied to public services; the principal during the first ten years was let out again to fresh borrowers. \* \* \* This money bore no promise of a redemption in coin but a promise to receive it for all dues. \* \* \* The money was so good it circulated in neighboring provinces as at home. The volume was governed by the necessities of the individuals and of the public and was always sustained in value by taxation. There were thirty-five issues of this money either to redeem old issues or supply the demand for increased circulation, and so universal was this system commended by the wonderful development and prosperity of Pennsylvania that it conquered all opposition.

This quotation is from Freeman O. Willey's "Whither Are We Drifting as a Nation," which quotes Dr. Franklin's, and also Gillett's comments, both of which should be thoughtfully read by anyone who wishes to understand the money question. This paper currency was overthrown by the Revolution.

The sixty million demand notes issued by the government early in the war and receivable for all dues against the government, kept within a few cents of full legal tender gold all the time they were out though the credit of the government was at that time shaky. Our continental currency depreciated on account of its excessive amount, because of the great flood of counterfeit and because at the time there was no adequate taxing power behind it.

Our greenbacks were no fair test of the stability of a paper currency as compared with a commodity currency as they were not legal tender for import duties or interest on the public debt, while gold and silver were.

The primary requirements for a stable and sound national currency are, that it shall be issued by the general government, shall be receivable for all dues against government, local or national, and shall be limited to the actual needs of government and of business. Making it legal tender is of secondary importance but gives an additional strength. Within these requirements, a legal tender paper money redeemable in all public dues will float at or above par with any commodity money.

If the government should refuse to use gold and silver and should remove their legal tender qualities they would cease to float as money and would at once be relegated to their proper uses as commodities except for the purposes of paying balances of trade with other nations. For such a purpose it would be much more available than now and every one but those who thrive on the necessities of their fellows would be benefited. The poor then might have more gold and silver plated utensils, more decayed teeth filled with gold.

The unfolding of time and civilization have relegated iron, tin, copper, brass and other commodities that have served as money to their other functions as commodities to the manifest gain of humanity. Silver and gold still linger, though the days of silver are, fortunately, apparently numbered. The sooner it takes its proper place with iron and copper the better. Then let gold follow it. It is the most dishonest and cowardly of all forms of money, the most easily controlled by speculators.

For the present, until the ignorance and prejudice which still linger shall be dissipated, it is well that gold should have its place in the national currency but its power to hurt will be taken away when the nation shall rise to its duty and issue a true and sound paper currency sufficient for the needs of government and business.

The total taxation, national and local, now is not far from one billion dollars. This then is the amount necessary to transact the public business of various kinds at present. At the beginning of each fiscal year the federal government should determine as now how much should be needed for the year and how much of coin in the treasury available for those expenses. Then full legal tender United States treasury notes should be issued for the balance. These should be paid out during the year for the specified purposes.

The taxes for the year should just equal the expenditures. They should be made payable during the year at such periods as would give chance for the notes to circulate from the receivers to the tax payers. The notes should be cancelled as they come back to the treasury in payment of taxation. That would complete their redemption.

Under present conditions the gold and silver coin might be received, and when so received be reissued instead of lying uselessly idle in government vaults. Under such conditions the free coinage of gold would not be harmful, even its legal tender function might be removed with benefit. For silver, the disappearing commodity money, there would be no need, and we might well bid it a glad farewell as money and welcome it to its rightful place as a useful commodity.

The federal government should provide a similar currency for the state and local divisions in a manner similar to that pursued in case of the national banks. The state should give non-interest bearing bonds for amount received and the amount should be strictly limited to the amount to be raised by taxation. As the state and local divisions collect their taxes, the state authorities should be required to take up their bonds to the federal government with the money received, thus cancelling the bonds while the federal government cancelled the notes returned.

This would give an annual circulation equal to the total local and national taxing power going out through a multitude of channels and returning through the taxpayers and others owing public dues, quickening industrial activity in countless ways. Such a currency would ever remain at or above par as measured by a gold or silver coinage.

To secure a currency for the needs of business over and above this, automatically regulating itself, the federal government should, so long as we have a debt, arrange to fund it into a 2 per cent. commodity bond as proposed by Hons. Tom L. Johnson, Windom, Spinner and others. These bonds should be in denominations of ten dollars and upwards obtainable at the post office and thus available to the masses. Whenever the holder should wish he should have the privilege of giving up his bonds and receiving a special currency full legal tender therefor. Whenever any one should have such special notes to the amount of ten dollars or multiples thereof he should have the privilege of obtaining such bonds. The national bank then might be safely allowed to drop out of sight and all banks be relegated to their proper functions of deposit, discount, loan and exchange.

With such a financial system it would be easy for the government to absorb as fast as it might be found wise such public functions as express business, telegraphs, telephones, railroads and the like, paying, if need be, with the 2 per cent. convertible bonds.

Such a currency would automatically adapt itself to the needs of business. When the demands of business caused the rate of interest to rise sufficiently above 2 per cent. holders of bonds would return them and take out bills to use or to loan. The government would save the interest on the bonds deposited. This would be a decided gain over our present national banking system, where the government gives the notes and pays interest on the bonds besides, limiting the privilege to those holding \$50,000 worth or more. This would give a banking system for the masses instead of the millionaire and the moneyed Samson would be shorn of his locks.

Such a currency and banking system would be as sound as the government itself. Its stability would be greater than that of any commodity money. Its flexibility would be well nigh perfect, adapting itself automatically to the varying needs of business. So long as the public debt lasted, and that could be continued indefinitely, it would satisfy the requirements of an ideal currency to all except those who wish to prey upon their fellows. Such a system of currency coupled with the single tax upon the annual rental value of lands would give us a well nigh perfect fiscal system.

## SHALL OUR HOUSE BE DIVIDED?

BY A. J. GRAY.

The greatest battle an individual has to fight is that in which he engages to conquer himself, and the greatest battle laborers have had, and still have to fight, is to overcome differences in their own ranks arising from ignorance, prejudice and superstition. Differences which result from honest conviction after impartial investigation of every phase of a question, must arise; but those who entertain opinions so formed are reasonable in their advocacy, and tolerant toward the opinions of others formed in the same manner, for they understand that after a full and impartial investigation different men will arrive at different conclusions. Such men can find common ground on which to stand, and can always rely upon one another. Very different is it with the ignorant man, who is nearly always governed by prejudice and superstition. He jumps at conclusions which no reasonable amount of evidence can change. A reasoning man is susceptible to change by reason, but no amount of reason can overcome superstition. To attempt to combat superstition with reason is like waging war upon shadows, for superstitions are but mental shadows cast by ignorance. For thousands and thousands of years truth has had to do battle with these shadows, and has often only succeeded in overcoming them in one form to have them appear, apparently as formidable as ever, in another place. Our progress is being continually impeded by obstacles which the ignorant and superstitious are constantly throwing in the way, and it would seem that we would continually have to fight the same prejudices and the same superstitions until every individual who entertains them has become enlightened. If laboring men were united in their demands for any one thing they would have no trouble in obtaining it. But they are not united, and as long as there are a great number in their ranks who are governed by prejudice they never can be united. The greatest enemies to the cause of labor are those within its ranks who would, under any pretense, do anything which would even tend to create a difference by arousing prejudice; and of all prejudices those which grow out of religion are the most unreasoning and harmful. Labor's cause is world wide. It is not race against race, nation against nation, nor religion against religion, but the laboring man the world over, irrespective of race, nationality or religion, in one common cause against a common foe their exploiters, the social drones who hold the God-given opportunities for the self-employment of labor, and by so doing are enabled to convert to their own use the greater part of that which the laborer produces. When laborers realize

his, no quarrels between their exploiters and no appeals to them in the name of patriotism or religion can divert their attention from their real oppressors and determine them to take up arms and engage in wars of self-destruction.

There is an organization called the American Protective Association which has erected a man of straw which they term Catholicism, and they are now trying to build that organization by working upon the prejudices of the ignorant and superstitious. If they succeed along the lines laid down they will create a division in the ranks of labor which will greatly impede its progress and will revive old religious prejudices and superstitions which ought to have been overcome two centuries since. They would turn the wheels of progress backward over two centuries, and oblige us to again wage a senseless war to overcome religious prejudice.

When will the laborer arise above petty, senseless denominational prejudices to a more sublime conception of true Christian brotherhood? Christ chose his disciples from among the laboring classes and he made no religious test a qualification. He called the laborer the salt of the earth, and he said that the service of God consisted not in the belief in a dogma nor in the subscription to a creed, but in feeding the hungry, clothing the naked, ministering to the sick, and visiting those who are in prison, and that the doing of these things to the least of our fellow men is the service of the Lord. In this is the kernel and the spirit of true Christianity. This was recognized by the immediate followers of Christ, but in time Christianity degenerated into mere formal observances and lip service. It was joined to the state for the purpose of keeping the people under the subjection of political rulers, and as the church had lost its spirituality, its real life, or love-giving principle, it only had power as it could work upon and appeal to prejudice and superstition. This was the status of the so-called Christian church as it appears in history after the death of the immediate followers of Christ. People were then ignorant and superstitious and performed acts in the name of Christ which were as foreign to his teachings as anything could possibly be. Their acts were not the acts of Christians, but those of a church begotten in ignorance and sustained by superstition and a grave misunderstanding of the teachings of him in whom they professed to believe and to follow. But the errors of the Christian church of that day—however serious and repugnant they may now appear in the light of our present understanding—are the acts and errors of the whole Christian church; for, at that time, the whole church organization was called the Catholic church.

They were one and the same, and any indictment for the acts of the Catholic church of that day is an indictment for the acts of the entire Christian church. As man became enlightened differences of opinion arose on the subject of religion and the church became divided and sub-divided, and as we advance in knowledge other divisions are being made and new churches organized. The old churches advance but they move too slow for some of their members, and they leave the old church organizations and start on ahead.

The Catholic church has advanced with the advance in civilization, but having retained the name of the early church, the name which the Christian church bore when it was united and when the people were bigoted, ignorant and superstitious—and on that account did many things which no good Catholic would now countenance—it is sought to be made, by the ignorant and unthinking, responsible for all the crimes committed by the early Christian church (so-called). Just because it is the church organization which has inherited the name of the early church, and for this reason, and for no other, the most outrageous lies are told regarding the Catholic church and some otherwise well informed and rational people give them credence.

Not later than last summer a well educated Presbyterian minister told me that it was said that Catholics had arms and ammunition stored in their churches and that they were drilling with intent, at some future time, of taking possession of the United States.

The most remarkable part of it was, he believed it. Prejudice dies hard. I know this to be true in my own case, for having been brought up in a small Protestant town where there were few Catholics, and no Catholic church, my knowledge of that church was gleaned from books and statements of Protestants which were calculated to prejudice me against that church and those who belonged to it.

As Catholics who lived in our village were just like other people, I came to look upon them as exceptional Catholics. When I saw more of the world and its people, I found nearly all Catholics like my exceptional cases, and when I came to have a knowledge of Catholics and Catholic institutions, as they now are, I found that my judgment was as erroneous as would be a judgment of the present English people by the cruel King John, or a judgment of the present inhabitants of New England by their intolerant and persecuting pilgrim forefathers.

With our knowledge of the present Catholic church and the good which it is accomplishing in caring for the orphan, the sick and the destitute; with its many institutions of learning and the position which it

has taken, within a year, in allowing its members to send their children to our public schools; the efforts which its officers, from pope to priest, are making to find a solution of the labor question which will advance the interests of the laborer and better his condition; and the consideration which it has shown, and is now showing, to the cause of labor by encouraging its members to join their organizations when it discourages their becoming members of other secret societies; when we consider the relation which Father McGlynn, one of labor's most eloquent and earnest champions, now holds to that church, and the further fact that the Catholic church is the church of the laboring masses, we ought to be able to banish the last lingering spark of prejudice against it and ought to do nothing to alienate it from labor's cause, for in so doing we lose a powerful ally and imperil the cause of organized labor by arousing a prejudice which will be sure to create a division in the ranks of the army of laborers now battling for their rights—for a condition where their share of that which they produce shall be more in accordance with the part which they take in its production. The object of the American Protective Association is to advance the interests of a few politicians by reviving and nursing prejudices which acts of the early Christian church have engendered against the Catholic church.

In all labor troubles have not Catholics been steadfast in their support of the cause of labor? This cannot be gainsayed, and as we know this to be true, why not act in accordance with known facts rather than upon unsupported assertions of irresponsible bigots who would trample upon labor and labor's cause in their efforts to gain a little cheap distinction or power in politics by fanning into a flame a religious prejudice conceived in ignorance and fed on superstition.

Already its influence is being felt in the ranks of organized labor, and laborers may be sure that those to whom they are opposed will use every effort to advance any cause which promises to create differences and antagonisms in their ranks, and it is known that nothing is more unreasoning and difficult to overcome than religious prejudice. It remains to be seen whether laboring men will have wit enough to realize that any action on their part which would cause a division on account of such prejudices would be the greatest calamity which could now befall them. It would cause their house to be divided against itself and would create a breach which years would not bridge. Will the time never come when it will be unnecessary to expend any effort in fighting prejudice and superstition?

It should be understood from the very

first that if a division is made in the ranks of labor along the lines laid down by the A. P. A. that they will be responsible for it, and that they, and not the Catholics, will prove themselves unloyal to the cause of labor, and to their door must be laid the charge of that bigotry which has always obstructed progress with prejudice.

Then let us say: "The world is my country, and every right thinking and right doing person my countryman. My religion is to do right, which is to do good, and in so far as any person does right or that which is good, in so far as he is my brother, and to that extent shall he have my love and my co-operation."

### WHAT SHALL THE HARVEST BE?

BY L. W. ROGERS.

Somebody has said that we never comprehend the importance of passing events because we are too near to them, and, like a spectator looking at a monument which is near enough to be touched, we see a meaningless wall instead of a clear outline of perfect design. The labor history of the past year is very near to us, but so striking are some of its points that already the relation between the various parts has become so clearly defined that the most careless observer cannot but see the outlines of the perfect plan which has produced the whole. Agassiz could look at a fossil bone and with his pencil reproduce the extinct animal. He is a clod who cannot look at the events of the last twelvemonth and see the shackles, the prison and the gibbet for organized labor.

The author of "The Coming Climax in the Destinies of America," a book as vivid as a flash of lightning, asserts that the affairs of the world are managed by a regularly chosen body of plutocrats, and that the ups and downs in industrial affairs are merely so many moves on the world's chess board done to order. Most people, even among those who are engaged in the wage-struggle, are inclined to smile at such assertions, but it is safe to say that the events of the past few months have sobered some thousands of them into an attitude of respectful attention toward those whose warnings have suddenly ceased to be amusing. We have felt so strong in our flourishing unions, we have been so confident that the sympathy of the people is with us, we have boasted so long of the impossibility of throttling the spirit of American independence that it is little wonder we laughed at the voice of warning and that the sudden shaping up of stern realities should leave us half bewildered and unable to grasp the full terrible meaning of these portentous events.

While the most significant things in all

labor history have been crowding themselves into the brief period of a few months. The principal occurrences in labor organizations have been the holding of annual conventions, and preparations for others, where the programme embraces the momentous question of whether John Small or Dick Little shall bear the title of "Grand" or "Supreme" head of the order. Aside from the settling of this important matter our grievance rules are patched up, our constitutions are changed a little, we have a report showing the number of dollars it has cost to run the machine a year, and another report telling how we have grown from a handful of members to the present magnificent proportions. These allusions to "our rapid growth" and "our great prosperity" bring out vociferous applause, and many a man who never scored a point in either wit, eloquence or logic has lionized himself by bombastic references to "our glorious organization." At the close of these conventions we have an oratorical round-up and go wild over the record "which has covered our noble order with glory." For a quarter of a century this has been the annual programme and not once have we attempted to take up the real questions that lie at the root of labor's adversity or search for the conditions that can bring permanent prosperity to labor as a whole. We have been too busy applauding references to our "glatifying progress."

Would it not be well for us to lay aside this pitiful braggadocio long enough to take a look at the yearly chapter of American history wherein manual labor and plutocracy are the chief actors? It will not require a second glance to see that labor is not quite so free and independent as generally asserted. It will be easy to discover that whatever of liberty it possesses is threatened by the enemy, and that this enemy is carrying forward its work in a most systematic and successful manner.

It is a good idea to be perfectly frank about a thing like this. The first principle of successful generalship is to know yourself. No good can come of pretending to be stronger than we are, or of rating the strength of the enemy at less than it is. The fact is that manual labor has been in slavery during nearly all the history of mankind. Most of the time this slavery has been absolute and the laborer did not have even a clear title to life. Some of the time in some of the nations he has had limited privileges, but for only an extremely brief period has he had anything like the civil rights of other classes of citizens. Speaking broadly, it is within the last century that labor has really advanced, and that free schools have given it a soul filled with a longing for equal participation in civilization that makes death preferable to old conditions.

It is this sort of progress that has alarmed the plutocracy, not of the United States, but of the world. The demand for better conditions and fairer division has become so strong and persistent that nothing but the sternest measures open to the ruling classes can have the slightest effect. Of these the most is being made, and they are neither few nor insignificant. If the plutocracy can undo the work of the last half century, if it can place labor where it then was, plutocracy's future is reasonably secure. Whether or not this can be done is the question to be settled. The fact that it will be determinedly tried has become so very evident that argument to support the point is superfluous.

We are probably on the threshold of the real struggle with plutocracy, and there may be surprises in store for us that will make Homestead, Buffalo and Toledo insignificant. Plutocracy has every advantage and occupies the fort of established law. While it has carefully prepared for the contest and securely entrenched itself in every legal and commercial stronghold, labor has frittered away the time boasting of the fact that it is wearing somewhat better rags than its ancestors possessed. It has held frequent conventions and passed grandiloquent resolutions about its rights, but has strangely neglected to use the only right it has that can lead to others—the right to vote and establish laws which the plutocracy cannot use against it at pleasure.

And so the plutocracy has prepared for the struggle and labor has not. The enemy's challenge leaves it startled and uncertain what should be done. We are brought face to face with the issue and our helplessness but emphasizes the folly of neglected opportunities. We have held in our hand the magic wand of the ballot and did not—aye, do not—appreciate its worth. Thus have we sown. What shall the harvest be?

REFERRING to the longest tunnels in the world the authorities report that Mont Cenis tunnel in the Alps is seven and one-half miles, the Arlberg six and one-half, the St. Gothard nine and a quarter. The Simplon will be twelve and one-half. The cost of tunneling is very great. The Mont Cenis tunnel cost \$15,000,000, the St. Gothard \$12,500,000. The longest railway tunnel in the United States is the Hoosac, in Massachusetts, four and one-half miles. The longest tunnel in the world is that of the Croton Aqueduct from the Croton dam to the New York reservoir. The length is over thirty-three miles and the whole distance is practically tunneled through solid rock.

PATTI's throttle has made her a million heiress. She wont open it for one performance for less than \$3,000.

### COMPOUND ENGINES: ECONOMY AND REPAIRS.

As a general thing it is supposed that the higher the pressure the greater the economy, or the greater the number of the cylinders, the higher economy is a result.

There are conditions which may, and do, modify the results so far as economy go, but to the ship owner, or railroad operator, there is another element that cannot be left out, and that is the relative repairs, or cost of maintenance; for it has long ago been found that a small saving in the fuel does not compensate for an addition to the constant expense of repairs and supplies, and this lesson has also been learned by some of the large manufacturing concerns in the east.

The compound engine as it was, used 90 to 120 pounds of steam pressure, by the gauge; and had two cylinders, and when used as condensing, it has produced an indicated horse power with 14 pounds of water an hour, with 120 pounds, at 135 to 160 lbs. pressure. It has been found that a considerable addition was needed in weight, for it calls for more strength, and more iron, to withstand the strains, and the result is so slight in actual gain, that it is not worth talking of, taking "three" or triple cylinders and 135 to 150 lbs., and the condenser, or running to 180 or 185 lbs., and we have three or four per cent. gain in the fuel, and just how much addition to the repairs is not yet fully determined, and then if we go a step further, and use four cylinders, and 200 to 225 lbs. pressure, with condenser, we have increased the elements of danger, for the steam at the upper limit is of the temperature of "melting tin," and unless we pay very especial attention to the lubricating it is an assured fact that we will run into serious trouble, for at such temperatures the oil will vaporize, and lack of oil will soon ruin the steam surfaces, and in this way some of the ships that carry only 165 lbs. have found serious delays, and a big bill of repairs at the end of a round trip, and a slow getting back to first economy, running through months of time, and a machine which was far less in value at the end of a brief time, than at the start. The packings, whatever they are, do not stand the pressure and heat as combined, and the expansion and contraction of increased weights and thicknesses are a far more serious matter than is usually supposed.

The matter of human life has had some

attention, but some terrible "accidents," are the very apparent result of too slight consideration to some of the connections, or the way such work was done, but with such pressure it is not easy to be entirely safe, without a considerable outlay, for the express purpose of securing immunity from accidents to life, and as most ship owners look closely after first cost, and contractors do business to get a profit out of the work, the men who have to run the machines do "the looking out," as is seen by the scalding, from breaking of pipes, blowing out of something, or some of the various incidents so familiar to those in active contact with the work.

Some curious affairs have come off from the action of the steam at high pressures on the piston rods not being lubricated properly while in use.

The number of expansions, or the increase in the number of expansions, is supposed to be a vital point of advantage, but it is proved by actual test, that it is possible to run a ship at higher economy, with less number of expansions, than some of the high theory engines, and a lower pressure, as well as less coal, and a far lower continual expense account, and it has been found that the increase of cylinders in number is not a necessity, or an economical matter, for there seems to be a happy medium in the case of a steamship, and a point where an increase of pressure or of cylinders does *not* work to such an advantage in either economy of fuel or repairs.

It is often a question by a ship owner, as to the cost of fuel and repairs, saving of cargo room, etc., and a raising of pressure, may not save in all directions, although it may save fuel, and although the triple and quadruple engines are fashionable, it is now found that modifications in the opinion of the owners are taking place, and the results are from the trips of the ship, and her log, rather than from the fairy stories of the men who are "looking for a job" of putting in engines, for after the flurry of rushing after new (?) ideas there is a return of sanity, and judgment, is exercised, and this is now working to show that theoretical expansions do not arrive at results so rapidly, nor so surely, at the higher limit, as a moderate pressure and more certainty of realizing on the calculations. Superheating the steam has been tried with great success, in some instances, and the result is far more favorable than with higher pressures and more in number of expansions, for it is quite possible to superheat the steam at a lower pressure to the temperature of a higher pressure, and then with a less number of expansions, to obtain a result most efficient in total result, without all the disadvantage of the extreme pressure used.

Friction is an element of much importance in any engine where the parts are multiplied, for the bearing surfaces are large, and parts heavy, and the rods must be closely fitted, and to resist great pressures.

Theoretically there are certain things required in the construction of the compound engine that are not so efficient in practical use as it seems to be in theory, even when the condenser is used, and it is essential that any engine in use "on the iron" must be so as to reverse easily, quickly, and certainly, and this can hardly be done without sacrificing, to some extent, in a drop as between the cylinders, and this as certainly is not in theory the highest efficiency, and as the cranks on the locomotive must be at ninety degrees, we cannot choose the position, but must conform to usage, and if the proportion in the cylinders is correct in the design, we are sure to have the nearest approach to an equal division of the load, to have some drop in the receiver, and to have the nearest to the practical results, although we are sure that we have violated the accepted theoretical condition requirements to some extent, yet it is proved over and over again that this style of engine is the most complete in its work at sea, for long trips and certainty of action.

Conforming to the economy, we would put in a locomotive compound, the small or horse power cylinder, with a cut-off on the lower pressure equal to the volume of the horse power, when their relative volume is considered, or the ratio of one to the other. This would make the two cylinders of equal value to the simple engine, so far as real economy goes, but it would at once violate one of the theoretical conditions as to the compound engine, for it could not easily be started or stopped, nor would it reverse easily or quickly, if, indeed, it did at all, in a majority of instances, with the cut-off on the low, and without that it would not operate as economically as the single engine, when the condenser is used, and as this last condition is not at all applicable to the locomotive, then it becomes a matter of not much interest to pursue the claims further.

The various forms of the compound engine have now been studied by many of the best men in the ranks of the engineering talent of both the old and new world, and much thought and experiment involved. The questions of "angle of cranks," "ratio in the size of different cylinders," "the position of the leading crank," are the standard subjects as to the "looked for perfection" as between two, three, four, or even more cylinders. While it is for many reasons hardly possible to employ over two on a locomotive, and whether it is possible to make use of two to advantage, when all

things are properly considered, is now an open question, in the minds of many of the men interested, who are not owners or promoters of "patents," for any use beyond the freighters, as in their case the load is to some extent more constant than in the flyers.

In studying the diagrams from the largest ships now afloat, of which the writer has taken as many, if not more, than any man living, especially on the new ships of war, the departure from the Rankine rule of efficiency is radical in some of them—for in some of the ships of war the clearance is more than 20 per cent., and the drop is from three to fifteen pounds, but it must always be understood that the maximum in a war ship is not at all the question of economy, it is a question of making a tremendous power, as may be required for a short or a longer time, to gain a position, or to get out of a scrape in a hurry, and so it is a question of pushing the engines to their greatest possible capacity, for any length of time, rather than an economical production of power.

So, in many of the "racers," the theoretical questions are all laid aside for the "speed," and the engines are economical to "some extent," but in either case the fine points are drawn to the commercial rather than the theoretical, and the commercial is finally the only standard, beyond a place in the computations, where it is easy to determine the relative value and the cost of repairs as demonstrated, and, in some cases that can be named, it is a fact that after one of a pair of ships has been sent to sea for a few round trips, with the intention of duplicating the engines of the first, such a modification of opinion has taken place that long before the second of the sisters had gone into the water her engines have been much changed from the first, and, when the second one has shown her superiority, the first one has been laid up and in turn been changed, and, in one case three years now past, a ship whose engines were of two cylinders had been carefully adapted in her valve motions and was the most economical ship in a line, and after she had a record there came out a triple and the old double was made a triple, with new boilers, *against the advice of her original builders*, but the job was undertaken, and finished by a man who could figure out a great saving, which he guaranteed, and he is now looking over his figures to find an amount of £415,230, for the simple reason that she has not yet come up to the old time results, in her coal account, other factors remaining the same.

There is very much yet to learn in relation to compounding any engines in working steam, and this has been taught in the most expensive way possible to some users of "electric light and railway companies." See

the record of failures and receivers and ask the reason. The use of the so-called high pressure compound is one of the "savers," and the using of the triple compound, where the load varies 40 to 50 per cent. in two hours, seems all right, but the fact is that steam is subject to some laws that will not bear contradiction, and still remain on a line of economy. The writer has now in mind a certain triple compound, made and set up with great *relat.* in a manufacturing concern, to do 600 horse power with 140 pounds of steam. It was illustrated and commended by the daily and illustrated papers and started on its daily work. After a few weeks the lawyers had some contracts to look over—then the writer was asked to go and see it. Indication followed, a duty trial was made and the result is a law-suit yet on, in its third year—still running. The contract stated that "a saving of 30 per cent. should be made over the engine it displaced," and the load in the cylinders "should not vary over 5 per cent., one from the other."

The old engine used 32,000 pounds of coal in twenty-four hours, the new one used, for three weeks, 31,200 pounds in a day of twenty-four hours. The old fellow had a difference of 5 to 6 horse power between its two cylinders, and the new one ran nearer as follows: Horse power, 290 indicated horse power; intermediate cylinder, 110 horse power; low, 200 to 210 horse power. The old one had 90 pounds of steam and the new one 130 to 140 pounds per steam gauge, and was built by one of the oldest of builders.

In the water works pumping engines, where the conditions do not vary much, it is possible to use cut-offs on each cylinder, and the highest economy has been attained, and in the large cotton mills, where the load for a large part of the time is very constant and the triple cut-off is possible, we can also look for highest economy. It is true the triple has its uses, the double has many places where the triple will not successfully compete with it, and there are many other places where neither will, with our present knowledge of steam, be admissible at present, and what can be done must be done in a practical way, or to earn a cash return for the investment, if it is adopted to any extent. There is plenty of room, but with a large percentage of the American railroads in the hands of receivers it is not a flattering outlook for costly experimenting at the expense of stockholder's money, but as the era of lying on the part of managers as to the facts, and the return of confidence in railroading becomes remote as to the first and nearer as to the last, there will be a demand for real improvements, and the day is not far away. Certainty rather than speculation, success, not failure, and benefits in place of disadvantages are what is wanted.

Thomas Pray, Jr.

#### LOCOMOTIVE SLIDE VALVES.

Q.—What is the most simple and usual type of slide valve used for an American standard locomotive?

A.—The valve consists in effect of a plate or block, such as is shown in figure 1, having in its under surface a cavity which extends at right angles to the direction of travel of the valve, and parallel with the ports in the valve seat. Crosswise projections from the top of the valve enable the valve rod to be attached either by screws and nuts or by a collar or frame surrounding the projections in such a manner that the valve is free to change its position with respect to the valve rod, as its face and that of its seat wear away.

Q.—Describe the seat upon which this type of plain slide valve or short D valve is placed.

A.—As shown in figure 2

Fig. 1.

Fig. 2.

it consists of a plain surface having in it three ports, all of which are at right angles to the direction of the motion of the piston and of the valve. The central one of these communicates with the exhaust passage, and the end ones with the cylinder at the counter bars. There are usually shoulders

at each end so that the valve may in its travel extend beyond them, instead of cutting away material, and wear a low place in the seat.

Q.—What would be the effect of omitting the shoulders in the seat?

A.—If the valve was given a certain short amount of travel and wore itself a low place in the seat, there would be either a smash up or a leak between the steam chest and the cylinder, if the travel was increased and the valve was adjusted so as to be brought nearer to or further from the cross head end of the cylinder.

Q.—What are the functions of the valve?

A.—To admit steam from the steam chest into each end of the cylinder, up to a certain point in the stroke; then to cut it off from that end of the cylinder; then to release it from that end into the exhaust pipe; and in some cases to close the exhaust before all the waste steam that has done work has been exhausted.

Fig. 3.

Q.—How are the positions of the valve with respect to the ports, the distances between the port edges, the widths of the ports, and the dimensions of the valve itself, arranged so that it will do all these things?

A.—The arch of the valve must be of such a width (in the direction of the valve travel) as about to reach from the inside edge of one steam port to the inside edge of the other; each leg or lip of the valve must, when the valve is in such a position that the arch will so reach (this being called its mid-position) be at least long or wide enough (in the direction of the valve travel) to entirely cover its end port.

Q.—How about the travel of the valve?

A.—It may be more or less, according to the points at which it is desired to cut off the admission of the steam and to close the exhaust.

Q.—What is the effect of great valve travel?

A.—Great friction between the valve and the seat, unless there is some way of counteracting it.

Q.—How may the valve travel be lessened without injuriously diminishing the port opening?

A.—By providing supplementary ports and passages, as shown in what is known as the Allan or Trick valve, seen in figure 3.

There is a step or shoulder on the valve seat, and a passage through the valve itself in such fashion that as the outside edge of the valve at either end commences to uncover the steam port at that end, the supplementary passage commences to receive steam at the other end, and passes it over to be discharged into the same port; besides the stream of steam coming by the outside edge of the valve.

Q.—Where is this valve most needed, and where is it of most use?

A.—It is most needed at high speed where the valve travel is shortest, and it is of most use here, also, giving double the opening with a given valve travel.

Q.—How may it be proved that it is economical of steam?

A.—By the fact that some engines, which have been unable to run past a certain water tank without taking water when they were equipped with the ordinary plain D slide valve, have been able to go on to the next one when the valve was changed to the Allan.

Q.—Can the Allan valve be used on the old seat?

A.—Yes, but it is sometimes desirable that the steam ports be widened a trifle by chamfering their outside edges.

Q.—What special precaution must be taken with the Allan valve, as regards its travel?

A.—That it should not travel so far as to bring the supplementary port over the exhaust port of the seat, in which case live steam would blow through.

Q.—What precaution needs to be taken in designing the valve itself, independent of the amount of travel?

A.—That the walls of the passage through it be strong enough to stand the steam pressure.

Q.—What precaution needs to be taken in the manufacture of the valve itself after it is designed?

A.—That the coring is good, in order that the passage through it may be of full size and may have smooth walls.

Q.—How is the admission of steam cut off before the piston has reached stroke end?

A.—By having the legs or lips of the valve longer than is necessary to seal the end ports, and by so timing the position of the valve with respect to the piston that after opening the port end for admission of steam it shall return and close that port before the piston has reached stroke end.

Q.—What name is given to the excess of length of leg or lip of the valve at each end,

over what is barely required to cover the end port?

A.—Steam lap, outside lap, or simply lap.

Q.—What is the relation between the lap and the degree of expansion?

A.—The greater the lap for a given valve travel, the earlier the steam is cut off, and the greater the degree of expansion.

Q.—What is the relation between the valve travel and the point of cut off and degree of expansion?

A.—The greater the travel for a given amount of lap the later the cut off and the less the degree of expansion.

Q.—If the valve had its lips just long enough to cover the end ports when in mid-position, was at mid-position when the piston was at stroke end, and was given an equal degree of travel in each direction from its mid-position, what would be the effect upon the steam distribution?

A.—If the valve had its travel so that it was back again at mid-position when the piston reached stroke end, there would be steam admission during full stroke, irrespective of the amount of valve travel and port opening.

Q.—What effect would the amount of valve travel have upon the steam admission in this case, where the valve started from mid-position at beginning of stroke and reached mid-position again at stroke end?

A.—The longer the travel the fuller the steam admission would be.

Q.—How long should the travel be in order to give the full degree of steam admission without choking?

A.—That depends upon the length of the port as well as upon its width; also upon the piston speed. The narrower the port and the higher the piston speed, the greater the valve travel should be.

Q.—Is there any usual rule for port area?

A.—There is one, but it is "more honored in the breach than in the observance." It is to give, for 600 feet piston speed, a port area of  $\frac{1}{16}$  the piston area.

Q.—If the valve has the same amount of lap at each end, will cut off take place at the same point in both ends of the cylinder?

A.—No; the reason being that the connecting rod introduces irregularities between the piston movement and the valve movement.

Q.—What is the nature of these irregularities?

A.—When the crosshead is at A, the out end of the stroke (see figure 4), the crank pin will be at a, on the inboard dead center. When the crosshead is at B, in the middle of its stroke, the crank pin will not be at quarter point of its path, but only at b; when the crosshead is at C, or outboard stroke end, the crank pin will be at c, or the half point of its path; and on the re-

turn stroke, when the crosshead is again in mid-stroke, at B, the crank pin will have made more than the quarter circle from c, and will be at b.

Q.—What relation has the connecting rod (main rod) to the amount of this irregularity?

A.—The shorter the connecting rod the greater the irregularity.

Q.—What would be the disadvantage of giving great length of main rod in order to lessen the irregularity?

A.—It would increase the necessary length of the engine and also the amount of unbalanced weight.

Q.—How may this irregularity of cut off caused by the angularity of the connecting rod be done away with?

A.—By giving the valve more lap upon that end at which the cut off would be earliest if the laps were the same at both ends of the valve.

Q.—What effect has outside lap upon the time of opening for exhaust?

A.—It makes it take place earlier than it would if there was no lap.

Fig. 4.

Q.—What is the effect upon the steam distribution, of inside lap or exhaust lap?

A.—To prolong expansion, delay exhaust and hasten compression or cushion.

Q.—Where is inside lap usually employed?

A.—In high speed engines having very late cut off, where compression takes place during about one-eighth the stroke and release commences when the crank is within  $40^\circ$  of the zero line.

Q.—What is the effect, upon the steam distribution, of inside clearance or negative inside lap?

A.—To shorten expansion, and to delay compression or cushion.

Q.—How can exhaust closure be equalized with the ordinary slide valve and eccentric?

A.—By giving a small amount of inside lap to one face of the valve and taking a little from the other.

Q.—What effect will this have upon the lead and cut off?

A.—None at all.

Q.—How can the cut off be equalized in the ordinary slide valve and eccentric?

A.—By increasing the angular advance of the eccentric, or by lengthening the eccentric rod.

*Robert Grimshaw.*

Without hearts there is no home.—*Byron.*

## ECONOMY AGAIN.

It appears that while I was thinking and writing about economy here in the east, Mr. H. T. Cunningham was thinking and writing on the same subject in the west—oh! excuse me, in the center of our country, for since Chicago has had the great fair it is certainly the “hub” and all Illinois near the center. The subject is of wide interest in all circles at all times, but especially so at this time when incomes are reduced and when in all cases it becomes necessary to make everything go as far as possible.

In writing on this subject in its relation to the consumption of fuel to get up steam for use on a locomotive, I said that “it makes a great difference which engineer was at the throttle” in the use of fuel, but Mr. Cunningham, with “a number of years’ experience on the rail,” seems to imply that the fireman is the only one that is responsible for the use or waste of the fuel. Probably a few years’ more experience will enable our friend to see that even “a first-class fireman, one who thoroughly understands his business” and “can beat a compound all hollow as far as fuel economy is concerned,” would not be “in it” with some of the men at the throttle, for in spite of the best efforts of the fireman there would be a waste of steam and fuel. I found this out before I had fired three years by watching the different methods of two engineers whom it chanced to be my lot to fire for, while remaining on the same engine, pulling the same trains over the same grades on a “wild cat run.” As I stated before, it took nearly a ton of coal per day more to keep her nearly hot for one than it did to keep her hot for the other one, and this was not the result of snap-shot observations made in a trip or two, but by months of actual work. Now these engineers were paid the same wages by the company, while the one actually saved the amount of his wages in the fuel bill, and the other one paid no attention to it at all. Outside of the economy of fuel there is another item of saving which, while it puts nothing into the treasury of the company, ought to receive some attention, and that is the handling of the extra amount of coal by the fireman. The fireman generally earns all that he gets, and while trades unions are agitating for eight hours work for a day, very few firemen do or can hope for runs which will enable them to get done in that time, and it is thus imposing on good nature to add useless work to his burden. One ton per day, 300 per year, 3,000 tons—about 300,000 extra scoops of coal in a ten years’ apprenticeship as a fireman is quite a factor in weakening the back, breaking up a robust constitution and producing a physical wreck. Even at \$3.50 per ton this pile of coal burned uselessly during these years would be worth \$10,000, a for-

tune in itself to most of us, if we had it. I style it useless waste; it was, indeed, worse than useless, because, if you have marked my words, you will note that in spite of the additional coal burned I could only keep her nearly hot.

Let me further say that neither engineer seemed to pay any attention to economy in fuel, but that the one did aim to keep or help to keep the steam pressure up to the maximum, so as to readily run up to the limit allowed and make it as easy for the fireman as possible, while the other one wanted to run up to the limit but paid no attention to the gauge to keep it up to the maximum, nor to make it easy for the fireman. I must admit that I was greatly puzzled about this matter, and that it took weeks and months of watching and thought to arrive at definite conclusions which would stand the test of further practice.

Let me give a little history. I had been firing for an engineer we will call A, for eight or nine months, on that “wild cat run,” when a change was made and B was put on with me. One of the first things I noticed as soon as B took charge was that he appeared to have more trouble to keep her full of water, for in all the time A ran her we never had both pumps on at once; but B never made a twenty-five mile run up grade without using both pumps three or four times. At first I blamed the pump, the valves or the plunger as becoming worn out, but when C and D came on and made a half dozen trips without using the two pumps at once at any time, it seemed to give good evidence that the pump was as good as ever and that I must investigate some more in other directions.

We used to stop at a tank for water after having made a seven mile run up a heavy grade, and in coming up to the tank B would invariably use both pumps. While taking water I would cover over my hard coal fire with enough coal to run to the next easy grade, four miles away. I would have her “popping off” before starting, but B would have one pump on right from the start and run with it on for a mile, by which time he would have the steam pressure reduced to 110 pounds. As we then struck a heavier grade, he would shut off the pump and run with it off for half a mile, by which time the pointer would run up to 122 or 123 pounds; he would then resume pumping and in the next mile the steam pressure would run up to 130, which was the pressure carried. A half mile further made with full pressure brought us nearly to the top of this grade and was the point at which B would call for the other pump to go over the easier grade of a mile. As a result the pointer would be back again to 110 at the end of the four miles. The pumps would both be off for one mile, one on in the next

mile, and both on in the third mile of the next section of road, which brought us to another tank. In these seven miles B would thus run one and one-half miles without a pump and two miles with both pumps, making one-half mile single pumping more than the miles run.

In making the seven miles with A, and also with C and D, I noticed that on leaving the first tank they would shut off the pump and run with it off for the first mile, which is an easy grade. The pointer would stay at 130 all the time, and being now at the foot of the heavier grade we were in good shape for it, having all the steam we could carry; the new coal put on at the tank being well kindled up, the pump was put on and would have no effect on the gauge, and the pointer would stay right at 130 all the time. On trying the water when three miles had been made, she would appear full and would not need the other pump, but while running over the easier grade a little easing up on the pump would allow the introduction of a little more coal without reducing the pressure to an appreciable extent and thus allow the next three miles to be made with a full pressure of steam and bring her in to the next tank full of water without using the second pump. We would thus have seven miles covered with only six miles of pumping, and part of this not at full throw, thus making one and one-half miles of pumping less in this case than in the first. Now as the pumps will ever make the same number of strokes in a given distance, it is at once evident that B somehow or other managed to use that much more water, and that I had to furnish just that much more heat to convert the water into steam, and this explained the extra ton of coal. Now, how did he do it? Simply by pumping while my fire was "green" or "new" and thus reducing the pressure; then in order to *try to make time* he had to give more throttle or an extra notch or two on the reverse lever, and thus instead of keeping up his supply he was constantly running his water down or using the second pump to keep it up. Yet, still, it was an old engineer, one by virtue of seniority entitled to good runs, but the sight of a fair face or a neat ankle had more charms for him than his business, and that is the only explanation that I can think of to account for such a state of affairs which years of running do not make better.

Having thus shoveled hundreds of tons of coal uselessly, do you wonder that I cry for improvements wherever needed? I know that there are lots of men who do not need to heed the cry, for they know it all now and could not get out of the "rut" into which they have got, but there are some still left who feel their lack of knowledge and are ready to live and learn, and

these are the men to whom the future holds out glowing promises of good cheer, for the time is drawing near when only those who can pass examinations will be eligible to promotion, and then woe betide those who are not ready.

*William Weiler.*

#### RESPONSIBILITY FOR ACCIDENTS.

The first serious accident to begin the record of death and destruction for the year 1894 occurred on the Morris and Essex division of the Delaware, Lackawanna & Western, whose previous record of immunity from serious accidents was so entertainingly presented by Mr. Weiler, in the January MAGAZINE. On January 15th eleven persons were killed and thirty-seven injured in a rear end collision which occurred on that road. From the truly remarkable record presented by Mr. Weiler one would be justified in the inference that the Morris and Essex was operated by a highly efficient and competent corps of employees, yet, if the newspaper accounts are correct, the company is just now showing its appreciation of this fact by trying to place all responsibility for this terrible accident upon the shoulders of certain of its employees.

It appears from the report of this accident that the forward train, which had slowed up on approaching a drawbridge, was protected by torpedoes, which the engineer of the following train failed either to hear or heed, and, there being a heavy fog at the time which obscured his vision, he crashed into the forward train with terrible results. When one considers the wonderful immunity from accidents that this road had previously enjoyed, it is simply astounding that they had no better method of protection for the immense number of trains they run than they seem to have had. How any set of employees could conduct such a business for so long without serious accident is certainly a mystery, and that they did so speaks volumes for their intelligence and watchfulness. The evidence ought to be conclusive by this time that torpedoes are not to be relied on as a means of protection against even ordinary danger, yet it appears that they were the only instruments furnished by this company as a means of protection under what were certainly extraordinary circumstances of danger. And now, to cover up its own shortcomings, the company is trying to place the responsibility for the accident upon its employees. The *American Machinist* comments on this affair as follows:

The recent collision on the Delaware, Lackawanna & Western Railroad, from the effects of which, at this writing, eleven persons are dead and several more in a critical condition, was due to one cause, viz: the neglect of the company to employ the block signal system. Some of the employees may have shown lack of judgment, but whether this is so or not is entirely beside the question. The main point is simply this:

in all human probability the accident would not have occurred had the block system been employed. The railroad company should not be allowed for a single moment to divert attention from this one simple and all sufficient fact, by the usual plan of laying the blame upon its employees, and by spacious argument aside from the main issue. Discipline of employees is something that the public may just now well leave to the company, or the courts, bringing all possible pressure to bear to the end of compelling the company to adopt common sense, well approved methods of operating its road. The failure to do this, as can be plainly seen, caused the horrible slaughtering of passengers, and furnishes the only occasion for an inquiry as to whether this or that employee did the best he could, or that could have been done, under conditions made entirely unfavorable by the neglect of the company. The sacrifice of life by this accident is entirely inexcusable, and the blame should be put squarely where it belongs, that is, against the company, on whose behalf no excuse should be considered as carrying any weight.

There was a time when the torpedo was a fairly safe and efficient instrument for the protection of trains, but that time is past; the torpedo is out of date, but it seems quite certain that railroad companies will never recognize the fact until public clamor becomes so great as to compel them to do so. In the meantime, trainmen should learn to rely on the torpedo just as little as possible.

As showing the tendency of some railway managers to attribute the occurrence of railway accidents to any and every cause but the right one, and their anxiety to force as much of their own responsibility as possible upon the employees, the following from the *Railway Age* is interesting:

"There ought to be no seats in engine cabs," said a manager in referring to a terrible rear end collision which had just occurred in the night. He went on to remark that undoubtedly many night collisions have taken place while the engineers were sleeping upon their comfortable high-back seats and would not have occurred if the men had been obliged to stand when on duty, as they are on European railways, where seats for the engine driver are unknown.

The *Age* is not prepared to say positively that the cab seat ought to go, but it says that "the proposition is advocated by some practical and capable railway men, and is submitted for consideration."

Up to this date none of those "practical and capable railway men" of whom the *Age* speaks have come forward with any evidence to support the hypothesis presented above, although two correspondents, an engineer and a conductor, and who may be presumed to be both practical and capable men, have argued for the retention of the cab seat, showing by instances of their personal experience that the cause of engineers going to sleep while on duty was overwork rather than the presence of the cab seat, and that, under such a condition, compelling them to stand up is no remedy, as when men are overworked they are as liable to go to sleep while standing up as in any other position. It is incumbent on

those persons who hold up the European practice in this matter as one to be imitated, to show that some part, at least, of the greater immunity from accidents enjoyed by European countries is due to the fact that engineers are obliged to stand up while at work. This must be done in order to establish a valid argument in favor of that practice, and with the very complete system of signaling in use in most European countries, it may be set down as impossible to estimate what influence, if any, the practice of standing has in preventing accidents. But now that the subject has been opened we may expect the whole crowd of theorists to come forward with their demonstrations showing the terrible consequences that are almost certain to occur when hot boiler-head, soft cushion and sleepy engineer are brought into combination with each other.

There are several reasons why there is no proper standard of comparison between American and European practice in the matter of cab seats. In Europe the trains are lighter, the runs are shorter, the track is smoother than here, in addition to which the law takes a very decided stand in protecting the employee from being overworked. The English railway company that should require one of its employees to remain on duty for a period of from twenty-four to thirty-six hours at a stretch would lay itself liable to very severe penalties, whether an accident was shown to have occurred from that cause or not. It is needless to refer to American practice in this matter for purposes of comparison. However, it is noteworthy that there is just now going on in England a very decided agitation for some form of cab seat to be adopted for the use of the engineer, as we have in America. It is claimed, with much show of reason, that the great prevalence of kidney diseases among European engineers is due to the fact that they are compelled to stand while on duty, and it is shown that the liability to accident is increased, rather than diminished, by the absence of seats; the pain and excessive fatigue to which engineers are subjected by reason of their standing position distracts their attention from their duties, thus rendering them much more liable to commit fatal mistakes than as though they were permitted to sit down. The agitation for the abolition of the cab seat, if agitation it may be called, is but an attempt to divert public attention from more serious questions. If the general public had no other danger to fear from railway travel than the presence of cab seats on locomotives it would indeed be fortunate, because of the fact that the danger would be so promptly and effectually removed!

Wilfred P. Borland.

**TRAVELING ENGINEERS' ASSOCIATION.**

We have received a report of the proceedings of the first annual meeting of the Traveling Engineers' Association, held in the city of Chicago, September, 1893. We have read the president's address with special satisfaction. It is practical from start to finish. Among other things, he is reported as saying:

The traveling engineer has a great many duties to look after; some of them are pleasant, others are very disagreeable; all are responsible. The good men in charge of engines must be encouraged, the inexperienced instructed, and the indolent, careless ones notified as quietly and certainly as possible, that, if they do not attend to their work somewhere nearly as well as the best, that they can expect to be disciplined. Mercy is sometimes thrown away on a lazy man, just the same as running repairs are thrown away on an old back number engine, ready to be cut up and sold for scrap. The traveling engineer, no matter by what title he is known, has come to stay. A few years ago they were looked upon as one of the luxuries of railroad management, and there were very few in service. Now there are over 500 of them, all more or less appreciated according to their usefulness. If we desire permanent employment or promotion, we must show the managers that we can more than pay our way in the increased efficiency of the engines, in economy of fuel, and in looking after the small every-day leaks that can be stopped.

We notice that Messrs. John A. Hill and Angus Sinclair are credited with having helped the association to achieve success, which the president acknowledges, as follows:

In this work (organization) we were very ably assisted by Messrs. John A. Hill and Angus Sinclair, who gave us the use of their office to meet in, and helped us in various ways. Mr. Hill kept the question alive in the columns of *Locomotive Engineering*, and sent out our circular calls everywhere. On the first night of our meeting they gave us a banquet which was enjoyed by all present. Ever since the first start, these gentlemen have helped us along, and we are proud to have them with us as members. The thanks of the association are due them.

We congratulate the association upon its prosperous condition, and wish it a large measure of success.

**MASTER MECHANICS' ASSOCIATION.**

The committee of the Master Mechanics' Association have issued circulars to all members of the Association as follows:

**SPECIAL SHOP TOOLS.**

Your committee, appointed to report on "new or approved appliances, either hand, power, pneumatic, hydraulic or electric, applied or applicable to locomotive manufacture and repair," desire to get all the information possible on the subject, and in order to present a paper at the next convention of our Association that will give the members full information as to what is now in successful use in various shops, earnestly request all members who have in practical use at their shops any of the devices named, or who can give reliable information concerning the use of them in other shops, to send blue prints, photographs, printed cuts or pencil sketches, with any written or printed matter they can get in connection with them.

Your committee hope that members will not confine themselves to appliances purchased from builders, but include any device that they may have gotten up, or that may have in any way originated in their shops.

In many shops there are special forms of jigs, holders and small tools, invented to cheapen work or to make production accurate and interchangeable. Particulars concerning these minor tools ought to be sent to the committee without fail.

Answers to be sent to T. W. Gentry, Master Mechanic, Richmond & Danville Railroad, Manchester, Va.

T. W. GENTRY.  
GEO. L. POTTER.  
H. D. GORDON.  
G. R. JOUGHINS.  
WM. SWANSTON.  
F. R. MILES.  
*Committee.*

**EXHAUST NOZZLES AND PIPES.**

1. Do you know how to locate exhaust-pipes to get the best results? If so, how?

2. Should location of exhaust-pipes be the same for straight stacks and taper stacks?

3. Have you had any experience that would show that too large an exhaust-nozzle would have the same effect on the fire as one too small?

4. Your committee realizes that they have considerable work before them, and would be greatly obliged to you if you will promptly reply to the foregoing questions; and if you have any suggestions on this line that will be of benefit, and have had any experience that the committee could make use of we will appreciate same.

Please send replies to R. Quayle, C. & N. W. Ry., So. Kaukauna, Wis.

R. QUAYLE.  
W. S. MORRIS.  
J. W. HILL.  
J. MCNAUGHTON.  
WM. FORSYTH.  
D. L. BARNES.  
*Committee.*

The circular calling for information on the subject, "Cost of Maintaining Locomotives," which was issued last November, received so little attention that it was found necessary to send it out the second time. This circumstance is probably what induced Secretary Sinclair to send out the following reminder:

"Swee'r is the mon wha winna gie advice," says a Scotch proverb; and the same philosophy adds, "e'en the diel will sha the wy tae Perth."

Members ought to be prompt answering Circular Questions of Committees—it's as cheap and as easy as to "gie advice," or to point out the right road to a traveler.

Committees do lots of work for the benefit of the Association—lend a hand. It is a duty and ought to be a pleasure.

ANGUS SINCLAIR,  
*Secretary.*

**PATENT GAUGE GLASS CUTTER.**

Our esteemed friends, Messrs. Stannard & White, of Appleton, Wis., are offering to engineers their patent gauge glass cutters, which is something new and valuable and which cost only 50 cents. The cut illustrates the working of the cutter, which for simplicity and perfection fills the bill. Messrs. Stannard & White are railroad men, members of the B. of L. E. and B. of L. F., and are entirely reliable. Their word is as good as a United States bond, and when they say a thing is good for engineers controversy is at an end, for which the MAGAZINE cheerfully vouches.

Agents are wanted by these enterprising manufacturers on all the lines of railways

on the continent. Their cab seats, which have long been advertised in these columns, have commanded a wide sale, and that there will be an active demand for the gauge glass cutter goes without the saying.

#### From the Field of Experience.

MR. EDITOR:—I recently observed an article in the mechanical department, written by Mr. Moore, devoted to methods of oiling, and I must say that I cannot find it in my practice as an engineer to agree with him; nor do I believe he would follow his method very many times if he went out on an engine I was running, as he might be compelled to resort to a gallon of cure because of failing to use a pint of prevention. Before starting out, I oil rather copiously as compared to other oilings, as a general proposition, and I believe all theory will logically bear me

out in so doing. When an engineer who knows his business takes charge of an engine, he makes up his mind to render to the company the greatest amount of service at the least practicable outlay of expense, and, not content with the knowledge that "Bill" did it so, he watches closely for the effect of different causes and learns to trace from effects back to their attendant causes. This engineer will, at first, feel sure that something will run hot; he oils copiously and frequently and each time he oils he closely observes the different bearings and notes their condition; he soon learns that oil does not evaporate nor run off as rapidly as he at first imagined it would, and, consequently, he at first reduces quantity and then, by closely following up the line of observation, he finds that he can materially increase distance, until ere long he is making fifty or more miles between oilings, unless a great deal of switching is included in his work, and when he gets in there is not a great deal of oil left to run down and lubricate the bearings very profusely, and the engineer who goes out must use a little common sense and enough oil to properly saturate the packing at the various places, or be confronted by necessity to cure what he could have obviated by a proper exercise of judgment. I have given the lubrication question a rather close study and may say that I do not follow any fixed method, but closely observe the action of different engines and treat them as my judgment indicates is proper, weather and work being taken into consideration as factors not to be lightly ignored. Following out this line recently on an engine I was in charge of for about ten days, I started out from this point, after using about one and one-half pints of oil, and made a run of 95 miles in two hours and thirty-two minutes without having made a stop of any kind, and the rate of speed was at no time less than 15 miles per hour, and only as slow as that through three towns along the line, and when I arrived at my destination I felt the engine all around and found everything perfectly cool. But all conditions were favorable; it was a night run; the weather cool and calm; no wind to blow dust on the bearings nor rain to wash the oil off, and no heat to cause it to run off. As a general proposition, I run from 35 to 70 miles to an oiling; if on a local run the lesser number; if on a through freight with no considerable delays, I usually run from 50 to 70 miles according to convenience, but I make it a rule to use sufficient oil at the first oiling to make me safe in the run.

Having recently seen the reply of W. J. Edwards to Wm. Weiler, regarding his dead engine, I am lead to state that I do not wonder at Mr. Weiler's query that elicited this reply, although I have not seen the original article which drew forth the query. I must

say that, according to my view of the subject, Mr. Edwards was not justified in killing his engine; I am sure I would not venture to do so here and let the facts be known, unless I was tired of my job and wanted to be relieved of the trouble of quitting. With us here the water question is of great moment, and on most of our divisions there are seasons in the year when if a very few little details go wrong the inevitable result is a run for water, and on such occasions I have frequently reached a tank with not more than an inch of water on the crown sheet, but I didn't have a "stiff" in consequence. I just had the fireman put on the blower and get up enough steam to work the injector, and proceed just exactly on the lines laid down by Mr. Weiler, and usually, in about twenty or thirty minutes, had steam enough to go back for my train and then be able to proceed in a short time without much delay either to my own train or to those I was meeting, and what I have done here in this line has been done by almost every engineer on the road. I remember two occasions which were the closest calls I had to come out all right. One was a never to be forgotten trip on Christmas morning, 1891, battling against a cold "norther" with a heavy train, and to make matters worse the engine began to foam to such an extent that I would be compelled to repeatedly shut off to let the water settle and then start again. I finally discovered, from my injector breaking, that I was out of water, and started to run. When I got about one mile from the train the water in the boiler had settled and I found that I had no water in sight. Just where we stopped there happened to be a pond, so my fireman and myself took turns in carrying water up a twenty foot hill, and by that means managed to get enough to get one solid gauge in the boiler, and I still had six miles to go to reach a tank. But I made it. I laid the passenger train out about fifteen minutes by so doing, but had I killed my engine and been compelled to fire up again I would, in all probability, have laid her out a couple of hours. On the other occasion I was detained by a train ahead of me on a very hard hill. The engineer of this train had to run for water and found he had not enough water to make the run, so had to kill his engine, and I was compelled to wait there on the hill side until his conductor walked back to the station he had passed, a distance of seven miles, and then back, up to where we were, a distance of three miles, and then we went back down the hill to the station and their crew let their train down the hill. We then proceeded to saw by several trains and continued on our journey. When I got within a half mile of the top of the hill my injector broke, but after I reached the top of the hill and started down the other side I got the

injector to work again and drained the tank, so that when I reached the station I had just two gauges of water in the boiler and was ten miles from the tank. About one-half of this distance the engine would roll, ordinarily, but that morning had to be unfavorable, as a strong head wind was blowing, and the result was that the last two miles was accomplished simply on my knowledge of how fast the water had gone down before it was lost to sight and how far it was from there to the crown sheet. When I got to the tank I stopped, applied the brake, and put the reverse lever in the centre notch; then pulled open the throttle and was gratified by seeing that I could raise the water to the first gauge. I then replenished the fire and put on the blower, and, as I had 65 pounds of steam, got the injector to work, and by the time the tank was full I was ready to go up to the station, three-quarters of a mile distant.

I note some comments on air by several contributors, and all of great value, especially those relating to emergency stops, and I should say, most emphatically, never release your partial application when you want to stop quick. You will lose too much pressure by so doing. Just turn your valve handle around to quick action position, open your sand lever wide, and get your reverse lever to looking in the opposite direction—quick. Then you might go to looking for a soft place to fall, and you will have the satisfaction of knowing that you have used everything at your command to the best possible advantage.

Mr. Borland's comment on the deadly angle cock recalls to my mind a number of instances in which the same thing happened to me, and I had intended to state them in reply to J. R. Norton's article, so as to show that the parts which would be left in case of a wreck might be all right and still the brakes be inoperative, all on account of the deadly angle cock.

Mr. James Carey's definition of a triple valve, in answer to J. R. Norton's query, does not go far enough, and further on I notice that J. R. Norton's own answer to the question is different from all the reasons I had ever learned as to why a triple valve is so called; my idea being that it is so called because, as its name indicates, it is three distinct valves: the one in one position to make a straight air valve, the other to make an automatic air valve, while the other is to render the brake with which it is in connection inoperative, that is, a cut-out valve. Perhaps I may be wrong in this, but it seems to me that it comes nearer being a definition of the triple valve than the one given by Mr. Norton.

And now, with a question, I will draw my remarks to a close. I was running an engine two years ago which was equipped

with tank and driver brakes that acted peculiarly; when I had a train with air cars and made an application of the brake, brake on engine and tank would hold; but if I had no air cars and made an application of the air brake, it would release before I had run a mile. Why was this? Recently I was on an engine that, when releasing an application with air working on engine only, the tank brake would release all right, but with a train, when release was made, the tank brake would stick. Why?

In my next I will give details of a make-shift in the case of a broken eccentric strap.

#### Questions Concerning Compounds.

MR. EDITOR:—I wish to ask for enlightenment on a few points concerning a compound locomotive through the columns of our valuable MAGAZINE. Several months ago I was assigned to engine 249, a compound just arrived from the Baldwin locomotive works. I had had no previous experience with this type of engines, and at first I did not want to take her, but finally did so and remained with her seven or eight weeks. During the time I had her she would throw water from her stack continually when working with more than one and a half gauge of water in her boiler. This was thought by my engineer, and others, to be due to the boiler being new, but they were evidently wrong because she seemed to get worse instead of better. However, a gentleman who claims to know all about compounds told me recently that the trouble was caused by the lower pressure cylinder not being able to relieve itself of condensed steam except through the exhaust passages and stack. He further claims that it is not possible to start a train with a compound while working in "cylinder cock position," but this, I know, is not correct. But if it be true that it is not possible to relieve lower pressure cylinder of condensed steam with cylinder cock, I will ask some person who has had experience with these engines what is the object of putting them on at all? Surely, not to frighten stock off of the track. From this gentleman's explanation I can find no other reason, and if he is correct, the Baldwin locomotive company have made a big mistake, which must be righted before the compounds can be called a success. But my experience leads me to believe differently. The cylinder cocks and rigging are put on a compound for the same purpose that they are put on a simple engine, the only difference being that instead of relieving two cylinders of condensed steam, they must relieve four. For instance, when cylinder cock lever is put in cylinder cock position you are giving engine just a little more power than if she was compounding,

and with just enough steam pressure in the low pressure cylinder to overcome the resistance from the high pressure cylinder that is against it, and therefore each cylinder is drained of condensation. I have never seen my engineer cut engine into high pressure. He works her compound all over the division, and informs me that the high pressure is only used when there is danger of stopping on a steep grade. I would like to write more on this subject, and in reference to the valve in cylinder cock rigging. If we would study the workings of this valve more, the compounds would not appear so complicated.

T. P. Knapp.

#### The Air Brake.

MR. EDITOR:—In the January number of the MAGAZINE, I notice a question from Mr. Garaghty: "Is there any communication between the air gauge and the train pipe when the engineer's valve is in the lap position?" I would say, for the information of all concerned, that no matter what position the engineer's valve may be in the air gauge is at all times in communication with the train pipe. This is easily proven. Let Mr. Garaghty take an engine before it is coupled onto the train, having the maximum pressure, say 70 pounds, on train pipe as indicated by the black pointer. When the pointer has become stationary, put the engineer's valve on lap position and open the train cock on tank enough to cause it to leak. It will be observed that the black pointer drops back, and with a rapidity proportioned to the extent of the leak at train cock. This should convince all doubting ones on that all important question.

Andrew Reid.

#### Utility of Air Pressures.

MR. EDITOR:—In order to settle a dispute will some of the numerous readers of the MAGAZINE kindly consider the following question:

Suppose we have a dead engine that has to be moved a distance of six miles, the first five are down grade enough to permit the engine to roll, and the last mile of which is up grade. Could air enough be accumulated in the five miles' run down hill to run the engine the last mile up hill? Again, suppose an engine with 90 pounds of steam is rolling down hill at the rate of forty miles an hour, when she is reversed and the throttle is opened; will the air pressure obtained overcome the pressure of steam? In other words, will air enter the boiler or will steam leave the boiler? Also, can one engine be towed around by another so as to get air pressure enough to work an injector?

SANFORD, FLA.

J. M. Bunker.

**How to Feed a Boiler.**

MR. EDITOR:—In reply to the criticisms of Mr. Weiler I will say that his method of treating the circumstances I have before detailed, is no doubt the proper one, and should I get caught in a similar fix again I would endeavor to follow it; but "circumstances alter cases," and Mr. Weiler should remember that, in the case in question, I drew the fire in obedience to the engineer's orders. In regard to pumping, I think it proper to carry water in top gauge-cock when working steam. The water supply in a boiler should be sufficient, when an engine ascends a grade, to prevent the front end of the tubes from being uncovered, and, when descending a grade, to cover the back end of the crown-sheet. I consider the most economical method of feeding a boiler is to let the amount of water delivered to the boiler be in proportion to the work the engine is doing; or, in other words, to avoid an irregular feed by which the boiler is alternately either under or over supplied. A uniform and constant feed is undoubtedly proper, but a deviation from this rule is recommended by competent authorities under the following circumstances: On approaching a steep grade as much water should be fed into the boiler as it is safe to carry without priming, and the fire should be in proper condition to heat the water as hot as possible before reaching the grade. The reason for this is that when ascending a grade the boiler is often taxed to its utmost capacity to generate the required amount of steam, and it will be of material assistance in doing the work if any portion of the water to be evaporated during the ascent has previously been heated. Should it be necessary to feed water after pitching over a summit, the fire should be bright and burning freely. This is necessary to prevent chilling the flues, which would cause them to leak. If the boiler is amply supplied with water when descending a grade—if the grade is very long—the fire should be leveled over and covered with a sufficient amount of fresh fuel to prevent unnecessary waste of fuel and steam; the dampers should also be closed. When descending a long grade, or when standing on sidings, care should be taken to have a sufficient depth of fuel near the flue-sheet. If too thin the fuel will soon be consumed, grates will become bare and cold air will be admitted, which will cool the flues and cause them to leak.

ALLEGHANY, PA.

W. J. Edwards.

SOME French savants recently succeeded in raising a balloon ten miles above the earth's surface; it carried no persons, but had ingenious instruments, driven by clock work, which recorded temperatures. At 7½ miles above the earth the temperature was 60° F. below zero.—*The Engineer*.

**Detection of Leakage in Train Pipe.**

MR. EDITOR:—In reply to Mr. Garahty's question concerning the detection of leakage in train pipe when engineer's valve handle is in lap position, I will say that when handle is in lap position there is no communication between train pipe air gauge and train pipe, as all ports are then blanked. If, when the handle is in lap position, the train pipe air gauge hand drops back, you can rest assured that there is a leak in either the rotary valve or small reservoir, or some of its connections. If the valve leaks the pressure in train pipe and the pressure in small reservoir will be equalized by the equalizing discharge valve, due to the reduction of air in train pipe through leakage. The pressure in small reservoir being less than before, and equal to train pipe pressure, the air gauge hand will drop back in proportion to pressure in train pipe. The same results will occur when there is a leak in small reservoir or connections when no leak appears in the rotary valve.

I will now ask a question. If the pump governor refuses to work, or the main reservoir gauge pipe is broken, is there any way to ascertain the pressure of the main reservoir?

Charles M. Ginter.

SOUTH CHICAGO, ILL.

A MOVEMENT has been initiated in congress looking to a reorganization of the navy in some respects, especially in the force of line officers. Such a reorganization seems to be needed badly enough, and we shall hope that in such a reorganization the fact will be recognized that naval vessels are now machines, and that the engineers who must manage them should at least be given sufficient authority to enable them to control their own departments; at least sufficiently to know that when they place a man in a certain position to do certain work, he will not be removed without the knowledge of his superior officer, and simply upon the arbitrary order of a line officer absolutely ignorant of the consequences of his removal. Private establishments could never be run on any such principle as that which obtains in the navy, and the navy stands it only because the people can be taxed without limit to pay for it.—*American Machinist*.

THE engineers and firemen of Victoria, Australia, have been agitating against running trains on Sundays. The grievance committee on that end of the globe becomes a deputation. A deputation waited on the minister for railways to protest against running Sunday trains, and they were told that they held the remedy in their own hands, as there was no law compelling the men to work on Sunday. He intimated that refusing to go out on Sunday would stop the practice.—*Locomotive Engineering*.

Letters for publication should be directed to Ida A. Harper, Stanford University, California.

### HOLIDAYS ON THE PACIFIC SLOPE.

It is the misfortune in writing for a magazine that the matter must be prepared two months ahead, and yet it may be that even at this late date our readers may enjoy a bit of holiday description.

If the climate everywhere were like that of California, there would be none of that Christmas literature which delights the children and makes old hearts grow young. The deep snow drifts, the frosty air, the great fireplaces with their blazing logs, Santa Claus with his reindeer and sleigh, all these stereotyped features of the Christmas tide, would have no place and would be regarded as the fairy tales of a vivid imagination. To those of us whose early associations are inseparably connected with these pictures, there can be no genuine midwinter holidays without them. In California we only make believe it is Christmas. The warm sunshine, the newly made gardens, the morning song of the lark, delude us into thinking that we have dropped a few months from our calendar and are celebrating the Easter festival.

Christmas of this season found us at Monterey, at the far-famed Hotel del Monte, which has been extolled by presidents, princes and prelates. In the early morning we stroll through the park and garden, or, properly speaking, one little corner of them, for the hotel is situated in a park of 7,000 acres, and 125 of them are laid out in gardens. Here, on Christmas day, the heliotrope is peeping into the second story windows and laden with blossoms, there is a mile of gorgeous chrysanthemums and another of callulies, the beds are bordered with an infinite variety of blooming pansies, clusters of orchids nod their grotesque heads and the air is fragrant with the incense of roses and violets. At 9 o'clock, in a carriage drawn by four spirited horses, we start for the famous eighteen mile drive along the beach, which, for variety of scenery, is unsurpassed in the world. A mile away is the ancient town of Monterey, the oldest spot in the state which has any place in written history, founded by the Spaniards about 1600, under the directions of Philip III of Spain. After telling the story of the cross and the altar and the mass under a great oak tree, history is silent for more than a century and a half. In 1768, a band of Franciscan missionaries established a mission here, whose ruins are still seen. A fascinating romance lingers around this old Spanish capital. A number of the ancient adobe

buildings yet remain, the sides moss-grown, the tile roofs black with age, historical ruins, the old custom house, the governor's mansion, the rude chapel, fragments of falling walls. At low tide, by an abandoned wharf, may be seen the decaying hull of a ship, the sloop Natalia, upon which Napoleon escaped from the Isle of Elba and returned to France. The vessel was afterwards purchased by the Mexican government and, in 1837, was sent to Monterey with a commission authorized to secularize the property of the missions, and while it was in the harbor it was sunk by a storm. It wrings the heart of one who loves antiquities to see the ruins of Monterey crumbling and neglected, and being replaced by the smart little frame buildings of the modern town, bright with paint and gay with cheap ornamentation.

Two miles further on, located amid lofty pines and extending down to the shores of the ocean, is the pretty town of Pacific Grove, a delightful summer resort, which attracts about five thousand people each season. It is the site of a Chautauqua assembly and numerous conventions of many kinds. It is the terminus of one branch of the Southern Pacific railroad, and is an ideal place for a summer home. Half a mile away is an ancient granite lighthouse whose little candle still sheds its beams to warn the ships away from this dangerous point, for here the waves of bay and ocean meet and dash with tremendous force against the great sentinel rocks which terminate the peninsula. The drive here leaves the ocean and plunges into the forest, primeval indeed, for man has not interfered with the handiwork of nature. The tall pines seem to touch the clouds, and below is a thicket of ferns whose size and density can be imagined only by those who understand the luxuriant vegetation of California. After winding through ravines where the sunlight never falls, we come again upon the magnificent beach and pause on a high promontory. The dark waters of the Pacific stretch far beyond the vision and the great waves roll and break upon the shore in a solemn and never-ending anthem. A short distance from the edge, standing in solitary state is the noted "seal rock," and clinging to its sides are thousands of seals, whose hoarse barking blends with the monotone of the waves.

Perhaps the most unique feature of this drive is Cypress Point, a stretch of rocky coast, high, wind-blown and storm-swept, and, rooted in its scanty soil, are those strange trees which are known as the cypresses of Monterey. Nothing like them is found in the world. How they came here is a mystery, whether the seeds were brought by the wind or the birds from an unknown shore, whether they are a changed form of some ancient cedar, whether they are a pe-

culiar product of this spot, never will be known. Ugly, misshapen, half dead, half alive, they appear to be centuries old, and promise to live centuries more.

From the ancient trees to an ancient race of men seems a natural transition, and yet the inhabitants of China appear strangely out of place in this little, desolate fishing village, their dirt and squalor standing out in wretched contrast to the long expanse of pure, clean beach in front, the vast stretch of odorous, health-giving pine forest behind.

What a rare discrimination had those early Catholic fathers, what an eye for the beautiful in nature, what a judgment in the selection of sites for the location of their beloved churches! In the loveliest spot of all the charming region that encircles the Bay of Monterey, the Franciscan priets, a hundred and twenty-five years ago, built the Mission San Carlos de Carmelo. The Carmelo valley is a perfect example of natural beauty. It lies among mountains which slope from snow-capped summits to evergreen-crowned hills, enveloped in purple mist. The Carmelo river, cold, clear and sparkling, brings perpetual bloom and verdure. On a rise of ground, overlooking the Pacific ocean, stand the old stone church and the crumbling walls of the monastery. A fund is being collected for the "restoration" of this old Carmelo mission, and the lover of the antique will see with anguish that the picturesque roof of mossy tiles has been replaced with one of painted shingles, and that one mouldy, lichen-covered wall has been treated to a coat of whitewash! Fortunately the fund accumulates slowly, and on the other side mosses, ferns and shrubs are still growing in the mouldy crevices of the wall. The ancient belfry and the rude, stone carving over the door are untouched, and the interior has not suffered from the desecrating hand of the "restorer." Four of the faithful old priests have lain for a century within the stone niches in the wall, and beneath the floor of the chapel repose fifteen of the early Spanish and Mexican governors of California. The long dark arches and the cold, mildewed cloisters strike a chill to the heart of the visitor and he almost hears the rustle of ghostly garments.

Out into the blessed sunshine, and, at a whirl of the lash, the four horses dash down the hill, through the fragrant valley and the resinous pine groves, along the pebbly beach, under the spreading live oaks, and up the broad driveway to Hotel del Monte. A novel way of spending Christmas and yet a pleasant way, if one can shut out the memory of others that were very different.

From Monterey we went to Santa Cruz, which is situated on the other horn of the

crescent that holds the beautiful Bay of Monterey. From its lofty cliffs is one of the finest water views of this hemisphere, and its long rows of terraces are crowned with many lovely homes. It is a pretty city of seven or eight thousand inhabitants and has all the modern improvements. There are many points of interest, but we soon found that we would appreciate them better in the summer, as the ocean and mountain winds combined make the climate on these high bluffs a little severe, even for people accustomed to cold eastern winters. So, with the promise to come again in the midsummer vacation, we started for the great metropolis of the state, longing for a taste of city life once more before settling down to a quiet winter of literary work. We came up by the narrow gauge of the Southern Pacific R. R., which runs through the heart of the Santa Cruz mountains. More picturesque scenery could scarcely be imagined, through gorges and cañons, over mountain peaks and precipices, dashing through tunnels and coming out into exquisite valleys. There are numerous hotels and summer resorts scattered along the road, and it surely seems that here, if anywhere in the world, would be found health and vigor. The most interesting spectacle is the forest of big trees, twenty feet in diameter, and capable of holding fifty persons within their hollow trunks.

We found no improvement in the weather of San Francisco. The fogs rolled in, morning and night, with a penetrating dampness that chilled one to the marrow. We took advantage of the first sunny day to visit the University of California, situated on the high hills of Berkeley and commanding a magnificent view of the city, harbor and surrounding country, but a fog suddenly poured in, so dense we could not see the bottom of the hill. Sight-seeing was out of the question. When we came out of some place of amusement, late in the evening, we would find policemen with lanterns, standing in the streets to prevent collisions in the fog and darkness. We sent longing thoughts toward our comfortable home at the university, and, in a very short time we followed our thoughts. Although only thirty miles from San Francisco, we are so shut in by the mountains, as to have a far warmer and dryer atmosphere. But we are ready to testify that the climate of California is not entirely tropical.

#### THE MID WINTER FAIR.

A tale of two cities! The World's Fair at Chicago, the Midwinter Fair at San Francisco, the Great White City, the City of Palms! The spectacle reminds one of the dissolving views of a stereopticon, the World's

Fair fades away, there is a misty blur for a moment, and then there appears upon the canvas another wonderful picture. Every visitor to the great exposition at Chicago exclaimed with a long sigh, as he shook the dust from his aching feet, "I never want to see another," and yet, even now, in all parts of the country, people are making their plans to cross mountains and plains to attend the fair at the City of the Golden Gate. It was a common remark at Chicago that not in the lifetime of the present generation would a similar enterprise be undertaken, and yet, before its buildings have been removed, before the echoes of the Midway Plaisance have died away, behold another fair is almost completed. The exhibits at Chicago were packed away, only to be opened in a few weeks at San Francisco. In this age of surprises we shall have to eliminate from our vocabularies the words "never again."

It is perhaps only in this remarkable Pacific coast city that such an undertaking could be made a success. There are two reasons why there will be no lack of visitors; 1st, because there are great numbers of people throughout the far west who could not attend the World's Fair, and will rejoice to have its treasures brought within their reach; 2d, because, practically, everybody in the United States intends at some time to visit California and will find now an unusual opportunity. There is no doubt but that the railroads will profit by their experience of the past summer, and the indications are that there will be a remarkably low rate from eastern points, with an extended ticket which will enable the purchaser to travel over the entire state, although at this writing it is impossible to say. The fair, of course, is intended to boom the state. Visitors from the other side of the Rocky Mountains will leave a region of ice and snow and zero weather, and roll down this side of the slope into as near Paradise as exists in the western hemisphere. The thermometer probably will be among the seventies, the air will be fragrant with the perfume of flowers and fruit, and the panorama unfolded, as he goes through the beautiful valleys, that extend from central to southern California, will be far beyond any work of the painter's brush or the poet's imagination.

The fair is situated in Golden Gate Park, overlooking the Pacific ocean. One hundred and sixty acres have been set apart for this purpose, and the seventy-five handsome buildings promise to be in readiness for the opening the latter part of January. Following so close upon the World's Fair, the managers are enabled to profit by all its successes and all its mistakes. The most interesting features of the Midway Plaisance have been secured, the most objectionable

omitted, and many new ones will be added peculiar to this locality. There will be a Liberal Arts building, 462x237 feet, Mechanical Arts, Fine Arts, &c., as at Chicago, all made of the white staff and very ornamental. In these will be placed great numbers of the exhibits that were at the World's Fair, and many others from this country and all the countries of Europe; Russia, for instance, taking 12,000 feet of space, and Great Britain the same.

Visitors, however, and especially those from the east, will be more interested in knowing what attractions there will be here which were not at the World's Exposition. In the Horticultural building, it is not an exaggeration to say that there will be the most magnificent display of flowers and fruit ever seen. There is great rivalry between what are known as the northern and southern citrus belts of the state; each will have its building, and the annual fair, which is held by each, will take place at this exposition, and the finest products of this greatest fruit-producing country in the world will be placed on exhibition. California is one vast flower garden and in the Horticultural building will be a gorgeous carnival of blossoms. People will think they never saw roses before. The whole fair grounds will be a wilderness of palms. There will be also miniature orchards and vineyards, and, out of regard for the feelings of the great temperance element, it will be better not to mention the display of wines that will be made.

Perhaps the most unique and interesting feature will be the mining exhibit. All of the country west of the Rocky Mountains abounds in mines, and there will be a wonderful showing of their products, of every kind of mining machinery and the various processes of mining, from the primitive pick and pan to the latest scientific process. There is to be a complete representation of a mining camp of '49. The street will be 450 feet long, on each side the old time dilapidated shanties, and all the details typical of those early days. There will be the rude newspaper office, the barber shop, where you can have your whiskers shot off or shaved off, saloons fitted up exactly as they were in '49, with bar and gambling tables, and old miners to illustrate all the border stories connected with these places. At the end will be an Indian camp with its uncivilized natives, the lonely graveyard, and occasionally an example of a lynching bee. The identical cabins of John Mackay, Senator Fair and Senator Perkins will occupy a prominent place, and a *fac simile* of that of James Marshall, with his lamp, stove, cooking utensils, saddle, etc. The veritable stage coach of Hank Monk will be there, and there will be daily illustrations of the life of these pioneers, known to the

people of to-day only as they have been immortalized by Bret Hart and other writers of tales of the far west.

It would not be possible to comprise in the brief space of one article the various exhibits that will be presented on a scale not seen before, the large collection of birds, fishes and other animals native to the west, the Alaskan fisheries, and innumerable relics from the old missions which are scattered along the coast, many of them of great value and never before placed in one collection. China and Japan will exhibit on a large scale, on account of their comparative proximity; the building of the former is now being erected at a cost of \$50,000, while Japan will have about twenty buildings.

The rapidity with which this great work has been accomplished would amaze those who do not understand the energy and enterprise of California. And that the necessary funds should be forthcoming, almost on call, need not be so surprising when one reflects that in the city of San Francisco alone there are over one thousand millionaires.

In a future article we hope to have the pleasure of describing the Midwinter Fair more fully for our readers.

#### BY THE WAY.

At the penitentiary of California the strictest surveillance of the officials is not able to prevent the use of opium and the traffic in it among the prisoners. It is brought to them in fruit, in cigars, in little wads of tin foil which are passed from mouth to mouth in a kiss. The prisoners are punished by flogging, by ball and chain, by solitary confinement, by taking away the credits, but have it they will, and when deprived of it they act like madmen, and will even commit murder to get it. This habit becomes a species of insanity and the only safety lies in never taking the first step, the first taste. It seems to be a more insidious, a more dangerous habit than liquor drinking, it is more easily acquired and ruins its victims more quickly.

At the same time that this war is being waged in the penitentiary, a similar one is in progress in the public schools of this same city. A committee has been appointed by the board of education to investigate the evil of cigarette smoking among the children. One of the committee is a physician and he makes the statement that "more than half of the young boys of San Francisco have been physically ruined by cigarettes." Many of them commence before they are six years old, and, according to the testimony of the teachers, the cigarette-smoking pupils are so nervous and weak they can make no progress in school. By the same testimony

we learn that the greatest obstacle to be overcome is the fact that in the great majority of cases the boys fall back on the excuse that their fathers smoke. No doubt in many instances they inherit the craving for tobacco just as the children of inebriates do for liquor.

At Hillsdale college, Michigan, the faculty have made a new rule that students who marry cannot remain in the institution. There has been such an epidemic of marriages among them that this ruling has become necessary. We shall have to square this with the assertion, so often made, that the higher education unfits women for marriage and that, through constant daily association, girls in co-educational schools lose their attractions for men.

The women of New Zealand lately have been given the full suffrage, and an Associate Press dispatch from there says: "At the recent elections there were as many women speakers as men, and they were treated with every consideration." The illustrated *Graphic* of that country gives two pictures: one of a beautiful woman standing in the door of the temple of justice with a scroll in her hand bearing the words "Woman's Vote," and at her feet scores of outstretched hands bearing the names of many needed social and political reforms, imploring her aid; the other depicts a noble looking woman standing on a globe, armed with a many-thonged whip, and around her head innumerable rays of light and the words, "She That Is to Be Obeyed," while crouching at her feet are miserable creatures labeled with the great wrongs and crimes of the present day. Beneath the picture is written, "Female Suffrage in New Zealand a Success." This does not seem to bear out the theory that when women have the ballot they will not be treated with respect. On the contrary, wherever they possess the franchise the facts show that they command increased respect.

#### NOTES.

The typographical errors were so evident in the January issue that it is not necessary to explain them. We have to expect such mistakes occasionally. An apology is due, however, to Mrs. Henry B. Jones for the way in which the reference to her was mixed up with the comments on rejected contributions. The two subjects should have been in two different paragraphs. Of course Mrs. Jones' articles are always acceptable.

One correspondent sends a letter, this month, which we did not use. In it, among other things, she says: "My husband is a fireman and very good to me. When he is home, he cooks my breakfast

for me and lets me sleep. I always try to be in a good humor with him, and, when he is off duty, he stays in the house with me." One would think it would be very easy for a wife to be in a good humor under such circumstances, much easier than for the husband. If the wife is ill or in delicate health, it is very kind and entirely proper for the husband to relieve her of every possible burden, but if she is well and able to work, it is her business to get up and cook the breakfast for him. The man who has the living to earn should not be required to add cooking to the rest of his duties.

#### *For What!*

What is there left? My world now lies in ruins  
around my feet,  
No woe that e'er can touch me, can make them more  
complete.

I read the tale of sorrow that other hearts have met,  
But—than my own—no sadder have I perused as yet.

The loom of life holds for me just broken tangled  
web:  
Of all the once fair pattern there seems no figure left,  
And I have no ambition to tie the shattered strings;  
I know not how to fashion that web for other things.

I know that some whose trials perhaps were sad as  
mine,  
Have found, amid the shadows, some ray of bright  
sunshine,  
Can hope and find some comfort for dear ones lost  
and gone;  
Can walk life's darkened pathway and not feel 'all  
alone.'

But I am watching, waiting, for one who cannot  
come,  
Although his very presence made sunlight in our  
home:  
I know the cold grave holds him, that he in life is not,  
Yet I wait for him, and want him, he never is forgot.

I strive to be like others, to find some task to do,  
To see, in scenes around me, the beauties I once knew.  
I seek something to care for, some one to aid or save;  
I cannot—all seems buried within my darling's grave."

#### *Dress Reform.*

In a recent number of the MAGAZINE, there is an article on "Woman's Dress Reform," a theme of much importance. The bloomer dress will prove to be the best of all garments. When Dr. Mary Walker came south, she wore the practical reform dress; of course foolish women and men ridiculed her; but Dr. Walker was determined. She lectured on "Woman's Rights," on which it took some years for the San Antonio free-thinkers to comprehend her policy.

In New York, in 1865, I attended a sociable by A. J. Davis, and a young lady was among the visitors dressed in light-brown garments which fitted her nicely, were well suited and handsome. It struck me that such women's dress when adopted will solve the problem of lifting the morals of the young people. I learned, also, that

girls in high schools in the north wear the reform dress, and that the women in the towns where those schools are dress likewise. Cooks so attired will not burn their clothing. Ladies by their long trailing dress hide their feet—as if they were ashamed of them; they wipe up tobacco spittle from the floors and the sidewalks, carry home the filth, full of bacteria off the streets they walked over, and much dust or mud. They excite the comment of young men in exposing their ankles when they lift their dress out of the mud.

The dresses between men and women are too extremely distinct; by assuming the bloomer dress, women becomes more self-responsible in her actions. Men's garments became perfected to the present time, while that of the women strayed off—guided by wrong fashions and becoming oppressive to themselves. But by the reform dress their character and disposition will become emancipated, become more mannish, more befitting, more handsome; their genuine influence will be more ennobling to men. In marriage they become a more suitable helpmate. In the analogy of the women's dress to the men's garment humanity will progress morally and spiritually. Very respectfully,

HELATES, TEXAS. Carl E. Kreische.

[We are glad to know the sentiments of one of our masculine readers upon this subject, and we publish this letter hoping to call out the opinions of our contributors of both sexes.—Ed.]

#### *The Silver Lining.*

Tho' troubles come to mar our lives,  
And fill our hearts with sadness,  
There's a silver lining to each cloud  
That will bring us joy and gladness;  
Tho' thorns are strewn along the way,  
As o'er life's path we journey,  
There are roses, too, with fragrance sweet  
That we may pluck, tho' thorny.

To-day dark clouds obscure the sky  
Where yesterday's sun was shining;  
To-morrow may be bright and fair,  
All beauteous nature smiling;  
E'en tho' our lives are filled with gloom,  
Why should we sit repining?  
For when the clouds shall disappear  
We'll find the "silver lining."

And should misfortune come to wreck  
Our barque while outward sailing  
Upon the sea of life, so broad,  
Regrets will be unavailing;  
Though day-dreams are unrealized,  
Weep not o'er fond hopes shattered;  
The "silver lining" you will find  
Through deeds of kindness scattered.

This world for us holds many charms,  
Tho' sorrows round us gather,  
And if we try, in place of grief,  
We'll find much joy and pleasure;  
Then let us cast aside dull care,  
And cease all vain repining—  
Tho' dark and lowering are life's clouds,  
Each has a "silver lining."

WEST OAKLAND, CAL.

Nellie Bloom.

*Easter Bells.*

[This poem by one of our well-known correspondents has appeared in several Chicago and Milwaukee papers, has been illustrated and also set to music.]

Ring slowly yet gladly, oh bells, on this day,  
And send forth the story again.  
Ring loudly that hearts may all know what you say  
In the long and happy refrain.

Ring clearly and sweetly and tell to us all  
A tale of the sorrows now past.  
Thy ringing may secretly lift up the pall  
From a life with shadows o'ercast.

Ring tenderly out, oh bells, on the air  
And herald this day ever blest  
A dawning most sweet, an awaking most fair,  
It comes to our worldly unrest.  
PRAIRIE DU CHIEN, WIS. *Nora Hall.*

*The Servant Girl.*

I write in behalf of the servant girl. How she is treated, how she should be treated, and why she should have opportunities that are denied her. The servant girl is supposed to do the work allotted to her and do it well, and I will begin by saying that she does her duty and does it well. Then, what has she to look forward to? She can see absolutely nothing in the future. How, then, can her life be a happy one? The lady of the house comes out and says, "Mary, we would like to have you go to church." Here is an exhibition of the true Christian spirit. Mary goes to church, returns, and continues to do her work; her mistress has done her duty. What a comforting thought for Mary to know that her superior wishes her to go to church. And to the same one she belongs to. Only think of it; what a pleasure. The lady of the house says, "come to church." Does she manifest a Christian spirit by saying anything else to make life happy? If there is a family altar, is Mary invited to it with the rest of the family? Oh, no; that is out of the question; she must know her place. Still, they all claim to be striving their utmost to get through that narrow gate that leads to heaven. I may be hitting some of the readers pretty hard; but that is what I want to do; and I say to them, one and all, if that is the way they show a Christian spirit they will never get a glimpse of heaven. Put yourself in your servant's place and see how you would like it. Remember the golden rule, "Do unto others as you would have others do unto you." A great many people have laid down certain rules for the government of their servants. Some do not permit them to bring gentlemen friends to the house, while others permit them to do so once in a while, if they receive them in the kitchen. Oh, what a Christian spirit! We are supposed to do as near as Christ did, when he was on earth, as possible. Did he say to the servant, "The kitchen is good enough for you?" Oh, no; he gives the best he has to each and every one of us. Can you wonder that

those girls who are compelled to keep company with their gentleman friends on the street go wrong? What pleasure do they have in life? Are they to blame if they fall? No, they are not. Then who is to blame? Why, the ones who employ them. Take care, my friends, that you have none of these dark shadows following you. My mother has servants, and how does she treat them? Mother always treats her servants with respect, and when they have gentlemen callers she says to them, "Take the gentlemen in the parlor, and if you have any work left I will attend to it." We have had two girls, or ladies, for ladies they were, who married respectable gentlemen and have nice homes to day; and they always make it a point to call on mother whenever they can. They had tears in their eyes when they left mother to go into homes of their own. Does any lady who reads this think my mother any the worse for the way she treats her servants? Does she not stand a better chance for heaven than if she had compelled them to keep company out in the street and probably have caused their ruin? Wives who employ help should try to make life worth living for them. We all expect to reach the same point in heaven; we are all equals there.

ROCKEFELLER, ILL. *E. S. Whitmore.*

*Will You Love Me?*

When the dimples in my cheeks have all faded away.  
And my dark brown hair has changed to gray.  
When my bright, laughing eyes, dim and faded have grown,

And my light hearted youth forever has flown;  
When time's cruel fingers have wrinkled my brow,  
Oh, love, will you love me then, fondly as now?

When life's end approaching fills with sorrow my heart  
At the sad thought that we forever must part,  
Nevermore to meet this side of that shore.

Where hearts re-united are severed no more;  
When the years bring old age and 'neath the burden  
I bow.

Oh, love, will you love me then, fondly as now?

SAN ANTONIO, TEX.

*Idis Gregory.*

Little Bess came home from church one Sunday with her head full of the sermon. It was about a "new heart," she said. Her father took her on his knee and gravely asked if she understood what a new heart is. "Oh, yes, indeed," she answered, brightly, "it's a kind of heavenly stomach."

He—Will you marry me?

She—No; you drink.

He—Then marry me and save me.

She—Thanks, no. I don't want a husband preserved in alcohol.—*Kate Field's Washington.*

"So she rejected you, did she? Your proposal didn't please her?" "Well I can hardly say it didn't please her. I thought she'd never stop laughing."—*Boston Herald.*

## LIBERTY AND THE COURTS.

The *Commoner and Glassworker*, in a recent issue, publishes the following:

The general manager of the Northern Pacific railway has discovered a new way to prevent strikes. He goes into the United States courts and has all the leaders in the movement arrested for "combining and conspiring to quit the service of the road." Upon this complaint an injunction is issued against each individual, and a failure to observe the court's order will land the offender in prison. It is the first order of the kind ever issued in the United States. The Northern Pacific is now in the hands of receivers. The difficulty arose out of reductions in wages. Should this action of the court hold good, the working classes will soon find all their rights and privileges as free men nullified, and they will be forced by due process of law to labor for just such compensation as receivers and courts deem proper and just to the government and stockholders, and the right of individual contract is void. It is difficult to distinguish between such action on the part of a republic and some of the old English laws of two or three centuries ago, which fixed both the wages and hours of the working people. Our boasted freedom is fast becoming a sham and mockery, and will hasten the entire dissolution of our present social conditions.

The foregoing is highly suggestive. The receiver of a railroad and a 3x4 United States judge in combination are able, it seems, to compel employes to hold up their hands while the aforesaid receiver and judge put on the manacles and rivet them.

That the Northern Pacific railroad should be in the hands of a receiver creates no surprise; that a receiver of such a bankrupt concern should exert his powers and authority to reduce wages that dividends may be paid on watered stocks and bonds is strictly in keeping with modern methods of piracy. Receivers are to railroad corporations what the jimmy is to

expert safe examiners, who, needing cash, smilingly and philosophically remark, in the language of P. M. Arthur: "If you can't get what you want, take what you can get." Corporations have no souls to be damned and are expected to wreck and rob, rob and wreck, in carrying forward their great enterprises designed to develop the resources of the country and give *eclat* to our Christian civilization. But hitherto it has been held that judges of courts, particularly United States courts, were, in all things relating to character, reputation and justice, in a word, all things of good report among men, superior to corporations and their tools. True, there have been mean, depraved, despicable judges, vicious creatures, moral monstrosities entitled to receive "greater damnation" than falls to the lot of many other scoundrels, but the people generally, in fact, universally, in this country, have been taught to revere judges of courts. There has been an idea, widely disseminated, that as a last resort appeals to the courts for justice would not be disregarded; that the poor and the friendless, as certainly as the rich and powerful, would be heard and their wrongs redressed. Such has been the drift of opinion. If at any time in the past such conditions were based upon facts they have in these latter days become the most arrant delusions. True, it is written in the "Bill of Rights" that "Justice shall be administered freely, and without purchase; completely and without denial, speedily and without delay." But it has turned out that the "Bill of Rights" has proven to be, in ten thousand instances multiplied by ten thousand, a miserable fallacy, mockery and deception; until it has come to be understood that the thing labeled "justice," to be "administered freely and without purchase," bears about as much resemblance to justice as a blue tailed fly bears to a bald eagle. And as for justice being administered "completely and without denial," there are upon record ten thousand cases where maimed railroad men have been denied justice by courts, and where cruel denials have been administered to the widows and orphans of dead railroad men who were killed in the line of duty, by judges of courts where corporations demanded the

sacrifice, and as for justice being administered "speedily and without delay," the records show that the declaration constitutes the prize sham of the age.

As a result of all this the reverence the people formerly entertained for judges and courts of justice is rapidly disappearing. It is widely believed, indeed it has become a settled conviction, that a poor man has about the same chance for justice in the courts of the country that a humming bird would have in passing through the flames of Vesuvius to escape without having its wings singed, while the rich, the corporations, trusts, and all rascally combinations, by the magic of money have things as they want them, upon the principle, doubtless, that gave Jay Gould his astounding success, that when he "wanted a judge he bought him;" at any rate the fact is that judges and courts in the United States are no longer revered. Wigs and gowns and all the ancient flummery which made a judge appear to the populace as a creature of superior dust—porcelain as compared with brickbats—have lost their talismanic power, until the "ermined robes" of an average judge have no more significance than attaches to a ten dollar ulster, and United States judges in integrity and intellectuality rate fearfully near zero.

For this rapid depreciation of judges and courts there must be a reason, and it behooves the people to investigate until they ascertain the true cause. We do not imagine any very deep excavations will be required to develop a mine of ignorance and egotism of astounding richness. Surface indications are simply immense. The outcroppings of imbecility are quickly pointed out by school children. It is a rare circumstance to find a United States judge who is not afflicted with big-head and pig-head, a condition of vacuity and vanity, stupidity and stubbornness, arrogance and insolence, qualities which have become so common as to rarely create surprise, and yet it so happens that vast interests are committed to these judicial deformities, which may be determined, right or wrong, just as flipped coppers may come up heads or tails, as chance may decide, but if a railroad pass is dropped in the slot of the ju-

dicial machine, or something more weighty still, then justice throws her scales to the dogs, strips the bandage from her eyes and breaks for the woods, but that particular judge proceeds to "hold court" and "issue decrees," just as if he was not under popular indictment for malfeasance in office.

Why this humiliating degeneracy? It is not difficult to answer the important query in consonance with an overwhelming weight of facts.

In the first place, political partisanship has, in numerous instances, contributed to the degradation of the judiciary. It has been, to some extent, a popular theory that a hide-bound partisan, elevated to the bench, at once proceeds to burst his shell and transform himself into a sublimated creature, in whose make-up all the bumps and depressions on his cranium indicative of meanness and malignity, disappear; that an "itching palm" is no longer a source of trouble, and that the hinges of his knees are so readjusted that they will not respond when wealth and power demand crooked legs. Alas! experience has taught the people to discard such hallucinations, and to regard courts as deadfalls and judges as simply the manipulators of the triggers.

Judges being selected for their partisanship, for their familiarity with the machine, and as a reward for services, it follows, as a general proposition, that small potatoes are, as a rule, elevated to the bench, and the courts become, therefore, so many political machines, clothed with extraordinary powers and prerogatives. It is well known that in the scramble for nomination or appointment the supreme essentials of a judge—large ability, knowledge of the principles of law, unflinching honesty, tireless devotion to right and justice, are practically ignored and that candidates secure election or appointment because they have rendered a political party assistance in campaigns, rough and tumble fights for supremacy. True, it may be said that sometimes a qualified man is selected, but such incidents are exceptional. As a rule, judges of courts seldom rise above mediocrity, and often fall calamitously below it. Being men of small caliber, often mental midgets, what more natural than that they should bring

courts into contempt by orders, rulings and decisions which make jurisprudence ridiculous?

It is contended that lawyers of brains no longer aspire to be judges: (1) Because they can earn more money practicing law, and (2) because the office of judge, generally, has become odious rather than honorable, in which small men strut around, targets for the flings and jeers of the people, their decisions being largely in the nature of *chucaluc*—or, worse still, like a twenty-five number lottery, where the chances are 999,000 to 1, that you do not draw a capital prize, and about 200,000 to 1 that you draw no prize at all. But, if it were a fair game of chance, men might gamble for justice in the courts and curse their luck while heroically accepting defeat—but it has come to this, at last, that the rich—corporations and trusts, as in the case of the Union Pacific, the Northern Pacific and the Ann Arbor affair—can obtain anything they want to help them crush the poor. Anything to the contrary is the exception—and only magnifies the rule. Occasionally, some distinguished scoundrel is lightly punished. In such a case the press engages in flambeau reports which are of special service to rich rascals generally, because, in the midst of the glorification over the conviction of one miscreant, a thousand go scott free, or to Canada.

Certain it is, that throughout the land, judges and courts are regarded with ever increasing suspicion and derision. Under the constitutions of states and the federal constitution, judges, as has been observed, are clothed with autocratic power. Note the creature called "judge" who, by a stroke of his pen, reduced sovereign citizens, employees on the Union Pacific and Northern Pacific, to slaves. Note the infamous rulings of Ricks and Tait in the Toledo affair. Such exhibitions of power are becoming alarmingly frequent, and the people believe they have discovered the reason why of them. With small salaries, venal judges will "make hay while the sun shines." Poor devils have nothing to offer for justice but gratitude, while the corporation can add to its thanks the coin of the realm—banquets, free passes and luxurious palace cars. True, men may ap-

peal from Pilate to Cæsar—if they can give bond—in the absence of which they go down to silence and defeat, and as well might a sparrow protest against a cyclone, or a jack-rabbit against a prairie-fire.

The judiciary of the country, in the opinion of multiplied thousands, is the rodent that is gnawing at the foundations of the liberties of the country, and if the question is asked, why so many mobs, regulators, white caps, popular uprisings in which Judge Lynch presides? the answer is generally—"O damn the courts, they're no good."

Talk of dangers to the perpetuity of liberty and free institutions from ignorance, poverty, wealth and its combination—the real danger lies in a venal, debauched, arrogant judiciary. Corporations are now chuckling over their victories achieved by pliant, weak, imbecile lickspittles "on the bench." The Union and Northern Pacific incidents ought to be convincing. They tell in "mournful numbers" what is in reservation for railroad employees. Chained to the corporation—subjected to the lash of general managers *et al*, their condition may be better than that of old plantation slaves, "fo de war"—for as yet, we believe, they are not included in "blanket mortgages," nor listed as assets in watered stocks and bonds. As an initial step, they are simply chained to the tracks, to their machines, to pick, throttle, punch, switch and brake, but as in the case of Job, how soon the devil will rob them of everything but their integrity, his "Honor," the judge, only knows—but the way things are moving, it ought not to be long before railroad employees will curse the day they were born, since to eat their hard-earned fare as a part of the rolling stock of a railroad, is enough to create a widespread epidemic of suicide. Such calamities suggest the immortal words of Patrick Henry—"Give me liberty or give me death."

The female wing of New York's "400" are now dyeing their dogs to harmonize with the prevailing tint of their boudoirs, and Mrs. Vanderbilt has engaged a Parisian artist to dye her dog for the season—a sky blue. Mons. Lavealereaux has arrived and is now doing some dog work for Ward McAllister.

### THE DESPOTISM OF DUNDY.

Manifestly, labor has fallen upon evil times, or evil times, with crushing force, have fallen upon labor. It is between the upper and the nether mill stones. It has been caught in the mill of some vengeful god, and is being ground exceedingly small. The United States judges just now seem to be the gods with mills of modern invention, so constructed that a railroad employe can be reduced to slavery by a turn of a judicial screw, have his manhood, his self-respect, his independence, his sovereignty as a citizen, all eliminated in a twinkling. He is still left with his muscle, his capacity to work, but to live and breathe, with his heart beating time to the moanings of despair. To talk of liberty under such conditions is an insult to all things American. It would be a Christless shame to flaunt in the face of the slaves of Dundy, Jenkins, Fuller, Ricks and judges of their kidney, the star spangled banner and ask them, as its stars and stripes floated out upon the winds of heaven, to sing the once cheering refrain,

"The star spangled banner,  
O, long may it wave,  
O'er the land of the FREE,  
And the home of the brave."

The old flag no longer floats over the free; and the home of the brave has been, by judicial decrees, transformed into the hut of the pariah, the peon, the helot. The men on the Union Pacific, but yesterday freemen, to-day wear Dundy's collar, marked U. S. A.—branded, not yet on forehead or cheek, or breast, but the hot iron of judicial authority has touched their souls and burned upon them ineffaceable scars.

It is possible there are feelings of resentment. The employes enjoy the luxury of memory. They doubtless think of the times when they were free, before Dundy damned them to degrading servitude at such wages as he deemed proper to award his serfs. These victims of Dundy's authority, who are fathers, remember the time when they gloried in the belief that, being free themselves, no taint of bondage attached to their offspring. Do they so believe now? Do they not know that Dundy's decree has manacled their hands, that they can use them only as he directs, fettered their legs, that they cannot get away—aye, fettered

their tongues, that they dare not speak? Is that the condition on the Union Pacific? That is it. There is no exaggeration. An Omaha dispatch of January 28 says "the Union Pacific labor circles were stirred to the utmost depths to-day when the order of Judge Dundy, reducing wages on the system, was made public. All employes in every department are affected by the cut, which amounts to nearly 10 per cent. The action of the court was not altogether a surprise, although most of the men thought the wage question would not be disturbed, but Judge Dundy went his brothers on the Federal bench *one better*, and not only enjoined the men from striking, but cut their pay and *ordered them to work on at the reduced pay.*" We italicise a sentence just to call attention to the rapid strides the United States courts are making to multiply white slaves in the United States and the extraordinary feature of this slave manufacturing business is that it particularly includes railroad employes who, in point of intelligence, education, character and moral worth occupy, confessedly, advanced positions, and in regard to responsibilities, stand in the highest position accorded the wage workers of the country. And yet judges of the United States courts strike them down with a savagery as relentless as ever distinguished Portuguese slave hunters in the Dark Continent.

In view of such facts what must be the damnable policy of the government of the United States? These satraps are the creatures, the spawn of the government. They are the parasites that fatten upon the revenues the government derives from labor. They are the trichina that riot in the muscles of the government hog. They are the rodents that are gnawing at the pillars of the liberties of the people and while their work is going forward the government, whatever that may be, much or little, looks on as unconcerned as if the enslavement of American workmen was of less consequence than the appointment of some hustler to a fourth-class postoffice.

In this warfare upon railroad employes there must be a malign purpose, known only to those whose interests demand lower wages of employes. The war waged by cap-

capitalistic corporations upon labor has this one thing in view, and only one thing, the reduction of wages, and when it is seen, as in the case of the Union Pacific, that wage-men are sandbagged by a United States judge, the conclusion is inevitable that the court and the corporation, in alliance, have decided to work the ruin of labor that the corporation may riot in wealth. It is the degradation of labor and the exaltation of the corporation, and if it be possible for the courts and the corporations, under cover of receiverships, to strike down the most manly and independent wage workers of the country, the task of subjugating employes in other departments of industrial enterprises will be comparatively easy. In the great mining industries of the country labor is on its knees. True, miners strike and protest while being subjected to ordeals of hunger, squalor, rags and exposure, but the corporations, the plutocratic mine owners, permit them to writhe until exhaustion comes, then they go back to their underground tasks, wronged and robbed and still more degraded. The great family of iron workers, as at Homestead, have felt the grasp of capitalistic corporations upon their throats, have resisted as does the prey in the coils of a serpent, to yield at last, when idleness and consequent want had done their work, a mass of mangled manhood, submitted to such terms as their masters might dictate, and thus the enslavement goes forward, but in no instance have men been rendered so debased and disgraced, humiliated and abject as the men on the Union Pacific by the autocratic orders of Judge Dundy. True it is that Jenkins and Fuller, Taft and Ricks, compelled men to stand and be robbed, but Dundy, in the language of the dispatch and the slang of the poker room, went all of his associates "one better," and not content with reducing the wages of the men, chained them to the road, reduced them to rolling stock, and there they are, working, toiling, sweating, hoping perhaps that the day will come when the black-tongued plague which Dundy sowed in their midst will disappear, and their rights as sovereign citizens be restored to them. We do not doubt that that day will come, since come it must if the ancient pil-

lars of our liberties are to stand, come it must if the republic is not to breed millions of Sampsons deprived of their eyes by judicial Dundys, and who, exasperated beyond endurance by corporate Philistines, grasp the pillars of the temple of our liberties and then asking a just God to give them strength, wreck the superstructure, leaving it to others to build something in its place with the Dundy curse omitted.

But, omitting such figures of speech, however appropriate, we are constrained to enquire from whence comes this evolution of savagery? On the one hand we see the power of the state, the judiciary of the state, and the military force of the state in alliance with corporate greed to strike down labor, as in the case of Homestead. We see, as in the case of Buffalo, the state and the militia of the state in alliance with corporations to overwhelm labor with disaster, when labor was demanding that the power of the state should support its claims to fair dealing in strict accord with the statute of the state, which the corporations were openly, defiantly and confessedly violating, demonstrating that states, their courts and the standing armies are combined, in defiance of truth and justice, to enslave labor. The question ceaselessly recurs: why this governmental madness, this implacable hostility to labor—to the great army of workmen? If such hostility is denied, we point to the records, to the facts, and to the conditions under which labor exists to-day—conditions which thoughtful men in every walk of life declare to be fraught with danger. Expressions of regard for labor, its prosperity and happiness could be quoted indefinitely, but when a United States judge, as in the case of Dundy, assumes autocratic power and goes "one better" than any other judicial miscreant in robbing men, not only of their money but of their liberty, does any government protest? Not so much as an intimation of opposition to the infamous decree is heard. What, then, must be the conclusion? This, the governments, state and national, look upon the wreck of the liberties of workingmen with composure. Such is the inevitable conclusion. What does it portend in the not far away future? Does it indicate peace

and prosperity, love of law and respect for courts? Necessarily, nothing of the kind. What is the remedy? The ballot, an abandonment of old parties and their methods; the solid unification of workingmen for the purpose of securing, while they may, a peaceful solution of the problems which involve life, liberty and the pursuit of happiness.

Here we call upon every patriotic workman to urge forward the solidification of the hosts of labor to change the governmental policy towards workingmen. They ought not to be subjected to further degradation, humiliation and outrage. The enslaving work ought to stop. It will stop. The times are ripe for resistance. The ballot, properly used, can work out for labor the needed reforms. The Dundys can be suppressed. Right and justice may be enthroned without a Sodom storm of fire, but the storm can only be avoided by a timely resort to the ballot.

#### THE AMERICAN PROTECTIVE ASSOCIATION.

The assumption upon which the A. P. A., *alias* The American Protective Association, is founded, is that the Roman Catholic religion is fraught with danger to American institutions, hence, the further assumption that all men who believe in the religion taught by the Roman Catholic church are the enemies of American institutions, and therefore, necessarily, are either embryo or fully developed enemies of our American form of government.

We recognize fully the difficulties of the task of banishing errors from the minds of bigots. We do not recall an instance in all history where, by the simple process of reason, argument and common-sense, success has attended such laudable efforts. Nevertheless, it is true of the past that the influence of bigots has been reduced to the minimum—that their fangs have been extracted, their claws blunted and the deadly poison secreted in the *glands* of the heart and soul neutralized to comparative harmlessness.

In the organization of the American Protective Association history repeats itself, but the astounding shame and infamy of

the thing appears in its title. To call it "American" is to outrage all truth and decency. It is a blasphemous arraignment of the term "American," which from the foundation of the government has been a standing rebuke of all religious intolerance, expressed in the organic law of the nation as follows:

"Congress shall make no law respecting an establishment of religion or prohibiting the free exercise thereof."

And, as a consequence, no state can make any law *respecting the establishment of religion or prohibiting the free exercise thereof*.

As a result, the states have, by their constitutions, following the example set by the great charter of AMERICAN RELIGIOUS LIBERTY, provided that "all men shall be secured in their natural right to worship Almighty God according to the dictates of their consciences," and that "no preference shall be given by law to any creed, religious society, or mode of worship," and that "no religious test shall be required as a qualification for any office of trust or profit."

In such provisions we are permitted to contemplate the true glory that clusters around the name "American," and to make it play any part whatever in the damnable game of religious bigotry and persecution is infamous beyond the power of adequate characterization. It is the acme of devilishness. It is satanic without a redeeming qualification.

The founders of the American government were well advised of the dangers that would confront the people if bigots were left to exercise their infernal malignity towards those who differed with them upon the subject of creeds and worship. They lived in such close proximity to the colonial period of religious persecution that they could hear the necks of its victims snap as they swung off of the scaffold; they could hear the crack of the lash upon the backs of Quakers, when they, at cart tails, were whipped from one town to another until the wilderness was reached, and they were left to perish, the victims of storms and the caressings of wild beasts. They saw colonial-established churches, imitations of European infamies, which banished, in the

name of God, one class of worshipers that another class, more powerful, might, with impunity, riot in cruelties which the devil himself, doubtless, regarded as quite unnecessary for the glory of his kingdom, and they determined to establish an AMERICAN policy which should effectually redeem America from the unspeakable horrors of a reign of bigotry. This, as we have recited, they accomplished when in the organic law of the nation they made America, at once and forever, the asylum of free religion.

In view of such facts of history, who can measure the astounding impudence and infamy of coupling with an organization established in the dark, in secret, for the avowed purpose of religious persecution, the name "American?"

What is the history of this A. P. A.? Those who have run it down are convinced that it originated with a gang of schemers whose sole object was to arouse dissensions in the ranks of organized labor. Everything else had been tried. Laboring men, members of organizations, particularly railroad employees, by turns had been cajoled and threatened, but the men stood firm—worked together in harmony and added to their numbers. Then came the scheme to bomb their ranks with dynamite bigotry. The adroitness of the plot cannot be questioned. The fires of hell never burn more fiercely than when fanned by the breath of fanatics.

Regarding the history of the organization, we take the following from *Every Saturday*, published at Albany, New York:

Between two and three years ago a conference was held in a certain office on Wall street, which was attended by representatives of the Chicago and Rock Island Railway, the New York Central and Hudson River, the Chicago, Milwaukee and St. Paul and numerous other railway companies, together with representatives from several large rolling mill corporations and iron manufacturers generally, besides many miscellaneous trusts and combines.

The meeting was a strictly secret one and its object was primarily to reduce the wages of the American workmen.

Numerous meetings of these same conferees were held at different places, the object always being the same. Fellow monopolists and corporation managers were frequently called upon to express their views and experience. These men were invited to come from various parts of Europe and Canada.

It was a gentleman from the latter country, a great railroad magnate, who formulated the idea upon

which the committee was to work to bring about the desired result, viz., to reduce the wages of the American toiler.

The story goes that the invited guest from Canada was of the opinion that no way could be devised to lower wages until the powerful labor organizations were overcome; dissensions and dissolution must be forced into their ranks, and with their disruption accomplished it would be a very easy matter to lower the wages.

This very desirable end could be arrived at by instilling into their ranks a religious prejudice. "You know," said he, "they are nearly all honest, conscientious fellows, with little or no education, and they fear God and live up to their various ways of adoring Him."

He then went on to tell how that they in Canada had a certain class of people who were pleased to be called Orangemen, and that they had an inherent dislike for Catholics and that the latter fully reciprocated in their hatred for Orangemen. All that was necessary to do in his country was to bring the two together and harmony would immediately give place to pandemonium.

These worse than devils concluded to act upon the Canadian idea. The railroads introduced a society and called it the American Protective Association (A. P. A.). Men were hired to boom the organization and do nothing else. Narrow-minded and prejudiced tools joined it, and the fight was on. Iron merchants did their share toward helping it along, and showed a preference for men whom it had succeeded in sucking in.

Here we have the underlying reasons set forth for the existence of such a non-descript organization as the A. P. A. The reasonableness of the statement crops out in every line. The reduction of wages with railroad magnates is the supreme requirement—for every dollar of reduction goes to swell the dividends on watered stock—and if the organizations could be disrupted by the introduction of religious prejudices, or of discord in their ranks, a point would be gained, all the more certainly, since, once light the fires of religious fanaticism and nothing short of a miracle can quench them. In this connection it is well for all labor organizations to understand the nature of the oath to which a member of the A. P. A. is required to subscribe to form any rational conception of the degradation to which he voluntarily submits, an oath which eliminates from its victim not only the nobility of Americanism, but every quality of manhood worthy of recognition, leaving the unfortunate creature with nothing to boast of except the depravity and malignity which in all countries and ages have made bigots the objects of unutterable loathing.

The oath is as follows:

"I do most solemnly promise and swear that I will use my influence to promote the interest of all Protestants, everywhere in the world; that I will not employ a Roman Catholic in any capacity if I can procure the service of a Protestant; that I will not aid in building, or in maintaining, by any resources, any Roman Catholic church or institution of their sect or creed whatsoever, but will do all in my power to retard and break down the power of the pope; that I will not enter into any controversy with a Roman Catholic upon the subject of this order, nor will I enter into any agreement with a Roman Catholic to strike or create a disturbance, whereby the Roman Catholic employes may undermine and substitute the Protestants; and that in all grievances I will seek only Protestants and counsel with them, to the exclusion of all Roman Catholics, and will not make known to them anything of any nature matured at such conferences; that I will not countenance the nomination, in any caucus or convention, of a Roman Catholic, for any office in the gift of the American people; and that I will not vote for, nor counsel others to vote for, any Roman Catholics; that I will endeavor at all times to place the political positions of this government in the hands of Protestants. (Repeat.) To all of which I do most solemnly promise and swear, so help me God. Amen."

We write to warn organizations of railroad employes against the infamous purposes of the A. P. A. We write to tell them that once introduced into the organization their power to accomplish good for themselves forever vanishes. We write to enthrone everywhere throughout the boundaries of our favored land that true, lofty and sublime Americanism, that regards men's religious convictions as sacred as life itself, and inextricably interwoven with the eternal and irrevocable rights of "Life, Liberty and the Pursuit of Happiness." Once light the fires of religious fanaticism, and the lodgefire is at once and forever extinguished. The term "Brotherhood" becomes a by-word and fraternity would be everywhere proclaimed as a stupendous sham. Americanism is as opposite of bigotry as water is the opposite of fire, as truth is the opposite of a lie, or as eternal justice is the opposite of those wrongs which reduce men to the condition of slaves.

To read the oath taken by misguided members of the A. P. A. embodying, as it does, every ingredient of malevolence that makes unbridled bigotry a horror, and evinces such blind obedience to fanatical venom that civilization becomes savagery

and Christianity the synonym of hate. We do not believe that the A. P. A. will be permitted, at the behest of the oppressors of labor, to wreck labor organizations, but it is "a pestilence that walketh in darkness," that it may destroy at noonday, and the only safety is in guarding the lodge from its blighting influences.

#### EQUALITY OF MEN AND WOMEN.

The present is an age of reform, at any rate, of change. Antiquity long since ceased to command veneration—even what was esteemed good is pushed aside to make way for something deemed better and there is a great host of crusaders whose purpose is to battle for the best. If this were all of it, the world would serenely contemplate progress and dream of perfection. But with all of our boasted progress and civilization, Christianity and knowledge, the vices and superstitions of the past are often reconstructed and made more offensive and are given a conspicuousness which, in earlier times, they could not enjoy. Prominent among these vices and superstitions of which we read and which we are permitted to see and contemplate, is the assumption of woman's inferiority to man. It does not matter that the world has experienced an age of chivalry; it does not matter that along the track of the centuries men have championed the cause of woman, called her an "angel" and applied other endearing titles to her, robed her magnificently and decked her with jewels of dazzling beauty, and paid her abject homage; it does not matter that women have been led to the altar and joined in matrimonial vows with all the pomp and ceremony the church could bestow; it does not matter that as wife she has been made mistress of the home, and as mother enshrined in the hearts of her children, and without whom there could be no home upon the earth; it does not matter that love is forever coining new words by which men are enabled to express their devotion and proclaim their vassalage to women. When the time comes to apply the test and determine the honesty of their professions of fealty, with scarcely an exception they are found ready to hurl at women the charge of inferiority to men. It is then that old

and degrading wrongs and superstitions come into view, and then, swearing by their whiskers, mustache and fists, tobacco and cigars, their muscle and avoirdupois, men swell to gigantic proportions of self-conceit, and proclaim themselves superior to woman-kind—to mother, wife and daughter, and like the "Oregon," hear no sound except their own boasting.

It may not be difficult for the student to determine the whys and the wherefores of man's savage brutality towards woman—since the masculine has the larger share of muscle and physical power, and can, therefore, subjugate the physically weaker sex, and as he finds enjoyment in the exercise of his power, the problem is easily solved. But why civilized, Christianized, educated and sublimated men should contend that women are inferior to themselves, and continue to deprive them of the rights, privileges and prerogatives men enjoy, constitutes one of the mysteries of this high noon of our civilization.

At the first glance it would seem to have been the mission of Christianity and the church to emancipate woman from the thraldoms of savagery and paganism, to have lifted her by divine power to ethereal elevations and to have enlarged her rights, rather than seek opportunities and excuses for abridging them. But it so happens that Saint Paul, the great apostle to the Gentiles, inoculated Christianity and the church with the virus of woman's inferiority, and from the days of Paul to the present, neither Christianity nor the church has sought to remove the stigma. It may be well to quote the language of St. Paul in this connection, that the charge of misrepresentation, if made, may be speedily crushed. Let it be understood that Saint Paul claimed to be inspired, that is to say, to speak by divine authority. Let those who are capable, grasp the proposition, and the reason why Christianity has evinced a relentless opposition to woman's equality with man is explained. St. Paul, in writing to Timothy, whom he called "my own son in the faith," said:

"Let the women learn in silence and in all subjection."

In this the great apostle would have

women emulate the oyster and the slave. The oyster is silent, and the slave is both silent and subservient.

Again says the inspired apostle:

"I suffer no woman to teach, nor to usurp authority over the man, but to be in silence."

Thus it happens in the year of "our Lord" 63, eighteen hundred and thirty years ago, the church began its relentless crusade against woman's rights, and as a general proposition has kept up the warfare for more than eighteen centuries. In this connection it becomes interesting to note why St. Paul was animated by such hostility to woman. True, he was a bachelor, and probably had never known the ecstasy of "love's young dream," had never told to woman's ears his love beneath the light of the stars or the moon's pale beams; had never taken his sweetheart to church, riding double on a Judean donkey, but such were not the reasons that prompted him to degrade woman. His hostility reached back to Eden. He says:

"For Adam was first formed, then Eve. And Adam was not deceived, but woman being deceived was the transgressor."

Here we have the key that unlocks the Pandora box from which have escaped more ills to women all along the track of the centuries than there are stars in the firmament. But St. Paul felt the divine command to write to the Corinthian Christians something more on the woman question. Evidently the apostle had become alarmed on account of privileges granted the Corinthian Christian women, whereupon he wrote as follows:

"Let your women keep silence; for it is not permitted unto them to speak; but they are commanded to be under obedience, as also saith the law."

"And if they will learn anything let them ask their husbands at home; for it is a shame for women to speak in the church."

The point we make is this, that the position taken by St. Paul, supplemented by the affirmation that he was inspired by God himself to degrade women in the eyes of the Christian world, fully accounts for the centuries of enslavement more or less cruel and crushing that has fallen to the lot of

women throughout Christendom. Their inferiority to men breathes in every line of St. Paul's writings upon the subject, a display of bigotry and arrogance which, in the light of reason, is sufficient to make the world blush scarlet. Is it strange that under such tutelage woman has been regarded inferior to man, or that centuries of wrong have not had the effect to impair her mental faculties, and as is seen in millions of instances, make women willingly accept the foul charge of natural, inherent inferiority? Had the same maledictions been hurled at man instead of woman, who can so much as surmise results upon the masculine branch of society throughout all lands where Christianity is the dominating religion?

The "woman movement" in these latter days is, we do not doubt, of all social, human and civilizing movements, the one of the most far-reaching and transcendent importance. We by no means underrate the herculean task that challenges the mind forces of the men and women who are engaged in the work of woman's enfranchisement. We do not belittle the power of bigotry and superstition, which in alliance asserts woman's inferiority to man and denies them the rights and privileges which men enjoy, and of which they boast. We know that the press and the pulpit, with here and there an exception, demand that women shall keep silent and wear their fetters submissively. But we see in spite of all opposition that women are achieving triumphs in all the walks of life that challenge intellectuality and high endeavor, which must make St. Paul, if permitted to observe human affairs, somewhat restive.

What do we behold? The institutions of learning, moss covered with antiquity, throwing wide open their doors and admitting women to lyceums as sacred as where Plato and Aristotle taught, and we see them coming forth equipped and holding as high aloft the blazing torch of learning and progress as falls to the lot of their masculine competitors.

And yet there are those who cannot refrain from resorting to science (so called) to demonstrate woman's inferiority. They proceed to weighing brains, and find that

the brain-weight of women is about five ounces less than that of men—hence this inference, that in the "higher levels" of intellectual work, women are not men's equals—though admitting that girls are superior to boys at school, when equal advantages are enjoyed. The injustice of the estimate of inferior work in high intellectual levels is manifest, because, at the very time when boys begin such work, girls are retired upon such laurels as they may have won. But, now, as opportunities are afforded women to enter the lists of high endeavor, men are required to make the most of their endowments. In a word, inequalities are disappearing and in the race to win prizes where the feminine and the masculine minds contend for the mastery, the proof is overwhelming, that but for the centuries in which the dwarfing processes have been carried forward, women to-day, in creative thoughts, clear perceptions and sound judgment, would bear off the more desirable prizes. An eminent scientist who holds to woman's intellectual inferiority when all the facts are summed up, is forced to admit woman's intellectual superiority in numerous instances; as for instance, the following:

Reading implies enormously intricate processes of perception, both of the sensuous and intellectual order; and I have tried a series of experiments, wherein reading was chosen as a test of the rapidity of perception in different persons. Having seated a number of well-educated individuals around a table, I presented to them successively the same paragraph of a book, which they were each to read as rapidly as they could, ten seconds being allowed for twenty lines. As soon as time was up I removed the paragraph, immediately after which the reader wrote down all that he or she could remember of it. Now, in these experiments, where everyone read the same paragraph as rapidly as possible, I found that the palm was usually carried off by the ladies. Moreover, besides being able to read quicker, they were better able to remember what they had just read—that is, to give a better account of the paragraph as a whole. One lady, for example, could read exactly four times as fast as her husband, and could then give a better account even of that portion of the paragraph which alone he had time to get through.

Other and numerous instances could be given showing not only that women are men's equals intellectually, but often their superiors—and that any inequality should exist we hold is chargeable to the fact that women nowhere at any time have ever en-

joyed opportunities equal to those conferred upon men to demonstrate to a gainsaying world that their mental endowments qualify them to participate fully in all human affairs designed to elevate human beings.

We are fully convinced that the opposition to the complete enfranchisement of women has its foundation in superstitions as degrading as any that have ever cursed the world. One by one these false theories are disappearing—and step by step women are advancing in the acquisition of knowledge. In the science of education, they challenge competition and silence criticism. In the science of law and of medicine, they are winning renown. In the pulpit, their sermons evince that they can delve as deeply into the mysteries of theology as any masculine graduate of the divinity schools can boast. In the lecture field they *draw* and win applause; on the stage, their admirers are a mighty host. In art and literature, they are achieving triumphs of which men might well be envious—but, their enfranchisement can be celebrated only when they are permitted to grasp the ballot. Then their fetters will drop from around them, as did the shackles from 4,000,000 of slaves when Abraham Lincoln declared their emancipation.

To this it is coming and the movement is gaining momentum. Men talk about the ballot unsexing women—as well say that the crown has unsexed Victoria. The ballot, as a weapon, is mightier than the sword, and women can wield it in the interest of peace and of purity—silence and submission have had their day—henceforth, agitation and aggressive warfare. Henceforth the shibboleth—“For Truth and the Right,” and as the “eternal years of God” are pledged for the triumph of truth and right, duty marks the way which will grow brighter until women in America stand forth emancipated by the conquering power of eternal justice.

Venezuela, as an attraction to immigrants, has what is called the “cow tree” growing in her forests, and attaining a height of 100 to 125 feet. The sap of the “cow tree” resembles milk, which is both wholesome and nourishing.

## JUDICIAL.

The following decisions of state and federal courts upon matters touching the liability of corporations, the rights of employees, etc., will be of special interest to railway employees:

### WHO ARE FELLOW SERVANTS.

The employees of a railroad are generally numerous, and necessarily divided into classes, according to the work assigned them. But all of the persons thus employed under one principal in the conduct of one common enterprise, such as operating a railroad, are, according to the ordinary meaning of the word, servants or employees of one principal, and, as it would seem, “fellow servants” of each other. We suppose it may be regarded as settled that whether parties are “fellow servants” in the sense of the rule does not depend upon the grade, rank, or authority of the two servants. A fireman and engineer or conductor are “fellow servants.” Judge Cooley states that persons are “fellow servants when they engage in the same common pursuit under the same general control.” Judge Thompson, in his work on “Negligence,” announces as a general rule “all who serve the same master work under the same control, derive authority and compensation from the same common source, are engaged in the same general business, though it may be in different grades or departments of it, are fellow servants, who take the risk of each other's negligence. He who engages in train service knows that other trains besides his will be running, and may fairly be considered as contracting to take the risk of the negligence of the employees managing such trains. He must expect to be employed now on one train and now on another, to be thus thrown into contact with the other employees in that service, to know himself what is the proper care in such work, and be able to detect any evidence of carelessness on the part of those in like service.”

But it is said that there is one limitation to the general rule which has been well established, and it is this: That, while the question as to whether parties are fellow servants is not to be determined by the rank or grade of the offending or injured servant, “it is to be determined by the character of the act being performed by the offending servant. If it is an act that the law implies a contract duty on the part of the employer to perform, then the offending employee is not a servant, but an agent, but as to all other acts they are fellow servants.” “The true question is whether the person is employed to do any of the duties of the master. If so then he cannot be regarded as the fellow servant or co-laborer of the operatives, but is the representative of the master, and any negligence on his part in the performance of the duty of the master thus delegated to him must be regarded as the negligence of the master.” As we have seen, the employees of a railroad company are necessarily divided into classes, to each of which, in the division of labor, certain specific ordinary duties are assigned, as to which each servant, within the compass of his employment, in one sense, is the representative of the company. Is it the intention that “the duties of the master” referred to as changing the character of an employee into that of master should include those matters of ordinary regulation and management, or only those original and essential duties implied by the contract of service; such, for instance, as the duty of keeping a safe and sound track, furnishing all proper appliances, competent servants, etc.? But, be this as it may, competent authority has indicated the following as “the duties of the master” referred to, viz.: to furnish suitable machinery and appliances, and keep them in repair, the selection, and retention of sufficient and competent servants, and the establishment of proper rules and regulations, etc. Under the head of “appliances” is understood to be included a proper roadway, or, as it has come to be phrased, “a safe track and a safe place to work.” The negligent use by one employee of perfectly safe machinery will seldom be adjudged a breach of the master's duty of providing a safe place for the employees. Such a construction would make any negligent misplacement of a switch, any collision of trains, even any negligent dropping of tools about a factory, a breach of the duty of providing a safe place. The true idea is

that the place and the instruments must in themselves be safe, for this is what the master's duty fairly compels, and not that the master must see that negligent handling by an employee of the machinery shall not create danger.

Jenkins vs. Richmond & D. R. Co. (Supreme Court of South Carolina.) 18 S. E. Rep. 182. (763.)

#### ACTION FOR DEATH OF EMPLOYEE.

In an action against a railroad company for the death of the manager of a switch engine in its yard, where he had been employed for two years, caused by the absence of a block between the rails abutting on a "sub switch," the complaint alleged that the switch had not been blocked for five days before the deceased was killed; that he was free from negligence and did not know the switch was not blocked. The complaint was insufficient, in that it failed to show that deceased did not know of the absence of the block previous to the hour of his death, since, if he had such knowledge, he assumed the risk incident to such absence. If the employee knew, or had reasonable opportunities to know, of the omission of the duty of the master, he had no right to assume that the duty had been performed, and to trust his life upon the absence of knowledge that the duty of the master had been performed. He was obliged to act with care and prudence, in applying the two years of experience in the duties in which he was employed. If he had had knowledge of the absence of the block, he was bound to apply that knowledge. If he had opportunities equal to those of his employer for gaining such knowledge he will be presumed to have known, and will be held to have assumed the risk flowing from the absence of such block.

Ames vs. Lake S. & M. S. R. C. (Supreme Court of Indiana.) 35 N. E. Rep. 118. (237.)

#### WAIVER OF FORFEITURE OF MEMBERSHIP OF MUTUAL BENEFIT SOCIETY.

Where the by-laws of a mutual benefit society require each member to pay a fee of one dollar, after having been a member for one year, for the beneficiaries of the next member who shall die, and make a similar payment at each death, such fee is due from a member one year after he joins, though no member may have died during such year. Where a member was sixteen months in arrears for non-payment of a death benefit fee, and the society did not strike his name from the list of members, or take any action to enforce payment of such fee, but received from him his monthly dues and fines during such sixteen months, the society waived the forfeiture of his membership for such non payment.

Menard vs. Society of St. Jean Baptiste. (Supreme Court of Errors of Connecticut.) 27 At. Rep. 1115. (136.)

#### ACTION ON CERTIFICATE IN MUTUAL BENEFIT INSURANCE.

In an action on a mutual benefit certificate, payable out of a "pool," the complaint, to which was attached a copy of the certificate, alleged that there was a sufficient sum in the pool at the time of the member's death to pay the claim, and demanded judgment for the amount. The by laws referred to the certificate and provided that if payment should be contested and judgment rendered in favor of the claimant, the claim should "be placed in, and paid pro rata with, the claims of the pools then forming." The court adjudged that the association should include the claim in the pool forming at the time of notice of entry of judgment, and directed payment of a proportionate sum. The judgment was embraced within the issues, and was therefore authorized, though the relief granted was not demanded in the complaint.

Sullivan vs. Industrial Ben. Ass. (Supreme Court, General Term, Fourth Dep't.) 26 N. Y. Sup. 186. (118.)

#### VALIDITY OF RELEASE FOR PERSONAL INJURY.

Where a railroad company obtains a release from liability for personal injuries from the person injured while he is lying in a hospital without means or friends, mangled and shocked, and before his wounds are dressed, or his mind is composed, such release is void.

Pederson vs. Seattle Consolidated Ry. Co. (Supreme Court of Washington.) 34 Pac. Rep. 665. (51.)

#### FORFEITURE OF MEMBERSHIP FOR FAILURE TO PAY ASSESSMENTS.

The constitution of a mutual benefit association declared that, upon receiving notice of an assessment, every member should remit the amount promptly. A notice sent to the last address given shall be considered a legal notification. Any member who does not remit the amount within thirty days from the date of notice shall forfeit his claim to membership. Mere failure to pay within the thirty days, without any action taken thereon by the board of directors, would not cause a forfeiture of membership, since the provision is not self-executory. Proof that notice was mailed to a member on or before July 20th, and no payment made by him until August 23d, without proof that the notice was sent to his last address, or when it was could have been made within thirty days after the receipt of the notice.

Northwestern Traveling Men's Ins. Co. vs. Schaus. (Supreme Court of Illinois.) 35 N. E. Rep. 747. (164.)

#### LIABILITY FOR DEFECTIVE APPLIANCE.

A fireman on a locomotive was killed by the explosion of the boiler. After the explosion it was discovered that the crown sheet of the boiler was burned. The engineer testified that from the time he went out with the engine until the explosion the crown sheet was covered with water, and there was some evidence that the crown sheet burned before that time. There was also evidence that the crown sheet had no appearance of having been burned before the engine was taken out, and that an engine with its crown sheet so burned as the one in question could not be made to run at all, while one with the crown sheet slightly scorched might be made to work for a short time. Whether the company was negligent in allowing the engine to be taken out on the run with its crown sheet burned was for the jury.

Hudson vs. Rome W. & O. R. Co. (Supreme Court, General Term, Fourth Dep't.) 26 N. Y. Sup. 286. (154.)

#### LIABILITY OF RAILWAY COMPANY FOR DANGEROUS APPLIANCES.

A railroad company is negligent in substituting for a switch engine, in one of its yards, during the night time, an ordinary freight engine, having none of the usual bumpers or appliances on switch engine designed to protect the switchman if he falls to make a coupling. Though the switchman may have known that the freight engine was not provided with the usual bumpers or deadwoods, yet, being inexperienced, and never having previously attempted a coupling with the engine in question, he was not, as a matter of law, guilty of contributory negligence in attempting to make the coupling in obedience to orders from his superior, since he had a right to presume that the company would not require him to use an appliance without a safeguard for his protection.

Smith vs. Buffalo, R. & P. R. Co. (Supreme Court of New York.) 25 N. Y. Sup. 639. (129.)

#### NEGLECT OF ENGINEER.

A railroad company is not negligent in falling to inform one of its experienced engineers, who has run over its road for many years, and who was appointed to instruct an engineer on another engine in all the physical peculiarities of the road, that such engine is several inches wider than the one he was accustomed to handle; and he cannot, therefore, recover for injuries sustained by his head coming in contact with the iron work of a bridge, while leaning out of the cab window watching his train, though he could safely have done so in his old engine.

Bellows vs. Pennsylvania and N. Y. Canal & R. Co. (Supreme Court of Pennsylvania.) 27 At. Rep. 682. (89.)

#### LIABILITY FOR DEFECTIVE APPLIANCES.

The rule that a railroad company is responsible for injuries to its employees caused by defects in its cars, of which it was ignorant as it is its duty to inspect its appliances, does not apply to companies or persons on whose sidings cars are delivered by a railroad company for the purpose of permitting them to load or unload them, so as to make them so liable for injuries to their employees.

McMullen vs. Carnegie & Co. (Supreme Court of Pennsylvania.) 27 At. Rep. 1043. (77.)

## ACTION FOR PERSONAL INJURIES.

A railroad switchman, in an action against the company for injuries in being run over by a train while he was attending the switching of a train on another track, and when he had stepped across the latter track to signal his engineer, cannot be held, as a matter of law, guilty of contributory negligence, from his testimony that it was his duty to watch out for the train by which he was struck, and that he could have seen it, had he not been occupied with his work, at a distance of 150 feet, and where the train was running at a speed that would cover that distance in five seconds, since it was also his duty to attend to his work.

*Bluedorn vs. Missouri Pac. Ry. Co.* (Supreme Court of Missouri, Division No. 1.) 21 S. W. Rep. 57. (127.)

## NEGLECT OF TRAIN DISPATCHER.

In an action by a locomotive engineer for injuries caused by a collision, it appeared that the train dispatcher ordered him to meet train No. 10 at B., but the instructions did not mention train No. 30, a special, with which his train collided. The engineer on train 30 was instructed not to pass B. until this train arrived there. The collision occurred after he had passed train No. 10 at B. according to his instructions. The collision was caused by the negligence of the train dispatcher.

*McHesney vs. Panama R. Co.* 26 N. Y. Sup. 245. (Supreme Court, General Term, Third Dep't.) (91.)

## INJURY TO RAILROAD EMPLOYEE BY DISOBEDIENCE OF ORDERS.

The conductor of a freight train, contrary to the rules of the company, allowed certain cars to be shifted and run down grade without an engine attached. Subsequently, while said conductor was between the cars, a brakeman, without objection from the conductor, caused another car to be run down in the same way, which, by reason of defective brake could not be controlled, and struck the first cars with such violence that the conductor was injured. There was no cause of action against the company.

*Richmond & D. R. Co. vs. Dudley.* (Va.) 18 S. E. Rep. 274. (97.)

## LIABILITY FOR VIOLATION OF MASTER'S RULES.

In an action for injuries to a locomotive engineer by a collision it appeared at the time of the accident that he was running his engine faster than the company's rules allowed, and with knowledge that there was risk of colliding with the other train if it was on time. It also appeared that he frequently ran his engine at an excessive speed, and that other engineers did the same. For such violation of the rules the engineer was guilty of contributory negligence.

*Sutherland vs. Troy & B. R. Co.* (Supreme Court, General Term, Third Dep't.) 26 N. Y. Sup. 237. (89.)

## LIABILITY FOR INJURY TO PERSON ON TRACK.

A locomotive engineer who sees a man on the track, going in the same direction as the train, is justified in assuming that he will step off, to avoid collision, when the danger signals are given; and the fact that a passing train on an adjoining track is making considerable noise does not render the engineer negligent in not attempting to stop his train, since it is the duty of a person on the track to look as well as listen.

*Syme vs. Richmond & D. R. Co.* (Supreme Court of North Carolina.) 18 S. E. Rep. 114. (85.)

## WHEN TRAINMEN ARE NOT FELLOW SERVANTS.

A locomotive engineer who is injured by a collision with another train, caused by the negligence of the men in charge of the other train, may recover against the railroad company, as train men on different trains are not fellow servants.

*Louisville & N. R. Co. vs. Raines.* (Court of Appeals of Kentucky.) 23 S. W. Rep. 505. (46.)

## TRAIN DISPATCHER AND ENGINEER NOT FELLOW SERVANTS.

A train dispatcher, who controls the movement of trains, represents the company, and is not the fellow servant of an engineer injured in a collision resulting from his negligence.

*Little Rock & M. R. Co. vs. Barry* (Supreme Court of Arkansas.) 23 S. W., 1097. (36.)

## CHAUNCEY AT ROME.

A copyrighted cablegram by James Gordon Bennett, from Rome, relating to Chauncey M. Depew's visit to the Eternal City, is relished much by those who, knowing the pride and pomp, fustian and feathers of our N. Y. C. peacock, readily comprehend how magnificently he spread himself while in the ancient metropolis, and how ridiculous he made himself appear. Our Chauncey is spectacular, and with a little phosphorus under the tail of his coat would make a superior fire bug and give reporters still greater opportunities to "set him up." Our Chauncey concluded to do Rome in Cæsarian style, dazzle the Pope, dine with the king, dance with the queen, hobnob with the nobility, flirt with the ladies of honor at the palace, write his name on Peter's dome, and having done Yurup in thirty days, have himself interviewed and flood Rome with the papers containing his flap-doodle.

But Chauncey, the Lobelia orator, whose beef and pudding is an intellectual menu for McAllister dudes, overdid the thing in Rome. The Rome dispatch cooks our Chauncey's goose as follows:

Chauncey M. Depew's extraordinary expressions of opinions on his visit to Rome in the form of an interview have just reached here, he having flooded the town with marked copies of the paper in which it appeared. It may interest Mr. Depew to know his utterances, of which he seems so proud and so anxious to distribute, have not made him popular. It is almost incomprehensible to the best classes of people here that an educated man should give vent to expressions so crude, puerile, and inaccurate as he has done. His heavy buffoonery falls flat. His statement that the Pope gives no private audiences to laymen or private persons, but made an exception in the case of the great Chauncey, is ridiculous. The Pope receives private persons daily in private audience. At the same time the Pope had no idea Mr. Depew was going to use his audience to puff himself.

The people are still laughing at the elation of Chauncey Depew after he had been received by the Pope. He rushed around excitedly, buttonholed every one he met, and poured forth the tale into their ears. He became one of the jokes of the moment.

The great Depew's inference that the king wished to see him requires revision. He says a message was sent him that the king would be happy to receive him if he could wait till Monday. The truth is Mr. Depew seemed specially anxious to have an audience with the king. He asked for it by Thursday, on which day he was leaving. The reply was that it was not possible. Then Mr. Depew said he would stop until Monday if he could obtain an audience. Naturally it would be impossible to open the question again at the court.

He says he receives 20 per cent premium on drafts from here. This is a rate of exchange which has never existed. His piteous lament that his attempt to obtain a free pass over the poor Italian railroads failed is not considered flattering to a man in his position, while his absurd and insulting attack upon the people who hunt here has earned for him the resentment of the social and sporting element. Indeed, "Chauncey the Great" is not popular just now in Rome.

We give the full text of the dispatch of January 14th that our readers may fully comprehend that, however much our Chauncey may swell in New York, in Rome he is simply a cock-a-doodle-do rooster from Yankee-doodledom. Exploding like a

firecracker over his reception by the Pope, it turns out that instead of being particularly complimentary to our great cascading orator, it is an every day occurrence for his Holiness to receive lay gentlemen, but it was left for our Chauncey to make himself ridiculous over his reception at the vatican palace. But our Chauncey trying to have an interview with the king caps the climax of egotism. It was enough to make "the little dogs laugh to see the sight," and to make all the cows of Rome "jump over the moon."

It is understood, if our Chauncey had dined with the king, he would have set the triggers so that he would have been called on for a speech, and it is further surmised that our Chauncey had all of his old stories well in hand to win the usual applause. It is whispered about in New York that our Chauncey was prepared to say, during his ipicacian address:

"Illustrious descendent of Romulus, many of your dago subjects are making fortunes in the land of Vanderbilts, and if you should get out of a job I will persuade my illustrious master, Cornelius, to put you on his pay-roll as highcockalorem, and if your policy should drive the Pope from Italy, I will do Vat-i-can, should he choose the land of the Vanderbilts as a residence, to have his sun set without a cloud."

THE *Railway Conductor* for January contains a thoughtful and well written article on the "Northern Pacific Situation." The editor is of the opinion that the "gentlemen" in charge of the N. P., when they assumed control, determined "to work out an innovation." We think the term "innovation," in view of the change the "gentlemen" contemplated, is excessively mild. When it is observed that in connection with the court the novelty they worked out bears the stamp of premeditated felony, because when "gentlemen" of the N. P. stripe and a U. S. court of the same stripe federate for the purpose of robbing and enslaving workmen, the crime is felony. The *Conductor* says:

No one who is thoroughly conversant with the situation will believe that the reduction in the pay of the men ordered by them was an absolute necessity, or at least, if there was a necessity, there could be no shadow of an excuse for cutting wages below the figures paid by competitors as well as a further reduction as the result of the abrogation or amendment of rules relating to the pay for extra or unusual services. It was natural that the men should protest against such reduction, and that protest was made in the same friendly spirit as that which actuated them when the violated agreement was made. As soon as this protest was made, however, the receivers took up a course of action which could not but force bad feeling on the part of the men if they had any remnant of self-respect remaining. One of these gentlemen openly declared that the "emp oves" would strike and boasted how easily their places would all be filled, all before a strike had been mentioned or hinted at by them.

Here we have the exhibition of a clean-

cut purpose. First, to rob the employees of a part of their honestly earned wages, and second, an appeal to the court for an order compelling them to accept the reduced wages. The shivering highwaymen, realizing the infamy of the wage reduction, and fearing mainly resentment, calls upon the court to make another order forbidding the human cattle the right to kick a privilege which an army mule enjoys. With the two orders in force, the men, robbed and starved, are expected, out of consideration of the majesty of the court, to submit like so many helots, and never so much as intimate that they hold the court in unpeakable contempt.

We have on our table the *Railway Conductor* for January, in which the editor points out some of the glaring wrongs perpetrated by the receivers of the Northern Pacific upon the employees of the road, aided by a United States judge. The *Conductor* takes occasion to give its readers some facts showing the rottenness of the men who set the deadfall to catch and cripple Northern Pacific employees. It says:

It may not be out of place to recall at this point, the fact that these same gentlemen, upon whose petition the order in question was issued, have been called before the courts to answer some very grave charges. On December 28th last, a petition was filed before Judge Jenkins, author of the restraining order in question, asking for the removal of Messrs. Oakes, Payne and Rouse from their positions as receivers of the Northern Pacific. In support of this request the petition sets forth that when the Oakes-Rolston management took charge they found the road a paying property with all contingences for several years amply provided for and abundant capital on hand to conduct and properly develop its business. The petition then goes on to say that this board managed to increase the interest charges of the Northern Pacific company for branch lines from \$26,000,000 to upwards of \$80,000,000, all in one year, and for the acquisition of properties, no one of which, (except a small line costing less than \$1,000,000) ever has paid the cost of operation and fixed charges, and many of which do not even pay the cost of operation, and the petition further charges that in several instances, and those the most disastrous to the company, the officers and board of directors were themselves interested in selling the properties to the Northern Pacific company at an exorbitant profit to themselves.

Such are the men who first wreck railroads and then appeal to United States courts to aid them in robbing the men, and, strange to say, the United States judges seem to be very fond of that sort of company.

It is stated that an instrument has been made that measures accurately the one-thousandth part of an inch, and another instrument has been invented which grades thickness in millionth parts; and again, as an evidence of skill, a watch-maker has built a perfect engine of 122 pieces, not including bolts and screws, which operates in a lady's thimble. These inventions are for the purpose of measuring the height and thickness of Chauncey M. Depew, and the engine is to haul his train when he goes to Washington as president of the U. S.

**A FREE PRESS.**

A congressman by the name of Hayes, credited to Iowa, has introduced in congress a bill to establish in the person of the postmaster general a censorship of the most odious character.

As the law now stands upon the statute books of the nation all needed protection is given, since indecent or immoral publications cannot be sent through the U. S. mails without committing a penal offense. But this does not satisfy a set of long eared and long and short haired cranks, they demand a censorship, by virtue of which the postmaster general may determine by his sweet will what is objectionable and should be cast out.

The law contemplated by the bill introduced by Hayes, "would be," says the *New York Herald*, "an intolerable tyranny. A free press, answerable in the courts for any offense it may commit against law and morality, is the foundation of free government. A bill to create an arbitrary, ignorant and partisan press censorship should receive short shift at the hands of congress. There is not even a plausible excuse for the suggestion of so monstrous a law. As was conclusively shown by a senate report in 1882, there is law enough and to spare already on this subject. It is already a penal offense to send immoral or indecent publications through the mails. Whoever does so may be indicted, and upon conviction in the courts must go to prison for his offense. In a country of law and of orderly court proceedings this surely is enough. It would be an intolerable outrage for congress to clothe the postmaster-general or any other public officer with authority to supersede the courts, and without indictment, trial or proof of any kind condemn men to shameful and ruinous penalties upon his own ignorant or prejudiced whim."

The views of the *World* the *MAGAZINE* fully indorses, and we do not believe the bill introduced by Hayes will become the law of the land.

**LIGHT BREAKING.**

The outrageous order of Judge Dundy, cutting down the wages of the employes of the Union Pacific railway system, is not meeting with the success that Dundy and the receivers anticipated.

Dundy's authority is not so great as Robinson Crusoe's, who is reported as saying and singing:

I'm a monarch of all I survey,  
My right there is none to dispute,  
From the center around to the sea,  
I'm lord of the fowl and the brute."

Not so with Dundy. As he goes west to grow up with the country, he is met by Judges Riner and Hallett, who inform him in the matter of fixing schedules,

that he and the receivers are not the only parties to be consulted, and as a result Colorado and Wyoming are exempt from Dundy's rapine order.

Nothing affords us greater pleasure than to contemplate an upright judge—as distinguished from an ermined caitiff; the difference is so unspeakably great, that one wonders how it happens that a mean, despicable creature becomes a judge in the United States of America.

In the United States it was not the intention to establish courts to rob working men of their means of living, because to do that infamous thing is to indirectly, but not the less effectually, take their lives, and that, too, by torture. When the receivers of the Union Pacific appealed to Dundy to reduce the wages of the employes of the great corporation, he gave the men no more consideration than if they had been so many coyotes or prairie dogs. He not only reduced their wages, but subjected them to degrading conditions.

Inspired by Ricks and Taft and Jenkins, he looks at his cards and "goes them one better," and seizing his pen, attempts to Russinize the Union Pacific. Having done what he could to gratify the receivers and subjugate the men, he confidently appeals to other United States judges, upon the principle of judicial courtesy, to give his decree effect in Colorado and Wyoming. But Judges Riner and Hallett, are not, as it appears, made of Dundy dirt, and when the attorneys having the matter in charge had concluded their arguments, the judges rendered their decision, sitting at Denver Feb. 8, as follows:

It appears by the pleadings in this case that prior to the appointment of receivers certain rules, regulations and schedules were in force, recognized and acted upon by the employes and managers. Our own view is if the receivers deem it advisable and necessary to the proper and economic management of the properties in their hands that rules and regulations, and schedules different from those in force at the time the property came into their hands should be adopted, that the employes affected by any proposed change be notified and given time and opportunity to point out to the receivers any inequality in the schedules or any injustice which they may think will be done them, and after such negotiations and consultation, if the receivers are unable to agree as to any proposed rules, regulations, item or items of the wage schedules proposed, that the matters of differences be referred to the court for final determination. If this course is pursued, the result in our judgment will be that after a full discussion of these matters between the employes and receivers, meeting as they will in a spirit of fairness upon both sides, determined to do the right thing under existing conditions, very little will be left to the determination of the court in relation to this matter.

Such decisions clearly indicate that light is breaking, that the day is dawning—that Dundyism is playing out. And Judge Caldwell is also in line with Messrs. Riner and Hallett. His words have the old-time ring of old-time justice, away back before corporations, courts, Pinkertons, plutocrats, the militia and the devil had formed a holy

alliance to knock the last *kick* out of a working man and compel him to work as near as possible to the confines of starvation and tie him to the corporation, as the hands of galley slaves are chained to their oars. Judge Caldwell's views, prohibiting the decree of Jenkins to have effect in his jurisdiction, is cheering as a Switzer's Alpine horn, announcing daybreak in the mountains. He says:

If receivers should apply for leave to reduce the existing scale of wages, before acting on their petitions, I would require them to give notice of the application to the officers or representatives of the several labor organizations to be affected by proposed change of the time and place of hearing, and would also require them to grant such officers or representatives leave of absence and furnish them transportation to the place of hearing and subsistence while in attendance, and I would hear both sides in person, or by attorneys, if they wanted attorneys to appear for them. The employees on a road in the hands of a receiver are the employees of the court, and as much in its service as the receivers themselves, and as much entitled to be heard upon any proposed order of the court which would affect the whole body of employees. If after a full hearing and consideration I found that it was necessary, equitable and just to reduce the scale of wages, I would give the employees ample time to determine whether they would accept or reject the new scale. If they rejected it they would not be enjoined from quitting the service of the court either singly or in a body. In other words, I would not enjoin them from striking, but if they made their election to strike I would make it plain to them that they must not, after quitting the service of the court interfere with the property, or the operation of the roads or the men employed to take their places.

There is not one employe in ten thousand that would object to such an adjustment as Judge Caldwell outlines; it embodies sound principles of law and justice, and we italicise a few sentences the better to call attention to a policy we believe will at an early day prevail in dealing with railroad employes on lines in the hands of receivers.

In reading Judge Caldwell's views we are the better qualified to estimate the villainy of Dundy's order—which we hope will be revoked, and since Judges Riner and Hallett will not permit it to disgrace Colorado and Wyoming, some modification will, we are confident, be secured.

At any rate, the fact that Judges Riner and Hallett antagonized Dundy's order, is a triumphant vindication of the determination on the part of the Union Pacific employes to protest to the last extremity against the despotism inaugurated by Dundy.

THE ladies of the household will be interested in knowing that the Cleveland Baking Powder Co., of 81 and 83 Fulton street, New York, is now supplying an article of baking powder that for purity and strength can not be excelled. We have given the Cleveland Baking Powder a fair trial and do not hesitate to pronounce it a superior article. The advertisement of the company will appear in these columns. Give it a trial and be convinced of its excellence.

### THE NORTHERN PACIFIC.

To succeed in securing an honorable adjustment of misunderstandings between railroad corporations and their hard-worked employes, is always a source of satisfaction.

The Northern Pacific railroad, from its inception down to the present, has been the one railroad goose that railroad wreckers and gamblers have plucked as often as a pin feather came in sight, or it has been the bleating sheep to be sheared as often as there was wool enough on it to pay for the shearing. It has been regularly plucked, sheared and skinned by a gang of Christless whelps as often as they could secure enough booty to get up a big blow out at Delmonico's, or pay the bills of a trip to Europe, and when, as in the present case, the concern had been sandbagged and bludgeoned to an extent that a receiver and a United States court, a sort of an ox an ass team, was required to draw its breath, the receiver and the court combine to rob the employes that the old goose may replume herself for another plucking just to keep the gamblers and wreckers in pocket change and their wives and daughters in pin money.

The fellow, Judge Jenkins, ambitious of notoriety quite regardless of its character, doubled up his decrees in the interest of the corporation, seemingly desirous of making himself specially odious to railroad employes.

In the first instance, the Jenkins judge, sitting at Milwaukee, issued his autocratic order restraining the employes of the Northern Pacific railway company from going on a strike, or from damaging, interfering with or injuring the property of the road in the hands of the receivers. It also contained the following prohibition, restraining the officers, agents and employes of the receivers "from combining and conspiring to quit, with or without notice, the service of said receivers, with the object and intent of crippling the property in the custody, or embarrassing the operation of said railroad, and from so quitting the service of the said receivers, with or without notice, as to cripple the property or to prevent or hinder the operation of said railroad."

But the receivers, becoming alarmed, they appealed again to Jenkins, who issued a second injunction directed to the officers of the various labor organizations, embracing the employes of the Northern Pacific by name, restraining them from conferring with, advising or counseling the men to go on a strike, and restraining the men from striking or quitting the employment of the company or receivers, either with or without notice.

The action of this judicial snipe was so outrageous that action has been proposed in congress to see if something cannot be done to curb his autocratic ambition, as will

be seen by the following resolution, offered in the House of Representatives by Congressman McGinn, February 5.

*Resolved*, That the committee on judiciary of the house be and is hereby directed to make such investigation into all the matters and things herein alleged and report to the house whether or not the Hon. Judge Jenkins, judge of the United States Circuit Court for the seventh circuit, has therein abused powers or process of said court, or oppressively exercised the same, or has used his office as such judge, to intimidate or restrain the employees of the Northern Pacific railroad or the officers of labor organizations, to which said employees or any of them were affiliated, in the exercise of their rights and privileges under the laws of the United States; and if they shall find that said judge has abused the process of said court, as alleged, or oppressively exercised the powers of his office as judge of said court to the injury of its employees of said railroad and others, then to report whether such act or doings of said judge warrant the presentment of articles of impeachment therefor, and to further report what action, if any, should be taken by Congress to prevent a repetition of the conditions now laid by said order, and by an injunction upon railway employees on the said Northern Pacific road, those engaged on other roads, officers and members of labor organizations throughout the country, and all persons generally.

It may not be that the fawning corporation sycophant will be impeached, but that the Jenkinses, Dundies, Rickeses and Tafts will hear and feel something drop, calculated to curb despotic proclivities, we do not doubt.

At this juncture it is specially refreshing to note that all the United States judges are not of the Jenkins and Dundy stripe. This is made to appear in the columns of the St. Louis *Globe-Democrat* of February 11th. Speaking of the extent of the jurisdiction of Jenkins it seems that inasmuch as the larger part of the Northern Pacific lies in the Eighth Judicial circuit, of which judge Henry C. Caldwell is the presiding judge, it becomes necessary to institute proceedings in this, the eighth circuit, in aid of or ancillary to those originally instituted before Judge Jenkins at Milwaukee, in the seventh circuit. The jurisdiction of Judge Jenkins only extends to the western boundary of the state of Wisconsin. All of the Northern Pacific railroad from Duluth, in Minnesota, which runs through the states of Minnesota, North and South Dakota and Nebraska and Colorado lies in Judge Caldwell's circuit, and it therefore became necessary to have Judge Caldwell indorse Jenkins. This Judge Caldwell refused to do. He is evidently not a corporation lick spittle, is not purchasable, and is withal a man of sterling convictions. He is reported as saying:

If receivers should apply for leave to reduce the existing scale of wages, before acting on their petition I would require them to give notice of the application to the officers or representatives of the several labor organizations to be affected by the proposed change, of the time and place of hearing, and would also require them to grant such officers or representatives leave of absence and furnish them transportation to the place of hearing and subsistence while in attendance, and I would hear both sides in person, or by attorneys, if they wanted attorneys to appear for them. The employees on a road in the hands of a receiver are the employees of the court, and as much in its service as the receivers themselves, and as much entitled to

be heard upon any proposed order of the court which would affect the whole body of employees. If, after a full hearing and consideration, I found that it was necessary, equitable and just to reduce the scale of wages, I would give the employees ample time to determine whether they would accept or reject the new scale. If they rejected it they would not be enjoined from quitting the service of the court, either singly or in a body. In other words, I would not enjoin them from striking, but if they made their election to strike I would make it plain to them that they must not, after quitting the service of the court, interfere with the property, or the operation of the road, or the men employed to take their places. A United States court can very readily find the means to effectually protect the property in its possession and the persons in its employ. I have in one or two instances pursued the policy I have indicated, and the differences were satisfactorily adjusted.

The *Globe-Democrat* says, "to put the position of the two courts sharply: Judge Jenkins, in the Seventh circuit, holds that he has power to restrain the officers of the labor organizations from ordering a strike and the men from going on a strike or from combining or counseling together for the purpose of inaugurating a strike. Judge Caldwell's action shows that he holds the power of the court to extend only to preventing the employees or any one else from injuring or destroying the property in the hands of receivers, or by force or threats interfering with the men who are engaged in operating the road. He does not, by his order, undertake to prevent them from going on a strike, or undertake to enjoin them from consulting together with reference to a strike, leaving that without interference by the court with the declaration that if any persons interfere with the property or men actually at work, either by violence, threats or intimidation, he will then deal with them as law breakers."

Manifestly, Judge Caldwell is a man, while Jenkins is a mouse, and as a result, the order of the mouse is circumscribed within narrow limits—men are still men where Judge Caldwell rules—though they may be something quite different under the jurisdiction of Jenkins.

The troubles between the employees and the receivers of the Northern Pacific began in December. For a time there was every indication that the federated orders had determined to make a stand for their rights; that, whether pleading or protesting they would show Spartan courage. The various federated orders had their grievance committees marshalled in force. They met and deliberated; called for their grand executive officers, who responded, regardless of time, distance or expense.

The negotiations finally ended on February 10th, when the following letter was addressed by Mr. E. E. Clark, chairman of the federated executives to General Manager Kendrick:

DEAR SIR:—As chairman of the federated board of representatives of your employees, I am instructed by them to inform you that in view of the present conditions they reluctantly accept the situation, and re-

quest that, agreeable to their expressed willingness, the receiver's petition the court to ratify the amendments to the schedule on January 1st, which have been agreed to by them in the several conferences which have been held in St. Paul and this city.

In doing this, we express the hope that rapidly improving business and increased earnings will soon render it consistent for you to restore in whole or in part, that which has been found necessary to take from the men.

Yours very truly,  
E. E. CLARK.

We regret that the men have had to accept the reduction while their hearts

"Like muffled drums, are beating  
Funeral marches to the grave."

#### BERRY OR BARRY.

There is an impostor named E. J. or C. J. or J. T. Berry, or, according to others, Barry, who claims to be a member of Guiding Star Lodge, No. 130, Milwaukee, Wis., and who has a traveling card which he is using freely for purposes of imposition and fraud. Complaint against him have been received from Pana, Ill., Memphis, Tenn., Danville, Va., Cumberland, Md., and other points. He makes piteous pleas of poverty and upon obtaining money promptly gets drunk with it. Two situations have been secured for him but he will not work. He has disgraced himself and the order on various occasions, and is totally unworthy the recognition of a brotherhood man. We are directed by the officers of lodge No. 130 to caution all members against this impostor and dead beat.

#### *Steady, Boys!*

Steady, boys! march right along—  
Every word a shout, a song.  
You must be brave and true and strong.  
Failure's death.  
But death's not failure to the brave.  
An honor'd death, and honor'd grave,  
Are not trophies of a hireling slave  
Whose tainted breath  
Kills like the fabled 'pas shade,  
Where nothing lives that God hath made—  
A cemetery without a spade  
To turn the sod.  
And he who enters not the war  
Of Labor, nor invites a scar  
From Labor's foes, from scab to czar,  
Denies his God.  
Let him die, as dies a worm;  
Without a thought, without concern  
For coffin, winding sheet or urn—  
Let him rot.  
While brave men march and abide  
Whate'er in battle may betide  
Themselves, or heroes battling by their side,  
Whose lot  
Is cast with those who dare and fight,  
Though noonday has the gloom of night,  
Their motto, "God and the right."  
The story  
Of their courage shall be told,  
While centuries gather rust and mold,  
Sung when the sun and stars grow old.  
Their glory  
Shall brighten as men go free,  
When Labor has its jubilee,  
And shouts are heard on land and sea.  
"The battle's won."  
Then peace on earth, strife no more,  
Shall be heard from shore to shore,  
"The salutation, as ne'er before,  
"Well done!"

Jacob B. Mayfield.

The railroads of the country are valued, for the purpose of collecting revenue from the people, at \$10,000,000,000, but when it comes to taxing them, a tremendous shrinkage occurs. It is then that the owners, with few exceptions, throw off all disguise and plead extreme poverty. It is probable that the railroads of the country have cost, in honest cash, about \$6,000,000,000, and, if their managers were willing to tax the public on that amount for transportation, the people would listen with more composure when the stories of disaster are recited.

A NEW BOOK by Henry Wood entitled "The Political Economy of Natural Law," has come to our table. It is from the press of Lee and Shepard, the well known publishers, No. 10, Milk street, Boston, Mass., and is gotten up in their usual excellent style. The book has a wide scope and is of special value to the student of economic and industrial questions. The titles of the chapters are immensely attractive, among them being, "The Law of Co-operation, The Law of Competition, Combinations of Capital, Combinations of Labor, Profit Sharing, Socialism, Economic Legislation, Can Capital and Labor Be Harmonized, The Distribution of Wealth, The Centralization of Business, Booms and Panics, Money and Coinage, Tariffs and Protection, Industrial Education, etc., etc. Political Economy is interpreted from the standpoint of evolution and natural law. The idealism and optimism of this book strongly distinguish it from many of the pessimistic treatises of the present time. Mr. Wood has the faculty of rendering this usually dry subject not only instructive but positively entertaining. He has given many years of careful study to the practical phases of social economics, in their relation to Natural Law, and each chapter is thoroughly original and telling in its special department." The book consists of 305 pages, is written with clearness and earnestness, evincing on the part of the author an honest purpose to have our social and industrial systems adapted to the immutable principles of natural law.

MISS IDA M. TARBELL has written for *McClure's Magazine* for March a comprehensive account of the French method of identifying criminals. As invented and perfected by M. Bertillon, of the French police department, this method has a scientific accuracy that makes it infallible. No offender once brought to record under it, can possibly escape identification if ever he is brought again; and Miss Tarbell, before writing of it went to the Paris police headquarters and saw it, in all its details, practically applied. Her article will be illustrated with numerous pictures from photographs provided by M. Bertillon himself. Address *McClure's Magazine*, 743 Broadway N. Y.

### The New Dispensation.

MR. EDITOR:—Under the caption "Are the Brotherhoods a Failure?" Mr. W. S. Carter, in the January issue of the MAGAZINE, introduces copious extracts from the declaration of principles of a new organization that has been "launched on the troubled sea of labor," and which receives considerable adverse criticism from him. As a staunch supporter of organized labor, and as a member of the Brotherhood of Locomotive Firemen, and also of the American Railway Union, I feel called upon to answer some of the statements contained in Mr. Carter's article.

An all wise Providence has seen fit to endow us with various degrees of intellectual capacity; many are denied the power of expressing their thoughts with fluency, and of clothing their language with that chaste imagery so captivating to the mental faculties. Notwithstanding such discouraging odds, however, a plain statement of facts is all that is necessary to place the situation before those interested in the labor problem, as it is presented on the railway systems of America to-day. At the outset of the article in question, Mr. Carter very frankly concedes "that there is a yearning for something new within the ranks of railway labor organizations, apparent to casual observers of current events;" also, "from many localities come urgent demands for a change, for a new organization." I heartily accord with Mr. Carter on those truthful propositions, and hasten to assure him that they will strike responsive chords in the hearts of thousands all over the land who are to-day anxiously watching the struggles between railway corporations and their organized employees, and who view with alarm the rapidity with which we are losing the advantages accruing from organization. The large and often unwarranted reduction of wages on many of the great railway systems during the past year, followed by the extinguishment of lodge fires on the Lehigh Valley, are deplorable occurrences indicative of arrested progress and backward tendencies. Special cause for disquietude is given by the knowledge that the systems involved are, according to the standard of efficiency so satisfactory to many, thoroughly organized, albeit, the organizations rendered no assistance to their membership in the hour of need. To the failure of our brotherhoods to resist the encroachments made upon our contracts and schedules, may be ascribed the inculcation of that "yearning for something new"—something better and stronger, some plan of union that will place all railway employees, let their branch of business be what it may, in active touch with, and support of each other,—a union that will amply provide for tens of thousands of men, that, by reason of the

isolation of their positions, the miscellaneous character of their work, and, perhaps, the watchful eye of some subordinate official, are powerless to organize into separate orders and are ineligible to membership in our brotherhoods. It is the knowledge that our present methods of obtaining justice—considering the opposition to be overcome, are becoming inadequate to the task, and the belief growing daily more prevalent that our brotherhoods will never improve on their present suicidal course, or will never enable us to present that solid front so essential to success—it is this knowledge, I say, that has made fertile the soil in which will flourish the principles propagated by the new order mentioned by Bro. Carter.

To the readers of this article, who have not yet had the opportunity of becoming acquainted with the aspirations and principles of this organization, I will say that a new dispensation is being preached. A leader has appeared before us, bearing aloft a snowy banner on which are inscribed those magic words, Equality and Fraternity, and beneath whose ample folds all railway employes may march shoulder to shoulder in one united band, demanding right and scorning wrong. At the head of this organization stand two men whose names are synonyms of success; men to whom no obstacle is insurmountable, and whose presence in the van is a sight as inspiring to their followers as was the presence of Sheridan at the battle of Cedar Creek. Eugene V. Debs, our chief, the matchless leader, the deep, aggressive thinker—rightly denominated by Shandy Maguire as the star of labor organizations—the man whose untiring industry and spotless integrity made the Brotherhood of Locomotive Firemen what it is. The seductive offers which he refused in order that he might enter a wider sphere of usefulness are too well known by Bro. Carter, and the brotherhood at large, to require repetition here. Second in command is George W. Howard, organizer of the Brotherhood of Railway Conductors, who carried his order to a successful issue, compelled the Order of Railway Conductors to adopt protective principles, and then, with a self-abnegation which finds but few counterparts, turned his thriving and popular brotherhood over to the Order of Railway Conductors, and stepped down and out.

Do not think, brothers, that in thus eulogizing the leaders of the American Railway Union, I lose sight of the main question; far from it. Notwithstanding Bro. Carter's ardent protestations of esteem for the president of the American Railway Union, it will appear to those who read between the lines that he is attempting to cast aspersions on the character and consistency of our beloved chief, thereby discrediting the order of which he is the founder. That he is try-

ing to do so is evidenced by his citation of quotations from Bro. Debs' past utterances, and from those set forth in the preamble of the American Railway Union, by which it is made to appear that Bro. Debs is pursuing a course totally at variance with his former teachings. That Bro. Debs may have, at one time, considered it feasible for the Knights of Labor to round up the mavericks in railway service, is certainly creditable to his heart and evinces a laudable desire on his part for the advancement of all our interests. However, the Knights of Labor failed to do that which he is said to have thought practical; the fruitful fields were left as prey to the avarice and injustice which seem inherent in the hearts of mammon's worshippers; the ripened grain stood waiting the master hand of the reaper. Now comes the American Railway Union, an organization to be composed solely of railway employes, free from the entangling alliances necessarily attending an order like the Knights of Labor, free from the costly compulsory insurance which has proven a heavy burden to our brotherhoods, headed by men whose lives have been spent in bettering the condition of those who depend upon the revolving drivers for their sustenance, and who are not merely official heads of an organization, but leaders in the true sense of the word. I am aware of the adverse criticism my attitude towards the insurance feature of our brotherhoods will call forth. I agree with Bro. Carter, that the heaviest expense borne by us are the assessments levied during strikes. When to this is added the \$7 to \$10 per quarter which we ordinarily are compelled to meet, it will readily be perceived that our financial affairs must be kept in pretty good shape or we will not be in it. Relieved of the insurance assessments our obligations would be much easier to meet, and hundreds of unfortunate members would not be expelled annually because of their inability to pay for compulsory insurance. Is it not a fact that the least additional strain thrown on our brotherhoods, will, when the dues and assessments are already as high as can be borne, cause a big loss of membership? Statistics, I believe, will show that the number of annual expulsions from the ranks of engineers and firemen, for non-payment of dues, would stock the largest railway system in the country. The generality of scabs are made, not born. They are either densely ignorant of the nature of the offense they are committing or, they are actuated by a desire for revenge for some real or fancied wrong. With rare exceptions, those who have been expelled from our orders harbor the design of eventually "getting even." When the unfortunates composing this rapidly increasing class are thrown out of employment, may

they not go to swell the number which is a standing menace to our security? The payment of heavy dues is a continual source of anxiety to a larger percentage of our membership than might be imagined, and fear of the disgrace attendant upon expulsion is an important factor in the list of inducements given us to keep square on the books.

While it is true, as alleged by Bro. Carter, that the union has no "secrets," yet in order to gain admission to its councils it is necessary to be enrolled on the lists of membership, and the constitution specially provides for the exclusion of railway officials, a fact which Mr. Carter failed to mention. Notwithstanding the absence of all the signs, passes, and red tape essential to gain admission to lodge-rooms, it is to be hoped those interested in matters under discussion will have sense enough to exclude improper persons. I willingly concede the correctness of statistics quoted by Bro. Carter, relative to the strength of organization among employes directly engaged in the movement of trains. Our orders would, no doubt, be able to successfully contend against railway companies were it customary for a few of the stockholders alone to bear the expense and furnish the means of suppressing rebellious employes, thereby imitating the example furnished them by their employes when extreme measures are found requisite to redress grievances.

Having had the pleasure of being present during the institution of two lodges of the American Railway Union by Bro. Debs, and being an attentive listener to the reasons assigned by him for its existence, I deem this a proper place to insert one of Bro. Debs' sledge-hammer lines of argument, which should call to the support of this new star in the firmament of labor all classes of railway employes. He said: "The greater the duration of a strike in the transportation department, the worse it becomes for the men, as the company will eventually succeed in moving a few trains, the blockade is gradually cleared and the strike is broken. On the other hand, the longer a strike lasts in the shop department the worse it is for the company, as the motive power begins to run down. Taken separately, these two classes can be defeated on any system in the country, combine them and the vast number of office men, yard men, track men, and others indispensable to the operation of a railroad, and there will stand arrayed an invincible army strong in numbers, capable, by reason of its very completeness, of commanding respect and support, and carrying with it a weight which can never be attained by the hostile factions into which we are now divided." To be sure, it is the fear of a strike which deters corporations from entering

such ruinous contests, and their persistency will be greatly increased when we stand as a unit. They will then be deprived of the certainty of success invariably attending strikes. In fact, it is not anticipating too much to say that strikes will become a thing of the past. Such disgraceful affairs as the "Northwestern" will be made impossible, as the incentive—aggrandizement of an order representing one class of employees at the expense of another class—will be removed. We need not fear the results of rivalry between the brotherhoods and an organization of the comprehensive character of the American Railway Union, as, from present indications, all classes of employees will, in the near future, be compelled to enter an order of this description. The heartiness with which the representatives of every craft are responding to its call encourages us to cast aside fears of ruinous rivalry. By our defeat on the Lehigh Valley our brotherhoods have received a crushing blow. At the inception of that memorable contest the members of the various orders participating therein were told by their chiefs that it was to be a fight to the death, and that the very life of organized labor was at stake; by the results of this supreme test we must stand or fall. This strike was conducted in the usual manner, like an army fighting a powerful enemy by detachments, and was *lost*. System federation of the orders was proven a failure, and more than 1,000 experienced railroad men were cast adrift on an ever-increasing sea of idleness. Patting them on the back and applauding them for their courageous conduct will be small compensation for the loss of hard-earned positions, and the privations to be endured by the unemployed during the fearful depression from which the country is suffering. Lamenting the deplorable results of this defeat would be a waste of time. It has once more proven the futility of partial strikes. We must profit by experience, and endeavor to remedy the defects responsible for the disaster. Fighting for principle smacks more of fool-hardiness than of heroism when defeat is certain, and the result is sure to render our condition worse. The leaders of the American Railway Union do not attempt to decry the noble work accomplished by our brotherhoods. They have cheered with us in victory and wept with us in defeat. They have been material factors in the advancement of our brotherhoods, and most certainly do not maintain that nothing has been accomplished by them. On the contrary, they speak in the highest terms of the wonderful evolution wrought in our condition by the brotherhoods. They assert, however, and the truth of their assertions will receive sorrowful substantiation from the employees of many large

systems, that our orders have attained the fullness of their power, and are no longer able to retain that which has been secured by them. Greater and more determined opposition must be overcome, consequently labor's armies must be reorganized to meet successfully the changed conditions imposed on us by an era wherein the concentration of wealth and power goes on with a wonderful rapidity that will eventually lead to—what?

Bro. Carter ascribes the "present lack of harmony" to personal ill-feeling between grand officers. He gives due recognition to the eternal fitness of things by granting this source of disruption first place in the category of circumstances which place us "hors de combat" when it becomes necessary to use Irish argument (being Irish myself) with the powers that be. In the name of reason, fellow-contributors to the campaign fund, are we to see our struggling hosts go down in order to gratify the jealous animosities of a few leaders? Are labor organizations to remain in a partially developed state, and are we to lose the ground gained by a quarter of a century of progress simply because a half-dozen men do not agree? If such is the case, and we have no reason to believe otherwise, it behooves us to shake off the lethargy which is entralling us and get into a position where a few men will not be capable of doing so much damage.

It is a truthful saying, that "hope deferred maketh the heart sick," and sick indeed must be the heart that has been cherishing hopes of an amalgamation of our brotherhoods. Judging by our past history, we have not the least assurance to believe that we will grow in harmony as we advance in years. Even though we should, there is yet that great army of workers we can never reach. Federation has ever been the watch-word of our advance guards. Tons of paper have been drowned with barrels of ink in the vain endeavor to formulate some plan whereby all the employees on a railway system, or, if needs be, of the nation, may be united under one government. Our most conservative leaders (stumbling blocks to progress) and some of the rank and file have scouted the proposition as an Utopian dream emanating from the heads of irresponsible cranks. In strict accordance with the time-honored custom of their weak-kneed tribe they have declared all efforts in the direction of complete federation as highly impractical, and would have us believe that better and more effective modes of organizing are out of our reach. In fact, they tell us we do not need any plan of salvation other than the one we now have. Up to the present reading our conservative croakers have had the best of the argument. Much satisfaction may it give

them. National federation expired prematurely. Peace to its ashes! System federation of the orders can hardly be termed a blooming success. At last, however, the consummation, so devoutly hoped for, seems to be within our grasp. Shall we reject it without a trial? The American Railway Union is nothing more nor less than a simple, effective plan of federation. Each class of employes may withdraw from the local union, elect its own officers and committees, transact its own business, and adjust its particular grievances, yet each form a pillar in the grand temple, beneath whose sheltering roof all may stand on an equal footing, united for a common cause. The power granted to every branch in the service, where large numbers might cause unwieldiness in the transaction of business, to form separate unions is the redeeming feature of this organization.

This constitutional clause alone removes all cause for friction which might obtain in a mixed order. Having one fountain head, instead of a score, as at present, the employes of a system will, in time of trouble, move much more easily and effectively than under prevailing methods. How infinitely grander and stronger is this broad republic, composed as it is, of a sisterhood of states, each governing in those matters which effects its individual welfare, yet forming a link in the great chain whose power has made all nations marvel! As it is with states, so it is with organizations of men. If all the states in the Union were independent kingdoms and republics instead of being federated under one general government, what clashing and warring of interests there would be. Each petty power would maintain costly standing armies, and in the insane desire to increase its dominion and add to the number of subjects from whom to exact allegiance, would claim the right to make war upon its neighbors. Aye, rather than see them flourish and prosper it would annihilate them from the face of the earth. The result of this course would be a people pauperized in order that each petty kingdom might excel in pomp and splendor the pretensions of its rivals. This chaotic and ruinous state of affairs presents a counterpart of several of our railway labor organizations. Oh, horrible thought, that self-aggrandizement of an order representing one class of employes could lead it to plot the extinguishment of an order representing another class. Hail, then, to the new dispensation which will represent all alike. Day star of hope, I salute thee; may thy power for protecting and ameliorating the condition of working men be as superior to the alienated factions into which we are now divided as would be the dominion of the stars and stripes to a horde of warring kingdoms. The prayer of my heart is that

the American Railway Union will realize to the utmost the expectations of the great heart and brain from which it emanated. Wherever Bro. Debs may go while sowing the seed which is to bear fruit a thousand-fold, he is assured of receiving from the members of the Brotherhood of Locomotive Firemen a warm hand-clasp, and a hearty God-speed.

LA JUNTA, COL.

John A. Martin.

#### The Question of Arbitration.

MR. EDITOR:—Mr. Moseley's article on arbitration as the proper solution of the difficulties arising between railway companies and their employes, together with your comment thereon in the February MAGAZINE, suggests to me a few thoughts which may prove not wholly uninteresting to the readers of the MAGAZINE. The settlement of labor disputes by means of arbitration has come to be quite a fad of late years among a certain class of persons who view the labor question "from afar off," who presume to adjust the relations of laborers and capitalists from the calm judicial height of superior knowledge and supposed impartial observance of the just rights of all parties concerned; persons who, in all ages of the world, have wasted their energy in the vain attempt to accomplish impossibilities by reconciling irreconcilables. Arbitration is only possible between parties who stand upon an exact plane of equality with respect to all those matters which, either legally or morally, affect their respective interests. Mr. Moseley admits this principle, in a general way, but how petty and inconsequential are the remedies he proposes for the attainment of that "equality of power and force which compels the essential requisites of friendly relation, respect, consideration and forbearance," which he would establish as a preliminary incident of his scheme of arbitration! In admitting that self-interest is the governing motive of both parties to such controversies, we must admit that each party will take advantage of all those forces and influences, either of law or of public opinion, that will tend to advance such interests. It then becomes a necessity of the case that such forces must be brought to an equilibrium before equitable arbitration can take place. We find railway corporations entrenched behind a multitude of special and exceptional privileges which are denied to their employes; we find them sustained by the laws of our country in financial schemes which, if undertaken by individuals, would be considered little short of highway robbery, and which they are able to carry on while masquerading in the character of public servants; we find the courts of our land, from the highest to the lowest, partial to their interests, and quick to take advantage of

every possible legal quibble which will enable them to cast the weight of their authority in favor of the schemes which the corporations have conceived for the purpose of reducing their employees to a subjection the most galling—all in the so-called interests of the public. We find a factitious public opinion, created in their interests and sustained by our great newspapers, which plainly accepts the principle that there is one rule of equity for railway employees and another for the companies, and which, while demanding and enforcing the most complete observance of the public rights from the employees, and, too, in a manner as if the employees were somehow apart from and not a part of the public, condones or ignores the manifest lapses from right on the part of the companies and fails to bring them to an accounting for the many and grievous instances in which they have sacrificed the public interests to their own. We find, in short, that our laws are so constructed as to place the dollar above the man, and are always so interpreted as to protect the interests of the stock and bondholders, real or apparent, while considering the rights and interests of the employees as secondary and subservient to them. Entrenched behind this wall of advantage, what benefit may the companies expect to obtain from arbitration? And is there any proposition from the advocates of arbitration to compel railway companies to abate one jot or tittle of the privileges by which they are now enabled to exact their "pound of flesh" from the necessities of their employees? Not a bit of it. They prate about the rights of the public and equality of interests but they propose nothing to bring about such equality. And they want to arbitrate between unequals as if they were equals! As if there might be arbitration between the slave and his master while admitting the principle of slavery! They would interpose an arbitrator between the slave and his master declaring that the two were equal in natural rights but being compelled to acknowledge that they were not equal in the eyes of the law. There can be no arbitration on such a basis. The question resolves itself, finally, into one of justice, into one of forcing employees to depend for their rights on whatever sense of justice may be resident in the minds of their employers—Mr. Mowley acknowledges this—and does not justice always have to take a back seat for self-interest? It is easy to predict what railway employees have to expect from arbitration by noting the expressions of those writers on industrial subjects who are recognized as authorities by the *lib.* Mr. N. P. Gilman, in a work published less than a year ago, discourses on this subject while predicting the "industrial future" of the country. There is not the least

doubt that Mr. Gilman expresses the general sentiment of those who control our laws. What measure of justice railway employees may expect from the operation of that sentiment will be best indicated by quoting his words:

A strike on an important line of transportation, however, at once retards the whole industrial machinery and is injurious in an extreme degree, few persons being exempt from its more or less direct effects. This fact at once suggests that the terms of the labor contract between the railway, for instance, and its employees should be different from the form usually prevailing; that the employee on a railroad should be obliged by law to give notice, some time previous, of his intention to leave the service, and that arbitration should be applied to the cause in a special manner. It goes without saying that the legislature of every state should make it an act of felony on the part of an employee on a railway to desert a freight or passenger train in transit, to the great detriment of shippers of freight or to the risk of life of passengers. The recommendation of the New York State Board of Mediation and Arbitration, several times renewed in the last few years, and especially emphasized with reference to the strike on the New York Central & Hudson River railroad in August, 1890, and the strike at Buffalo in August, 1892, commend themselves with great force. The carrying them into general practice will mark a great forward step in this direction. The semi-military organization of the railway service toward which these recommendations tend is highly advisable. In case of labor difficulties on a railway, the calling in of the State Board of Arbitration should be compulsory on the employees and officers—the existing contract being continued until the board has rendered its decision."—*"Socialism and the American Spirit,"* by Nicholas Paine Gilman, page 259-60.

The recommendations of which Mr. Gilman speaks are as follows:

- (1.) The service rendered by railroad corporations created by the state is a public service.
- (2.) Entrance into such service should be by enlistment for a definite period, upon satisfactory examination as to mental and physical qualifications, with oath of fidelity to the people and to the corporation.
- (3.) Resignation or dismissal from such service to be permitted for cause, to be stated in writing and filed with some designated authority, and to take effect after a reasonable and fixed period.
- (4.) Wages to be established at the time of entry and changed only by mutual agreement, or decision by arbitration of a board chosen by the company and employees, or by a state board, or through the action of both, the latter serving as an appellate body. Other differences that may arise to be settled in like manner.
- (5.) Promotions to be made upon a system that may be devised and agreeable to both parties.
- (6.) Any combination of two or more persons to embarrass or prevent the operation of a railroad in the service of the people, a misdemeanor, and any obstruction of or violence towards a railroad serving the people, endangering the safety of life and property, a felony with punishment of adequate severity.
- (7.) Establishment of a beneficiary fund for the relief of employees disabled by sickness or accident, and for the relief of their families in case of death, as is done upon the lines of a number of railroad corporations in other states.

There you have the approved programme of the arbitration advocates. How do railway employees like it? It might be remarked, in passing, that this New York board was largely instrumental in settling (?) the Lehigh Valley strike. Its programme is being enforced to the letter as fast as possible in all essential particulars. Now let's all take off our hats and give three rousing cheers for arbitration.

W. P. Borland.

BAY CITY, MICH.

**For a License Law.**

MR. EDITOR:—In a speech made at Terre Haute, Brother Debs said, "I will not declare against strikes, for there is not a star nor a stripe in the ample folds of our country's flag that does not represent a strike." I have thought a great deal about it since that day, and my conclusion is that a history of strikes is a history of loss of life and property. No matter how successful a strike may be, large sums of money are lost on both sides, and I believe railroad strikes head the procession so far as loss of life and property are concerned. When a strike is ended somebody is, invariably, out of a job, and sometimes a large number are thrown out. Perhaps those who can least afford it are left to hunt up a new situation and begin at the foot again, the fruit of years of patient toil swept away in a few days or weeks at most. A workingman's job represents his living, and one man's living is just as valuable, to him at least, as that of another. Many plans have been tried to prevent strikes, but all have been deficient in some respect. The time was when the engineers held the key to the situation, but that time is long past. State boards of arbitration have accomplished but little; federation, partially tried, is not as successful as we hoped; why not look for something to go with it? When we go on board of a steamboat of any kind, from the "Ocean Greyhound" down to the most insignificant steam yacht, we feel perfectly safe, as far as the human element enters into the conditions of safety, because all the officers are licensed; we may not know these officers, but their certificates of ability are hung up where all who wish may read them, and they are signed by U. S. authorities, not by some obscure official, or possibly some state examiner who has a political pull. We may not know the "jib sheets" from the "bow anchor" or perhaps we never saw a steamer before, but we are assured by U. S. officials that the men to whom we entrust the care of our lives and property are competent to act in any emergency. Yet we step into a railway train and go whirling over the country at from twenty to ninety miles per hour and who knows the conductor or engineer? Who can tell whether they are drunk or sober? Who vouches for their ability? Perhaps there is a wreck; a coronor's jury may find fault with some railway official, and a jury of interested officials, intent on saving their own heads, shift the blame to the conductor or engineer, or both. They are the highest authority and they are interested. If the conductor and engineer had a U. S. license in their pockets could this be done?—certainly not so easy. Could the rules be twisted so as to lay the blame on the men in the train service regardless of circumstances, as is done now? I think not. Railroads have adopted standard time,

some of them have adopted standard rules; why should not the general government compel them all to adopt standard rules, allowing special rules to govern local matters, then allow nobody to run an engine or train who could not pass an examination before a board of U. S. inspectors and obtain a proper certificate of ability? Suppose we have a strike; could the company hunt up all the whiskey soaked soreheads in the country and put them in a position of responsibility, where life and property would be entrusted to their care? Nay, verily! Uncle Sam would be in a position to promptly interfere with that arrangement, and unless that quintessence of nothing, that is one degree lower in the scale of animadversion than a hog, known as the scab, could produce a United States license he could not go out. And the chances are he could not get the license, because he could not get the required recommendation for sobriety, industry, etc. And if his examination was not straight the inspector would lose his job, as did a marine inspector that I knew of. I have never heard this matter discussed, nor do I remember of ever seeing anything in print regarding it, and I have long hoped that the subject would be introduced by an abler pen than mine. I hope the question will be taken up and pushed forward or backward, as its merits determine.

COLLINWOOD, OHIO.

*H. I. Miller.***Strange Faces.**

MR. EDITOR:—I am a charter member of No. 54, which lodge was organized in October, 1876. I have been at the throttle for the past ten years, but still cling to old 54, and in looking over the charter I find that I am the only charter member left; the others are scattered here and there, some are dead, some were expelled, and some withdrew to join the B. of L. E. at the time the laws of that order compelled an engineer to withdraw from the B. of L. E. before joining it. It gives me great pleasure to meet with the boys, but I am sorry to say I do not enjoy that pleasure very often. I find many strange faces there, but I feel as much at home as I ever did, and it is a pleasure to see them go through the routine of business. No. 54 has an excellent set of officers; they are all good workers, and where a lodge has good officers you will always find it in a prosperous condition, which is the case with 54. It is my intention in the near future to give the brothers, through our valuable MAGAZINE, a slight account of my trip to England, and how nicely I was treated by the engineers and firemen while there, mention of which was kindly made by the editor in the December MAGAZINE.

MOBERLY, MO.

*George R. Stacy.*

*Plea to Our Masters.*

In God's good name, ye learned men,  
Who preach so much with voice and pen,  
When grinding out decrees,  
Please pause and hear this humble tale  
That we poor devils of the rail  
Now tell on kneeling knees:

You thunder at us legal lore  
In broad sides from your hireling store,  
And say we mustn't strike,  
We mustn't either quit or frown.  
However much you cut us down,  
Or contemplate the like!

Of course, we know we're only slaves,  
To serve you till the yawning graves  
Are closed above our bones;  
We're made of nature's coarsest stuff,  
All quarried, crossgrained, rude and rough  
As newly quarried stones.

Because we're built in human shape,  
Superior ways we sometimes ape,  
Above our lowly sphere:  
God bless the wisdom of your brains,  
That adds more rivets to our chains,  
When e'er such signs appear!

You've but to fire injunctions out,  
They'll from our breasts entirely rout  
Each independent throb;  
Don't pause an instant in your might  
To ask your bosoms if it's right  
To let us quit a job.

Our masters, they're superior clay,  
And made to while their lives away  
On beds of eider down;  
Pay them in thousands multiplied,  
In order that they'll rough-shod ride  
Upon us if we frown.

Just throw us crusts of moldy bread,  
They're good enough—we're better dead—  
We've got no right to live,  
Except, oh, learned judges dear,  
To be your beasts of burden here,  
While air to breathe you give!

\* \* \* \* \*

An imp of hell now guins my ears,  
And whispers: "But so many tears  
We'll only have to weep,  
T'ntil perhaps a midnight cry,  
In thunder-tones, will reach the sky,  
Arousing all from sleep."

This imp declares: "The like before  
Took place upon a foreign shore  
One hundred years ago,  
When blear-eyed serfs, like beasts of prey,  
Their heartless masters swept away  
In crimson tides of woe."

God save this land from such a doom,  
May never anarchistic gloom  
Upon its banner fall.  
May justice rule in all her might,  
And hateful wrong be crushed by right,  
Mid equal rights for all.

*Shandy Maguire.*

*Demand for Political Action.*

MR. EDITOR:—The recent injunction proceedings on the Northern Pacific, taken in connection with the somewhat similar action of the courts at the time of the Ann Arbor strike, should have the effect to rouse workingmen all over the country to a full understanding of the requirements of the labor problem. I am sorry to see the railway corporations and their employes disagree and have trouble, but I believe this to be one of the grandest things that could happen to the laboring class. Organization is one great step towards our freedom. It has been found from time to time that one organization alone could not successfully resist the encroachments of the corporations nor win strikes without working in combination with other organizations. This knowledge has at last been applied to practice, and the organizations are now able to make a bold stand and a brave fight for the rights of labor. But there is something else which I believe is necessary, and that is the ballot-box. Brothers, wake up! Are you aware that you are losing precious time by your delay? Make this a part of your study; bring it into the lodge room and agitate the question on behalf of yourself and brothers. It is all in our own power; if we put up our candidate and stand by one another as true brothers should, we can elect our men. What can the rich do without the assistance of the working class? Nothing. Neither could they elect their candidates without our assistance. But it is certain that the laboring class has no voice in the choosing of candidates for high offices. The moneyed men do the choosing themselves and the laboring class is only supposed to vote for them; that this is true anyone may prove by simple observation. The laws are corrupt and should be amended, but we cannot expect such amendment from the party which is now in power, nor from the one that has heretofore been in power. We must select our own candidates and elect them; that is our only salvation. We shall then have justice, and not before then can we expect it. Brothers, I appeal to you, for your own sake and for the sake of your wives and children, to make this your future study. Think it over honestly; it is a serious problem, for once lost we are lost forever. I do not appeal to the railway orders alone, but also to every labor organization. Brothers, I wish you to meditate over this question. Never mind the old parties you have so long voted for. If they deal dishonestly with you and make laws to ruin you you have a good reason for deserting them. Let us rally for united political action.

DIAMOND LAKE, ILL.

*E. S. Whitmore.*

ELSEWHERE will be found the charming verses of Bro. Ellis B. Harris, Spooner, Wis., entitled "The Songs my Mother Used to Sing." The verses have been set to music and copies can be obtained by applying to Bro. Harris, the author, who is a member of Quickstep lodge, No. 500. The composition evinces poetic talent of a high order, and the exquisite tribute to the songs of motherhood soothe the ear and touch the heart.

## President Depew.

MR. EDITOR:—In the January issue of the MAGAZINE appeared your article "The Clown and the Pope," which may be very good reading and may be considered very amusing in Greenland or anywhere else except on the N. Y. C., the east, and such other parts of civilization as believe in Mr. Depew's integrity and capability, of which the brothers on the N. Y. C. have a high opinion.

To these brothers it does not seem to be a very good way to produce harmony and good will, such as now exists between officials and men, to have the chief executive senselessly belittled by the official organ of the Firemen's Brotherhood. Mr. Depew will compare favorably with any railroad president of whom we ever heard. He will compare favorably as a friend to labor organizations. If any organization has a grievance to air, you may be sure they will not be refused an audience, which, I am sorry to say, cannot be said of some presidents we all know. If there is a union meeting to be held, Mr. Depew willingly gives his services if not previously engaged. These services were always highly prized by the B. of L. E., and they were always properly thankful for the same.

In your article, "Success in Engineering," appears the following in reference to the managers' solicitude for the men: "But we challenge the record to show an instance when the managers said to their employees, 'men, your duties are arduous, and involve great danger, we propose to advance your wages,' but let business decline, and promptly is heard all along the line the orders, first to remand the men to idleness; second, to reduce wages." A little further along appears the following: "But who ever heard of the Vanderbilts' solicitude taking the form of increasing the wages 5 or 10 per cent. or any other per cent." The past season has been one of business depression throughout the country. The N. Y. C. has not been exempt. Did anyone hear of a reduction of wages? I didn't. In 1890 the engineers received a raise of 50 cents per 100 miles and the firemen 10 cents per 100 miles for freight service.

While it is not as smooth sailing on the N. Y. C. as is desirable, we believe in giving justice where justice is due. We do not suppose the MAGAZINE is published for the aggrandizement of Mr. Depew, or its views moulded to suit that part of the fraternity working on the N. Y. C., but we do think it would promote a better feeling of mutual good will between officials and men not to have the owners and president misrepresented and ridiculed in the official organ of the Firemen's Brotherhood.

I hope you will accept this in the spirit in which it is offered.

ALBANY, N. Y.

C. G. Riddick.

*The Songs My Mother Used to Sing.*

Oh! I love to hear the ballads that my mother used to sing

In the twilight as I stood beside her chair,  
In my memory their melody with love and reverence cling.

Like the blessings that she gave at evening prayer,  
Her voice was sweetest music, and my mother's face was fair.

In her eyes, the love-light shone so pure and strong,  
Oh! how oft I've stood at twilight and caressed her silken hair.

While my youthful heart was stirred with some old song.

## REFRAIN.

"Erin is my home!" "Beautiful isle of the sea!"  
"The meeting of the waters," "And you'll remember me."

"Kathleen Mavourneen!" "Fond memories 'round them cling."

Those are the songs that my mother used to sing.

When the sun had formed a halo on the far-off azure dome.

Clothed the clouds in robes of crimson and in gold,  
When the toil of day was over, turned our wearied footsteps home.

There dear mother gave a welcome to the fold,  
She stood upon the threshold with a smile upon her face.

Like an angel pure and bright she seemed to me,  
In my memory I see her and the dear old-fashioned place.

As I listen to some sweet old melody.

There are times when bowed with sorrow and my heart is filled with pain.

In an anguish that the lips can scarcely tell,  
Then I long for that to-morrow when to hear her voice again.

I to seek her go where brightest angels dwell,  
I've heard of heaven's music and the ecstasy of song.  
Sweet and gentle as the rustle of a wing,

But I'm sure there are no melodies sung by that angel throng

Sweeter than the songs my mother used to sing.

## REFRAIN.

"Home, sweet, sweet home!" "In the cottage by the sea!"

"And the old oaken bucket," "I'm dreaming now of thee."

"Sweet highland Mary!" "Fond memories 'round them cling."

Those are the songs that my mother used to sing.

SPOONER, WIS.

Ellis B. Harris.

A MEETING was held, not long since, in St. Paul, Minn., to discuss the early closing movement, at which Archbishop Ireland spoke, and among other things, said: "My sympathy naturally goes out to the toilers, as they are not only the stay and support of the nation, but also the builders of its material wealth. The labor question is the great question of the day. Sad it is that some capitalists, though not all, look upon toilers as pieces of machinery that revolve for their benefit. Hence the uprising of the labor element, and the discussion of this question is an absolute necessity. Any profit received by the capitalists from the sacrifice of humanity in the toilers is an outrage on God's children. The prosperity of capital depends upon labor having its rights, as well as the prosperity of labor depends upon capital having its rights." Such words indicate conclusively the trend of public sentiment, and will eventually produce a harvest of splendid results.

## Union and Protection.

MR. EDITOR:—I notice in our valuable MAGAZINE for January an essay from the fluent pen of Bro. W. S. Carter, of Alamo Lodge, Taylor, Texas. Asserting as an evident truth that the columns of our MAGAZINE are to be used to advance, and not retard us in life, I feel justified in asking for a little space to present my own and brothers' explanation and defense. I am neither courting honors nor glory; I despise flattery; I detest contention, and fear not honest men; and I ask recognition from Bro. Carter by reason of us both being members of the B. of L. F., and also of our personal acquaintance, as I was employed as a fireman on the I. & G. N. in 1887, and am as familiar with his speech and pen as I am with the memory of Texas. Knowing him as I do, I know he is a man subject to conversion, ever and always willing to pardon an offender. He who can reason, convert, and be converted, is wise; he who has but one mind and one eye, and will not, is a fool. I am inclined to judge Bro. Carter hasty, somewhat rash, and altogether too jealous in the manner he assails the A. R. U., its members, and its organizers. Since we last met I have well earned—though unavoidably—the slang title of "tourist," and that partially accounts for my being a member of the A. R. U. to-day. I have also experienced the ups and downs, and to's and fro's of railroad life, and endured hardships which I wish never to repeat, nor see duplicated by others. Bro. Carter's argument will support my assertion that he speaks from observation of his immediate surroundings, while I do not; I speak from an experience obtained within the boundaries of the British province, the Mississippi river, the City of Mexico, and the Pacific coast. I speak for a cause that demands our attention and support; I speak for his interests, my own, and the interests of every man who, to-day, is, or wishes to become a brotherhood member. In union there is strength, in division, defeat and death. Bro. Carter has referred to the constitution of the A. R. U., and I will, in turn, dwell lightly on the constitutions of the distinct organizations. Can every employe in all ranks and classes of railway service join the B. L. E., the B. L. F., the O. R. C., or the B. R. T.? No. Are they disqualified for any reasons affecting their manhood and honor? No—true enough, lack of integrity is not the obstacle. Does not our various constitutions demand that the applicant be a limited time in actual employment in the vocation represented by the brotherhood to which he is seeking admission? We cannot all of us become members of the B. L. E., O. R. C., or B. L. F., but we can all become, and in a body, too, A. R. U. members,

which would be in a practical sense—federation, federation! Yes, in its natural, pure, and unadulterated state. This protecting arm, federation, extended to the laboring world in the name of the A. R. U., will be the powerful wall of protection whose absence in the past has been demonstrated, and which the progress and success of the future demands. Brothers, this fort of the future is what, or will be, what we make of it. The character is grand, the parts are easy, and if we, both individually and in a body, play well our parts success will be assured. When the hard working and poorly paid section man, and those who toil at the coarse labor in railway service, offer their hearts, hands and oaths, and prove by their actions and support that they are our brothers, how can you refuse, even hesitate, to join us? At the same time we are craving strength and protection, as is indicated by our B. L. E. or B. L. F. membership, the men who, in emergencies, could inflict ruin upon us, now pledge their honor and support to become as true brothers as any the distinct brotherhoods can furnish. They are making the sacrifice; we are the ones most benefited, and as we respect old age and honor gray hairs, so do we respect those who have served an honored apprenticeship at their respective trades. Then, as time rolls on until the final end is attained, we will gather in the vast army of experienced men and not exert our influence in favor of discord where our brother's interests are concerned, nor occupy ourselves in a field entirely foreign to railway service. The excess in the supply of railroad men, over the demand for them, is daily increasing, and until this great surplus of experienced men are consumed will strikes continue to be—and continue to be lost. If every railway employe was a member of the A. R. U. to-day we might congratulate ourselves that we had known our last strike. Then, as strikes would be a thing of the past, equally so would be the alternative now frequently forced upon us, "accept our terms or we will employ scabs." Bro. Carter admits that only 141,000 out of the vast army of one million railway employes are organized, and they are divided into as many as twelve or fifteen different orders, yet each order purports to be correct in its mission. I claim that honors are equal, and that the interests of all are identical. Why not, then, become one? Pride! Yes, pomp and pride? We are each and all—Bro. Carter admits he is—proud to the core. Brothers, let us cast off this inhuman, unjust, and unworthy coil of vanity and conceit, and place our hearts and hands to the level and equality of our interests. If we continue indifferent and unorganized, half a score of years hence we will have not

where to lay our heads, in any sense pertaining to the recognition of our liberty and manhood, but if the A. R. U. succeeds in performing its mission as successfully as that truth and philosophy are blended in the rhymes of Shandy Maguire, then, in a little time, can each and every one of the present army of railway employes claim affiliation with an organization that is what Bro. Carter portrays - the unit organization of to-day. Then, when meeting a brother of our craft there would be no need to avoid him, nor restrain him from giving evidence of his misfortune, nor referring him to the idle thousands of the craft and acknowledging how utterly impossible it is for his lodge, or his system, to obtain for him even a "release" of service, not to mention a reinstatement, owing to weakness and inability. Positions of skilled labor, with their high-sounding wages, are a standing temptation to the inexperienced and uninitiated in the outer world, and those who would be protected should hasten to be enrolled. The A. R. U. is the consolidation of all the fraternal and protective knowledge and experience gained by the various brotherhoods, and is to be equally beneficial to all; becoming a member does not necessitate the care of several students, nor require one to divulge his knowledge, in any other than a fraternal sense—for the good of all. Whether or not the brotherhoods have outlived their usefulness may be an open question, but it seems quite certain that they can never outlive their expensiveness. Each order could belong in a body to the A. R. U. and be governed by its own local boards, which could confer with the board of arbitration as with our present joint protective boards. We could dispense with the high salaried grand officers, and we would readily discover that a \$3 per annum brotherhood would suffice to supplant our present lodge dues and assessments, which many have found to be an intolerable burden and one not warranted by their surroundings and financial ability. The first permanent by-law to be inaugurated by conference and consent of a convention of the A. R. U. is yet to be adopted. The A. R. U. is in need of experienced, sincere, and true advocates to carry the good work on, and calls upon such to join the ranks and teach us, who are neither wise nor experienced, but who have ample will power and staying qualities, to become true and devoted supporters of the cause of labor. Perhaps Bro. Carter has never enjoyed the pleasure of attending an A. R. U. assembly? for it is a pleasure to see engineers and firemen conductors and brakemen and a' that seated side by side, and note the feeling of satisfaction that is evolved by a discussion of the common interest in an honest cause,

and for honest principles. Let us each and all, in silence or otherwise, act as arbitrators in our cause and endeavor to obtain a quorum for harmonious action; and then, one aim in life, one flag, and rational federation is the ultimate.

LA JUNTA, COL.

*Ira D. Mayhall.*

### Why the Anarchists Were Pardoned.

MR. EDITOR:—It is related of a celebrated English lawyer who was retained as counsel in a suit involving a considerable sum of money, that when the suit came to trial he handed to the barrister who was to do the pleading a slip of paper on which he had written: "No case, abuse the plaintiff's attorney." And this seems to be the invariable method which men adopt whenever they feel called upon to plead but have "no case." It is the method adopted by Mr. W. H. Gray and the whole brood of apologists for iniquity from whom he derives his inspiration. It is a noteworthy fact that not a single one of those who have condemned Governor Altgeld's action of last June have ever made the slightest attempt to base a condemnation upon the real ground of the governor's action, nor to offer the slightest evidence in rebuttal of his charges. Invectives and abuse have been made to do duty for argument, and a vast amount of dust has been thrown in the air with the sole purpose of obscuring an issue that could not be met, and while some of the least shameless of Altgeld's opponents have been able to take their stand on a question of expediency, not a single one of them has been able to reach the broad plane of morality and justice—upon that, Governor Altgeld and his defenders stand alone. Mr. Gray's argument—and I ask pardon for so honoring it with the name—would not be worth any serious attention were it not for the fact that he, presumably, speaks in the character of a workman, and it is important that workmen, if no others, should address themselves to the real merits of the case. It should be understood, in the first instance, that the social, moral, or religious opinions or beliefs of Samuel Fielden, Michael Schwab and Oscar Neebe have not even the remotest connection with the questions which furnished grounds for their pardon. Whether or not these men were Anarchists, Methodists, Mohommadans or Buddhists, does not in any way touch the claim that they were convicted by a packed jury and prejudiced judge and sentenced to suffer punishment for crimes they never committed, and it is this claim that furnished grounds for their pardon. These men were not pardoned because they were anarchists, what they teach or believe is not an issue in the case at all; they were pardoned upon the complete and sufficient showing that they were suffering unjust

punishment at the hands of the state. All the men who were convicted in 1887, the four who were hanged on November 11th, the one who blew his head off to avoid the disgrace of the gallows, and the three who languished in prison for a period of six years, were the victims of police activity and an unceasing determination on the part of the myrmidons of the law to find victims in revenge for the murders in the Haymarket. The governor's showing on these points is ample and conclusive; it has never been successfully controverted, and that his opponents have been compelled to raise the cry of anarchy and resort to vindictive abuse of his personality, instead of addressing themselves to the merits of the case, is quite conclusive evidence of the irrefutable nature of his charges. There are two points in connection with this matter that there has never been the slightest evidence produced to explain away, and which the apologists for the judicial prostitute who presided at the anarchist trials make no attempt to explain away. First, an unwarranted attack was made by the Chicago police upon the right of public meeting, which attack led to the death of certain of their number from the effects of the explosion of a bomb. Second, the state never found out who threw the deadly bomb, and, therefore, never convicted the real perpetrator of the outrage, but did convict eight other men simply because they had indulged in violent language and had been found in bad company. Seven of these men were sentenced to death and one to fifteen years' imprisonment, and it is worthy of note that in the case of Neebe the state's attorney did not ask the jury for a conviction, because he did not dare to do so on the evidence adduced, but the jury went ahead and convicted and sentenced him just the same. The theory upon which these men were convicted and sentenced was that they had taught doctrine that was in opposition to public order and against the peace of society, and that it was through the influence of such teaching that some person, or persons, unknown to the state, had been led to throw the bomb which caused the massacre at the Haymarket. Admitting the reasonableness of this theory, and conceding the state's right to make these men *particeps criminis* with the bomb thrower upon evidence that their teachings had had the effect ascribed to them, still it was absolutely essential to a just conviction that the state should establish the connection between these men and the actual thrower of the bomb. This connection was never established, because the real thrower of the bomb has never been discovered, and the state never produced a shred of evidence to support the theory upon which these men were convicted, sentenced and executed. It was never even shown that the

thrower of the bomb was an anarchist at all, because it was impossible to make such a showing, let alone establishing his connection with the particular group of anarchists who were on trial for their lives because charged with responsibility for his acts. It was, indeed, given out by the police that a certain Rudolph Schnaubelt, an anarchist, was the actual thrower of the bomb, but no extraordinary effort was made to bring this man into custody for the purpose of proving whether he was not, nor was his connection with the men who were on trial for their lives ever established. These are questions of fact that may not be disposed of by the simple assertion that these men were anarchists, nor will their conviction be justified by ignorant and vindictive denunciation of the governor who had the courage to pardon the three who were in prison, and give the exact reason for his act to the world. It has been asserted by many persons well up in the authority of the nation, that if the governor had released these men without giving any reason for the act, or had simply said that he released them because he believed they had fully expiated their crime and further punishment was unnecessary, no condemnation would have followed, but, rather, he might have received a mild sort of approval; but to release them on the grounds he did! that was not to be endured! But, why such reasoning as this? If the men were justly convicted why should not they serve out their sentences the same as other criminals? And why should the governor escape condemnation for exercising his pardoning prerogative without adducing full and sufficient reasons therefor? But, if these men were innocent, if they were the victims of juridical obliquity, why should the fact be suppressed? Why should the governor be condemned for giving to the public all the information in his possession relating to the fact, and thus, as far as possible, removing the cloud of criminality from the reputations of innocent men? Those who cannot make some sort of a showing to oppose the pardon of the anarchists in the light of facts that have never been disproved, would much better keep quiet. To uphold the doctrine that these men were rightly condemned simply because they were anarchists, and had propagated theories tending to lead others into the commission of crime, is rather dangerous business; there are consequences flowing from that principle which even so great an upholder of the rights of society as W. H. Gray might hesitate to accept. The tendency of such a doctrine is well illustrated by the following communication which recently appeared in the *Twentieth Century*:

*Editor Twentieth Century:*

BOMBS IN HARMONY WITH THE GOLDBUG PRESS.—On

October 11, in the United States senate, Mr. Stewart, of Nevada, read a threatening letter which he had just received. It was dated Baltimore, October 11, and addressed him as "My Dear Sir," it says:

"You are now warned not to put your foot on the toiler's neck, although you have him down; for there might something drop between your feet, there there is a rude figure of an explosive bomb, that will surely explode. Take warning. By One Who Knows."

"Mr. Joseph C. S. Blackburn will also take warning."  
"P. S.—This is no Anarchist talk; I am American born."

Mr. Stewart said he would not have called attention to this missive, if it had not been in harmony with the language of the public press of New York.—*New York Herald.*

Dupes of the goldbug press find it necessary to threaten silver senators with bombs, and in the same breath cry out: "We are not anarchists, we are American born; you silver men are anarchists." Suppose this goldbug anarchist had actually thrown a bomb and killed some of the silver senators: Would there not, in that case, be just as good reason to arrest, try, condemn and hang the editors of New York goldbug newspapers as there was for hanging Parsons and Spies in Chicago, the 11th of November, 1887? The cases would be exactly parallel. Spies and Parsons were hanged, not for any overt act of violence, but for printing newspapers which some persons thought were calculated to incite to acts of violence. The New York newspapers are backed by the money power—the bankers, monopolists, plutocrats—the Chicago editors were backed by nothing more than a just cause. That is all the difference there is between them as anarchists or as politicians.

Mr. Gray will, of course, understand that Governor Altgeld's subsequent action in the pardoning line has nothing whatever to do with the merits or demerits of his action in the anarchist matter; "that is another story," but, as possibly tending to throw some light on the matter, I commend Mr. Gray to a perusal of "Live Questions, Including Our Penal Machinery and its Victims," by John P. Altgeld. Mr. Altgeld has made quite an exhaustive study of criminology, and there are truths in his book which might be accepted by even so narrow an intellect as that of W. H. Gray.

BAY CITY, MICH. *Wilfred P. Borland.*

#### Addresses Wanted.

HARRY CROOKER.—A blacksmith helper, worked last at Santa Ana or Tracy, Cal., also at Pueblo and Manitou, Col., is about 5 feet 8 inches high, has light hair and complexion and very prominent teeth; weight about 135 pounds. Any information regarding him will be thankfully received by Joe P. Aiken, Hitchcock, Texas.

C. A. TOWSE.—Anyone knowing his whereabouts will confer a great favor upon his brother by notifying F. E. Towse, Omaha freight office, Minneapolis, Minn.

SAMUEL C. SMITH.—Left Hartford, Conn., in September last and was last employed as engineer on the N. Y. & N. E. R. R. He is requested to at once communicate with the secretary of Charter Oak Lodge, No. 285, Hartford, Conn.

OUR ADVERTISERS.—The Farrand & Votey Organ Co., of Detroit, Mich., advise us they have just issued the new edition of their "Daily Memorandum Calendar," for '91. It makes an excellent time book for railroad men, and will be sent to any address upon receipt of ten cents. It is claimed to be the best of its kind published, and is indispensable to the laboring element. This company has been awarded the gold medal and highest award at the Columbian Exposition, and for those contemplating purchasing organs, we would urge that they correspond with Farrand & Votey, and get their prices.

THE *Trainmen's Journal* for January, 1894, comes to our table with a frontispiece on which appear life-like pictures of the grand officers of the order. We regret that the face of our esteemed friend, D. L. Cease, the editor of the *Journal*, is absent. The leading editorial of the issue relates to the strike on the Lehigh Valley, in which the point is made that the strikers won a victory. The editor says:

The company claims a victory but where was there ever a strike that the company did not. The points fought for were conceded but the company claims the battle. The men, when they found they had to fight prepared for it. They strengthened their organizations, they federated, they made financial preparation to withstand a siege, and when the time came they could not be either scared or starved into submission. Their federation was successful, for without it they would have been driven from the system. With it desertions from the ranks were few and the non-union men were inspired with the same impulse as were their union co-workers and they stood with them to the end.

The declaration that "the company claims a victory" is doubtless conceded by the "poor wanderers of a stormy day," who can't see how it is that the strikers won a victory when they lost their jobs.

#### British Workman's Ballad.

I walked in a percession with a banner and a band,  
And they said I was a noosance in 'Igh 'Oborn and the Strand;

I spouted at a meeting which was in Trafalgar square;  
But they sent the slops to charge me and to clear me out of there.

Oh, it's "Demmygog" and "Sochulist," and "Damn the lazy lout,"

But it's "Bless the British workman" with the ballot box about.

The ballot box about, my lads, the ballot box about—  
Oh, it's "Bless the British workman," with the ballot box about.

I struck for better wages, and they said I was a fool.  
And the crafty hagittator merely used me as a tool:  
And when the kids was starvin' and we hadn't sup nor bite,

They only shrugged their shoulders, and they said it served me right.

For it's "Ruin to the country," and it's wickedness and crime,

But it's "Sacred rights o' labor" just about election time.

Just about election time, my lads, just about election time;

Oh, it's "Sacred rights o' labor," just about election time.

I'm lazy and I'm 'ulking, and a noosance and a cuss,  
And I sit on trade and commerce like a blessed ink-bus.

I'm a-draggin' down the hempire and a swelling of the rates,

And a orn'y anded 'umbug what the hupper class rates.

For it's "Workingmen are duffers," and "They're never worth a groat,"

But it's "British bone and sinew" when they want your blooming vote.

They want your blooming vote, my lads, they want your blooming vote.

Oh, it's "British bone and sinew" when they want your blooming vote.

*Geo. R. Jones*

### A Reformer Loose on Railroads.

An intensely funny story was written by Mark Twain for the *Cosmopolitan*. It is called, "Traveling with a Reformer," and relates principally to small abuses encountered by railroad travelers.

The modern Don Quixote whom Mark Twain brings into existence attacks abuses in a highly practical fashion, moral suasion and diplomacy being his favorite material of war. His mission was to root out all forms of rudeness and petty imposition, and to do it in a fashion that would reform the offender. In dealing with rude brakemen, saucy conductors, and others, his power is in being closely related to the president of the company. His stronghold is being brother-in-law of the president or general manager. His brother-in-law would make a big army. After starting out, their first adventure is with the supercilious telegraph operator, who tries to snub the public. After being snubbed when he tries to send a message, the reformer writes a telegram to the president of the Western Union, inviting that personage to come and dine with him that he may explain how business is conducted in one of the offices. Of course, the clerk collapses. He is forgiven and the lesson is left behind.

The reformer, who is an army major, and his friend enter a street car late at night and three villainous roughs come in who make vile remarks, and make a disagreeable time for conductor and the women and children in the car. The reformer is troubled, and takes in the situation for a minute; then he exclaims, "Conductor, put off these swine, and I will help you." The boys make a rush at the reformer, but he hits each with a blow like a trip hammer and kicks them off the car. This was called an emergency case, where a fist is the best persuader.

The reformers go to Boston over the Consolidated roads and the various trainmen get queezed into politeness through fear of the president's brother-in-law. The great fun comes when the two go to Chicago. While traveling on Sunday they see the parlor car conductor stop a game of cards, and the major volunteers to join the game, that he may vanquish the conductor and demonstrate that a railroad company is not authorized to stop card playing on any day of the week. The conductor comes and saying that card playing on Sunday is against the rules, orders the game stopped immediately.

"Nothing is gained by hurry," says the major. "Who authorized the company to issue such an order?"

"My dear sir, that is a matter of no consequence to me, and—"

"But you forget that you are not the only person concerned. It may be a matter of

consequence to me. I cannot violate a legal requirement of my country without dishonoring myself; I cannot allow any man or corporation to hinder my liberties with illegal rules—a thing which railway companies are always trying to do—without dishonoring my citizenship. So I come back to that question, by whose authority has the company issued this order?"

The argument proceeds at great length, and the conductor is greatly embarrassed, but he cannot produce any legal warrant for the order to stop card playing, so he lets the game proceed, but is dreadfully worried. The train conductor comes round, and was going to put a peremptory stop to the game, but the sleeping car conductor took him aside and explained how matters stood, and then no interference was offered.

When the party starts to return from Chicago, a sleeping car in which they have engaged a stateroom is not on the train, and a section is offered in another car. The major refuses the section and demands his stateroom.

"It's the best we can do," explains the conductor, "we can't do impossibilities. You will take the section or go without. A mistake has been made and can't be rectified at this late hour. It's a thing that happens now and then, and there is nothing for it but to put up with it, and make the best of it. Other people do."

"Ah! that's just it, you see. If they had stuck to their rights and enforced them you wouldn't be trying to trample mine under foot. It's my duty to protect the next man from this imposition. So I must have my car. Otherwise I will wait in Chicago and sue the company for violating its contract."

"Sue the company for a thing like that?"

"Certainly."

"Do you really mean that?"

"Indeed, I do."

The conductor looked the major over wonderingly and then said:

"It beats me—it's brand new. I've never struck the mate of it before. But I swear I think you'd do it. Look here, I'll send for the station master."

When the station master came he was annoyed at the trouble raised—not at the real cause of the trouble—but he had not long tackled the major, when he decided to find a stateroom for the party.

When they were in the dining car the major asked for broiled chicken, and the waiter said: "It's not on the bill of fare."

"That gentleman yonder," said the major, "is eating a broiled chicken."

"Yes; but that is different. He is one of the superintendents of the road."

"Then all the more must I have broiled chicken. I do not like these discriminations. Please hurry. Bring me a broiled chicken."

The waiter brought the steward, who explained in a low and polite voice that the thing was impossible; it was against the rule, and the rule was rigid.

"Very well, then; you must either apply it impartially or break it impartially. You must take that gentleman's chicken away from him or bring me one."

The steward was puzzled, and did not quite know what to do. He began an incoherent argument, but the conductor came along just then, and asked what the difficulty was. The steward explained that here was a gentleman who was insisting on having a chicken when it was dead against the rule and not in the bill. The conductor said:

"Stick by your rules. You can't have any option. Wait a moment; is this the gentleman?" Then he laughed and said: "Never mind your rules. It's my advice, and sound; give him anything he wants. Don't get him started on his rights. Give him whatever he asks for; and if you haven't got it, stop the train and get it."

The major ate the chicken, but said he did it from a sense of duty and to establish a principle, for he did not like chicken.—*Locomotive Engineering.*

#### Sketched from Life.

Mrs. Mulligan used to wash for us, when we could afford that luxury. Her pay on those occasions was none too prompt, and the way the poor soul would thank Providence on receiving her just dues was rather irritating to a man who is doing his best, straining his limited income and his unlimited desires to make both ends meet. Her manner implied a gratitude for unexpected blessings.

But Mrs. Mulligan, poor, patient soul, had trials and sorrows of her own and far beyond the average. She was always smiling and cheery, sympathizing with others and seldom mentioning her own troubles unless some one referred to them.

To begin with, her husband, Mike, drank like a fish. He would work like a plow-horse all the week, and get roaring, howling drunk Saturday night, spending every cent he had earned. This, of course, threw the support of the family on the wife and mother, and bravely she bore the burden. Johnny and Mary Ann, their children, were kept in the public schools, "to be educated like a lady and gentleman," according to Mrs. Mulligan, who washed and scrubbed for a dozen families to keep the wolf from the door.

An education is a glorious thing, but a moral balance wheel should be provided with it. It was not provided in the cases of John and Mary Ann. Both were bright students and stood well in their classes, but

it was a terrible trial for them to be sent to coventry by the sons and daughters of the rich, who were hardly their equals in intellect. They were proud and ambitious as a boy and girl and were always conscious of their poor clothes, which were better than their toiling mother could really afford, but boys and girls were ever foolish creatures. The disadvantage of their station made them envious and morose, and they drifted naturally into anarchy. In order to make a better appearance, John sacrificed his moral nature to external apparel and became a thief. Mary Ann started with thieving and ended in something far worse. The tears were always very close to Mrs. Mulligan's eyes after that and their tender blue was not so bright as of old.

John landed in the house of correction and Mary Ann was lost in the purlieus of sin and shame, but their mother's cup of sorrow was not yet full. One night Mike did not come home. She supposed he was at the police station as usual, but the next morning when she went to the police court to pay his fine he was not there among the prisoners and none of the police had seen him.

It had been a bitter night, setting in with a blinding snowstorm and ending clear and cold. Late the next afternoon, some duck hunters were prowling along the lake shore, when, to their astonishment, they beheld a man standing up to his knees in the ice at some distance from shore. He was leaning forward, as if facing a driving gale, with one hand clapped on top of his cap while the other was partially extended, as if to balance himself. They shouted to him but the man did not move a muscle. Then the discoverers suspected what proved to be the case.

The man stood in a shallow place, where the beach extended out for a long distance. Between him and the shore the slush and ice of the day before was frozen into a solid mass, while farther out it was still washing against the edge of the solid ice and freezing rapidly. The hunters walked out to the spot and found poor Mike Mulligan frozen as hard as granite. He had, evidently, wandered on and on in a drunken delirium until fate led his unwary feet to the shore of the lake. Dazed by drink and blinded by the driving snow, he had staggered into the water and then further out, until the chill of the slush had warned him that something was wrong. Then he had paused to recover his bearings. While reeling in uncertainty in this desolate, wind-swept spot, his feet and knees had been fettered in the fast freezing ice.

There they found him; the ruddy glow gone from his cheek, leaving it white as marble, his broad jaw firmly closed upon his short pipe, giving his face a look of grim

resolution, while his wild eyes stared ahead as if they saw the phantom form of death.

Help was called and Mike was chopped free of the ice. His rigid body, still in that terrifying pose, was laid on a farm sleigh and carried to his home.

Mrs. Mulligan sat alone in her cottage, crooning an old country air, expecting her husband to appear at the door at any moment, when the heavy tramp of feet was heard outside and then a knock at the door. She opened it, and, without a word of explanation, four men entered bearing her husband's frozen corpse, which they laid on the table. While they were stupidly wondering how to break the news to her, she set the lamp down and stood for a moment as if turned to stone. Suddenly she threw up her hands and burst into such a wild, unearthly cry that the rough men who stood about her felt their flesh creep on their bones. Her's was a frenzy of grief such as is seldom seen except in women of Irish birth; there was a ring of madness in her cries, the extravagance of her wild Celtic blood, and then the men drew away from her like cowards, leaving her alone with her dead.

How she spent the night no one knows, but when the horror-stricken neighbors heard of it and came rushing into the house next morning a haggard woman, who seemed to have aged 20 years in a single night, sat sobbing by the fire, while the remains of her husband, now limp and blackened, lay in the front room with blazing candles about his head and a wooden crucifix on his breast. She had thawed out his frozen limbs and dressed him in his Sunday suit, and but for the blasting touch of the frost he looked as peaceful as if he had died in his bed attended by the ministrations of his faith.

This happened but a few years ago. She had hardly recovered from the shock when a letter came from a distant city. It was all Greek to Mrs. Mulligan, but she brought it over to our house for Araminta to read. It had been written in a Buffalo hospital, and by the long-lost Mary Ann. She was dying and wanted to see her fond old mother and be forgiven for the past, that was all.

The poor old soul rocked back and forth with her shawl hugged to her heart as she had held little Mary in the long ago, and between her sobs she would talk to an imaginary child as if all the dreadful past had rolled away.

"Whist, darlint, niver mind; that's a dear. Mother's got yez and not a sowl shall harm a hair of yer head while I live." Then she would throw her hands above her head and burst into loud lamentation. "Oh, wirra, wirra! Sorra the day. It was niver yer own fault, darlint; ye were al-

ways kind to yer poor ould mother. I'll not believe what they say; it's all lies, ivery word of it, an' yer mother don't believe it!"

It was hours before she calmed down, and then she was dressed up in her best and put on the train for Buffalo to take the only consolation that could be brought to the deathbed of her daughter. Then she came back to take up her weary burden again. She still lives on, with the one hope that her misguided Johnny will some day be a man and a comfort for her declining years.—*Detroit News*.

### A Penalty.

The rock is veined with gold, and the silver shines,  
And the seams of the coal are black in the nether  
mines,

And the copper gleams like a kindled furnace spark,  
And the heavy lead is dull and cold and dark;

Yet for all the black of the coal and the gloom of the  
lead,

Do they weep to be copper or silver or gold instead?

The lilies rock in the garden, fair and tall,

And the daisies creep in the grass at the feet of all,

And the yellow sunflower stares at the yellow sun,

But the trailing yellow trefolls earthward run;

Yet for all the lilies are high and the daisies are low,

None of them crieth, "Why hast Thou made me so?"

Like flowers of air the kingbirds flash and fly,

They have dipt their wings in the blue of the summer  
sky,

But the dusky lark that made an earthy nest

Must carry away its color upon her breast:

Yet for all the feathers are brown or the feathers are  
bright,

None of them saith, "God doth not work aright."

And men spring up in their place, and a golden crown

Circles a royal head, for king and clown

Rise and pass through life their several ways,

And this shall be born for toil and this for praise:

Yet of every soul in every devious lot,

There is none content, there is none that murmurs  
not.

Nina F. Layard.

### High Rate of Speed.

"How many revolutions is that fly-wheel making?" said a curious citizen to the engineer of the electrical supply station.

"Eighty a minute, sir," said the engineer.

"Eighty a minute, eh? What's the diameter?"

"Five foot two."

"Lemme see," said the citizen. "To get the circumference you multiply the diameter by three. Three times five feet two are fifteen feet six, and eighty times fifteen feet six gives a total of 1,240 feet. That wheel would be moving pretty fast if it were touching the ground, wouldn't it? But—

"Got a pencil? Thanks."

[A moment of scribbling.]

"Yes—she'd have to be turning at 341, or 261 revolutions faster, before she'd catch a locomotive driving wheel revolving at the rate of a mile a minute, and then the locomotive wheel would only be overhauled at the slow rate of five feet and a half the mile.

"Wonderful age, isn't it? Good morning."—*Detroit Free Press*.

*Long Ago.*

I once knew all the birds that came  
 And nested in our orchard trees.  
 For every flower I had a name—  
 My friends were woodchucks, toads and bees;  
 I knew they thrived in yonder glen  
 What plants would soothe a stone bruised toe—  
 Oh, I was very learned then.  
 But that was very long ago.

I knew the spot upon the hill  
 Where checkerberries could be found;  
 I knew the rushes near the mill  
 Where pickerel lay that weighed a pound.  
 I knew the wood—the very tree  
 Where lived the poaching, saucy crow,  
 And all the woods and crows knew me—  
 But that was very long ago.

And pining for the joys of youth,  
 I tread the old familiar spot  
 Only to learn this solemn truth;  
 I have forgotten, am forgot.  
 Yet here's this youngster at my knee  
 Knows all the things I used to know;  
 To think I once was wise as he—  
 But that was very long ago.

I know it's folly to complain  
 Of whatso'er the fates decree,  
 Yet were not wishes all in vain.  
 I tell you what my wish should be;  
 I'd wish to be a boy again,  
 Back with the friends I used to know,  
 For I was, oh, so happy then—  
 But that was very long ago!

—*Youth's Companion.*

**Women as Tramps.**

There is a new element to scare the women folk in country houses half out of their wits that is yet in its infancy, but endowed with the strength of a young giant as far as terrifying qualities are concerned.

This new bugbear is in the form of a woman tramp. A month spent on a farm situated on the main road between two thriving towns, yet distant enough from habitations to make it quite isolated, has revealed the fact that, though men of the genus tramp are annoying and bothersome, the women of the same ilk are ten times more so.

To begin with, being women, no farm hand or any man about the place cares to deal with them in the summary manner to which the male species is accustomed. Knowing this, these tattered vagrants in female form intrude even into the very living rooms and whine and beg until they are given something, or when refused will turn abusive and hysterical, a combination that frightens even strong men, says the *Philadelphia Times*.

Every visit from one of these gentle wanderers means so much less property, as they seize everything they can lay their hands on. No nap in a hammock or a morning stroll can be taken without being disturbed by one or more of the homeless viragoes, who are lost to sense of shame or decency. Sometimes an all unhappy little mortal that calls the tramp mother is taken along on these summer wanderings.

They fare better than men, for scarcely

anyone is hard hearted enough to refuse a woman a night's shelter in some out-house; therefore they generally sleep under cover. On being questioned as to why they have taken to the road, they tell a tale of the difficulty of obtaining work in the large city they have just left and the hope of employment in the one toward which they are journeying.

If, however, work is offered them they either find some excuse for not accepting, or stay one night and decamp before daylight with edibles enough to last several days, and any other trifles they can conveniently carry.

**Heroes in the Rough.**

The bravery and heroism of self-sacrificing men who have sternly faced death or sacrificed their heart's dearest affections for the preservation of others, have had their chroniclers from time immemorial.

Yet it is seldom that the heroic deeds and unselfish devotion of our railroad men find a record. They have too long been looked upon as a rough class of men, uneducated and unprincipled, and a necessary evil in every part of the country where the echoes are awakened by the shrill whistle of the iron horse.

I shall not attempt their vindication, being content to leave that to time and abler pens; but I can not refrain from narrating a few incidents wherein many lives were saved by railroad employes. Brief mention was made of the first incident at the time of its occurrence by the local press, but the full particulars will be of interest to all.

Some years ago there was employed by the ——— Railroad a poor, uneducated man whose duties were to attend a drawbridge over a canal at a certain point on the road, and the flag station attached to it.

The approach to this bridge on the east side was a curve around a high hill and through a deep cut, the cut being but a few rods from the bridge. It will thus be seen that the engineer of a train going west could not see the bridge until too late to stop should anything be wrong, unless he ran at reduced speed. As much valuable time would be consumed in running slow until the bridge was passed, the watchman was provided with a flag and red lamp, which were to be placed—by day or night as the case might be—on the top of the hill, a hundred yards from the draw, when it was necessary for him to open it; the flag and light being discernable to trains approaching from either direction.

One clear, bright, but windy day he was called to open the draw for boats. Trains being due ere long, he hurriedly placed his flag, and in a few moments the boats were passing. More time than usual was consumed by their slow movements, owing to

the heavy wind dead against them, and it lacked but a few minutes to the time of a fast express bound west when the last boat had passed, and he commenced working the cumbrous machinery to close the gap.

Instinctively glancing upward while thus occupied he saw, to his dismay, that the flag had blown from its fastening.

At the same instant he heard a cry and a plunge, and looking around, was almost paralyzed to see his boy—the pride of a loving father's heart—struggling in the water, and whose cries for help echoed in his ears, mingled with the shrill whistle of the train, now but a mile away.

Oh, the agony of that moment!

He had barely time to shut the draw. If he did so his child must drown.

If he saved his child the train must plunge into the opening and scores perish.

Can you imagine a more trying position? What would you have done had you been in his place, think you? What thoughts must have flashed with lightning swiftness through his brain? All a father's natural affection calling on him to save his child.

The picture of his home rose up before him, no more made happy with childish music and pattering of little feet. No more was his rough, bearded face to be pressed by those dimpled hands and rosy lips.

Think of the heroism which nerved his arm and steeled his heart to the cries of his first born, as, with starting eyes and brain on fire, he swung that bridge into place, the train flashing by the same instant.

Think of the grief of the father when, all unnerved, he bore the dripping, lifeless form to his now desolate home; and then tell me, ye readers of romance, did velvet doublet or steel cuirass ever cover the heart of a greater hero? And yet he was but "a rough railroad man."

The hero of the incident with which we conclude this account was an engineer—a rough, greasy, grimy engineer; one of the oldest in the service, and as good and brave a man withal as ever "pulled a plug" on an engine.

Although the writer was running on the same road at the time of its occurrence, and was conversant with all the facts, he will let an old "knight of the footboard" tell it in his own words, as he told it many years ago in a little volume entitled "Reminiscences in the Life of a Locomotive Engineer."

"Those who have traveled much on the Little Miami Railroad must have noticed a little old fellow with grizzled locks and unpoetical stoop of the shoulders, who whisks about his engine with all the activity of a cat and whom the railroad men call 'Uncle Jimmy.' That is old Jimmy Wiggins, an engineer of long standing and well known. I believe Uncle Jimmy learned the machinist's trade with Eastwick & Harrison in Phil-

adelphia; at all events he has been railroad-ing for a long time, and has been always noted for his carefulness and vigilance. Let me attempt to describe him.

"He is about five feet four inches in height, stoop-shouldered and short-legged. His hair is iron-gray, and his face would be called anything but beautiful. He has, though, a clear blue eye that looks straight and firmly into yours with an honest and never flinching expression that at once convinces you that he is a 'game' man. Not very careful about his dress is old Jimmy; grease spots abound on all his clothing, and his hands are usually begrimed with the marks of his trade. In short, Uncle Jimmy is anything but a romantic-looking fellow, and a novelist would hesitate long before taking him as the hero of a romance; but the old man is a hero, and under that rough yet placid exterior there beats a heart that never cools and a will that never flinches. We go back into the history of past ages to find our heroes, and them we almost worship, but I question whether the whole history of the world furnishes a better example of self-sacrificing heroism than this same rough and unromantic looking Jimmy Wiggins. It is not the casket that gives value to the jewel; it is the jewel gives value to all. So with Uncle Jimmy. Rough he looks, but the heart he has makes him an honor to the race, and deserving of our praise.

"I'll tell you why I think so.

"Uncle Jimmy was running a train that laid by on the switch at Spring Valley for the up-express to pass. He got there on time, and the express being a little behind time, the old man took advantage of the time to oil round. The whistle of the up-train was heard, but he paid no heed thereto, for it was to pass without stopping. The fellow who attended to the switch stood there at his post. Uncle Jimmy was coolly at work when a shriek from the conductor called his attention, and looking up, he saw what would frighten and unnerve almost any one. The stupid fool at the switch had thrown it wide open, and the express was already on the branch, coming, too, at the rate of thirty miles an hour—thirty feet in the beat of your pulse—and his train loaded with passengers stood there stock still. That was the time to try the stuff a man was made of. Ordinary men would have shrunk from the task and run from the scene. Your lily-handed, romantic gentry would have failed then, but homely old Jimmy Wiggins rose superior to the position, and unromantic as he looks, proved a hero. No flinch in him. What though two hundred tons of matter were being hurled at him fifty feet in the second! What though the chances for death for him were a thousand to one for safety! No tremor in that brave old heart, no nerveless action in that strong arm. He leaped

onto the engine, and with his charge met the shock; but his own engine was reversed and under motion backward when the other train struck it. It all took but an instant of time, but in that moment old Jimmy Wiggins concentrated more of true courage than many a man gets into a lifetime of seventy years.

"The collision was frightful; iron and wood were twisted and jammed together as if they were rotten straw. Charley Hunt, the engineer of the other train, was instantly killed; passengers were wounded; terror, fright, and pain held sway. Death was there, and all stood back appalled at what had occurred; yet all shuddered more to think what would have been the result had old Jimmy's engine stood still, and all felt a trembling anxiety for his fate, for surely, thought they, 'in that wreck his life must have been sacrificed to his bravery;' but out of the mass, as cool, as calm as when running on a straight track, crawled Uncle Jimmy, unhurt.

"He still runs on the same road, and long may his days be and happy."

Such cases are not rare among us, if not blazoned to the world in high-flown rhetoric and lavish praise.

When the incident just narrated occurred, certain papers, commenting on it, threw the blame without stint on the railroad employees indiscriminately. Columns were devoted to showing what would have prevented the accident and dictating rules for the guidance of officers and employees, but mention was never made of the heroism that had preserved many lives at the risk of a horrible death to the heroic engineer.—*Chester F. Baird in Good News.*

### Eminent Domain.

The following definitions of the power and right of eminent domain are given by recognized authorities on this subject: "Eminent domain is the right or power of a sovereign state to appropriate private property to particular uses, for the purpose of promoting the general welfare." "It is the rightful authority which exists in every sovereignty to control and regulate rights of a public nature which pertain to its citizens in common, and to appropriate and control individual property for the public benefit, as the public safety, necessity, convenience or welfare may demand." "The exercise of the right of eminent domain shall never be abridged or so construed as to prevent the general assembly from taking the property and franchises of incorporated companies and subjecting them to public use, the same as the property of individuals."

From these definitions and statements by recognized authorities, it will be seen that

eminent domain is "the right of property possessed by a state, which is higher over all the goods and valuables within the state than that of any individual." By virtue of this right the state may take private property for public use to whatever extent is necessary for the public welfare. The law and justice require, however, that adequate compensation be made to those from whom the property is taken. In this country, as in other republics, the right of eminent domain rests on the paramount right of the public welfare, and the public welfare is the supreme law, as the promotion of the public welfare is the supreme purpose for which government exists.

The police power of the state is based on the same principle. Under this power the state may do all such acts as are necessary for the public safety and conducive to the public good. It may regulate the use of property in such manner as the public health, safety, convenience and welfare may require. In order to the public welfare the state has the right and is in duty bound to protect all citizens, not only from personal violence or injury to person and property, but also from the exercise of any business, trade or employment which is found to be hazardous or injurious to its citizens and destructive to the best interests of society. It is on this principle that the state has absolute control of the liquor traffic even to entire prohibition. It has the same right to restrict or prohibit, temporarily or permanently, any business or traffic that is known to be dangerous or injurious to society. No man or body of men can ever have a natural or just right to inflict an injury upon society in any way or by any means whatever. These principles have been affirmed time and again by the highest judicial authorities in this nation.

A proper and lawful exercise of those great sovereign powers, it is believed, is amply sufficient to settle the Homestead difficulties in a lawful, safe and peaceful manner. Let the sheriff require the company to keep their works closed for the time being, for the same reason and by the same authority that he required the saloon keepers to close their saloons—the public safety. The public safety will authorize and justify the sheriff not only in closing the saloons, but also in closing the largest steel plant in the country. Hence, so long as the public peace and safety demand it, the company should be absolutely prohibited from starting their works,

Keeping the works thus shut down for a time would afford the company and the men an opportunity of coming together and settling their difficulties amicably if possible, but if such a settlement should be found to be impossible, then let Gov. Pattison condemn the plant by the state's right of eminent domain, and let the works be started

up as soon as possible and operated under government control, until such a time as the legislature can act on all the vital questions involved. As the great manufactories of the country have now become a public necessity, they should be controlled by the state in such manner and to such extent as the peace, safety and welfare of the public demand.

It was on this principle, it is alleged, that the late Gov. Seymour, of New York, settled a strike which occurred on the New York Central railroad. Let Gov. Pattison pursue this policy in the Homestead matter and thus demonstrate that the policy power of eminent domain are amply sufficient to secure all the just rights of the people and to control any corporation in the country to whatever extent the peace, safety and welfare of the people demand.—*Pittsburg Press*.

### Scotch Wedding Superstitions.

In the matter of courtships and weddings, Scottish people preserve an extraordinary number of peculiar customs and fanciful superstitions. It is deemed unlucky to alter the first width of an engagement ring. Many troths have been broken as a result. The giving of brooches and pins by lovers is full of ill consequences. No young man or woman, in the tender relation, will take a pin from the other without returning the same after use. Pins, needles, etc., are all emblematic of the cessation of friendship and affection. It is very fortunate for the bride to wear some borrowed article of apparel at her wedding. If swine cross the path of the bridal party before it, it is an omen of direst import; but if they should cross its path behind the party it would be a happy augury. A wedding after sunset entails on the bride a joyless life, the loss of children and an early grave. In the south of Scotland a rainy day for a marriage is an unlucky one. The bride is then called a "greetin' bride," whereas "Blest is the bride the sun shines on." To "rub shoulders" with the bride is a sign of speedy marriage; the first among the unmarried female friends who succeeds in doing it will be the first to wed; and I have myself witnessed scrambles on the part of buxom Scotch lasses for precedence quite closely approaching fisticuffs. As a newly married wife first enters her new home some elderly person must throw a cake of short bread into the door before her. One securing a piece of cheese cut by the bride's own hand, before she has left the wedding feast, is certain to be shortly happily married. And it is everywhere in Scotland as inauspicious for the bride's mother to be present at a wedding as it is unfortunate in our country to have the same individual arrive to remain, at any subsequent period.—*Boston Transcript*.

### The Switchman.

He stands at his post with flashing eyes  
And awaits the coming train,  
With a rumble and roar it fairly flies  
In safety, and back again  
He throws the switch, and takes his stand  
To hurry on the crew,  
And quickly waves his horny hand  
To signal "No 2."

What risks he takes, now holding brakes,  
And now upon the ground;  
With link and pin he's out and in,  
Forever on the bound;  
No drones will do to form a crew,  
But men with nerves of steel,  
That know no fear, are needed here,  
To follow up the wheel.

And then at night, with lantern bright,  
In hail, or snow, or rain,  
Still at his post and like a ghost  
He flits from train to train,  
All honor to the switchman, who  
In danger night and day,  
To fear is blind, may fortune kind  
Be with him night and day.

Thomas West.

### Will It?

The Oregon *Alliance Herald* takes up the assertion of a prominent loan agent that one good crop with fair prices will destroy the industrial agitation, and asks the following questions:

We would like to ask if one good crop with fair prices will destroy railroad extortion?

Will it equalize the burdens of taxation?

Will it stop usury extortions?

Will it do away with child labor?

Will it give work to the millions of idle men in the country at remunerative wages?

Will it give the millions of female employes living wages?

Will it destroy speculation in land, the heritage of God's children?

Will it destroy speculation in the food products of the world?

Will it prevent the lockout of honest working people, thereby forcing up prices by limiting the output?

Will it supply school facilities to the millions of children now crowded out?

Will it destroy the jobbery that now exists in every branch of the public service, wringing millions out of the people to satisfy the greed of a lot of slick schemers?

Will it secure an equal and exact administration of justice to all people alike?

Will it shorten the hours of toil?

Will it correct all or any of the damnable ills that have grown out of the past political administration of this country?

The time has passed when the farmers will be satisfied with the mere fortune of good crops for a season. What they demand and mark you what they are going to have, is the rights of American citizenship, and a just distribution of the products of labor. A reform is coming, a reform which is too deep-seated in men's minds to be seriously injured by the schemes of political intriguers.

### Population of India.

The census of India brings to public attention some astounding figures. According to the Washington Post, they would be incredible save for their unquestioned authenticity. It says: "The population of British India amounts to the enormous number of 220,000,000, while that of all India is 286,000,000; more than four times that of the United States. More than 1,000,000 enumerators were required for this work. The increase in ten years was in excess of 26,000,000 souls, or more than 11 per cent. This is the most densely populated portion of the globe. It is difficult to grasp this congestion of population in this oriental land. In England it is estimated that a square mile of cultivated land gives employment to fifty persons, in the proportion of twenty-five males to an equal number of females. In Bengal, every square mile, cultivated or not, supports an average of 474 persons, this including swamps and untillable soil. In other words, on one twenty-third the area of the United States is supported a population greater than that of this country. France is considered a densely populated country. The average is 187 to the square mile. In Bengal, proportioned to the tillable land, it is 715 persons. In the province of Oudh, made famous by the eloquence of Edmund Burke, the average is 442 persons to the square mile. Thus on an area of less than one-half the extent is located a population more than twice that of the German empire. In the United States the average of population is rather less than eighteen to the square mile. Were the average such as holds in Bengal this country would have a population exceeding 1,600,000,000, or 200,000,000 in excess of the present population of the world."

### "Me Ride."

Mark McDonald, a veteran knight of the throttle, was surrounded by a group of friends in the Laclede corridors yesterday, to whom he related one of his latest yarns. His first trip on the Union Pacific, in 1860, and how an "Injun" rode, was the subject of the tale. He was ordered from Omaha to the Cheyenne division, and there got orders to return to Grand Island and take engine 4126 back to Cheyenne. Going over the road both ways at night, he did not learn much of the lay of the land, and stations at that time were a long way apart. Firing up the engine about the middle of the afternoon he started out, and stopped when about 160 miles away for water. It was dark when he got to the tank, and taking the packing hook, he tied some waste around it and saturated the stuff with oil, which, when lighted, made a very good torch. "When I got back into the cab," he

said, "after quenching the torch, I found I had a visitor, a big buck Indian gazing at the steam guage. I was surprised when he nodded to me, and did not return the salute. My fireman lay asleep on the water tank, and there I was left with an ugly redskin wrapped up in a dirty white blanket tied with a strap, in which was stuck a navy and a bowie-knife. When I motioned him to get off he said 'No,' in broken English and patting the seat said, 'me ride.' 'No,' said I, 'you can not,' and he then tapped his revolver and again said 'Me ride.' Having no weapon with which to defend myself and not knowing how many of his kind there were lying about, I was much perplexed. Suddenly the thought struck me to break the water glass. I threw my oil can against it and it exploded with a loud report. The steam and water caught the buck full in the face, and he bounced from the cab yelling wildly. When we pulled out again the fireman came into the cab more scared than I was. He had crawled onto the tank at the approach of the redskin and pretended to be sleeping."—*St. Louis Globe Democrat.*

### Tough Sole.

Mrs. Custer reports a story related to her by a frontiersman which may be taken as an amusing illustration of a very solemn truth. The teller of the story had stopped at a cabin to get a supply of milk.

The family consisted of a mother and several "strapping daughters." As the traveler sat by the fire, the shriveled old mother bent over the fireplace puffing a clay pipe, perfectly stolid and silent, till one of the girls came in and stood at the fire trying to dry her homespun dress.

Without raising herself, and in a drawling tone, the mother said presently. "Sal, there's a coal under your fut."

In no more animated tone, and without even moving, the daughter replied, "Which fut, mammy?"

The girl had run barefoot all her life over the shale and rough ground of that country, and the red hot coal was some time in making its way through the hard surface to a sensitive tissue.

### Must Carry a Check Book.

Every woman of fashion must now carry a check book. It is dreadful form to handle musty old bank bills, and so the dainty lady has her little check book and fountain pen, and, when she makes a purchase, draws with great dignity upon her bank for the amount. Of course, it is necessary that a woman's credit be fairly established before check-giving is possible, but this is the point that makes the custom popular among the affluent and select. The rich women of New York are known in all the principal shops

of the city, and their checks are as good as cash. The other day a young lady drove up to the door of a Broadway jeweler's shop, went in, and selected a turquois and diamond ring valued at \$250. She quietly made out her check for that sum and passed it to the clerk. The latter glanced at it and then looked inquiringly up at the young lady.

"There is some mistake here, I think," said he, with an apologetic smile.

The young lady flushed and demanded to know if the check was not for the right amount. She was told that it was, but—

"But what?" She exclaimed haughtily. "Do you mean that my check is not acceptable? Sir, do you know who I am?"

The clerk mildly acknowledged that he knew quite well who the young lady was, but explained that the check was not made out just as it should be. And he handed it back. The girl ran her eye over it, and then turned a deep crimson.

"Oh," she exclaimed, "I see."

And then she proceeded to make out another. She had signed the first one, "Your own sweetheart, Sally." It was a case of sentimental aberration in which finance and love got mixed.—*Philadelphia Press*.

### And Doggeral For Poets.

Some people have very little regard for the fitness of things when selecting dogs for presentation purposes. The giver, by his lack of appreciation of coherency, frequently brings together a dog and a man whose tastes, susceptibilities, aspirations and literary ability are markedly dissimilar. Such a companionship cannot fail to be unpleasant to both. There is no need for such unfortunate occurrences. Let dog donators ponder the following directions and unpleasant complications will be avoided:

For stock broker, speculator, or investor in contingencies of any kind, get a pointer.

The same kind of a dog also goes well with a punctuator.

For a compositor, get a setter.

For military men, dogs of war.

For a man who has lost his fortune, a retriever.

For a baloonist, a skye terrier.

For a pedestrian, a lap dog.

For a detective, a spotter.

For a cattle raiser, a bulldog.

For a millionaire, a deer hound.

For a negro, a coon dog.

For a jeweler, a watch dog.

For a sailor, a water spaniel.

For a tobacco chewer, a spitz.

For an explorer, a Newfoundland.

For a singer, a yeller dog.

For a prize fighter, a pug.

For a messenger boy, a terrier.

For a dude, a collie.

For an angry man, a ma'stiff.—*Drake's Magazine*.

### Tacks in Battle.

A prick may be less heroic than a blow, but it is apt to be more effectual. One hornet will rout a squad of soldiers; and a ready-witted seaman once vanquished a horde of savages with tack nails.

In 1819 the whale ship Syren, while on a voyage to the Pacific ocean, met with an adventure which would have proved fatal to all hands but for a quick stratagem of the mate.

One fine day, off one of the Pelew islands, all the boats being after whales, and but a few men left aboard the vessel, a large band of armed natives suddenly swarmed over the bulwarks. The crew flew to the rigging, leaving the naked, howling savages in full command of the ship.

The mate, on coming alongside, took in the situation at a glance, and quickly ordered the men to open the arm chests and scatter on deck all the tacks they could find. In a moment it fairly rained tacks upon the naked savages. The deck was soon covered with these little nails. They pierced the feet of the islanders, who danced about with pain, which increased with every step they took, until, with yells of rage and agony, they tumbled headlong into the sea and swam ashore.—*Century*.

### Entitled to a Quarter.

"Good morning," observed the tramp casually, as he stepped in the broker's office.

"S' mornin'," was the reciprocal salutation.

"You're a broker, I believe," continued the tramp and the broker nodded.

"And a broker is always ready to make a fair legitimate percentum on any transaction he may make as an agent or middle-man?"

The broker nodded again.

"Good," said the tramp. "Now I have this plain business proposition to make, to-wit: By the last treasury reports the total amount of money available for use in this country is \$1,425,000,000, which divided pro rata among the people as enumerated by the Porter census—by the way, you think that census is perfectly correct, don't you?"

"Certainly I do," responded the broker, with good strong Republican emphasis.

"As I was saying, this total amount divided on the basis of that enumeration will allow to each person \$23.25, and I, as duly enumerated, am logically entitled to that amount ain't I?"

The broker nodded.

"Well," continued the tramp, "you just keep the \$23 that is coming to me and give me the quarter and I'll make you out a quit claim. Is it a go?"

The broker handed over the 25 cents, says the Cape Cod Item.

### A Mad Engineer.

"O, there's plenty of excitement in life," said the engineer of engine No. 10. "What with the chances of a wreck every mile or so, a general smash-up at the sidings, the giving away of bridges, and the forgetfulness of the dispatcher, all of which is likely to happen, I may say there is no complaint of monotony in running an engine. But the worst snap I ever struck in the business was a trip I took one time with a madman. Yes, sir, as wild a lunatic as you'd find chained and strait-jacketed in any asylum in the country. Want the story? Well, here's to it, and a straight one it is. It was in 1880 that I was serving as fireman under a man named Grady. He was a fine engineer; could do more with an engine than any one I ever saw, and knew his road like a book. I'd been with him about a year, and we got pretty thick, and he was always showing me his little gal's picture and talking about her. His wife was dead and his sister had the child.

"He was just the loveliest father I ever did see. Never got drunk like other men but this one time I am going to tell you about. We were to go out that night, when I met him on the street just before dark and I saw he had been drinking, but was in a mighty good humor. 'I'll be there in time,' he said to me, 'I'm just going up to the house to kiss my baby good-by.'

"Well, we parted and I come on down to the depot. It was mighty near time to start, and I had steam all up, when here comes Grady. The moment I saw him I knew there was something mighty wrong with him. 'Stead of saying 'Hello,' or something like that, he just climbed into the caboose without looking at me, but kind of staring straight ahead of him with his eyes hot and dry and his lips as white as my shirt off duty. I thought to myself: 'Well, if this is a drunk it's the queerest one I ever saw,' and, not wishing to rile him, I kept quiet. We pulled out steady enough, Grady still saying nothing, but staring straight ahead as if he saw something in front of him. Pretty soon we become to get faster and faster, till the old engine just rocked and I could feel the cars behind fairly jump over the rails. I did not like to say anything, for he was boss of the engine, but when we went whizzing past a station where we were to stop without paying any more attention to it than if it had not been there I began to think there was something mighty wrong, and I stepped forward, pretending to look at the dial-plate, said: 'Hain't we rather going it, boss?' But he didn't answer and I went on: 'Ain't sick, are you, Grady, old man? If you are lie down a bit and I'll run her awhile.'

"But still he paid no attention, but would look out at the headlight and kind of mutter

to himself. So I went back to shoveling in the coal, but keeping an eye on him, for by this time I was sure that there was something very much wrong with him, and I began to think that what he had taken had crazed his brain, and yet his looks weren't those of a drunken man and his hand seemed as steady as usual. But presently, whiz! we went past the lighted lamps of a small station where we were due to wait fifteen minutes for the up train. 'Good Lord!' I thought, 'we'll meet that train on the main track and then look out!'

"With this in mind, I called out: 'Hello, Grady, forgot about the upbound, ain't you?' But he just stood as before, mumbling to himself in that strange fashion, and I just caught him by the arm, storming at him. 'Where are you going to, man?' and then he looked back over his shoulder at me, grinning and gnashing his teeth like a dog. 'To hell!' he shouted, 'and all of you with me. I've killed my baby and I've got to go to hell, but you'll have to go with me.' When he said that I waited no longer, but grabbed him about the waist. I did not want to hurt him, but to save the train—no, both trains. But he fought me like a devil, clutching me about the throat, while I slipped my hands up to his, and there, swaying from side to side, with our breath hot in each other's face, we struggled for what seemed to me an age, with the train all the time thundering on, on to destruction. I had no thought of my own life, but I could not get the idea of the unconscious people behind and coming out of my head, so I hung on like grim death until a happy thought struck me, and I yelled out: 'Look out, Grady, there's your baby just behind you,' and, as he turned to look, brought my fist down on his head with all the strength I had left, and he fell senseless.

"Then began a race between time and me. I had to run the train back to the station, where we were to pass the up-bound, so away I went. The conductor rang to know what the matter was, but I had no time to answer. Away we went back, back, with me fancying every moment that I heard the other train thundering down upon us. Could I make it? Could I? Back, back, and on to the side track where we were to wait, and as I knew we were safe, down I fell by Grady's side in a dead faint. They found us lying there together and I, coming to first, tried to tell them what was wrong, when my poor boss sprang to his feet, was out of the caboose and gone into the black night. The up train was fifteen minutes late that night and that and my mad back pull was what saved them both from destruction. Grady was found next day hiding in the woods, a gibbering idiot, and put in an asylum, where he died in a few weeks. It seems that he had gone

home drinking that night, and playing with his little girl had tossed her up in his arms, when her head coming in contact with the ceiling the skull was crushed and the baby left a corpse in his arms. No, sir. I want no more such runs. I was sick a week after that one and exchanged to another road when I got up."

### Torture to Win a Bride.

On the lower Amazon dwell the cannibal Butucudos, who distort their features with the biggest ornaments of a certain kind known. In babyhood both men and women have their lower lips and the lobes of their ears pierced with holes, in which are thrust pieces of wood. As they grow older these wooden adornments are made bigger and bigger until an adult ordinarily has ear lobes that hang down to the shoulders and a lip that projects 6 inches or more beyond the nose. One must suffer to be beautiful, as the French say, and such is the inexorable fashion among those anthropophagi. In that country a young man who desires to take a wife must first submit himself to a frightful ordeal. He draws over each arm up to the shoulder a loose armlet woven of palm leaves.

Then, under supervision of his elders, he plunges both arms as far as he can into a nest of fierce devouring ants. The insects at once attack the intruder, of course, and according to the terms of the trial he must stand without moving for an hour, submitting with absolute stoicism to the bites of the enraged creatures. If he endures the test he is entitled to the bride, otherwise he must wait for a year and then undergo it again. There are still tribes descended from the ancient Incas which bandage the heads of their children so that they assume a conical form. Funnily enough, the brain does not seem to suffer any injury from this treatment.—*Philadelphia Press.*

### The Swiss Plan of Taxing.

Almost the first difficulty that besets a people trying to govern themselves is the question of revenue. Where is the money to come from? Taxes, the bugbear of all nations, also puzzle the Swiss. His method of raising them in some of the cantons is alike interesting and novel. No official assessment is made of property. Blanks are distributed to every house, to be filled in by its occupants. The system is known as the "progressive" tax scale.

A, who owns \$4,000 of property, pays taxes only on half of it; B, who owns \$25,000 worth, pays taxes on eight-tenths of it; while C, with his \$100,000 worth of property, pays taxes on the whole. The result is that C pays not the proportional twenty-five

times the amount of A's taxes, but fifty times as much. The income tax is managed after a similar fashion. The rich pay out of all proportion to the poorer classes. They probably would not change places with the poor, however, even to save what they decry as unjust taxation. The plan is not always a popular one. Leaving every man to assess himself has the disadvantage that the rich, with stocks and bonds, sometimes do not make return of them. When a rich Swiss dies, however, the government control of his estate quickly makes amends for all his past misdeeds in the way of assessments, and every penny of taxes held back is now deducted, together with compound interest and fines.—*Harper's Magazine.*

### The Blarney Stone.

Five miles west of the city of Cork, Ireland, in a little valley where two streams meet, stands the little village of Blarney. The fame of Blarney is world-wide. It has a castle, and in the walls of the castle the famous "Blarney stone" is set. The stone is a part of the solid masonry, is 50 feet from the ground, and about 20 feet below the projecting roof of the building. To kiss the blarney stone is supposed to endow one with captivating witchery of manner, to loosen his or her tongue so that the whole or the conversation will be one solid stream of honied words. The situation of this talisman is such that the kissing of it is rather a dangerous feat, it being necessary to let the votary down over the walls by means of ropes. On the top of the castle there is a stone which many claim is the "true blarney," because the feat of kissing is more easily accomplished. This spurious stone has been in its present situation only seventy years; the true blarney, mentioned as being set in the wall, bears date of the building of the castle, which is 1446.

### A Busy Editor Officiates.

A Georgia editor who is also a real estate agent, a building and loan association director, an attorney-at-law, clerk of the town council and pastor of the village church, was recently called upon to perform the marriage ceremony. He was in a great hurry; in fact the couple surprised him in the middle of a heavy editorial on the tariff.

"Time is money," said he without looking up from his work. "Do you want her?"

The man said yes.

"And do you want him?"

The girl stammered an affirmative.

"Man and wife," cried the editor. "One dollar. Bring me a load of wood for it—one-third pine, balance oak."

## GRAND LODGE.

**Assessment Notice for March.**

OFFICE OF THE GRAND LODGE, B. OF L. F.,  
TERRE HAUTE, IND. MARCH 1, 1894. }

ASSESSMENT No. 44, \$2.00.

*To Receivers of Subordinate Lodges:*

SIRS AND BROTHERS:—You are hereby notified of the death and disability of the following members entitled to all the benefits of the order, viz:

CLAIM No. 1213. Chas. J. Mills, of Charter Oak Lodge, No. 285, was Drowned July 19, 1893.

CLAIM No. 1214. Henry E. Bailey, of Potomac Lodge, No. 7, died of Typhoid Fever, August 30, 1893.

CLAIM No. 1215. George A. Pierce, of R. H. Wilbur Lodge, No. 384, was declared totally disabled by Loss of Feet, November 27, 1893.

CLAIM No. 1216. Joseph M. Fogarty, of Hill City Lodge, No. 460, was killed in a Wreck, November 28, 1893.

CLAIM No. 1217. Chas. M. Decoo, of Falls City Lodge, No. 103, died of Pericarditis, December 17, 1893.

CLAIM No. 1218. John Downes, of Pride Lodge, No. 502, was killed by Engine turning over, December 17, 1893.

CLAIM No. 1219. W. H. Chappell, of Pride of the West Lodge, No. 6, died of Pneumonia, December 26, 1893.

CLAIM No. 1220. John E. Kennedy, of Eureka Lodge, No. 14, was declared totally disabled by Loss of Leg, December 31, 1893.

CLAIM No. 1221. W. C. McGuire, of Connecting Link Lodge, No. 25, was killed by Jumping from Engine, January 3, 1894.

CLAIM No. 1222. H. B. Stockwell, of Clinton Lodge, No. 34, was declared totally disabled by Partial Paralysis, January 9, 1894.

CLAIM No. 1223. William H. E. Lee, of Mineral King Lodge, No. 129, was declared totally disabled by injury to Back, January 10, 1894.

CLAIM No. 1224. John F. Fetherkill, of J. K. Gilbreath Lodge, No. 264, was declared totally disabled by Loss of Leg, January 10, 1894.

CLAIM No. 1225. John F. Manning, of Decoration Lodge, No. 144, died of Phthisis Pulmonalis, February 14, 1894.

CLAIM No. 1226. Alfred Kirsch, of Lafayette Lodge, No. 203, was totally disabled by falling from moving Train, January 16, 1894.

CLAIM No. 1227. John M. Keppert, of Pine Ridge Lodge, No. 17, died of Liver and Stomach disease, January 19, 1894.

CLAIM No. 1228. Eldridge Mullinix, of Patapasco Lodge, No. 432, was declared totally disabled by Tuberculosis, January 23, 1894.

CLAIM No. 1229. Wencel Shefronic, of Hawkeye Lodge, No. 27, was killed in a Railway Accident, January 23, 1894.

CLAIM No. 1230. Edward F. Folsom, of Scioto Lodge, No. 202, died from injuries by being Burned, January 24, 1894.

CLAIM No. 1231. Bert Fletcher, of Eureka Lodge, No. 14, died of Typhoid Fever, January 26, 1894.

CLAIM No. 1232. A. Brecher, of Twin City Lodge, No. 39, was declared totally disabled by Fracture of Leg, February 1, 1894.

An assessment of Two DOLLARS (\$2.00) has been levied for the payment of the above claims, and you are required to forward said amount for *each member* whose name appears on the roll of membership MARCH 1st, 1894, (also for all members having taken a withdrawal (limited or final) after FEBRUARY 1st, and for all members who died or were totally disabled since that date), said remittance to reach the Grand Lodge not later than MARCH 20TH, 1894, as provided in Section 50 of the Constitution. Any lodge failing to make returns as above provided will stand suspended from all the benefits of the order, as per Section 52 of the Constitution.

Yours fraternally,

F. P. SARGENT, G. M.

F. W. ARNOLD, G. S. AND T.

**Special Assessment Notice.**

OFFICE OF THE GRAND LODGE, B. OF L. F.,  
TERRE HAUTE, IND., February 1, 1894. }

SPECIAL ASSESSMENT No. 1, \$0.75.

*To all Subordinate Lodges:*

DEAR SIRS AND BROTHERS:—You are hereby notified that Special Assessment No. 1, amounting to seventy-five cents (\$0.75), has this day been levied by the grand lodge for the Protective Fund to be used in paying the striking firemen on the Lehigh Valley Railroad who engaged in a strike, beginning November 15th, 1893, and ending December 6th, 1893, under the laws of our order. A majority of the lodges belonging to the Brotherhood of Locomotive Firemen have voted to levy this special assessment, and the will of the majority becoming the law, this levy is made. (See Section 41, Page 16, of Constitution.) This assessment is payable by all members whose names appear on the rolls of membership on February 1st, 1894, and must be paid to the Collector on or before March 1st, 1894. Any member failing to pay the foregoing assessment within the time specified will stand expelled as provided by the laws of the order.

Collectors are required to deliver the foregoing assessment to the Receivers of their respective lodges on or before March 2nd, and Receivers are required to forward the same so as to reach the grand lodge on or before March 10th, 1894.

Collectors and Receivers are required to make collection and returns of the above assessment in all things as provided by law for the collection and returns of assessments for the beneficiary department.

Collectors will receipt for this assessment on the usual form, as no special slips have been issued.

Yours fraternally,

F. P. SARGENT, G. M.

F. W. ARNOLD, G. S. AND T.

## Beneficiary Statement.

OFFICE OF GRAND SECRETARY AND TREASURER, }  
TERRE HAUTE, IND., February 1, 1894. }

To Subordinate Lodges:

SIRS AND BROTHERS:—The following is a statement of the Beneficiary fund for the month of January, 1894:

## RECEIPTS.

Respectfully submitted,  
F. W. ARNOLD, G. S. and T.

## What She Would Do.

AWA woman standing all alone,  
I humbly hope to shine;  
I'm tired of the twaddle  
Of the oak and ivy vine.  
I've seen too many instances  
Where nature's law declining,  
The vine did the "supporting,"  
While the oak did all the "twining."

Before I'd marry a man and work  
For his bread and my own,  
Before I'd marry a man who'd place  
Himself upon the throne,  
And claim from me his "better half,"  
Allegiance blind and mute,  
I'd marry the merest ape and wait  
For him to evolve!

— Woman's Journal.

TIME-TABLES for the kitchen are as important as for the railroad, as the food that supports the system must be baked or cooked by equal rule and care. Every railroad man should see that his wife has a copy of the Cleveland Baking Powder Co.'s Cook Book, as advertised on our last outside page in this number. This is a most meritorious article, and we take pleasure in calling our readers' attention to it. Sent free upon receipt of stamps to pay postage.

A copy of Twentieth Century, New York; The Coming Nation, Greensburg, Ind.; Nonconformist, Indianapolis, Ind.; The People, New York; Tom Watson's People's Paper; St. Louis Labor; Brick Pomeroy's Advance Thought; Express Chicago, Ill.; Missouri World, Chillicothe, Mo.; Commoner, Wichita, Kansas; Advocate, Topeka, Kansas, and others. Enclose 10 cents in silver to Reform Literature Company, Greensburg, Indiana.

We invite the attention of our readers to the advertisement of George R. Fuller, manufacturer of artificial limbs, which appears in this issue. Mr. Fuller is a reliable and thorough workman, and we have no doubt his work will prove satisfactory.

# IMPORTANT.

In view of the present uncertainty of business, we have decided to offer the two works of Professor N. Hawkins upon easy and liberal terms of payment to the patrons of the FIREMEN'S MAGAZINE and others, who will furnish a reference as to reliability, i. e., part of the cost with the order when the books will be sent, and balance monthly.

It is a proverb that "he stands strongest who stands on his head"—this has been well illustrated in the case of the owner of these two books. In the numerous changes which have taken place in the past half year, and which are still going on, the practical knowledge which has been acquired from the Hawkins works has enabled many of their possessors to hold over in good positions where others have been forced to resign.

The "Hand-book of Calculations" (now selling in its seventh thousand), and the "Maxims and Instructions for the Boiler Room" (now selling in its third thousand), are educational works of the rarest value, and have already, in scores and hundreds of instances, proved the stepping-stone for permanent advancement (Firemen to be Engineers, Engineers to be Superintendents, etc.).

The "Calculations" teaches first, the principles on which steam-engineering is founded, i. e., mechanical philosophy, and beginning with the figure one, proceeds with rules, examples, and plain directions to the most essential problems relating to steam-engineering.

The "Maxims and Instructions" teaches how to "fire" with all kinds of fuels and the different varieties of boilers; gives details of construction and dimensions of boilers. It deals with the details and management of pipes and piping, steam-pumps, injectors, tanks, steam-heating, plumbing, etc. The book has hundreds of definitions and illustrations of appliances used in and about the boiler room.

These books are each provided with a ready reference index, which renders their hundreds of practical suggestions instantly available; hence they are works of both instruction and reference.

These two books are each strongly and handsomely bound in green cloth, with gold titles; they weigh over five pounds for the pair and are almost a library in themselves. The price is \$5.00 for the two, and \$2.50 for a single volume, post or express prepaid to any part of the world.

Parties wishing them on "part payments" will be informed of the terms upon application. Club rates also given on application. Correspondence solicited. We furnish a descriptive catalogue free.

**Theo. Audel & Co.,**  
PUBLISHERS.

Office 3. 91 Liberty St., N. Y.

P. S.—Very many Master Mechanics of railroads have bought the pair of these "noble books" and found them exactly adapted to their department of railroad service.

## LOCOMOTIVE ENGINEERING,

ANGUS SINCLAIR, }  
JOHN A. HILL, } EDITORS.

5 Beekman St.,

NEW YORK.

## Yankee Hill.

# \$60,000,000.

### Is Its Record,

From an area no greater than the city of Washington stands on, Gilpin county, Colorado, has produced \$61,001,000 in gold in its history of thirty years. There is not an area of similar extent that can equal this record in the known world. It is the strongest, richest and most permanent gold belt ever opened. Yankee Hill is a portion of this same great gold belt, found on examination to be identical in every respect with the present producing area of Gilpin. Yankee Hill is a new camp. Six months ago it had neither place nor record. To-day pay ore is lifted out from more than fifty shafts within an area of 500 acres.

Three towns have sprung up like magic in the district; fifty stamps are already pounding on its ores. Shafts and drifts are running in every direction. Strikes are reported almost daily; at three different points ore bodies yielding \$400 to \$500 in gold are reported. Capital is coming in and by the first of June 3,000 people will be on the ground.

The Whale, the General Ives and Alice group of gold mines belonging to the Orphan Boy Extension M. & M. Co. lie in the very center of this wonderful new gold camp. The largest and richest body of ore yet uncovered in the camp is at the bottom of the 40-foot shaft on the Whale lode—eight feet of ore between the walls.

The systematic development of this mine alone will be sufficient to establish the claim of Yankee Hill to the first place among the new gold camps of the state.

This company has already begun extensive development work. A force of men has been put on the Whale shaft and the necessary hoisting machinery and buildings placed. A body of ore for stoping will be ready in sixty days.

Meanwhile the question of the most successful method of treatment is receiving attention. Experiments in concentrating have been repeatedly made giving the most satisfactory results, raising a \$.0 ore to \$350.

The company has determined to erect a concentrating plant on the property in the early spring. This plant will have a capacity of 150 tons.

To raise the necessary funds to erect the mill and keep up the work of development we offer 20,000 shares of Whale stock at 16c, and 20,000 shares of Orphan Boy Extension stock at 25c, in blocks of 100, or multiples of 100, to suit purchaser. THIS OFFER HOLDS GOOD FOR THIRTY DAYS ONLY.

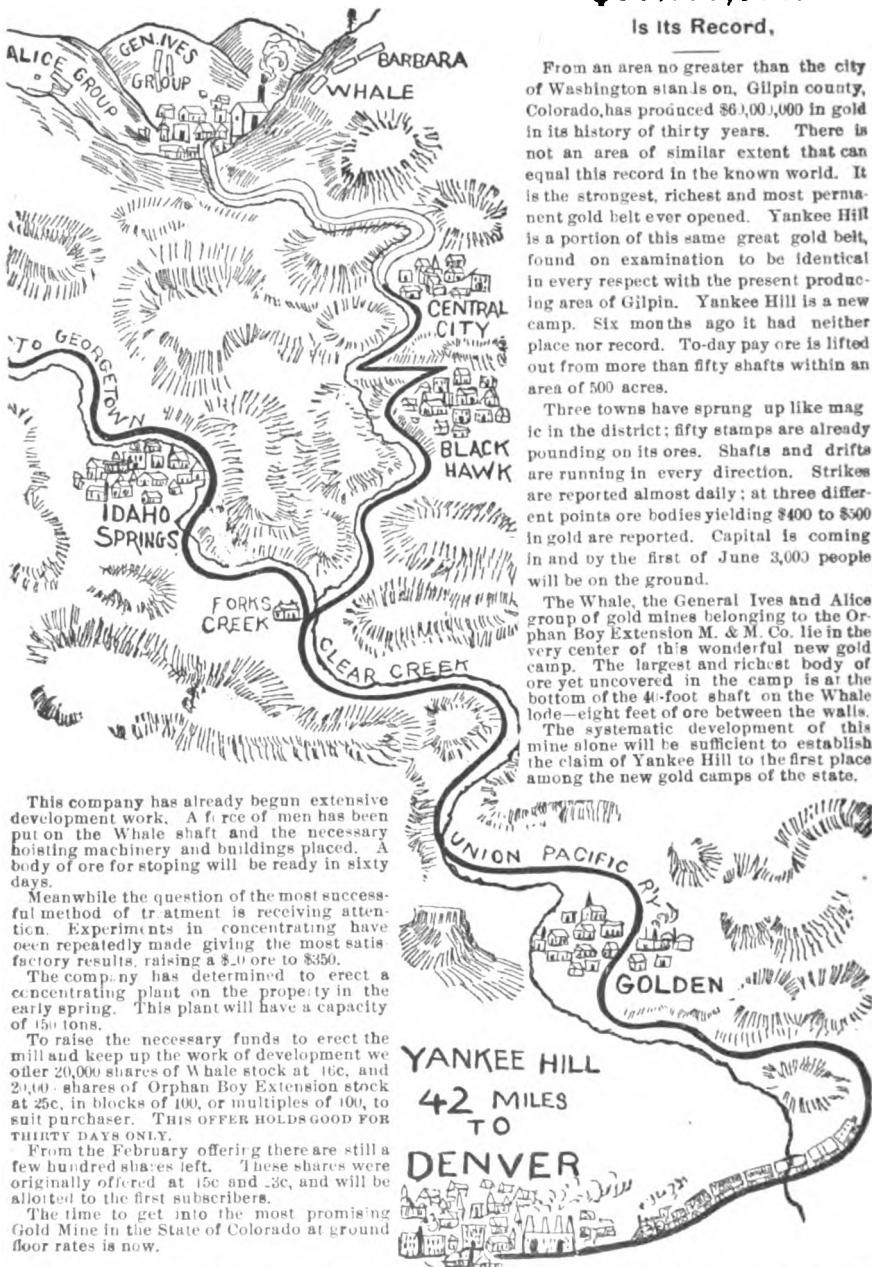

From the February offering there are still a few hundred shares left. These shares were originally offered at 15c and 3c, and will be allotted to the first subscribers.

The time to get into the most promising Gold Mine in the State of Colorado at ground floor rates is now.

Stock reserved on telegraph order. Send for a copy of the GOLD NUGGET, a beautifully illustrated mining journal, copy of by-laws, maps, ore specimens, etc. Address

## Orphan Boy Extension M. & M. Co.,

No. 29 & 30 Kittredge Building, Denver, Colo.

# OVERALLS FREE

By Mail or Express,

**FOR 75 CENTS.**

We are large wholesale manufacturers of Overalls and Coats bearing the "Carhartt" Brand. These goods are designed and made especially from suggestions made to us by members of the Brotherhood.

To introduce them to many members to whom their excellent qualities are unknown, we will for a short time send (all charges paid), to any one who will show them and help us increase their sale, one or more garments made of the best blue denim upon receipt of the following prices (provided your clothing dealer does not keep them on sale):

Overalls—(any size) . . . . .	\$ .75
Overalls—(with apron) . . . . .	.85
Apron Overalls—(with elastic in the suspenders) . . . . .	1.00
Sack Coats—(perfect fitting, to match) . . . . .	.85
Sack Coats—(made of blue and white Amoskeag check) . . . . .	.75

Say, Joe, why the devil don't you get a suit of overalls from that Detroit firm that advertises in our Journal, same as I do, then you won't have to go around looking like a tramp with those Jim Crow duds on?

In ordering, give waist measure and inseam (crotch to heel) for overalls, and for coats, the breast measure under arms, saying whether regular or long sleeves are wanted. Address all letters plainly to

**HAMILTON CARHARTT & CO., Detroit, Mich.,**

**479, 481, 483 and 485 Michigan Ave.**

Samples of cloth and self-measurement blanks sent free to any address, provided this Magazine is mentioned. This also includes linen tape measure.

## THE FIREMEN'S FRIEND—

That never tears,  
rips, or leaves him

F. W. FROST, ESQ.

## A LOCOMOTIVE ENGINEER.

**Testifies to His Cure of Rupture. The Constant Jar of a Locomotive is one of the Severest Tests that can be Applied to a Recently Cured Case.**

*Rotterdam Junc., Schenectady Co., N. Y.*

After suffering a number of years from a painful Rupture, I went to the Invalids' Hotel and Surgical Institute, at Buffalo. While there, I submitted to an operation which was not painful. It was done without chloroform, ether or any dangerous anæsthetic. Under the skillful treatment of their specialists and the very close and kind attention of their nurses, in less than a month, I left the Institution feeling like a new man. I have every reason to believe that the Hernia will never return, and that I am permanently cured. It is a great relief to go without a truss.

Very respectfully,

F. W. FROST.

WE REFER, BY PERMISSION, to many prominent people in every State, whom we have cured of Rupture or Hernia. Of these we can, for lack of room, only append the following:

J. H. Riemer, Zion, Wis.; R. M. Folk, Sparta, N. J.; Ed. C. Stubb, Augusta, Ga.; R. Galland, Orangeville, Mills, Barry Co., Mich.; C. E. Clark, Sec'y B. L. T. & S. D. Co., Buffalo, N. Y.; Hon. E. L. Clapp, Belchertown, Mass.; John F. Harper, North Solon, Cuyahoga Co., O.; W. S. Raber, Port Allegany, Pa.; R. Sessions, West Oneonta, Otsego Co., N. Y.; Mrs. E. M. Cutler, Buffalo Prairie, R. I. Co., Ill.; Miss V. M. Thomas, Albion, Ind.; Mrs. W. A. Kernan, Mexico, Mo.; Mrs. Jesse Martin, No. 507 William St., Rome, N. Y.; Jos. A. Martinek, Mackey, Iowa; Chas. H. Pulsifer, Yarmouthville, Me.

## RUPTURE.

HERNIA (Breach) or RUPTURE, even if old and large, is speedily and radically cured in every case undertaken by our specialists, without dependence upon trusses, and without danger. 967 cases of Rupture cured at the Invalids' Hotel, in 1893.

There is no longer any need of wearing clumsy, awkward, chafing old trusses. There is no safety in any kind of a truss, for there is constant danger of the Hernia suddenly becoming strangulated and resulting in death.

## VARICOCELE.

VARICOCELE, or false rupture, and HYDROCELE are permanently cured by new and painless methods.

An illustrated Treatise on Rupture, Varicocele, or Hydrocele, sent to any address on receipt of ten cents.

OFFICIALS AND EMPLOYEES'  
ACCIDENT ASSOCIATION

INDIANAPOLIS, IND.  
WM. K. BELLIS, SEC.

## THE WHEEL

Of progress too often becomes the Wheel of Destruction, and at such times the possession of a staunch true friend, to whom the

## RAILROADER'S FAMILY

Can appeal in their sorrow, is the greatest boon on earth. Such a friend is the RAILWAY OFFICIALS AND EMPLOYEES' ACCIDENT ASSOCIATION, of Indianapolis, whose unparalleled growth during the past year, showing an increase of

**\$21,000,000,00**

Over the previous season, unanswerably demonstrates its overwhelming popularity with the Railroaders of America.

## THINK OF IT!

If you should get caught in that fatal accident which visits so many noble men, and leave nothing to your dear ones, what would become of them? A Certificate of Membership in the RAILWAY OFFICIALS AND EMPLOYEES' ACCIDENT ASSOCIATION is as safe and certain as a landed estate, and the relief it secures to the bereaved family is flashed over the wires the very moment the news of a stroke of misfortune reaches the Home Office. No Sensible Railroader longer doubts it his duty to carry first-class Accident Insurance. Do not postpone until it is too late, but take a membership with us.

## Don't Forget That the Brotherhood Overalls

**Are NOT Made by Chinamen,  
Are NOT Made in "Sweat Shops."**

**But are made by the BEST PAID  
WHITE LABOR in the Business.**

They are made by a Brotherhood man, and were officially endorsed by the B. of L. F. Convention at Cincinnati, September, 1892. If no dealer keeps them in your town, insist upon getting them. The dealers anywhere will handle them if the Brothers will insist. Won't YOU insist on the Brotherhood overalls made by **H. S. PETERS,**  
Hinsdale St., Brooklyn.

Large No. 3, B. of L. F.

Div. 419, B. of L. E.

## The "WORKER'S"

The New 25 Cent Suspender. Made for Active Men. IT PAYS to wear it.

PATENTED NOV. 29, '92.

It is the simplest, completest, most comfortable and most serviceable low-cost suspender made.

**Easy on Buttons.**

**Does not Slip Down on the Shoulders.**

**Has no Rubber in Web to Induce Perspiration**

**Has a great stretch in back Elastic Graduated Cord.**

**Holds Trousers up Firmly.**

It has just been put on the market and your dealer may not have it, but ask him. If he does not, send 25 cents in stamps for a sample pair. Say if you like back.

**Chester Suspender Co.,**  
60 Decatur Ave., Roxbury, Mass.

# Railway Watches

Hampden 17-jewel adjusted movement in Dueber gold filled open face case, warranted 20 years, \$20.90. Sent by express prepaid on receipt of amount or sent C. O. D. Examination allowed on receipt of 50 cents.

**Solid 14-Karat Gold Chain, \$10.00.**

Solid gold emblem pins and buttons of any order, 95 cents.

**CHICAGO WATCH CO., 281 Wabash Avenue, Chicago, Ill.**

**ELY'S CREAM BALM**—Cleanses the Nasal Passages, Allays Pain and Inflammation, Heals the Sores, Restores Taste and Smell, and Cures

# CATARRH

Gives Relief at once for Cold in Head.  
Apply into the Nostrils. — It is Quickly Absorbed.  
50c. Druggists or by mail. ELY BROS., 56 Warren St., N. Y.

## NATURE'S CURE FOR ASTHMA FREE ON TRIAL.

The WONDERFUL KOLA PLANT (HIMALYA), discovered by African Explorers on the Congo River, West Africa, is NATURE'S SURE CURE for ASTHMA. No Pay until Cured, and Positive Cures Guaranteed. Importing Office, No. 1164 Broadway, New York. For Book and Large FREE Trial Case, sent by Mail, address, Central Office KOLA Importing Co., No. 132 Vine Street, Cincinnati, Ohio.

See New York World and Philadelphia Press, May 18 and 19, 1890; also Christian Observer and Medical Journal, April 9, 1890. The Christian Evangelist, May 30, 1890, says editorially: "The Kola Plant is a gift direct of God, to sufferers in Asthma, and His blessing will rest upon Stanley and associates, explorers in the Dark Continent. It is an untailing cure for Asthma." Remember, No Pay Until Cured.

Established 1884.

## ARTIFICIAL LIMBS.

Patent Adjustable Slip Socket. Warranted Not to Chafe the Stump.  
Largest Firm in the United States.

Received Gold Medal and Diploma at the World's Fair.

The Inner Socket, seen outside the limb in cut, is made over a plaster cast of the stump, giving an exact fit, being held permanently upon the stump by elastic fastened to lace above, and in act of walking, moves up and down in the Outer Socket, bringing all the friction between the two sockets, instead of between the stump and the socket, as is the case in all single and wooden socket limbs. With our SLIP SOCKET the most tender and sensitive stump can be fitted and limb worn with perfect ease and comfort. Endorsed and purchased by U. S. Government. Send for our New Catalogue with Illustrations.

# HEROES OF PEACE!

## They are Greater Than The Heroes of War!

### AND DESERVE PRAISE.

**How the Devoted Lives of Railroad Engineers are Beset on Every Side and How to Escape Some of the Worst Dangers.**

It is a mistake to suppose that heroes only die upon the battlefield.

The daily battle of life sees more heroes, is full of more pathos, has things more terrible than the greatest struggle between the hosts of war. In the patient suffering, cheerful resignation, fidelity to duty, we behold heroes as lofty, as lovely and as worthy as any ever exhibited by the soldier.

We are here reminded that among the fighters in the battles of peace, the engineer stands forth prominently as the embodiment of the hero. We read, only the other day, of the engineer of a wrecked train mutilated and in great agony, and in intense darkness, crawling along the slippery track, lantern in hand, to warn an approaching train against danger. Such instances of devotion are innumerable, but the thoughtful recognize the spirit of heroism which is made manifest by the stories and understand how terrible is the mental and physical strain with which the railroad man has to deal.

Is it at all wonderful that with the constant jar, the irregular hours, irregular meals, the care, the responsibility, to say nothing of the labor itself, many men break down? Is it at all wonderful that they look for help which will relieve their nervous system of its cares, which will place life and health upon a sure foundation?

Hundreds of engineers and railroad men have found a remedy which is precisely suited to their needs, which will counteract the evil effects that the constant jarring and jolting has had upon their kidneys, and which will tend to keep them in health, in strength, and prolong their lives. A few of the names of those who have discovered this secret are given herewith:

Mr. A. G. Dingwall, of Salt Lake City, says: "I do not hesitate to recommend to locomotive engineers or others who may suffer from the effects of hard riding on any kind of rolling stock, Warner's Safe Cure. Have had trouble of this kind myself, and know that Warner's Safe Cure is most efficacious in its action on the kidneys. I know of other railroad men who have great faith in it for any of the inconveniences resulting from riding long distances on rough riding engines, and have always resorted to its use for cold in shoulders, back or side. I carry a bottle of it on my engine with me all the time, and my faith in its power to give relief has never yet been shaken. My advice to engineers who may occasionally be afflicted with any of the ills that arise from riding in hard riding engines is, try Warner's Safe Cure, and persevere with it, and the result will be most gratifying to you."

George F. Anderson, 624 Olive street, St. Louis, Mo., says: "I am a conductor on a Missouri street railway. Before coming to this work I was a brakeman on the Missouri Pacific R. R., and had to give up work because I had kidney trouble. I was so bad at times that I could not walk the length of the car without having to sit down and ease the pain in my back. I was obliged to give up my position and look for something that would not be so tiring. A couple of weeks after I accepted my present situation, I found that the jolting of the street cars was about as bad as the others, and my kidney trouble returned. An old conductor on the line told me to use Warner's Safe Cure. I stuck to the medicine faithfully and managed to hold my job. I have not had a day's sickness this winter."

A. Coleman, Buffalo, N. Y. (N. Y. C. & H. R. R. R. Engineer), declares: "Some six years ago I was afflicted with neuralgia and constant pains in my side and back. I commenced using Warner's Safe Cure. I had finished two bottles with marked improvement in my case, but kept at it until I had used over twenty bottles. I was so bad at one time that I could not bend my knee to pick up anything. I am sure that without the use of your Warner's Safe Cure I would be in my grave to-day. I can daily attend to my business on the road now, free from pain and a well man."

James M. Dunden, Fitchburg, Mass., asserts: "I have been an engineer on the Fitchburg Ry. for two years, was fireman on the same road for three years. About five years ago I was troubled with my kidneys and bladder so bad that it was almost impossible for me to urinate. I was so bad that I had to stop work a number of times. I saw Warner's Safe Cure advertised, got a bottle and commenced taking it. I continued its use and am now in perfect health."

George E. Thomas, C. E., 478 Calumet avenue, Chicago, Ill., states: "My business as civil engineer, in connection with railroad work, necessitates almost constant traveling. The result was disease of the kidneys, which gave me great trouble. The use of Warner's Safe Cure entirely cured me."

Mr. Horace A. Hamilton, of Worcester, Mass., says: "My life as a railroad engineer produced disordered liver and kidneys, constant pain in the back, etc. At times I could not void urine for forty-eight hours, and then high colored with brick dust and albuminous deposit. When all other medicines failed a few bottles of Warner's Safe Cure made me well so that now I am all right. My wife was afflicted with troubles peculiar to her sex, and Warner's Safe Cure acted like magic in restoring her to health and strength."

Such statements speak for themselves. They show that for railroad and traveling men there is nothing which so preserves the health and prolongs the life as Warner's Safe Cure. They show conclusively that what this great remedy has done for others it is able to do again, perhaps for you. Bear in mind, "there is danger in delay!"

HIGHEST AWARD AND MEDAL, WORLD'S COLUMBIAN EXPOSITION

## THE OLD RELIABLE STANDARD METAL POLISH FOR ENGINE WORK

Firemen Should be Careful and Avoid Imitations. **PRICES REDUCED FOR 1894.**

For this year prices to firemen (as agents) will be: One pound boxes, per dozen, \$2. Three pound pails, per doz \$5. Five pound pails, \$7.50 per dozen.

Cash must always come with orders to avoid delay.

Best Rock prices are here given to firemen as agents and they cannot and must not expect to buy from dealers at these prices. Samples sent free on application. Address,

**THE MATCHLESS METAL POLISH CO.,**

69 Frankfort St. New York.

88 Market St. Chicago

## BURNISHINE

**The Most Marvelous Metal Polish in the World.**

Will Produce a Most Brilliant Lustre to Brass, Copper, Zinc, Steel, Etc.

**Especially Adapted to Hot Metals.**

**SPECIAL PRICES TO FIREMEN:**

One pound boxes, \$2.00 per dozen; one-half pound, \$1.25 per dozen; five pound pails, \$7.50 per dozen.

Send cash with each order. Money will be refunded if Polish is not satisfactory.

On receipt of 10 cents in postage stamps, we will send 2 oz. box prepaid.

1 Broadway, New York. 308 Walnut St., Philadelphia  
 70 Kilby St., Boston. 36 Main St., Norfolk, Va.  
 1 Fenchurch Ave., London, England.

The **Pocahontas** Coal is acknowledged by all railroads that have used it to be the best American coal for Locomotive use. It generates steam with great rapidity, and at the same time holds the fire an unusually long time. The merits of the coal are shown by the unprecedented growth of the mines, which were not opened until 1883. Since that time the out-puts have increased over 1,200 per cent. beyond all precedent, amounting during 1892 to 3,000,000 tons. During the present year it will be at least 2,000,000 tons. We are therefore prepared to fill all orders with prompt dispatch.

## Galena Oil Works, Limited. FRANKLIN, PA.

### SAFETY, SPEED, ECONOMY

Are the results of the use of Galena Oils. Scientific and practical tests of the past twenty years have demonstrated the fact that Galena Oils are superior to any other oils in the market.

Galena Oils in winter stand a cold test of from ten to fifteen degrees below zero, and will not freeze in the coldest weather.

The superiority of Galena Oil is demonstrated by their exclusive use upon a large majority of the railways of this country. They are in use upon three continuous lines of railways from Boston and New York to the Pacific coast and on one to the City of Mexico, thus demonstrating their adaptability to all climates and all temperatures.

We also supply our patrons with Sibley's Perfection Valve Oil, which is in exclusive use upon a large majority of the leading railroads of the country.

APRIL, 1894.

## SOCIALISM SCIENTIFICALLY CONSIDERED.

BY JOSÉ GROS.

By the scientific we mean the natural, the precise, the correct. Science is specialized philosophy in concrete forms, applied philosophy, and hence the application of truth to all the forces and forms in nature. Science embraces two grand departments, the physical and the moral. Social science is therefore the culmination of all scientific or philosophic thought, the finality of all knowledge, the ultimatum of all truth in connection with all human activities on the face of the planet, since it must rest on moral perceptions of the highest order; because what are the mere physical or mechanical developments of the universe without intelligent beings able to appreciate them? And intelligent beings are social creatures. Society is indispensable to the full development of the individual endowed with intelligence. Without intercourse with each other men on earth would soon become very stupid. The greater the intelligence, as we know it here below, the greater the intercourse needed, or at least the more intimate the relations, and the more finished the social forms of the whole group.

We are then justified in asserting that if we need a science in physical conditions, we do need it more still in social relations. Also that such a science shall be far more important than any other. Hence it will need, not only the mere mechanical adjustments of any other, but also the moral and ethical adjustments indispensable to the individual and collective joys and duties of the intelligent beings in question.

Social science means then a science of moral and ethical developments conducive to the building up of universal manhood. If it is not that then it is no science at all.

Let us now see if the cardinal conceptions of Socialism and the details by which they are to be realized correspond to moral and

ethical principles. If they don't, Socialism shall stand self condemned as a practical combination, no matter how much credit we may be willing to give to many of our socialistic friends for good intentions and desires in the suppression of our present wrong social system.

The central thought of socialism seems to be as follows; to suppress rent, interest and profits. That would leave nothing but labor earnings, wages, natural wages if you like, in opposition to our past and present slavery or monopoly wages. No socialist can hate our present wage system more deeply than the writer and the men of his school of thought. We are down with all wages ruled or determined by King Monopoly. We are working for natural wages, determined by the whole product of labor. We are one with the socialists on that point anyhow. Only we go a little farther than socialists. We want wages determined also by laws of freedom, by principles of ethics, by each individual worker in fact, without the interference of any boss, private or public, self-elected or elected by the people.

Even if we should grant the possibility of some improvement in wages either directly or indirectly emanating or fixed up by public bosses, even then you have a man between each worker and his wages or earnings, a fallible being, a being subject to temptations because of greater power than many of his fellow beings. We have had experience enough on the subject to see that the law of freedom is apt to suffer from any such process.

Add to the above difficulty the one arising from that equalization of wages, one of the pet ideas of socialism. There we come across with a great injustice. Suppose that young men should leave school at eighteen to commence their industrial life. Why should such chaps earn, for at least five or six years, as much as men who have, in the same occupations, acquired the skill resulting from ten, twenty, thirty years experi-

ence in the same branch of industry, commerce, profession, etc.? We are not in favor of any great inequalities in labor earnings. Beyond a certain point such inequalities involve great injustice. Yet, shall we rush into the other extreme and evolve injustice in another form? Equity repudiates all extremes because they all represent unnatural deviations from grand positive facts embodying some central truth.

What we can call the socialistic wage system is then far from scientific, ethical or natural.

Let us now meditate on the suppression of rent, interest and profit, the grand desideratum of our socialistic friends.

We don't believe in monopolistic rents any more than in monopolistic interest or profits. They all can be suppressed through processes extremely simple, and without having to resort to the complex paraphernalia that Socialism involves. Our readers know our conceptions about rent, so we shall skip that and take the question of interest.

Suppose two workers, Frank and Paul, the former twenty years old, the latter forty years of age. If Frank, in two years' labor, has created \$1,000 surplus value, above his receipts from labor earnings or wages, Paul must have created, at least, say \$12,000 surplus value, because he has worked twenty-two years, and by that much has he advanced the general comfort of the community. Unless we increase our stock of wealth, year after year, we become poorer because of increased population and needs, etc., etc. Socialism would most unjustly equalize the two capitalistic workers in question in the matter of interest, besides that of wages. And please don't forget that while we can and should suppress capitalism, the loafing or scheming capitalist, and so interest in that direction, we neither can, in ethics, nor should, if we could, suppress by force the working capitalist or the interest due to him, interest or profit. Except in gambling operations profit is but a little higher interest than the usual, owing to some peculiar and passing coincidence that may to-day favor John and to-morrow Peter, etc., and such profit is not going to hurt anybody.

The socialistic equalization of interest to which we have referred, or its total suppression if you like, that would be the confiscation of the capital of the working capitalist. Is there any morality or equity in that?

And what about the annihilation of the loafing capitalist by paying him in full for the capital we would take from him? There we have an extremely funny conception. To take away my plough worth \$10 or my factory worth \$10,000,000 and pay me in full for that, is to give me the power to buy an-

other such factory or plough for me to use as I did with the former one. If you don't pay me in that way you don't pay me in full, and socialism could not do that any more than socialists could fly. And is there any equity in paying me for my capital in such a way that I could no longer use similar tools according to my own natural freedom in production and commerce? Of course not. And that is the way that socialism would pay me for my capital. Would that payment be anything but a clear farce?

When there has been any form of robbery anywhere, even if legalized by law, such robbery must be followed by restitution, never by compensation. Compensation means that I had no right to take away the wealth or opportunity in question. Compensation is an emphatic denial of free contract.

Absence of free contract, absence of trade and so the destruction of the legitimate earnings of trade, because of the labor it involves and the impulse it gives to production and the accommodations to all consumers—that aberration of socialism we have now no time to develop in all its great connections to industrial phenomena and must be dropped for a future article. Also the item that the socialistic idea of suppressing rent, the economic one, would evolve a host of inequalities in the social organism, inequalities of the worst type. And that in the midst of a regime which would attempt to establish equality in impossible forms, because mathematical, or in mechanical developments. There is nothing natural, nothing ethical, nothing scientific in such equalities. What we do find in nature and corresponds to ethical order is: "Equality of opportunities for all, healthy development blended with variety in gifts and forms of beauty." And that is the kind of variety we can and should evolve among men. Any other class or form would be useless, monotonous, insipid, unscientific, unjust!

We have now reached the point with which we propose to close this article. Is it right to give to a majority the power to decide everything, or pretty near, as socialism involves? Truth, honesty and moral law seem to be elements in life which not even a majority can change. The whole course of human history proves that majorities are often wrong. Whatever power we are forced to leave to a group of men, it must be left to a majority, because minority rule is despotism, and experience teaches that even the best men degenerate under the temptations of power. To be sure, even majority rule is apt to breed despotism, but there we have greater competition among rulers and that competition is a saving element, provided we limit the power of the majority to a few cardinal elements

with but one aim, viz.: That of enforcing equal rights, leaving all else free to individual initiative and to the natural, normal aspirations of the generic man.

The preceding sentence embraces the science of government because of its extreme simplicity. All science is essentially simple. Is there any simplicity in socialism? The majority with power to do pretty nearly everything! Is not that complication run crazy? And what about the moral order?

Stop only to consider the following thought: If it is wrong for Peter to control John's capital when the latter prefers to control it himself, is it right for 51 Peters to do the same with 49 Johns? Where is the science of any such process? Where is the ethics? And that is but a small portion of the questions our friends must satisfactorily answer before they prove that there is anything ethical or scientific in the socialistic programme.

## THE ECONOMIC BASIS OF SOCIALISM.

BY WILFRED P. BORLAND.

The divergencies of Karl Marx from the orthodox political economy begin at the point where he claims to have discovered not only a relative but an absolute measure of value, and it is upon the correctness of this measure of value that the integrity of the whole theory of modern scientific socialism depends; for Marx repudiates the doctrine of the old metaphysical communists, who would regulate both consumption and production after a fixed rule of their own, and would leave consumption free, as it is to-day, to regulate itself. Consumption would be limited by the labor of each individual, and the value of products would be determined strictly by the average duration of the labor-time expended in their production; and this proposition, that the labor-time expended in production is an absolute measure of the social, or exchange, value of products forms the economic basis of socialism, to show the fallacy of which is to overthrow the entire superstructure built upon it, and leave the Socialists without any guiding principle except that of authoritative communism, which they utterly reject.

Karl Marx states his proposition as follows: "The value of one commodity is to the value of any other as the labor-time necessary to the production of the one is to that necessary for the production of the other. As values, all commodities are only definite masses of congealed labor-time." From this standpoint he proceeds to a logical development of his surplus-value theory, which we will defer consideration of for the present, devoting present

space to an examination of the main thesis.

In the first place, it is necessary to understand something of the distinction between the *utility* of an object and its *value*, or, as it is generally expressed, the difference between "use-value" and "exchange-value." Karl Marx, agreeing with the orthodox economists, admits that all objects the fruit of human labor have two kinds of value; their value in use—utility—which they derive from inherent qualities and the services which can be derived from them, and their value in exchange, by virtue of which objects whose use is different—and for the very reason that their use is different—may enter into equivalence and be exchanged with each other. Here is a coat, a hat, a pair of shoes, a barrel of flour, and a quantity of meat; they are use-values, which are serviceable either as food or clothing, but one article cannot be substituted for the other. Thus, the coat could not be made to do service in the place of the shoes, nor the hat in the place of the flour or meat. Their utilities are different and one of these articles cannot be made to do the service of the other; consequently the use-value of these articles is different. One barrel of flour may have the same use-value as another; but it is impossible for a barrel of flour to have the same use-value as a coat. How is it with exchange-value? Say I have two coats, one of which is useless to me, while my neighbor has two barrels of flour and has use for but one of them. I lack an use-value—a barrel of flour; while my neighbor lacks another use-value—a coat. It is at this point that exchange takes place. I give up my extra coat to my neighbor who has an extra barrel of flour, and he gives me the flour in exchange for it. Both of us gain by the transaction, each having given up something actually useless to himself, and obtained something with which to satisfy an immediate want. Before the exchange took place I had no flour, and my neighbor was suffering for the want of a coat. After the exchange, however, each of us had found what was needed to protect himself from the inclemency of the weather or the pangs of hunger. Now, while the use-values of the flour and the coat are so different that it is utterly impossible to make the one answer the same purpose as the other, their exchange-values may be identical, that is to say, the flour and the coat may possess this quality of exchange-value in such equal quantities that, except for the slight labor of exchange, it would make no difference to the person wanting either the one or the other which one he possessed, as the one, through this social quality possessed alike by both, could be made to answer the same purpose as the other. Whether or not these two products, whose

use-value is so entirely different, *will* possess the quality of exchange-value in such nearly equal degree that the one may be made to exactly answer the purpose of the other is a question that will be determined by many contingent circumstances, but as long as they retain their quality of utility (the assumption always remaining that we are dealing with products of labor), as long as they are able to satisfy some sort of a human want, that is to say, as long as they remain *use-values*, there will always be some sort of a ratio of exchange between them; always some proportion in which the one may be made to serve the purpose of the other, and so of all products.

What is it that determines the relative proportion of exchange-value that each product shall bear, or, what establishes a certain ratio of exchange for commodities? Karl Marx is the only person who ever attempted to answer that question absolutely. The proposition is, as before stated, that it is the labor-time expended in the production of a commodity, that determines the magnitude of its value. The duration of the labor necessary for the production of an utility—and it must not be forgotten that value can only attach itself to utilities—determines its value. Labor-time is an absolute measure of value. That is the basic proposition of the Socialists, and their whole economic structure is built thereon. According to this theory, then, the flour and the coat would change places on exactly equal terms if the labor-time expended in their production was equal. That is to say, if it took ten hours of labor to produce a barrel of flour, and an equal number to produce a coat, the one would be worth the other, no more, no less; but if one of these objects required but five hours of labor for its production, while the other required ten, the one would bear but half as much value as the other. If the ten hours of labor-time was embodied in the coat, and the five hours in the barrel of flour, then the coat would be worth, and would exchange for, two barrels of flour; and it is upon such a basis as this that all values would be regulated and all distribution of products take place in the socialistic state. That is, providing the Socialists were able to harmonize their absolute theory with the *incontestable* facts that are all the time cropping up to give it the lie, which, not being the case at present, is no more likely to be so after socialism had become established. The first thing to be noted in connection with this theory of value is, that its author, at the very outset, admits a qualification into the theory for the purpose of meeting a very obvious objection, which he states himself. After having taken, in a general way, the time consumed in labor as the normal mea-

sure of value, he lays down the distinction between the labor socially necessary for the production of an object and the labor actually expended in its production:

The labor, however, that forms the substance of value, is the homogeneous human labor, expenditure of one uniform labor power. The total labor-power of society, which is embodied in the sum total of the values of all commodities produced by that society, counts here as one homogeneous mass of human labor-power, composed, though it be, of innumerable individual units. Each of these units is the same as any other, so far as it has the character of the average labor-power of society, and takes effect as such; that is, so far as it requires for producing a commodity no more time than is needed on an average, no more than is socially necessary. The labor-time socially necessary, is that required to produce an article under the normal conditions of production, and with the average degree of skill and intensity prevalent at the time. The introduction of power-looms in England probably reduced by one-half the labor required to weave a given quantity of yarn into cloth. The hand-loom weavers, as a matter of fact, continued to require the same time as before; but for all that, the product of one hour of their labor represented after the change only half an hour's social labor, and consequently fell to one-half its former value.

Let no one suppose, then, that the mere pointing out of the individual differences in capacity for labor would lead to a refutation of the socialistic theory of value. A noted French economist, M. Yves Gyot, in his very pretentious work, "Principles of Social Economy," puts himself in a very ludicrous position by criticising the socialistic theory from this erroneous standpoint. With a great flourish of rhetoric and much show of dialectic precision, he points out that if labor is the measure of value, the more one labors the more value he produces, and, if this were true, all that need be done would be to transport oneself from the sunny fields of France to the gloomy and ice-bound shores of Iceland to make oneself immensely wealthy, seeing that the labor required to produce a given article would be so immensely greater in Iceland than in France. But such criticism as this is to be avoided, in the interest of scientific truth, and when met with by those who are endeavoring to arrive at truth in social matters should be cast aside as either ignorant or thoroughly disingenuous. However, with the qualification admitted, the theory is thoroughly unsound, and not to be relied on as a means of arriving at an equitable distribution of wealth, a circumstance which Socialists are, in spite of themselves, forced to admit when they enter into a development of their organic programme. The truth is, that there are many things of which we have actual and continuous experience that are not capable of precise definition, and value is one of them. It, of course, happens that when an object of considerable utility is rare upon the market, and for that reason brings high prices, the productive agents of society are attracted toward those industries concerned in its production, be-

cause of the more than average rewards offered. There is no doubt but this free movement toward a particular form of production brings about a glut in the product, the price of which then lowers and enters into equilibrium with the prices of other products. It follows, as a result, that at the end of a certain time, and with everything the scarcity of which is not a natural necessity, the value of the various objects is brought back into something like proportion with the labor expended in their production. But this is only a consequence. The labor-time expended in production has become proportional to the value, but does not constitute the value. The value remains independent of the labor, and has really no other measure than the usefulness of the article and the greater or lesser demand that is made for it. Let us take a natural object, say, a fruit: We may suppose that it costs nothing to take possession of it, that it presents itself at haphazard to the passer by, who has only to stretch forth his hand and take it without labor. From a socialistic point of view—and Marx is positive on this point—("A use-value, or useful article, has value only because human labor in the abstract has been embodied or materialized in it." "A thing can be a use-value without having value. This is the case whenever its utility to man is not due to labor. Such are air, virgin soil, natural meadows, etc.") This object has no value. Yet, who does not see that the object *will* have a value? and that such value will be dependent on its scarcity, combined with its utility, and on the desire of a large number of persons to possess, or enjoy, its utility. And who can rightly contend that the value of a diamond bears any relation to the social-labor time embodied in it? Suppose there is but one diamond on earth, and that its possessor has secured it without effort, has merely stretched forth his hand and picked it up. There is no labor-time embodied in the diamond, will the Socialists say that in receiving the price of the diamond its possessor is guilty of robbery? They will if they hold to their theory of value; but how, then, shall it be determined to whom the diamond shall belong? If a great many persons desire to possess it there must certainly be found some way to determine to whom it shall go. This determination cannot be made with any reference to the labor-time necessary to produce a diamond, because this diamond represents no expenditure of labor whatever, and no man is able to estimate the amount of labor necessary to produce its counterpart. The means of determining to whom the diamond shall go will be found in the sum of sacrifices which persons will consent to make in exchange for it, the price that persons will

consent to pay in order to procure it for themselves. This price will constitute the value of the gem, and it will be wholly independent of any labor, either social or actual, that may be embodied therein, because our supposition eliminates labor. It will be dependent wholly on the utility of the gem to satisfy a human want, combined with the desire of a large number of persons to possess it. It is entirely opposed to science to say that an object is without value if it has cost no labor to produce it. This holds good if the object is sufficiently general to be at the disposal of all, so that all may consume as much as required without depriving anybody else—we note this with respect to all natural forces; but as soon as the object becomes so scarce as to be no longer at the disposal of all in unlimited quantities, as soon as two or more persons evince a desire to make use of it at the same time, it assumes a value, and that value will be proportioned to its scarcity and utility. The first place in the determination of value must be given to utility; labor enters into the matter only in a subsidiary manner, only in so far as the object to which the value attaches may be reproduced by labor, and, even then, when its utility is destroyed, when it is no longer a use-value, all the labor in the universe might be expended upon it without creating a pin's worth of value. Use-value carries with it the demand for its enjoyment, and creates exchange value. Thus, water, which has no value on the banks of the Mississippi, would become of immense value in certain regions of our western country, where it runs short. There, the traveler might give up to the native "greaser," who knew of the existence of a well, even though it were a natural one, all of his worldly goods for merely guiding him to the spot where he might enjoy the use-value of the water which, in other circumstances, he would be free to enjoy without money or without price. The first question that presents itself to the mind when we contemplate a desirable object relates to its utility—what useful purpose will it serve? If we conceive the object to be of great utility, if to be deprived of it would appear to us as a great hardship, then it has, in our eyes, great value; and, under certain exceptional circumstances, the price we would be willing to pay rather than go without it would be enormous. But with this—what DeQuincy calls "affirmative value"—conception of value, under normal conditions we have nothing to do. It remains dormant, to be called into activity only by unusual and exceptional circumstances, but it is none the less value when it appears; utility is the sole conception which determines its magnitude, and labor enters not into the matter, even as a sec-

ondary consideration. Now, what these exceptional circumstances show us is, not that we have a measure of value in utility, but that utility is the determining cause of the sufficient reason for the existence of value. By a negative process of reasoning we get the same result.

The Raub locomotive is a machine that was heralded a short time ago as one that would surely revolutionize the present practice in locomotive building and convert the machines now in use into back numbers. But it turned out that the inventor of this locomotive did not exactly understand the requirements of the situation, and the two locomotives he caused to be built are now rusting to pieces under a shed down East somewhere, utterly useless and without value for the purpose for which they were intended. The persons who built these machines certainly accomplished a very troublesome labor, but they produced not an atom of value, because the object of their labor was destitute of utility. How, then, is it possible to consider labor as the chief factor in the determination of the magnitude of value? And between these two extremes, between the object which is entirely without utility, though it may be the product of labor, and the object the utility of which is so great that it is impossible for man to deprive himself of it, there exists an infinite series of gradations, and, for that reason, it is utterly impossible to consider all kinds of labor as being equally productive, though they are subject to the sole condition of not being entirely useless. And this is a truth that crops up as a social fact. Not the individual alone, but society as a whole takes cognizance of it. Between the laborer, who uselessly occupies himself with making Raub locomotives, and the laborer who produces something of prime utility to man, there exists a series of workers whose products are of various utility, and, therefore, involving values equally various. And this fact is what plays hob with the socialistic scheme of distribution when they attempt to bring it into harmony with their theory of value. The logic of facts compels the Socialists to recognize the existence of a composite labor which is nothing but a multiple of common labor. They admit that by reason of the fact that certain kinds of labor will be more repugnant than others, they will command a price above the average; and, not having any precise measure of labor, after having taken labor as a measure of value, they are compelled to have recourse to that iniquitous law of supply and demand to determine what that price shall be. This is nothing more than to measure labor by its utility, and, after having made of labor the measure for the value of products, it simply amounts to taking utility as the

measure of value. They launch the bitterest invectives against the bogey, competition, but they are compelled to make use of it in order to determine the value of labor. They would change nothing but words. We may also note this: In attempting to define value—which is not capable of definition—the orthodox economists have been driven to say that “the value of an object is whatever the consumer is willing to pay for it.” Marx contends, and rightly so, that this is a mere tautology, a vicious circle, as if one should say “the value of a thing is what a thing is worth.” He becomes quite sarcastic on this point. But, in falling back on utility as a measure of labor after having taken labor as a measure of value, the Socialists are in a circle fully as vicious as that of the economists when they attempt to define value. After having said that the value of an object is represented by the number of hours work required to produce it, Marx and his disciples are driven, in the attempt to determine what this number is, to say: “The value of labor is what labor is worth.” There have been many attempts on the part of the leaders in the socialistic movement to bring their theory of value into harmony with the facts that oppose it, but, so far as I am aware, these attempts have not yet met with success. It seems to me that the inaccuracy of the theory results from a trope, the unconscious substitution of the term “value” for the term “wealth.” To say that “labor creates all wealth” is but to enunciate a truth that cannot be successfully disputed, but it seems to me that we are dealing with quite another proposition when we say that “labor creates all value.” However, when it is attempted to apply the theory to the economic category of distribution, it produces highly incongruous results, some of which may be presented at another time.

My friend, Mr. Stuart, does me too much honor to pay any attention to my very incomplete remarks on the subject that is “not worth discussing seriously,” especially since he seems to have doubts about my sincerity. Mr. Stuart’s advice to those firemen who never tear the cover from their MAGAZINE is good. I fully indorse it, and I am led to wonder if Mr. Stuart is not in a pretty good position to take some of his advice to himself. Who is in the worse position, the person who reads not at all or the person who reads in so superficial a manner as to not know what he has read? I candidly assure Mr. Stuart, that so far as I can remember, I have never quoted a line, or a word, from Bax’s “Religion of Socialism” in my life. And there is “no religion of socialism.” Well, perhaps not. I will not dispute the assertion; but I want

to call Mr. Stuart's attention to the fact that the word "religion" is a very comprehensive word. The Century Dictionary defines religion as "sense of duty; conscientiousness; sense of obligation." If socialism has none of this, why there is no more to be said, and, of course, we don't want it. However, one of the very ablest of the French commentators on socialism has this to say: "One of the points on which collectivist-socialism is essentially wrong, though the fact is ignored by its devotee—and this, too, in spite of its constant affirmation of materialism—is that it acts practically as a religion." As far as Mr. Bax is concerned, whatever Mr. Stuart may affirm as to the classicism of his various works, he stands well with the whole European school of scientific Socialists, and, when one denies the authority of his words, which I have quoted, he is simply denying the authority of Karl Marx himself. For Mr. Bax has simply reproduced the idea of Marx as expressed in "Das Kapital." His language is original, but his thought is Marx's. Perhaps Mr. Stuart has not fully grasped that idea of Marx's that the religious system of a people always answers to a definite economic category, and that Christianity is the form of religion that answers to the needs of society based on the production of commodities—capitalism. Perhaps he does not grasp the idea that the religious and economic systems are so interwoven, so interdependent, that they must rise or fall together; that one cannot survive upon the ruins of the others? Hence his charge of inconsistency against me for connecting the two ideas in the way I did. I can assure Mr. Stuart that, were I dealing with any other theory than socialism, his charge of inconsistency would be well founded; but socialism is no ordinary theory; you can't have it the way you want it, but must take it the way it is, and it does seem funny for a Socialist to charge inconsistency against an opponent who merely states the theory as it is. Now, to show that the quotation I made was merely Marx's thought clothed in Bax's language, I quote from Marx as follows:

The religious world is but a reflex of the real world. And for a society based upon the production of commodities, into which the producers in general enter in social relations with one another by treating their products as commodities and values, whereby they reduce their individual private labor to the standard of homogeneous human labor—for such a society, Christianity with its *cultus* of abstract man, more especially in its bourgeois developments, Protestantism, deism, etc., is the most fitting form of religion. In the ancient Asiatic and other ancient modes of production, we find that the conversion of products into commodities, and therefore the conversion of men into producers of commodities, holds a subordinate place, which, however, increases in importance as the primitive communities approach nearer and nearer to their dissolution. Trading nations, properly so called, exist in the ancient world only in its interstices, like the gods of Epicurus, in the Internuntia, or like Jews in the pores of Polish

society. These ancient social organisms of production are, as compared with bourgeois society, extremely simple and transparent. But they are founded either on the immature development of man individually, who has not yet severed the umbilical cord that unites him with his fellow men in a primitive tribal community, or upon direct relations of subjection. They can arise and exist only when the development of the productive power of labor has not risen beyond a low stage, and when, therefore, the social relations within the sphere of material life between man and man, and between man and nature, are correspondingly narrow. This narrowness is reflected in the ancient worship of nature, and in the other elements of the popular religions. The religious reflex of the real world can, in any case, only then finally vanish when the practical relations of every-day life offer to man none but perfectly intelligible and reasonable relations with regard to his fellow man and to nature.

So, if Bax is not good authority neither is Marx. As for Mr. Bliss, he may be an authority on Christian socialism, but Mr. Stuart surely knows that the Christian Socialists are not "orthodox." They are schismatics, like the nationalists, and they have no right to present their views as the real simon-pure socialism. Mr. Bliss is no more an authority on socialism than is Edward Bellamy, and when he says that he is a Christian because he is "a believer in Karl Marx" he is simply flying in the face of Marx. The position of Mr. Bliss in the socialistic movement is well known. He is even "damned with faint praise" by the editor of the *Twentieth Century* for continuing to work such a "barren field" as he is in. But, understand me, I do not at all believe in the doctrine of the orthodox Socialists; I only state it as I apprehend it. In my view, the Christian Socialists occupy much the more tenable position on the religious question, but it must be remembered that when we are speaking of "Socialists" we don't mean either "Christian Socialists" or "Nationalists," and I can find nothing in Mr. Stuart's criticism calculated to change my view that those frankly materialistic ones are the only logical Socialists. And it must be understood that society is not likely to accommodate itself wholly to the views of either the Blissers or the Baxes whom may constitute but a small part of it. I am persuaded that there would always be some persons who would fail to see things in the same light as these gentlemen saw them, and there is no evidence to show that they would apprehend matters any differently than they do today. And we are not so slow about engaging in religious persecution whenever it suits our purpose, as Mr. Stuart would have his readers believe. Our treatment of the Mormons is a case in point, and, by the way, this is a case that goes far to support the contention of the Socialists. Their religion was incompatible with the prevailing economic system. As long as they held to the practices of Mormonism they were not "good citizens." That is to say, they were not good commodity producers, there-

fore, they were systematically persecuted and rooted out, even by a government that guarantees religious liberty to every person beneath its flag. The Perfectionists furnish another example. Ostensibly Christians, they were schismatic to an extent that put them out of harmony with the prevailing economic system, they were not good commodity producers, and they were rigorously persecuted until they were brought back into the fold of orthodox capitalism. And Mr. Stuart has but to read the article by Mr. Gray which appears in the *March Magazine*, to satisfy himself that the masses are a long ways from the point where they are competent to subordinate their religious prejudices to the requirements of their material welfare. He has but to take note of a movement even now immensely active in this country to see that the people are by no means weaned of their love for "false gods," and that this is the material out of which we must build the co-operative commonwealth. Perhaps Mr. Stuart has overestimated "the intelligence of his fellow workmen. Who knows?" I assure Mr. Stuart that I have no desire to apply the terrible weapon of "*odium theologium* to socialism." I am merely trying to interpret facts; and socialism must submit to the logic of facts as well as any other theory. The Australians, who have started a socialistic community in Paraguay, refuse to accept persons whose morality is doubtful. A socialistic colony is now being started at Greensburg, Indiana, and its projector advertises that "none but persons of good moral character will be admitted." Now, it seems to me, that that states the whole case for socialism. Its economic principle is not strong enough to hold men together and prevent injustice, so it can only work with those whose moral sense is in the ascendent. But when our moral natures are properly developed that is sufficient by itself, and socialism has no *raison d'être*. Mr. Stuart says: "The majority, providing it is strong enough to enforce its action, can now absolutely prescribe what the people shall eat, drink and wear, and what religion shall prevail." That is a remarkable statement, to say the least, and I assure Mr. Stuart that he is far from right. The power of the majority in this country is now strictly limited by our fundamental law, and if it attempts to do any of the things which Mr. Stuart says it can do, it is exceeding its power under the law. The majority has the power to change that law any time it sees fit; it has the power to establish a new limit to its power or to delegate to itself unlimited power, but it must be remembered that when that occurs the majority has assumed powers which it has not now, and it is the *now* we are concerned with when making com-

parisons with socialism. What the majority *may* do is a contingency; what it *can* do under the existing status is a *fact*, and that is a queer mode of reasoning, indeed, which consists in reckoning on a contingency as if it were a fact. Whatever may be the intention of the Social Democrats with respect to the extension of the power of the majority, the simple fact that private capital will be entirely eliminated would operate to give the majority in the socialistic state a power which it is impossible for it to secure while private capital is allowed to exist.

## RAILROAD MEN AND AMERICAN CITIZENS.

BY GEORGE C. WARD.

Methinks I hear some railroad man exclaim in his wrath, "Listen to that ignorant, intimating that railroad men are not American citizens!" I must hasten to explain. The truth intended to be emphasized in the above caption was that railroad men were not only railroad men, but also American citizens. And now I can in fancy see my critic, as he changes his wrathful glare for a contemptuous grin, and says: "Just as if all railroad men did not know that!" But excuse me, my brother toiler, both the speech and actions of some railroad men would seem to indicate that they had allowed the greater fact of American citizenship to be obscured and hidden by the less important accident of railroad employment.

It is my intention, so far as is possible within the limits of a brief article, to treat of the dual relationship sustained by the American citizen who is also a railroad employe. I also wish to point out wherein railroad employes are prone to merge their citizenship, with its duties, privileges and responsibilities, into their particular and distinctive avocation, with its interests and aspirations.

It is estimated that at this time there are one million men in the employment of the railroad corporations of the United States. Following the common rule of estimating population upon the basis of five to each male voter, these million railroad employes represent five million souls, or one-thirteenth of the total population of the nation. Or, putting it in another form, out of every thirteen men of legal voting age, one is a railroad employe; while of all the women and children one meets, every thirteenth woman is a railroad man's wife or sweetheart, and of every thirty-nine children three claim as father some railroad employe.

Upon these arithmetical facts we may base a proposition which should prove to be as absolutely correct as a problem in mathematics. I would state it thus: While it

is problematical to what extent railroad employees may be able to share by permission, willingly, or by aggressive and united effort, in the good fortune and prosperity of railroad corporations, it is certain that they and theirs will have to bear a one-thirteenth part of any ills inflicted or burdens imposed by railroad corporations upon the people at large or as a whole. May I not go further than this? May I not affirm that, while even the right to labor for a bare subsistence depends upon the whim and caprice of the heartless representative of a soulless corporation, and any concessions, advances or advantages must be won by railroad employees as such, as the result of aggressive warfare and organized effort, yet as an American citizen the railroad employee must meekly and uncomplainingly bear his portion of the burdens contingent upon overcapitalization and the imperative necessity of earning interest and dividends upon an amount equal to double the cost of the railroad system? And yet in the face of these facts we hear of organizations of railroad employees, having as their avowed object such political action as will benefit and advance "railroad interests," such interests being defined and differentiated by the railroad corporations themselves. The organization of these clubs and the personal status not only of the members, but of the organizers thereof, would seem to clearly indicate two facts: First, That corporate "interests" may be advanced or retarded by legislation. Second, That those becoming members of such organizations subordinate their real interests as American citizens to their supposed interests as railroad employees.

Railroad presidents, general managers and boards of directors are not statesmen, and, as a rule, know very little about political economy. The extent of their aspirations and the ultimate of their aims is to increase their gross earnings and reduce their operating expenses so as to realize as large net earnings as possible. Their knowledge of the best means to compass these ends is limited by the adage "Charge all the traffic will bear," and the rule "Buy labor in the cheapest market, at as low rates as possible." Their sphere of politics is bounded by the desire to wipe off the statute books all legislation that stands in their way, and prevent any future adverse legislative action. Their devious modes and ways of attaining these purposes are too generally known to require elaboration, and it will suffice to say that no government agencies from township trustee to the highest legislative and judicial functionaries are exempt from their blandishments and peculiar modes of persuasion.

Now if there were in operation a sliding scale of wages for railroad employees which

worked not at one end only, but at both ends; rising as the gross earnings of railroads increased, and falling as they decreased, employees might, with much more reason than now, assume that their interests were identical with the interests of railroad corporations. But even if such were the case any advantages gained by reason of a rise in wages would be more than offset by the weight of one-thirteenth of the burden laid upon the people in the shape of increased rates of railroad transportation, which burden, being in the nature of indirect taxation, is borne by the consumers of the nation and in a much greater proportion to ability by the poor than by the rich, so that at last it would simply be a case of "robbing Peter to pay Paul."

It is hardly necessary to remind railroad employees that the machine at present in use works perfectly at one end only, and that while reductions in wages are ever cheerfully and willingly accorded, it is only as a result of a stubborn and determined onslaught on the part of organized labor that wages are ever raised.

I have stated that railroad presidents, general managers, &c., were not statesmen, or versed in the science of political economy. I will now further assert that (leaving governmental ownership of railroads out of the question) if they were ripe statesmen and students of social science they would lend their weight and influence in the direction of inducing all railroad employees to earnestly support the principles of labor's advocate, the People's party.

Let us see. Populists favor such measures as, if enacted into law, would reduce the current, prevalent legal rate of interest to two per cent. In the matter of refunding their bonded indebtedness, such reduction in interest rates would save the railroad corporations more than one hundred million dollars a year. The People's party demands such increase in the volume of money in circulation as will double the prices of labor, farm products and all commodities. Under such conditions as these "the traffic will bear" double the present transportation charges, as expressed in terms of money, or dollars, and yet bear no heavier upon the shipping and consuming public than the present rates. But the interest upon railroad bonds is paid in dollars, or money, and cannot be doubled in rate so as to require twice the number of dollars to pay it. One of the results of the enactment into law of Populist financial demands would be that the ability of railroad corporations to meet their interest payments would be doubled, while the people would both more willingly and more easily pay transportation rates expressed in money terms twice as large as at present. It is passing strange that the steady and continuous, though necessary,

reduction in freight rates and the rapid growth in the number of railroad receiverships, has not taught railroad magnates that the limitations in money terms, or dollars of "all the traffic will bear," depends very much upon the volume of money in circulation.

And on general principles railroad corporations should support the Labor-Populist demands. Railroads make their money by hauling the farmers' products to the cities, and the manufactured products of the cities to the farms, while their time of greatest prosperity intervenes when their cars are loaded both ways. But the ability of the farmers to buy manufactured goods is measured by the demand on the part of city laborers for their products and their ability to pay good prices therefor. Railroad corporations should favor high wages, the eight hour day and the abolition of child labor and everything else that will enhance the prosperity of civil labor and increase its purchasing ability. Upon the same principle they should advocate the reduction of interest from the present high rates to two per cent., because every dollar thus saved to either civic or rural labor enhances its ability to buy farm products and manufactured goods, and would result in vastly increasing railroad traffic and very largely augmenting their gross earnings without increasing their operating expenses. The reduction of interest to two per cent. would save to farmers and city labor one hundred and sixty millions of dollars in interest upon farm and home mortgages. So, then, the educated railroad employe will best serve the interests of the ignorant corporation he labors for by voting exactly opposite to the manner he is requested to vote by his masters, who know not what is best for them.

But to return to the railroad employe and his interests as an American citizen. Is interest a curse and a burden? One-thirteenth of its weight of bitterness must be borne by railroad employes. For the year 1894 that one-thirteenth part will amount to \$150,000,000, or \$150 per capita to each railroad employe. I know that many will aver that they pay no interest, but I know better. It is almost certain that out of every thirteen mortgaged homes one belongs to a railroad man. Every railroad man pays his proportion of the interest upon the five billions of railroad indebtedness. Interest enters into the price of everything we eat, wear, use and enjoy. It forms a component part of the price of everything offered for sale or hire. It is omnipresent, and none can escape its withering curse or hide from its extortion. As American citizens railroad employes are as vitally interested in the abolition of interest as is any other class of citizens.

Take the factor rent and the present system of land tenure. Look at the evils of land monopoly and the billions of wealth absorbed by the few as a result of speculation in land. Even railroad men cannot fly or swim. They must live and move and have their being upon land. They pay their pro rata of the tribute paid by the people to the land owners for the privilege of living upon the earth. In 1894 such pro rata probably amounts to \$100,000,000 (including increase in "land values.") This is \$100 per capita. Railroad men should be as anxious to see land made free to all as should any other distinctive class. The single tax and the graduated cumulative land tax should be intelligently studied and discussed by them, and their votes should be cast for "Mollie and the babies." And while casting their ballots the future lot of the babies and the babies' babies, if present conditions and systems continue and remain in force, should furnish a strong incentive for righteous exercise of the right of suffrage.

The condition of labor and its future prospects under the present planless system of industrial anarchy should be prayerfully considered by railroad men, even by such of them as vary the phraseology of the Pharisees' prayer, by saying "I thank thee, Lord, that I am not a common laborer, or a factory hand, or even a 'lower grade' of railroad employe."

When the baby boy grows up he may clean cess pools or pick rags for a living. I have known well educated business mens' boys do worse. It has been said that if you wish to shoot a college graduate, you should aim at a street car driver. Railroadng is not an hereditary disease, and a man should vote as though he was not sure that his boy would be a railroad employe. Consider, then, the prospects of the laboring masses, with the sources and tools of production and the mechanism and means of exchange all in the hands of the chosen few. Think of the "army of the unemployed" constantly being augmented in numbers by the displacement of labor by machinery. Consider the selfish, brutish instincts now being developed in man by the cut-throat, competitive system under which we live. Think of all these and many more momentous, startling facts and truths, and then crawl out of your railroad employes' straight jacket and stand up as an American citizen and a member of the brotherhood of man. Look up to your head, even Christ, and try to be a useful member of His body. Be a man and not a machine. "He who loses himself for My sake shall find it, but he who seeks to save his life shall lose it."

Brother toilers, I have written you a long letter, and must say good bye. In conclusion let me exhort you to prepare for the

battle of Armageddon, which is swiftly approaching. Enroll yourselves under the banner of the chevalier *sans peur et sans reproche*. Eugene V. Debs, and subscribe yourself a member of the American Railway Union, for in that order will be found the compact and invulnerable center of the industrial army now marshaling to do battle with the hosts of capitalism and monopoly. Cloee up the ranks!

### "TRIX."

BY STANLEY LEWIS.

They called her "Trix." That was the only name by which she was known to the little community of rough miners and railroad men; but old Joe Evans, the round-house foreman, would occasionally tell his assembled mates around the "office" stove how big, honest Jack Moreland fairly wept with joy the day they brought him news that a little daughter had come to brighten his home. At such times a mist would creep into the eyes of his listeners; for all remembered well when tender hands had borne home the mangled body of poor Jack, after his engine had gone through a bridge.

The shock of the sudden bereavement was too much for his frail young wife, who did not long survive him, and the dark-eyed baby girl was adopted by kind-hearted Mrs. O'Reilly, who kept the depot lunch-room.

From the time she was able to toddle about the platform she loved to look at and admire the big engines, with their shining brasses and steel-work, and before she had attained the age of six she was the pet and pride of the entire line. Seldom did a rail-roader stop at O'Reilly's without a package of candy or some similar dainty for "Jack's kid," and she was never so happy as when an engineer would take her on his locomotive for a ride. Her good-natured guardian would exclaim, "Shure, them railroad byes will be the death av the child yet!" and object in vain; for Trix had a will of her own, and all her spare time was spent about the "round-house" and depot. The engines possessed for her a peculiar fascination (inherited, perhaps, from her father) and at sixteen, she had developed into a slender, dark-haired slip of a girl, full of mirth and mischief, but underlying all a vein of sound common sense, and that inherent passionate love for locomotives that she never could outgrow. She knew by heart every rod and piece of metal on an engine; and at the age when most girls are reading French novels and chewing gum, she still clung to the favorite work of her childhood days—a battered and dog-eared copy of "Forney's Catechism."

She eschewed companionship almost entirely—with the exception of a poor Irish

lad some years her junior, who was popularly supposed to be "not quite right" and who was accordingly known as "Crazy Bill." Trix had once done some trifling favor for the poor boy, and since that time he had followed her about like a faithful dog. His honest devotion was touching to those who saw it, and to none more so than to Trix herself, so she fed him from her guardian's lunch counter, and the bluff, hardy railroaders accommodated him with a bunk in a warm corner of the round-house office.

One day, however, a marked change came over Trix's life. A new engineer came upon the line from the East, one end of his division being at Drayton, where Mrs. O'Reilly's lunch-room was situated. She was standing by the telegraph office as he went by one evening, and he remarked to himself that he had never seen so pretty a picture as she presented, framed in the dark doorway with the setting sun throwing a halo about her brown curls. Noticing his ardent glance she blushed and turned away, but the impression she had made was not easily erased from his heart. Mrs. O'Reilly, good-naturedly, introduced them the next day, and Trix soon found herself watching for tall, handsome Dick Mason, as his engine went through the "yard." The acquaintance ripened into mutual love, and when Dick explained that they were made for each other, and showed her the advantage of being an engineer's wife and a member of the "Auxiliary," she did not say him "nay." Old Ben, Dick's fireman, who had known Trix from a baby, observed Mason's beaming face next day, but shrewdly divining the cause, said nothing.

One evening in early fall, Trix was perched up in the cab of an engine in the round-house, as was her custom, absorbed in a copy of the "Brotherhood Magazine." The building was deserted, save for the two "wipers" at the opposite end, who looked weird and uncanny as they moved about, the light of their torches casting strange lights and shadows upon their grimy faces and the shining sides of the great engines they were wiping.

Suddenly she heard voices in the gloomy corner on the other side of the "pit" which she recognized as those of two men who had recently been discharged from the road. "Look here, Mike," were the first words she could hear. "It's as easy as falling off a log. The engine goes down that there bank, an' the express car is next to it. There's \$20,000 goin' through to-night, 'cause to-morrow is pay-day. We can bust in the car door if the wreck don't do it for us, grab all we can get, an' skip the country. Then yer can settle that grudge o' yours agin that engineer, an' have enough money to live on the rest of yer life."

"Yes, curse him!" growled the other. "I hate Dick Mason, with his d—n stuck-up ways. He reported me an' got me 'fired' just because I broke a seal an' swiped some stuff out o' a box car. I'd give anything for a chance to kill him!" and the speaker ground his teeth savagely.

"Well, here's yer chance to get square, then," replied the other. "That wooden-headed section foreman forgot to lock up his hand-car to-night, an' we can get down to Floodwood Cut in less 'n no time. Then we can just drop a rock on the track, an' as the express is behind time now, she'll be comin' around that there curve at a pretty good clip, an' the next thing o' the program 'l be a mess of the company's kindlin' wood down in the ravine, and some good money in our pockets."

"Right, yer are, Jim!" was the savage reply. "You get out the car an' I'll shin up a pole an' cut the wires. It won't take us no time ter git down thar, for it's down grade all the way."

The two speakers hurriedly left the round-house, and soon Trix heard the sound of rapidly-rolling wheels as the hand-car flew by on the way to Floodwood Cut—the most dangerous point on the entire line. Trix had listened with bated breath to the fiendish plot, and every word seemed graven on her brain in letters of living fire. For a moment she was overcome by the horror of the situation—the next instant she was once more her strong and courageous self. She must save Dick's life at all hazards, but there were no trains either way till long after the express was due, and the miscreants had already cut the wires and rendered them useless. Suddenly an idea flashed upon her—an idea which if put in practice might save her lover's life. Directly across the round-house stood "No. 46," a big Baldwin, with steam all up. In a moment she was out of the round-house and down the track to the switch box, where the old watchman was nodding in his chair. Seizing a switch key from a nail she unlocked and threw the "house switch," replaced the key and ran back to the engine.

No one saw the slender form swing itself lightly into the cab of the "46." The wipers on the other side of the house supposed that the engine had been sent for, and that a man, instead of a girl, was at the throttle.

An "exhaust" that seemed to raise the roof of the "shed," a cloud of smoke and steam, and the engine, emerging into the open air, moved slowly down the siding. Hastily scribbling a few words upon a fly-leaf torn from her magazine, she wrapped it about a lump of coal and tossed it to Mrs. O'Reilly, who stood in the depot door petrified with astonishment.

A glance across the cab by the dim light

of the gauge lamp showed upon the opposite seat box the sleeping form of her idiot protegee, "Crazy Bill." In response to a vigorous shake he slid to the "deck" and was soon heaving coal into the roaring furnace, while brave little Trix, seating herself on the locker, "hooked up" the reverse lever a few notches, and then commenced the wild ride to Floodwood Cut, twenty miles away.

A clinkety-clash and a bang, and they were over the switches, their myriad lights flashing by like a series of shooting stars. As they sped on, Trix reflected that the villains had by this time nearly reached their destination. The only safe course, then, was to pass the point of danger before they had carried out their dastardly intentions, and to flag the express in time.

On, on, faster and faster, flew the locomotive like a thing of life. Higher and higher crept the little indicating needle on the steam gauge as Bill piled on the coal. Trix sat like a statue on the box, unmindful of the jar and pounding of the mighty engine, her hand resting on the polished throttle lever, occasionally testing the gauge cocks or putting on the "Monitor." It was the wildest ride on record—a race of love against hate.

\* \* \* \* \*

"Are we making up any time, Mason?" inquired the superintendent, as he stood in the cab behind Dick, peering out into the darkness. The big "McQueen" was toiling up the grade with her string of heavily-loaded coaches. Dick turned for a moment, his brown, honest face lit up momentarily by the glare from the fire door.

"I think so, Mr. Badger," he replied, respectfully. "That extra express car with the big safe in it is a little extra load, but we'll make up all our lost time between Floodwood and Drayton. A little more coal, Ben"—thus to the old fireman, who stood leaning on his "scoop," his brow bespangled with drops of perspiration.

Dick "let her out" another notch, and the big stack shot up another pyrotechnical array of sparks into the summer night. Above, the moon shone tranquilly down upon the express with its precious load, slowly laboring up the incline—and a few short miles away its rays lit up a brace of desperadoes, crowbars in hand, climbing the face of the precipice which overhung the track, their hand-car, left to itself, rolling down the track with increasing momentum toward the approaching train.

And close at hand a mighty engine was thundering over the rails, its great headlight flaring, its massive drivers revolving at lightning speed, its bell clanging warning, and the slight girlish form leaning from the window.

Trix had her eyes fixed upon the halo of light from the headlight as "46" swung around the curve at the upper entrance to the cut, and in a moment had descried the villains, high up the steep bank, toiling with desperate energy to hurl a mighty rock down upon the track. They looked up—saw the engine coming, and with a shout of mingled rage and defiance, redoubled their efforts.

Already the boulder was beginning to move—another instant it was rolling down the steep declivity, striking fire at every bound. With a murmured prayer to God for safety, Trix pulled the throttle open to its fullest extent. The old "Baldwin" gave a mighty leap and surge forward—she dimly saw the rock just above the engine—another instant and they had passed the dangerous point, the boulder in its fall cutting away the rear tank-coping like a piece of paper—and they were speeding like lightning down the ringing rails, followed by a howl of baffled rage from the two desperadoes. The next moment, with a practiced hand she had "shut off" as she saw the headlight of her lover's engine a mile away. Then—

Poor "Crazy Bill" told the rest of the story afterward, between sobs. How he was back in the tank breaking up coal, when he felt the "air" go on full and the reverse lever come back, while the wheels ground sand. He sprang into the gangway, but was met by Trix. Clear as a bell her voice rang out above the roar of the engine—  
"Jump, Billy! Quick, for your life!"

He felt her hand on his shoulder as he left the deck; then all was a blank till he found himself crawling, with a broken arm, from under the wreck of old "46," which had crashed into the abandoned hand-car, and was lying in the ditch—a shapeless mass of iron and steel. Next moment the express slowed up and stopped with her pilot almost touching the wreck. The superintendent swung himself down from the engine, followed by old Ben and Dick, who hurried forward and bent over the crushed form of the girl he loved, with a great cry of horror and grief.

A doctor stepped from among the crowd of passengers, and after a brief examination, sadly shook his head and turned away. Inured though, he was to scenes of suffering, he could not bear to witness the grief of the big, strong engineer as he watched the life of the one he loved slowly ebbing away. The gruff superintendent wiped a suspicious moisture from his glasses: Slowly Trix opened her great dark eyes and looked up into the face of her engineer-lover bent so close to her own. She knew she had not long to live; but she had saved her Dick's life, and she was satisfied.

"I—got—there—on—time—Dick." The words came slowly, and with a last effort she threw both arms around his neck. Old Ben was sobbing now, his face buried in his hands. Again came the sweet voice—a trifle lower this time.

"Dick—I'm—going—fast—don't—cry—it's—getting—dark—and—cold—good—bye—kiss—me—Dick."

And with her lover's kiss upon her lips, and his strong arms about her, brave little Trix's soul went to report to the Great Superintendent of all.

\* \* \*

On a great railroad, whose four iron lines connect the lakes with the metropolis, is an engineer who has the reputation of being the best on the road. His associates say he has never been known to smile or laugh, and although not over thirty, his hair has many gray streaks.

And far away on a western mountain side where the trailing arbutus grows in the spring-time, stands a little white headstone, with the simple inscription:

"BEATRIX MORELAND, AGED 16 YEARS."

And below;

"Greater love hath no man than this, that he lay down his life for his friend."

## SOCIAL ORDER.

BY MARIE LOUISE.

The desires of man have a natural and dominant tendency towards order, *i. e.*, towards a condition where things are adjusted into a harmonious combination. This tendency flows from his innate love for the good and the true. In the realm of society, this powerful feeling takes the form of equity and justice. Thus, the love of the good and the true in mental philosophy transforms into the love of equity and justice in social philosophy, and these two expressions of the same attribute embody the great principle of goodness, or God, as many designate it. The reign of God, of which Christ spoke with so much earnestness, alludes to the reign of goodness, of order, of equilibrium in things.

It were impossible for our minds to grasp the idea of goodness unless this principle be made intelligible by that of evil, *i. e.*, confusion, disorder—the destroyer as opposed to the preserver.

Goodness is elicited in our minds by a feeling moral which makes it necessary for us to build our happiness on the happiness of our fellow-men, and evil is elicited by a feeling unmoral that makes it necessary for us to build our happiness on the satisfaction of our own carnal passions. The former is conducive to harmony in society, the latter to disorder.

Unless the desire of establishing in society equity and justice be the main spring of our efforts, we shall look in vain for peace and order in the community or in our immediate surroundings. The notion which so strongly prevails in industry and in politics, that violent, repressive measures are a means, nay! the means of establishing and preserving order, is the greatest of falsehoods invented by man's imbecility and ignorant selfishness. The seeming necessity for violent repression points out a cause of disturbance lodged somewhere and which must be removed before peace and order can be secured. Repression avails nothing. To pretend uprooting evil by destroying or torturing unfortunate human beings whose fate threw to the surface of the disturbance, just as the angry sea throws foam to the surface of the rolling waves, is as fruitless as to endeavor to skim the foam of the roaring waves with a view of calming the sea.

Order reigns not where corpses lie mutilated by the arms of authority. It is not order that reigns over the ruins of a sacked city; it is solitude!—it is the cold and dreary silence of the grave!

Social order, I maintain, is equilibrium in social conditions and not the strangling of one portion of mankind by the other. Equilibrium in social conditions does not mean equality of these conditions. It means equality of opportunities for all human beings to adjust themselves harmoniously to the body social and vested privileges for none. It means discarding as effete and as relics of a barbarous age, theories which enshrine iniquity and scoff at justice—theories which fetter, from their cradles to their graves, millions of human beings as a sacrificial offering to the deity of greed and authority; theories so false, so perfidious that the words of Jesus, "You shall always have the *poor* with you," have been translated: "You shall always have the *serf* with you."

It matters little, however, to what source doctrines so baneful are ascribed; they make the establishment of social order an impossibility. All the wealth on one side and all the want of it on the other cannot balance evenly, and no mental gymnastic in the world can override that mathematical proposition. The only way to get out of the difficulty is not to balance at all; to deny all social relations between the rich and the poor, the wage-worker and the capitalist, the starving and the glutton; do what the French economist, Pierre Joseph Proudhon, demands that it be done with women, viz.: put them out of the society. By so doing, the mathematical difficulty would be removed and order would prevail in the select section called society. But what about the outsiders? Would they long toil for the benefit of those on the other side of

the fence, or would they set to business for themselves and let the select 400 peacefully enjoy their bliss and feed on their own fat?

The laws which regulate society are just as exact as those which regulate the cosmos. Forces either harmonize or conflict, they cannot do both. Harmony means peace and happiness; conflict means war, confusion, misery. Read history. Take the pages where those in authority have come with their swords to put down the rebellions of the oppressed and re-establish order. Come with me to the end of the 10th century and glance on the green plains of Normandy in France. Notice how many mud huts of the peasant-serfs are tenantless and how many are tenanted by one or two human beings distracted with sorrow and sobbing over the loss of their loved ones. Step closer and peep through the small apertures that airs and lights the huts, and inside many of those dingy cabins you shall see mutilated human forms. They breathe, they live, they speak, they are animated human trunks. Their hands and feet have been chopped off by order of Richard II, Duke of Normandy, surnamed the Good!!!

These living trunks were, but a few days since, the hardy and devoted leaders of peasants so crushed by seigniorial oppression that they resolved to refuse tilling the land any longer and be robbed of all its product by their lords. They had not raised in arms; they simply had the temerity to believe that under their tattered rags a human heart was beating, and to protest in open field meetings against being treated like cheap beasts of burden. They had ideas, and held theories at variance with the social arrangement of the time and were, therefore, a menace to the authority of the seigniors and to social order in general. Thus they were attacked and slaughtered, their leaders mutilated and "sent to their homes," says the writer, Guillaume de Jumiège, "in order to deter their like from such enterprises and to make them wiser for fear of worse. After this experience the peasants left off their meetings and returned to their ploughs."

Pass on and follow me. Again we meet the peasant serfs in rebellion. Historical records of the middle age mention no uprising for liberty save those of the peasants. The burghers and the artisans in their cities warred against their feudal lords to wrench from them the privileges and get charters to make them secure, but they never attacked the social and political system itself. The peasants, on the contrary, rose like a hurricane and tried to sweep away the regime that degraded them below the level of the beast of burden.

We reach the year 1358. All the peasants of the north of France are up in arms

against the feudal system. They swarm around the manor houses and attack them. The seigniors, who had been warring among themselves with great fierceness, now join hands and unite to crush the rebellion that threatened their privileges to own the serfs and the products of their hands.

The peasants are defeated and subsequently butchered, thousands upon thousands on a heap. The survivors flee and creep into their mud huts. What matters the burning at their hearts, the despair that crushes them, the desolation that surrounds them? Their misery is consistent with the social regime and nothing can avail. Let them bear or die, for order must be preserved.

Follow me again. We will cross the English Channel and land in London. The year is 1381. The English peasant-serfs have raised the standard of revolt against the feudal regime. They arrive in London to present to the king their grievances, led by their captain, Wat Tyler, and two priests, Jack Straw and John Ball, who religiously love the down-trodden. Their demands are few and modest: "1. Abolition of bondage. 2. Reduction of the rent of land to four pence the acre. 3. The free liberty of buying and selling in all fairs and markets. 4. A general pardon for the past offenses."

The king, a boy of sixteen, seeks to destroy the rebels, but will do so by entrapping them. He accedes to the four demands and promises the peasants great favors. Wat Tyler approaches him in the name of the united serfs and is stabbed in the abdomen and killed by one of the royal squires. The rebels, seeing their chief murdered, put themselves in battle array. But the young monarch rides towards them and with a perfidy inconceivable in a boy of that age, unless he be a king, says in a coaxing voice: "Sirs, what ails you? I will be your leader and captain. Follow me, I am your king; Tyler was but a traitor. Be ye at rest and peace."

He leads them where they are soon surrounded by men at arms and caught in a snare. Then the virtuous young king addresses the poor, betrayed wretches in these words: "Rustics, you have been and are, and in bondage shall you remain, not such as you have heretofore known, but in a condition incomparably more vile."

By order of this young monarch, a general slaughter of the serfs commences, where all those who cannot flee are killed, and on the two shores of the river where the rebel boards had marched order is at last re-established, peace reigns everywhere, save in the breasts of the surviving peasants.

Shall we recross the channel and give a look to Germany? In June, 1525, an immense army of peasant-serfs is defeated and

destroyed, part on the battle field and part subsequently to their surrender. Two important uprisings prior to this resulted in the same disasters. Historians estimate that 150,000 peasants perished in these wars. Crippled and maimed on all points, the miserable serfs lend anew their backs to the yoke and order throughout Germany is restored—that order which unnatural social conditions may procure.

Reader, shall we travel further and look at the downtrodden as they fall under the tomahawk of established tyranny? Let me show you a stand of the wage-workers for the privilege to earn their bread by working. We will stay in Europe, for here we may look at things as they are, unprejudiced by national pride.

We are in Paris. It is the morning of June 22, 1848. From all the suburbs that converge to the center of the capital, streams of men descend and march slowly, mournfully. Note the paleness of their faces, the brightness of their sunken eyes—they are hungry! Their clothes, usually so neat and clean, are tattered. Since three months they have had no work. The government they had just elected promised to organize industry and give them employment. To-day they come and ask the government to redeem their pledges. For answer, the government points to one hundred thousand bayonets and numerous cannons. It is all over; death awaits them, if not by bullet, then by starvation. With their feverish hands they erect barricades. No, not barricades, strongholds, and all the toilers in Paris, men, women and children, fight behind them. The battle has lasted four days; the fire behind the barricade slackens, it ceases, the people have no more ammunition and they surrender. The government orders a general massacre of the conquered insurgents and as many fall as would people a large city. Glance towards the suburbs, the merry abodes of the artisans. All now is still, every home is in mourning for its dead. On the walls of the capital large placards are posted. General Cavaignac, the commander of the government troops, proclaims: "Parisians! the insurrection is vanquished; order is re-established."

Violence cannot produce order; it may subdue disorder, but it never conquers it. In 1892, when 8,000 militiamen in Buffalo put down 800 switchmen, the press on the next morning came out with big headings: "Order reigns in Buffalo." Was it order, or was it the 8,000 bayonets that reigned? And at Homestead, in the same year. The militia re-established order, even though they compelled men to starve in silence in their desolate homes—even though they had to hang by the thumbs one of their own militiamen to smother his protest.

## MONEY AND INTEREST.

BY JAMES MIDDLETON.

There is more or less misconception of the relation of money to interest. Many seem to think that the rate of interest is governed chiefly by the abundance or scarcity of money. This is far from being the fact. The rate of interest is, in the long run, but very little affected by the amount of money in circulation.

This misconception arises from a mistaken view of what interest really is. It arises from a popular definition of interest, "money paid for the use of money." It was this view of interest that led Aristotle to denounce interest. His argument against it was that there is nothing in the nature of money which causes it to increase. This is true. If we plant corn and care for it, there comes an increase, not only over and above the corn planted, but over and above the corn or its equivalent consumed in the labor involved from the beginning to the close of the harvest. But gold dollars have in them no power of re-production and increase.

If money were the only thing borrowed and lent, interest undoubtedly would be unknown. But so far from money being the only thing borrowed and lent, it is only one of the things, and it is chiefly borrowed as a medium to get something else.

I am a farmer. I need seed corn, potatoes and wheat; I have not the money to buy with; my neighbor has the required seed and loans it to me. I agree to pay him back after harvest with an additional amount for services rendered. That additional amount is true interest. If our bargain was a bargain between equals, what I pay him is an equivalent for services rendered. In many cases the loan is actually effected in some such way.

In many cases the one loaning the seed, machine, or fertilizer takes a note for the market value of the commodities measured in money at the time the loan is effected, to be repaid with an increase when the crop is sold in the fall. In such a case the rate of interest will probably be lower than in the first, as the borrower has to do the marketing.

In many cases the borrower goes to some one who has money, borrows that, then goes to the one who has the required commodities and buys for cash. At the end of the season he markets his crop and pays his note with interest.

In each of these cases the increase has come from labor and the productive forces of nature. The interest or payment for services rendered is a part of that increase over and above the original investment. It may or may not be just. That depends upon the moral right of man to the product of his labor, and whether the interest is

the result of a bargain between equals. The fact that he can pay it depends upon the increase which the productive forces of nature give to his labor and capital.

Without such increase there would be no such thing as interest. What then I borrow is capital in the shape of commodities, and when money enters into the transaction it is as a medium to facilitate the borrowing.

Even money made from stock gambling and the like is due to the same law of increase, though they are unjust means of compelling producers to part with a rightful share of their produce. Gambling and interest should not be confounded.

A large part of interest is a premium for risk. We may not know just how much is premium for risk or insurance. The only standard that we can have is the rate of interest paid on the best securities like government bonds. In times of panic the risks increase and the rates go up. As the panic subsides the rates diminish. Sometimes they fall below the usual rate of good times, and then rise to the ordinary rate as business revives.

During the panic, during the lethargy following, and in the subsequent revival, the quantity of legal money may remain stationary and yet the rates vary. During the revival of business the legal money may be greatly increased by coinage, by banks putting out authorized bills, or by government, and yet the rate of interest may rise.

The following passage from David Hume's essay on "Interest" is both interesting and instructive:

Nothing is esteemed a more certain sign of the flourishing condition of any nation than the lowness of interest; and with reason; though I believe the cause is somewhat different from what is commonly apprehended. Lowness of interest is generally ascribed to plenty of money. But money, however plentiful, has no other effect, if fixed, than to raise the price of labor. Silver is more common than gold, and therefore you receive a greater quantity of it for the same commodities. But do you pay less interest for it? Interest in Batavia and Jamaica is at 10 per cent; in Portugal 6; though these places, as we may learn from the prices of everything, abound more in gold and silver than either London or Amsterdam. \* \* \* An effect always holds proportion with its cause. Prices have risen near four times since the discovery of the Indies; and it is probable gold and silver have multiplied much more; but interest has not fallen much above one-half. *The rate of interest, therefore, is not derived from the quantity of the precious metals.*

Hume's conclusion is emphasized if we take into account the fact that the fall of interest was due largely to England's greater stability, and consequent lessening of that part of interest called insurance, or premium for risk, and also that credits were as a result expanded; supplementing to that extent gold and silver.

To show how little the amount of money may have to do with the rate, let us consider the following illustration:

Suppose, first, wheat to be worth one dollar per bushel, and the rate of interest 6 per cent. Then, \$100 will buy 100 bushels of wheat. Six dollars will will be required to pay the interest, or six bushels of wheat. But suppose the currency trebled. Then, to buy the 100 bushels of wheat will require \$300, instead of \$100; so that the demand for money will keep pace with the expansion. My need of wheat will be just as great, so the rate would be the same, 6 per cent. To pay my interest would require six bushels of wheat still, but \$18 in money.

This would be true of debts contracted after the expansion, but debts contracted before the expansion could be paid with two-thirds less wheat. A debt of \$100 contracted when wheat was worth one dollar per bushel would, when currency was trebled, be paid by 33⅓ bushels at three dollars per bushel. It would require one-third of the effort as well to pay the interest. The creditor classes would lose what the debtor classes would gain. Strange to say, this is esteemed dishonest or robbery by the moneyed classes, while it is considered all right if the currency contracts, making the loans more valuable to the creditors at the expense of the debtors. The truth is, both undue inflation and undue contraction are wrong—the one fleecing the creditor and the other the debtor.

If the rate of interest is not governed by the amount of money, by what is it governed?

The first law is the productiveness, or increase given to labor by capital, for it is out of that increase that interest is paid. Whatever increases that product makes it possible to pay greater interest.

It is this law Mr. George had in mind when he claimed that wages and interest rise and fall together; that whatever raises the margin of cultivation diminishing rent, as, for instance, the single tax, would cause both wages and interest to rise; that whatever lowers the margin of cultivation and increases rent, lowers both wages and interest.

Unfortunately, Mr. George failed to take into account other causes. The facts are often against him. For instance, in England for a long period rents and wages rose together, while interest fell.

Says Arnold Toynbee, in "The Industrial Revolution of the 18th Century in England" Humboldt Library, No. 129, page 142:—

"The interest and wages always rise and fall together? As an historical fact they do not. Between 1715 and 1740 while rents (according to Professor Rogers) rose but slowly Arthur Young denies they rose at all, interest fell and wages rose. Between 1790 and 1815 rent doubled, interest doubled, wages fell. Between 1846 and 1882 rents have risen, interest has been stationary, wages have risen. Thus in all these three periods the facts contradict Mr. George's theory. Rent indeed has generally risen, but neither profits

nor wages have steadily fallen, nor have their variations borne any constant relation to each other.

The two leading factors which Mr. George failed to take into account were the element of risk and the law of supply and demand. It is these two laws that are constantly modifying and acting upon the first law to which Mr. George ascribed such undue prominence.

So great an element is risk that there are not wanting acute economists who claim that if risk could be completely eliminated interest would disappear; that risk is all there is to interest. Certainly the rate of interest in the best class of securities shows that it is a very large element.

The law of supply and demand is very important in interest, as well as in rent and wages. When capital is scarce and demand is great the rate of interest will rise. When capital is more abundant than the demand, then interest will fall.

The three laws of interest, briefly stated, are, first, the increase which loanable capital gives to labor; second, risk incurred; and third, supply and demand.

A high rate of interest stimulates saving and an increase of capital. A low rate of interest opens up avenues for labor, making it easier for men to borrow to engage in business. It is probable that a low rate of interest in stimulating industry produces capital more rapidly than the mere stimulus to saving from a high rate. There certainly seems to be no falling of increase in capital in England and America through the fall of interest.

Many attempts have been made to lower the rate of interest by statute enforced by penal laws. Such attempts have been and must be dismal failures. They increase the difficulties of the borrower who must have, and increase the actual rate by increasing the risks of the business. The repeal of usury laws have usually proved beneficial to the borrowers.

If government must regulate the rate of interest it should loan on fixed capital at say two per cent., and open up postal savings banks at one and one-half per cent. The rate of interest would adjust itself naturally and easily to that standard, and the poor and the wage worker would have a savings bank that would be as stable as the government itself. Kellogg, in "Labor and Capital," proposed a scheme of that nature.

In such a scheme loans should be made only on fixed capital, such as improvements attached to the land—as houses, factories, orchards, and the like, that could be in use while serving as the basis of the loan.

Loans on food products and the like, which would have to be stored in warehouses while serving as the basis of the loan, would facilitate the cornering of the necessities of life, and should be avoided.

Loans on land values would promote speculation in land, and should be as emphatically condemned.

If the single tax could be brought into operation the first effect would undoubtedly be to give an increase to wages and interest both from the great increase in the product and the increased demand for labor and capital. Falling rents would intensify the increase. Capital would rapidly accumulate and the law of supply and demand would send down the rate. The greater stability of society would lessen the risk so that we might look to see ordinary market interest as low as that of government securities now. The wage worker would swallow the increase so long as population did not increase to the lowest limit of subsistence.

Granted that the Malthusian doctrine is true, it would be ages before its evil effects could be manifest under the beneficent workings of the single tax wisely carried out.

To conclude, the true remedy for the evils of interest is not an undue expansion of money, but the introduction of the single tax programme. With that may be coupled government loans on fixed capital at 2 per cent., with government savings banks at  $1\frac{1}{2}$  per cent.

## THE COMING CO-OPERATIVE COMMON-WEALTH.

BY W. H. STUART.

That the existing relations between capital and labor—or, to speak more correctly, between capitalists and laborers—cannot much longer continue without some very radical change being effected in our economic and social conditions, is evident to thousands who have no very clear perceptions of the causes or the cure for those conditions. Such people will frankly confess to you that a bloody revolution is inevitable; that no less heroic remedy will put a stop to the encroachments of the "money power," as they vaguely term what they consider the cause of the poverty of the masses.

Yet, to the scientific socialist who has critically and inductively analyzed our present industrial and social system, the cause and the cure are both equally plain. Given an industrial system where the means and instruments of production are the private property of a continually diminishing minority of society, and where the great majority of the workers must compete for the privilege of access to those means of production, and the necessary and inevitable result logically follows that the great majority must be content with a bare subsistence, whilst the small minority are able to

absorb all wealth over the cost of the maintenance and reproduction of the workers.

But the capitalist system of production carries with it the seed of its own destruction. The end and aim of the capitalist is the production of surplus values. Therefore, every device for reducing the cost of labor is eagerly seized upon for that purpose. Labor-saving machinery supplies this want in its most effective form. Machinery does not tire, never gets hungry, has no "complaints," and never "strikes." The motto of the capitalist is to always "replace a man by a machine," and he does not fail to do so. The necessary result is that men are continually being displaced by machinery; skilled labor is becoming more and more unnecessary. First, common labor displaces the skilled; then women, and finally children, displace the common laborer.

But, note the result to the capitalist that follows this displacement of labor. The laborer is a consumer as well as a producer. As the army of the unemployed continually increases owing to the displacement process, he ceases to be a consumer of the capitalist's surplus products and "overproduction" follows, not that there is an actual overproduction of commodities gauged by the wants of the consumers, but there is an actual overproduction in so far as the purchasing power of the consumer is concerned. In old times poverty was the result of famines or plagues, and of inefficient tools of production, making it difficult to accumulate wealth for future consumption. Modern poverty, however, is the result of a glut of wealth. When commodities accumulate, and the capitalist can no longer dispose of his commodities at a profit, he stops the wheels of industry and men are thrown out to idle and starve, and we are in the midst of our oft recurring commercial crises.

Then, when the supply of commodities is reduced by being thrown on the market at a loss, causing widespread bankruptcy, the wheels of industry once more start up, and we go through again the same weary cycle.

But, note again that those crises are becoming more frequent, and also more violent and disastrous in their effects. The cause is, that the continual introduction of labor saving machinery increases the productive capacity of labor, and, oh, irony of fate! makes human labor less necessary, and increases the army of the unemployed and non-consumers until we reach a stage in this labor displacing process where the capitalist, reducing his labor to the minimum, when he can produce commodities at the lowest possible labor cost, is confronted with the startling condition that in getting rid of his laborers he has also got rid of his consumers! And, although he can produce commodities with the minimum of labor,

he has now less consumers to sell his products to! Formerly the capitalist depended on disposing of his surplus products to new colonies or to countries devoted to the production of raw material. But now, nearly every country has its own capitalist system of production, and it is becoming more and more difficult to work off surplus products.

This, then, is the negation of the capitalist system; having displaced human labor in its greed for wealth, it has also destroyed the consumer of its wealth; it has, in fact, been digging its own grave, and in due time will fall in and be buried forever. With a little keener vision we could almost predict the point in time when our economic development will inevitably result in a total collapse of the capitalist system of production, when we will be confronted with the anomaly of millions of idle men and thousands of idle factories—idle, not because there is not use for the wealth the factories could produce, but because they can not be run with profit to the private owners. This is the negation of negation, the *reductio ad absurdum* of the capitalist system of production. The only conceivable alternative will be the elimination of the capitalist and the substitution of collective ownership of the instruments of production—production for use, instead of for profit—in other words, the adoption of socialism, the inauguration of the co-operative commonwealth.

Our present system of private ownership of land and capital is a necessary but passing phase in the economic history of the world. It had its purpose to serve in economic evolution; its midnight hour is near; to give place to a grander, nobler system of fraternal co-operation and human brotherhood. This is why I speak of the "coming co-operative commonwealth." Its coming is inevitable; it is the only solution of the problem of the just and equitable distribution of wealth. The problem that the sphynx presents to the closing years of the nineteenth century, and which not to answer, is to be destroyed.

The change from our present system to the new social system will be, indeed, great, and while no socialist pretends to be able to describe in detail the changes that will be effected, yet certain great changes are inevitable, and I shall devote the rest of this article to a rough outline of the more prominent and salient economic and social features of the new nation.

In the December *Railway Conductor*, Mr. W. P. Borland, in an excellent article under the caption "The Logic of Socialism," says:

It requires considerable mental effort to fully realize the immense changes in the organic structure which socialists propose to bring about; they are so thoroughly fundamental that their full import can only be mastered after a great deal of patient study. Metallic money would be entirely suppressed; it would be replaced by labor notes. \* \* \* Private

production and private ownership of capital would be no more. There would be no capital save the socially managed capital of the entire collectivity, and private interest in the productive processes—that is, in the sense in which we now understand private interests—must entirely cease. The stock exchange and boards of trade must vanish, since there would be no such thing as either stocks or trade. Our present costly and elaborate system of advertising would entirely disappear, and there would be absolutely no further use for the middleman. The drummer, the solicitor of trade, the wholesale and retail dealer, the manufacturer, the entire army of those who now exploit the consumer for private profit, would find their occupation gone; they would be relegated to the ranks of the actual producers of wealth; they would be obliged to perform some socially necessary work in order to procure any of the means of subsistence, and such social necessity would not be determined by the dictates of their private interest but by the collective interests of society as a whole.

The economic functions which this army of persons now perform, and which they undertake from the stimulus of private gain, would then be performed by public functionaries, and public store-houses conveniently situated would take the place of our present wholesale and retail stores. Just imagine for a moment what it would mean to have every able-bodied person transformed into an actual producer of wealth, forced by the very constitution of the society in which they found themselves to perform some sort of labor whose social utility was publicly recognized, in order to obtain for themselves any portion of the means of existence. Imagine what all this would mean to the vast army of those who may truly be said to be unproductive consumers in our present society, and it would appear that the change proposed by the socialists would be a most thorough one. \* \* \* The products in the public store-houses would only be delivered to individuals in return for labor checks, and as there would be no private capital, nor private sources of income, there would remain no way of obtaining those checks except in exchange for some socially recognized useful labor—only in so far as individuals obtained them as the result of free gift from others. Thus, every member of the socialist state would be compelled to labor, except only those who were excused by age or invalidity.

Think of the enormous saving that would be effected over our present planless and wasteful method of carrying on productive processes. In the two items—cost of business advertising and soliciting trade, alone, would be saved a sum that considerably exceeds the cost of the national government as at present administered. No adulterated foods would be permitted. It is estimated that adulteration of food products now costs us five hundred millions annually. Think of the enormous saving that would be effected by abolishing the miles upon miles of retail stores in our large cities, with their armies of employees and substituting instead a large public storehouse in, say each ward. Think of the waste under our present system of our national, state and municipal indebtedness, the cost of our swarm of revenue officials and tax assessors and collectors, the army of people connected with banking, insurance and commission business. Then again, the waste from our irresponsible system of private production, the waste arising from engaging in mistaken undertakings, and from useless competition arising from mutual hostility between those engaged in trade, the waste from our per-

iodical gluts and consequent stoppage of industries, and from idle capital and labor. All these wastes will be entirely stopped under the new social system.

With the abolition of private property in land and capital 90 per cent. of our present laws will become obsolete. For as government under our present system is principally an engine for the enforcing of property rights and privileges in favor of the possessing classes, so nearly all laws are made for the express purpose of guarding those property rights and privileges. Therefore, litigation under the new order will be mostly confined to actions of torts; offenses against the person, so that 95 per cent. of our lawyers and judges and officers of the law generally will be unnecessary, and will be employed in productive labor, as authors, artists, scientists, inventors, or organizers and managers of public industries, or as public functionaries.

Education will be compulsory. No child will be permitted to grow up in ignorance. Every boy and girl will receive a college education, an education that will be thorough and practical, and intended to fit them for taking a useful part in social work. Every one will be allowed to choose the occupation for which they seem best adapted, as it would not pay the state to compel citizens to follow uncongenial occupations.

Those showing special aptitude for literary, artistic or scientific pursuits, will be afforded every opportunity to gratify and cultivate their special tastes or talents.

It will of course be understood that in the new nation the state will be the sole employer. All the citizens, by virtue of their citizenship will become employes of the nation, to be distributed as the needs of industry and the public service require. No citizen will depend for his living on any other citizen, such dependence would be considered degrading and a form of slavery not to be permitted. The same holds equally true in regard to women, who will be paid for their services directly by the state, so that they will not, as now, be dependent on their husbands for their support. They will, for the first time in the history of the world, be economically independent. They will no longer be compelled to sell themselves into legal prostitution for the sake of securing a home. Children will not be dependent on their parents for material support, that also will be provided by the state, as well as their education. Only for love and affection will they be dependent on their parents.

All citizens, both men and women, will receive an equal share in the distribution of the national wealth. Nationalists hold that all men who do their best, do the same, and are entitled to the same reward. A man's abilities, no matter how superior,

merely fix the measure of his duty, and he who falls below the standard of that required by the gifts nature has endowed him with, is less deserving than he who less poorly endowed, does his best. We believe that the spirit of emulation, the desire for the honor, esteem, and gratitude of their fellows, will impel men and women in the new nation to do their best. Even in our own sordid times we have had recently in our international yacht race, an example of pure emulation, totally dissociated from mercenary motives. The college boat races and foot ball games show that mere love of money is, even now, not the only motive that impels men to do their best.

It is sometimes urged that under nationalism there will be no incentive to inventors to invent, the expectation of reaping riches being removed. Those who take this ground should explain why Edison continues at his work, he is now a very rich man. He works because he loves to, and is impelled by an unconquerable desire to keep on experimenting and devising and perfecting new creations of his brain. It is the same with the poet, the artist, the author, the musician. When the fear of want is forever removed, we may expect a noble spirit of emulation, an "enthusiasm of humanity" that will inspire men to higher and nobler exertions in the interest of the race.

It is also objected that socialism aims to prevent the acquisition of private property. This is an error. On the contrary socialists denounce this system as incompatible with the acquisition of property, except to an insignificant minority, while socialism will make the ownership of private property universal. Only private monopoly of the means of production will not be permitted.

Every citizen will dispose of his income in any way his fancy or tastes dictate, but there will be no way in which he can invest it as "capital," *i. e.*, for the purpose of obtaining an income without personal exertion. From their private means, citizens, the same as now, will support the churches, the literary, ethical, social or artistic societies with which they desire to affiliate. In the same way they will support the newspapers or magazines that voice their various views in religion, morals, science, public policy or otherwise. Such publications will be under the editorial control and management of those selected for the purpose by those interested, the mechanical work only will be done by the state upon proper compensation.

Here it may be proper to state that while private production will be replaced by social production, it will not be as the result of any prohibitory laws, but because private production will be impossible as against public, for the reason that cost will be the

limit of price. On such terms no private owner could compete. It is quite possible, however, that private production may continue in a small way, for the purpose of initiating new processes, or for social or literary ventures, but all private production for the mere object of profit would most certainly cease.

The ranks of the various trades, occupations and professions will be recruited by volunteers from the young men and women who have finished their education. The attractiveness of the various trades will be equalized by a difference in the daily hours of labor required in each, *i. e.*, in proportion to the arduousness of the trade the hours constituting a day's labor will be reduced, so that the conditions of labor in all trades shall be equally attractive to persons having natural tastes for them. No child labor will be permitted under any condition. Nor will women be permitted to engage in occupations for which their sex or physical endowments disqualifies them. Their labor will be lighter, their hours shorter, and their vacations more frequent than those of men.

As socialists and nationalists we hold that our present civilization is the result of thousands of years of growth and improvement, to which millions of our ancestors have contributed, so all men are co-heirs and should be the equal beneficiaries of this civilization. No one in the new nation will, therefore, be disqualified as a participant. The sick, the lame, the blind, the physically and mentally impotent will be entitled to their full share of the national wealth, not as a charity, but as a right. They will be treated as tenderly as the wounded soldiers of a victorious army.

One of the most important bureaus of the new nation will be the bureau of statistics, whose function will be the accurate collecting and compilation of statistics of the various products and commodities produced and consumed by the nation. These statistics will enable us to produce commodities in proper proportion to the demand, so as to avoid periodical gluts and crises as under our present planless methods of production. It will be safe to say that the new nation will not waste labor and capital in producing two million bales of cotton when one million bales would be sufficient, or in raising 300 million bushels of wheat more than was needed for home consumption and exportation. There will be bureaus of production and distribution, which will regulate the whole field of productive and constructive industry, with a view to economy of labor. All labor will not of course be required for the production of commodities for consumption, a large contingent will be employed in creating fixed capital, such as

buildings, machinery, engineering works, etc.

I said before that under our present system, government was, to a great extent, merely a machine for the enforcement of the rights of property and privileges in the hands of the possessing classes. Under the new social system class distinctions with reference to property will be entirely obliterated. There will be only one class, whose interests will be identical. Government will lose, therefore, its coercive features and become more and more administrative of the industrial affairs of the nation in the interest of the collectivity. It will be impossible for public officials to prostitute their office for private gain. Entrance into the public service will be through the lowest grade, advancement upwards will be through merit alone, as the result of successful service examinations. Social position will not be due to superior wealth, but to superior ability, or devotion to the public service. They will be the generals of the industrial army whom we shall delight to honor, on whose brow we shall bind the laurel leaf. The desire for such positions, and the honor and gratitude it will bring, will be an incentive as great as that which now spurs on our successful generals under a military régime.

With the adoption of the initiative, referendum, and imperative mandate, and proportional representation, the will of the people on all questions of public policy will be prompt and effective, and insure a thoroughly democratic administration of affairs. The power to recall our representatives or officials by means of the imperative mandate will insure us an honest and efficient administration of the public service.

Such is a brief outline of what the new nation, the coming co-operative commonwealth will be. It may be asked how so great a change is to be brought about. Do we expect to confiscate all existing wealth to the use of the collectivity? No, although John Stuart Mill asserted that as wealth was the product of society, and not of the individuals in whose possession it was, society would be justified in appropriating it, if the general good of society would be subserved. In case the possessing classes resisted the absorption of the means of production by the people we would have the precedent of the southern slave owners to guide us. But if nationalists have their way, our economic revolution will be a peaceable one. They have nothing to fear from us; we are thoroughly familiar with the compulsion under which the capitalist as well as the proletarian, has been forced under the stress of competitive conditions to fight for life. The conditions have forced us "to eat or be eaten." We

would all have been capitalists if we could, all the difference has been merely one of ability and opportunity. When the crisis comes, those whom the capitalists have most to fear from, are the now ignorant and apathetic masses who refuse to think, but go blindly along oblivious of the conditions that are hurrying us on with lightning speed to our destiny. When this class do get aroused and become suddenly conscious of the causes that have ground them into poverty and misery, then let the possessing classes beware of their nemesis!

But assuming the change to be a peaceful one, it might be effected in this manner: We would probably commence by taking over the railroads, telegraph and telephone lines. We could have the government engineers estimate the actual cost of reproducing them, and tender that amount in U. S. bonds bearing two per cent. interest, the interest and one-twentieth of the principal payable yearly. We could raise the wages of all the employes and considerably lower the cost of service, and extinguish the debt in 20 years, without adding one cent to our taxes. If the owners refused to sell on our terms, we would at once commence the construction of railways, telegraph and telephone lines, issuing for the labor and material U. S. greenbacks, a full legal tender for all dues to the government. However, there would be no danger of that occurring, the mere intention on the part of the government to build these lines would squeeze out every drop of water in existing lines within ninety days. We would then proceed to obtain by right of eminent domain coal lands in four or five states, set 5,000 miners to work at 50 per cent. increase over present wages and proceed to mine and deliver coal at actual cost to consumers. The coal barons could not compete with us, and coal lands would be nearly worthless property to private owners. We would then size up Bro. Carnegie's plants, and a few others, and if the price was agreeable to them, we would take charge of the steel rail and iron plate business, and so on, one industry after another, until all industry was nationalized. We would only purchase such plants as we needed, we would be under no obligation to burden ourselves with unnecessary plants. Competition now makes hundreds of them useless, nor would we be obliged to purchase any property not necessary for the public use. Those who owned stores, residences, factories, or land could retain possession until the public needed them, when they would be paid for at their actual value. Finally, we would assume control of the agricultural interests of the nation, starting mammoth farms in different sections of the country, giving our present poverty stricken farmers permanent employment under better condi-

tions and on more remunerative terms than they now enjoy, until finally all production and distribution of the national wealth was controlled by the people themselves, and in their own interests. It would be merely extending into other departments of industry what we are now doing in the postal service, public roads, light houses, the army and navy, public schools, etc.

Then would the co operative commonwealth be realized and the new nation ushered in. I hope I need not apologize to the reader for closing this article by quoting Mr. Edward Bellamy's reply to the query: Why a new nation?

Why a new nation? Why will not the old one do?

These are some of the reasons why it will not do. In the old nation, the system by which the work of life is carried on is a sort of perpetual warfare, a struggle, literally to the death, between men and men. It is a system by which the contestants are forced to waste in fighting more effort than they have left for work. The sordid and bitter nature of the struggle so hardens, for the most part, the relations of men to their fellows that in the domestic circle alone do they find exercise for the better, tenderer and more generous elements of their nature.

In this old nation, a million strong men are even now vainly crying out for work to do, though the world needs so much more work done. Meanwhile, though the fathers and husbands can find no work, there is plenty always for the little children, who flock, in piteous armies, through the chilling mists of winter dawns into the factories.

In this old nation, not only does wealth devour poverty, but wealth devours wealth, and, year by year, the assets of the nation pass more and more swiftly and completely into the hands of a few score individuals out of 65,000,000 people.

In this old nation, year by year, the natural wealth of the land, the heritage of the people, is being wasted by the recklessness of individual greed. The forests are ravaged, the fisheries of river and sea destroyed, the fertility of the soil exhausted.

In this old nation, under a vain form of free political institutions, the inequalities of wealth and the irresistible influence of money upon a people devoured by want, are making nominally republican institutions a machine more convenient even than despotism for the purposes of plutocracy and plunder.

These are a few of the reasons why the old nation will not do, and these, in turn, are a few of the reasons why men are looking and longing for the new nation:

In the new nation, work will not be warfare, but fraternal co-operation toward a store in which all will share alike. Human effort, no longer wasted by futile and cross-purposes, will create an abundance previously impossible.

More important far, the conditions of labor under the plan of fraternal co-operation will tend as strongly to stimulate fraternal sentiments and affectionate relations among the workers as the present conditions tend to repress them. The kindly side of men will no longer be known only to their wives and children.

In the new nation, there will be neither rich nor poor: all will be equal partners in the product of the national industrial organization.

In the new nation, the dependence of one sex upon another for livelihood, which now poisons love and gives lust its opportunity, will be forever at an end. As equal and independent partners in the product of the nation, women will have attained an economical enfranchisement, without which no political device could help them. Prostitution will be a forgotten horror.

In the new nation, there will be no unemployed. All will be enabled and required to do their part according to their gifts, save only those whom age, sickness or infirmity has exempted; and these, no longer as now trodden under foot will be served and guarded as tenderly as are the wounded in battle by their comrades.

In the new nation, the children will be cherished as precious jewels, inestimable pledges of the divine love to men. Though mother and father forsake them, the nation will take them up.

In the new nation, education will be equal and universal, and will cover the entire period of life during which it is now enjoyed by the most favored classes.

In the new nation, the wasting of the people's heritage will cease, the forests will be replanted, the rivers and seas repopulated, and fertility restored to exhausted lands. The natural resources of the country will be cared for and preserved as a common estate, and one to which the living have title only as trustees for the unborn.

In the new nation, the debauching influence of wealth being banished, and the people raised to a real equality by equal education and resources, a true democratic and popular government will become possible as it never was before. For the first time in history the world will behold a true republic, rounded, full orbed, complete—a republic, social, industrial, political.

These will be some of the characteristics of the new nation, to the advancement of which, till it shall have utterly replaced and supplanted the old nation, we nationalists are pledged.

### GAINS FROM REGULAR HABITS.

BY W. A. ENGARDE.

An English scientific philosopher recently made a half-playful, half-serious defence of the routine life of the man of "regular habits."

He insisted that, in this busy, hustling age, when so many duties press upon an active man, and there are so many things which unavoidably call for the exercise of attention, judgment and decision every day, it is part of wisdom—a real conservation of energy and nervous force—to settle as many as possible of the routine matters by a fixed habit of life.

There seems to be sense in the suggestion. Why should a man with anything important to do in the world tax the gray matter of his brain nearly every day to decide what he will eat, drink or wear, what his pleasure shall be and what his recreation, when he shall go to bed and when get up? Having arrived at years of discretion and discrimination, why can he not so order his life as to have these and kindred things come and go in a somewhat settled order?

To eat at regular hours the things he "finds good of," according to Bacon's rule, abstaining from those that disagree with him; to rise, bathe, dress, exercise, work, recreate and sleep after a regular order, is not to make a treadmill of life. It is to lay out a smooth road for journeying with the least possible friction and waste. "To choose time is to save time." A considerable proportion of the worry and waste of life comes from a needless jumbling of work and clashing of duties.

Whatever we may think of the method, the large majority of men who accomplish great things and live to a good old age are men of regular habits. It may be encouraging to know that there is a scientific foundation for their sticking to the ruts.

### CHARACTER, NOT APPEARANCE.

Who shall judge a man from manners?

Who shall know him by his dress?

Paupers may be fit for princes,

Princes fit for something less.

Crumpled shirt and dirty jacket

May beclothe the golden ore  
Of the deepest thoughts and feelings—

Satin vests could do no more.

There are springs of crystal nectar

Ever welling out of stone;

There are purple beds and golden,

Hidden, crushed and overgrown;

God, who counts by soul, not dresses,

Loves and prospers you and me,

While He values thrones the highest

But as pebbles in the sea.

Man upraised above his fellows,

Of forgets his fellows then;

Masters, rulers, lords, remember

That your meanest hind's are men;

Men by labor, men by feeling,

Men by thought and men by fame,

Claiming equal rights to sunshine,

In a man's ennobling name.

There are foam-embroidered oceans,

There are little reed clad rills.

There are feeble inch high saplings,

There are cedars on the hills;

God, who counts by souls, not stations,

Loves and prospers you and me,

For to Him all vain distinctions

Are as pebbles in the sea.

Toiling hands alone are builders

Of a nation's wealth or fame;

Titled laziness is pensioned,

Fed and fattened on the same.

By the sweat of other's foreheads,

Living only to rejoice,

While the poor man's outraged freedom

Vainly lifted up its voice.

Truth and justice are eternal,

Both with loveliness and light;

Secret wrongs shall never prosper

While there is a sunny right!

God, whose world-heard voice is singing

Boundless love to you and me,

Sinks oppression with its titles

As the pebbles in the sea.

THE cheapest tax dodging scheme on record is that of a churchman in Lincoln county, Maine, who has organized a bogus religious and charitable society, has made himself treasurer, and has turned all his personal property over to the treasury of this non-taxable corporation. He defies the assessors, and they don't see how they can get at him.

### HORSE POWERS OF LOCOMOTIVES—WATER USED, ETC.

The amount of water made into steam with which to make the energy to develop a horse power of work is one of the most material elements we have to do with.

The cost of the energy is the prime element of the machine with which we do the work for it is constant. It is not like repairs, and does not vary much on the same machine, and it calls for coal, mixed with brains, in order to obtain the best results, and it is not one of the matters that do not show to the credit or discredit of the man who "runs her," so much has been said of late as to the claims of the amount saved, by the new engines, and their enormous savings, that it is well to look into some of the statements in order to see the basis on which such statements rest.

Reading a paper very lately on the fuel account of a recent addition to the rolling stock of a R. R. Co., I looked it over carefully with some "ancient" records and here is what was on the books, the recent addition claimed that thirty pounds of water was pretty good for the locomotive, for a H. P. one hour, but that their new one had given them a clean record of 27+ when she was well loaded, not clear up to the utmost, but at fairly good loading, for a pull, this was with 178 pounds pressure as a rule.

On looking over some old figures, I find the results of some trials made in England nearly forty years ago, on an 18"x24" cylinder with a ratio of 1.45 expansion only 28.00 lbs per H. P. were used, and with an expansion ratio of 2.92 but 19.8 lbs were used, and on an engine in regular service each day, and at the same time it was stated that if the possibility had existed of reducing the back pressure to nothing, and continuing this, to the extent of a vacuum, the result would have been in the first case that less than 24 lbs, and in second case to less than 14 lbs or as compared with a condensing engine the locomotive would at that time have done far better than very many of the engines now in use and called economical.

Here is what is trying to be accomplished with the double expansion engine, better known as the compound, it is to do away with the atmospheric pressure, or counter pressure to the free exhaust of the steam in the air after having done its work in the cylinder, the same thing is also being tried on the Electric Light and Power Companies, by using what is termed a "High Pressure Compound," or a two-cylinder engine with-

out any condenser, some of the arguments used are that such an engine will save "forty per cent.," over the usual high pressure engine most used by such plants, while if we read the circulars of the Independent Condenser makers, we read that they will only guarantee but 25 per cent. saving, by a good vacuum, over the usual exhaust into the open air. Perhaps some of our readers will be able to say where the saving is made, certainly not in theory or practice, as has been proved in so many of the causes which have been tried on the question.

When we have to evaporate 30 pounds of water into steam it takes an amount of heat units readily obtained by reference to any of the Steam Tables, and if we assume for the moment a pressure of 165 pounds by the gauge, or 180 pounds absolute, then we require 850.3 units to evaporate each pound of water from 32° F. to 372.9° F. or in all to make thirty pounds of water into steam at 180 pounds absolute calls for the expenditure of 25509 heat units, then if any improvement that made even 20 per cent. would allow us to do our work on 20407.2 heat units, or on the same basis that is usually accorded the Condensing Engine with a single cylinder, using 20 pounds of water per horse power per hour, while if the assertion is made good that 40 per cent. is gained even on a locomotive that is using 30 pounds of water, at 180 pounds pressure, it would require us to use only, 15306 units of heat, or far less than many of the engines now considered as better than locomotive practice, are doing in regular service.

In all comparisons we must not forget to find the difference in the actual heat used in the making of the steam at different pressures, for at 180 pounds absolute it is 850.3 units, at 140 pounds absolute, 865.1 units, and at 100 pounds absolute, 876 units, so that when we are to investigate such statements it means a great deal more than simply the pounds of water used, for as comparative tests, we are to look on all sides of the matter, for so many who are in the business do not consider that any element enters into the calculations beyond the pounds of water used as a result. The turning of energy into steam from coal is only the conversion of heat from coal into heat in water up to the point where the vaporization of water into steam, at temperature due to pressure occurs, and the amount of heat units called for, as is shown here between different pressures, is often of far greater moment than is supposed to be the case when it is carelessly talked of, and not inquired into.

It is precisely these reckless statements that lead the adoption of so many new things into disrepute or non-adoption, for men who run railroads, are called to account often, when they adopt, some new

machine or apparatus, and if it is done without care, it does not occur many times before the management call for another man.

The difference of quantity of heat called for to evaporate water into steam at different temperatures is not of itself a great amount, but when trifling differences are multiplied by 30,000 in one hour, and that by 20 hours run a day, or 36 to 40 hours for a round trip, very trifling amounts call for money, in such lumps as would make a man happy to get it, or to look very troubled if he had to pay it out for no consideration.

When the question of heat is carefully considered, it is well to consider the density of steam at other pressures, for that is of much account in handling it, for it becomes heavier as well as hotter—so that when we come to analyze statements on the steam use, for efficiency, we must take in all the reasons for economy, as well as all questions of cost, of the steam we are to use, and it is sometimes found that what is an advantage, carries with it also some not desirable quantities, but we must take them into account, in order to get at facts.

For comparison we insert the data of some of the absolute pressures here:

Pounds. sq. Inch.	° F.	Heat in One Pound.	Cubic Feet in One Pound.	Weight of One Cubic Foot.
50	281	917.4	8.414	0.1188 lbs.
80	312	895.6	5.425	0.1843 "
100	328	884.0	4.403	0.2271 "
125	344.13	871.7	3.572	0.2800 "
140	352	865.1	3.212	0.3113 "
150	358	861.2	3.011	0.3321 "
160	363.40	857.4	2.833	0.3530 "
170	368	853.8	2.676	0.3737 "
180	373	850.3	2.535	0.3945 "
190	377	847.0	2.445	0.4153 "
200	382	843.8	2.294	0.4359 "
230	401	829.5	1.854	0.5393 "
300	417.5	817.4	1.534	0.6440 "
325	425	811.9	1.437	0.6960 "
1	102	1043.	334.6	0.00299 "

The difference as shown on table is at the end, where a pressure higher than we are now able to make use of is shown in comparison with a pressure far lower than we need to use, and we find that the weight and density as compared between 325 lbs per square inch, and one pound per square inch is 232.7 times, or the steam at one pound requires 232.7 times as much room as at 325 pounds, and weighs 232.7 times as much at 325 as it does at one pound. The heat required to make the steam at two pressures is not far from thirty per cent. more to make a pound at one pound's pressure than at 325, but the volume of the steam at one pound would not allow of its

use in any sort of comparison, for we could not get an engine large enough to use it, and do any amount of work.

The amount of work done by a pound of steam is another important part of the matter, and is always to be considered, and into this comes the clearance, ratio of expansion, and the pressures with volume, etc., and will be treated of in a separate article, but the heat is of the utmost importance, and in its comparison it will be found that any one who can make even a saving of four per cent. on a recently constructed engine, will be doing what is very valuable indeed, if he or they actually do save in result one-tenth of what is so often claimed in the usual way of statements which are certainly to some extent reckless, or without consideration, if indeed they are based on any actual knowledge at all.

Some interest is now shown in the eastern part of the country in a new Shaw locomotive which is said to be a considerable improvement on the only one of the name or kind ever yet built, and which is remembered as having a peculiar set of side rods, and four cylinders, two on a side, not a compound, the new one is said to do away with the "hammer on the rail," as well as the "counter balance in the wheels," this is the talk now, but whether it will be built or not is not known at this writing.

There has been another attempt to supplant the good old way of building a R. R. in Boston the so called "Boylnton" Bicycle Railway, which is to run on a rail overhead, in such a way as to make it capable of getting over "a hundred miles an hour," there has been some talk of its being built, but none of the old roads have stopped yet.

The interest in the matter of improving the present methods is quite enough to keep us all busy the whole time in '94, and no one need to be out of a job, for there is still lots of work to do, and as the heat increases, it will be time to pull off our coats, and go in soon, and it should be our aim to make a better record this, than last year.

Thomas Pray, Jr.

#### AIR PRESSURE IN BOILERS.

J. M. Bunker wishes to have a dispute settled, and as ours is a mission of peace we will try to explain the question asked and thus restore harmony. The question is: "Suppose a dead engine has to be moved six miles, the first five of which are down grade enough to permit the engine to roll down, and the last mile is up grade. Could air enough be accumulated in the five miles run down hill to run the engine the last mile up hill?"

Under favoring circumstances it might be done, but the chances are against the performance. In order to get air into the empty boiler while the engine is rolling

down grade it would be necessary to put her in reverse gear, with cylinder cocks shut and throttle open. At the first start this action would not have any retarding influence, for there would be nothing opposed to the free entrance of the air to the boiler, but the pumping would soon show its effect and the pressure would run up until the engine would come to a stop. For illustration let us figure on a boiler four feet in diameter and twelve feet long. A boiler of that size would hold about 150 cubic feet of air, but as the fire-box sides, the wagon top and the dome will take more air than is occupied by the flues in the cylinder part of the boiler let us suppose our boiler to contain 210 cubic feet. A cylinder 18 by 24 inches contains about  $3\frac{1}{2}$  cubic feet and as each cylinder would be filled twice to each revolution, we would have four times  $3\frac{1}{2}$  ft., or in theory about 14 cubic ft. of air to each revolution of the wheels. A six ft. wheel would be about 19 ft. in circumference, and would make 15 revolutions in rolling 285 ft. Fifteen revolutions forcing 14 cubic feet of air into the boiler at each revolution, would be just 210 cubic ft. or the estimated cubical capacity of the boiler. In starting with the engine, we assume that it has air in its boiler at the ordinary density, and hence after rolling only 285 ft. we have forced in another lot of air equal in bulk to what was in when we started, and have two atmospheres in the space at first occupied by one. The pressure is thus just double or about 14 pounds on the gauge. Each 285 ft. passed over should add 14 pounds to the pressure till at the end of 2,850 ft. or a little over a half mile we should have 140 lbs. pressure. But with the throttle open, and the accumulated pressure acting on the pistons, the engine would stop long before this pressure was reached. It might be possible, with heavy grades to favor you, to get speed enough by letting the engine run, and thus throwing her in reverse gear and pumping air until her speed was checked, to get over 100 pounds of pressure on the boiler, but toward the last it would be slow work, for her speed would check very quickly with the high pressure acting against the pistons. As before said if the grade was steep enough you might thus get even over 100 lbs. of pressure, but the chances are against getting as much as that.

Again the question of how heavy a grade the mile up hill is has to be taken into the consideration. An empty engine cutting off at six inches ought to run up any ordinary grade and if started with 140 lbs. ought not lose more than 70 lbs. in running a mile, for by cutting off at quarter stroke she should run four times as far in emptying the boiler as she ran to fill it. The answer must then be that under some circumstances it can be done.

Engineers who have got into close quarters, and have reversed their engines and opened the throttle, have noticed an increase of pressure on the gauge, and that the engine would commence to "pop off" almost immediately. This is no doubt caused by the air being forced in against the action of steam, for when an engine is reversed and continues to run on contrary to her valve motions, nothing can leave her boiler but air will in all cases be forced into the boiler with each revolution of the wheel. This action will cease only when the wheels slide, or if she should get to slipping her wheels in obedience to her valve motion while still moving the other way. When a boiler is filled with water up to her water gauges or say more than  $\frac{3}{4}$  full it would leave a space of only about 50 cubic ft. above the water level, and if air were pumped into this space at the rate of 14 cubic feet for each revolution it would take only four revolutions to add 14 lbs. as the smaller air space would be filled so much quicker.

I had a nearly dead engine (she had lots of water and but little steam) to move about 250 feet, place her on a turntable and run her into the roundhouse. I pushed her these 250 feet with another engine and had my helper put the nearly dead one in reverse gear with the throttle open and in shoving her 125 feet she gained 40 pounds, and began to hold back pretty hard. I let him shut the throttle and put her in right gear and after pushing her onto the table we had plenty of pressure to run her into the roundhouse. Air pressure can thus be utilized in more ways than it is yet being done, and compressed air will form no small factor in the future development of mechanics, for air is the most abundant of all God's gifts to man, and on account of its elasticity and ductility forms one of the best mediums to convey power, because it loses so little by friction.

In regard to working an injector by air pressure there is a doubt whether it can be done. In writing books on locomotives theories have been advanced by some writers to account for the action of the injector, while others observe a discreet silence, which is probably as wise a course as any, for when a man ventures to tell about induced currents and vacuums he may be in a fair way of getting drawn into entanglements. One of our latest writers on locomotives says "the injector's action is that of induced currents," and illustrates by the action of wind blowing over water and raising waves and specifies the ordinary exhaust blast, lowers, steam siphons, steam-jets, jet exhausters and argand burners as examples of the principle involved. It is true that they are examples of induced currents but in none of these cases is there any direct counter pressure opposed to the

indirect current like there is in the check valve of the injector with a pressure of say 500 lbs. holding it down. Exhaust blasts, blowers, steam jets, jet exhausters and ar-gand burners do not send their induced currents to meet an equal counter pressure nor indeed for that matter any pressure at all and so they are not fair illustrations of the principle.

My attention has been called to the advantage to be obtained by a running start of a force outside a door overcoming a greater force inside, but while granting this as true I fail to see why the greater force should not be able to gradually check and finally stop this made rush. In further explanation it is stated that it is necessary to create a flow of water through the overflow and then to turn it toward the check. In opposition to this I am using a Mack injector and whenever I choose to I can put it to work so quickly as not to lose any water through the overflow at all; it is therefore not necessary to establish a current and then to divert it to another direction. But this is getting away from the subject matter. As before stated air may be forced into a boiler either by rolling down grade or by being towed but it is taken as a fact that injectors will not work with air pressure, but if I ever get a chance, as I have had, I shall try it by a practical test. If air will not work an injector it would certainly do away with the explanation of "induced currents," because if the pressure is there to induce the current it ought not to make any difference whether it is steam or air pressure.

William Weiler.

#### RECENT TESTS OF COMPOUNDS.

The *Railway Age*, in its issue of Feb. 2d, presents some interesting figures as the result of a test of compound locomotive No. 145, in comparison with simple locomotive No. 138, both built by the Baldwin Locomotive Works for the Long Island Railroad Company. Engine 145 is a Vaucrain four-cylinder compound, and, except for the compounding feature, is an exact counterpart of engine 138. Every precaution was taken to have the conditions of the test as near alike as possible, and the engines were selected as being both in equally good running condition. The tests were conducted over the same course for each engine, with the same train and the same engineer and fireman handled both engines. The compound was tested for three consecutive days; then the simple engine was put through the same course of sprouts, and the results were compared. The comparison developed a surprising economy for the compound and it is really hard for a layman to see how any fault can be found with the figures. The part of the official report setting forth

all the essential facts of the test, and the results obtained, is as follows:

1. A train of twenty loaded cars was set apart for the haul.
2. The section of track between Hempstead Crossing and Ronkonkoma was used; and the train hauled the round trip twice each day, making a total daily run of 113.78 miles.
3. Two cars of Clearfield coal were set apart by the storekeeper as being from the same mine, and were used exclusively on the series of tests.
4. It was decided to run the test train three days with one engine, and three days with the other, making a series of tests of three days with each.
5. All coal was weighed on and off from point of start to return to that point, and the water consumption was measured with Thompson patent water meters attached to the injector or suction pipes.

It will be seen that with the same train over the same course the work on each day was the same. On the first three days the compound engine was used; on the second three days the simple engine. On the first day run with each engine the flue tubes and grates and front end were all perfectly clean, and on all succeeding days all conditions were similar, and the engines were in simple running order.

Each day's run for consumption was reckoned only from the time of starting with the train, and each day was concluded exactly at the point of origin, the fires being brought up to level as at starting, and the water in boiler being brought exactly up to level of stop cock. The same engineer and fireman being retained for the whole series.

All weather conditions were adverse to the compound engine; as one day (Nov. 4th) was exceedingly wet and on the succeeding day the coal was still soaking from the previous one. The resultant economy, it will be seen, is figured up as 37.2 per cent. in coal, and 17.2 per cent. in water, on the simple basis of per car per mile; but making allowance for the increased length of terminal stoppages with the simple engine. I have also entered up the economy per car per mile per hour as 32.1 per cent. in coal and 10.7 per cent. in water, each in favor of the compound engine.

Yours respectfully,

CHARLES M. JACOBS,  
Consulting Engineer.  
J. V. DAVIES,  
Assistant Consulting Engineer.

[Signed.]

It is also stated that the Richmond Locomotive works have furnished the Big Four with a compound of a new design which has developed an economy of between 35 and 40 per cent., as shown upon the regular monthly performance sheets, over simple engines hauling the same trains over the same division. Speaking of this, the *Age* says: "We are not at liberty at this time to publish the figures from which these percentages are deduced, but have been shown what purports to be a copy of the official record, showing for each engine the data upon which such comparisons are usually based. In every instance the comparison was favorable to the compound." The Richmond compound has some features not yet protected by patents and a detailed description of her peculiarities has not yet been published; but, so far as the opinion of several representative locomotive men, unconfirmed by official evidence, can go, the engine is a remarkably economical one. She was given some trials on the Illinois Central that from all accounts are likely to develop some surprising results when official figures relating to them make their appearance.

Wilfred P. Borland.

**TRAVELING ENGINEERS' CIRCULARS.**

The committee of the Traveling Engineers' Association have sent out the following circulars to members of the association:

**EXAMINATION OF FIREMEN FOR PROMOTION.**

Your committee on "A Uniform Form of Examination of Firemen for Promotion and New Men for Employment," desire answers to the following questions:

At our last annual meeting the matter of examination of firemen for promotion was discussed at length, and it was the unanimous opinion that there should be a uniform form, containing the best methods of examining men when employed, and at different times after that, before being promoted to the responsible position of an engineer. As the president said, in his opening address, at our last convention, railroads are operated nowadays on so small a margin of profit that the distance between a dividend and going into the hands of a receiver is measured by the small economies and savings in all departments. The engineer and fireman can be a large factor in saving, and for our companies to get the full benefit they must commence by getting good material. What is needed is good, bright men, that take an interest in their business, and it is our duty to first find the material, then by examinations at stated intervals, know that the men who will be the engineers of to-morrow have not made a mistake in the choice of their profession, or that they are careless and indifferent and are willing to be carried along until time brings promotion.

It is hoped by the committee that each and every member will answer the following questions, and in addition give the benefit of their experience and ideas on the subject:

1. Do you have any system of examination on your road that applies to firemen promoted to switch and road engines, and new men hired as road engineers? If you have, please send form to chairman of committee.
2. Is there any qualification necessary other than stated in examination?
3. Are applicants for position of firemen and engineers obliged to exhibit a specimen of handwriting in any other manner than filling out personal record?
4. What is the limit of minimum and maximum age of men employed as firemen?
5. Do you make any distinction in percentage of questions asked and answered properly by firemen to be promoted to switch or road engines?
6. What per cent. of questions must be answered to enable candidate to pass?
7. Do you have any form of certificate that you give to those who have successfully passed the examination? If so, please furnish the chairman a copy.
8. How is examination conducted—by a board of examiners or one person, and is the one being examined allowed to have one of his associates (one who has passed the examination successfully) present during the examination?
9. In the air-brake examination, is it necessary to explain the action of the air pump, pump governor, engineers' brake and equalizing discharge valve, triple valve, including quick action feature?
10. What means are provided for men to become informed as to the best practical method of engine running and caring for engines, and becoming familiar with air-brakes, other than every day practice?
11. Do you examine applicants for positions of firemen, in physical defects, such as sense of hearing and color?
12. How do you examine regular employees for color defects and hearing?
13. What is the limit of maximum age of employed engineers?
14. Do you require employed engineers to pass a more rigid examination than firemen, when promoted?
15. Do you use a progressive form of examination for firemen? If so, please furnish the chairman a copy.
16. Do you examine a candidate in the office or in the round house with an engine to look at?

17. If the candidate fails to answer correctly any question about a common break-down, or is unable to disconnect and block an engine and if necessary set an eccentric, would that disqualify him?

J. W. SHELTON,

Committee

**POOLING, OR DOUBLE CREWING OF ENGINES.**

Your committee on "How Can Traveling Engineers Improve the Service when Engines are Double Crewed or Pooled?" desire answers to the following questions. This question was continued from the last annual meeting, as it was not understood by the majority of the members. It is not for us to say whether it is practicable or economical to double crew or pool engines, but it is our duty to find the best and most economical way when our management conclude to try the experiment. This subject has been before the railroad world and has been tried with more or less success for a number of years and the committee earnestly request that you not only answer the following questions, but give the benefit of your ideas and experience:

1. State if you pool or double crew engines on your road or not.
2. What method do you use to keep up repairs, and by whom are engines cleaned above running board?
3. What system do you use to keep engine properly supplied with tools?
4. By whom are supplies placed on engines?
5. When and by whom are engines inspected?
6. How often are boiler checks and gauge cocks examined and cleaned?
7. Do you clean fires at intermediate stations for firemen. If so, please state number of miles run, also give your opinion as to the waste of fuel in so doing?
8. Who takes care of the head lamp and signal lamps?
9. Are your engine tool boxes locked and the keys left at the office for the engine men to get when they take the engines? (This refers to small tools.)
10. Is the box containing frogs, jacks, saw and axe, sealed as well as locked, and when the seal is broken a record kept of it?
11. Do you have all steam fittings in cab kept tight by other than engineer?
12. Is the packing of driving boxes and engine and tender trucks governed as much as possible by mileage?
13. Are the firebox flues and front end inspected at stated intervals, or do you wait until she don't steam?
14. Are oil cans looked after and kept in proper condition?
15. Are sand boxes and pipes inspected and known to be in proper condition before the engine leaves the terminal?
16. Are rod cups adjusted by shop men and other automatic oilers inspected, so that all engineers are required to do is to fill them?
17. On double crewed engines do you try to place men on opposite turns who are friendly and work in harmony with each other?
18. On double crewed engines do you give each engineer a set of oil cans?
19. Do you think it is practicable or economical to keep an inspector for double crewed engines?

Address all communications to

Committee

## DISCIPLINE WITHOUT PUNISHMENT.

Under the above caption Mr. George R. Brown, general superintendent of the Fall Brook Railway, contributes a superb paper on *Locomotive Engineering*, which should command the careful perusal of every student of the railway problems of the times. Mr. Brown enjoys the enviable and exceptional distinction of having in twelve years experience as an official *never laid off a single man*. Mr. Brown is entitled to the floor and we bespeak for him a hearing on the part of every man who is interested in the relations between railway employers and employees. The full text of Mr. Brown's admirable paper, fraught with advice and suggestions of special value, is as follows:

The usual penalty for a serious violation of rules on American railroads is dismissal from the service. Minor infractions are usually punished by depriving the offender of employment for a fixed time, ten, thirty or sixty days—few roads have adopted the European practice of direct fines. In my estimation, as a rule, these forms of punishment are as unjust and inhuman as they are unnecessary.

It is a well understood principle in jurisprudence that a law without a penalty for its violation partakes more of the nature of advice than of law.

The rules and regulations governing the running of trains on a railroad are laws, and should be so considered, and penalties for their violation are not wanting.

The responsible officer or officers of a railroad must act as judges, try every case, make every decision and punish every violator. It is not only their right, but their duty, to be strict in maintaining discipline. They have no right to excuse one offender and punish another, but must try every case on the calendar.

Penalties are imposed for two purposes: First, to uphold the law and prevent its further violation, and, second, to reform the violator.

Punishment inflicted indirectly benefits thousands who do not violate the law as well as the one who does.

It often occurs that the disgrace and injury occasioned by a strict enforcement of a sentence does more to ruin the guilty than anything else, and a wise provision has been made allowing courts to use their judgment as to carrying out punishments; this is known as "suspending sentence." If the same-time offender does better, and is not guilty of the same or other offenses, the judge conveniently forgets the indictment hanging over him, but should he go on committing one misdemeanor after another, his "record" rises up to condemn him.

I believe in and practice "suspending sentence" with railroad employees.

Officers of railroads differ from judges of the law in that they *make* the law and enforce it, while the judge administers the law as he finds it. If the people are dissatisfied with the laws they change them, but there is no appeal from the decision of the railway official, who performs the functions of judge, jury, executioner.

Railroad officers who hire, discipline and discharges employes cannot be too careful in exercising their authority, and no honest one can afford to decide on a single case without first "putting himself in the other man's place." In other words, treat him as he himself would consider just and honorable if the sentence was to be pronounced on him, and the decision should be made impassionately, impartially, and giving him the benefit of all doubts.

Accidents have happened on railroads since the starting of the "Puffing Billy" until to day, and are likely to happen as long as railroads are operated.

Every wreck, every accident, every mistake, every loss has taught its lesson, and these are of no less value to the railroads and to railroad men than the successes, a practice making every mishap a lesson to every man on the road.

It often happens that an accident or a "close shave" for one is the best kind of a lesson to the man who could be blamed, and, if he is retained in the service, he is a more valuable man than he would otherwise be or who could be hired to take his place.

I am afraid that it would do me no good, and would do me harm, to lay me off for thirty days for any offense, and I am sure I would do no better when reinstated than if I had been allowed to continue in the service. I should feel as if I had been ill-treated, as if my family had been deprived of the necessities and comforts that my earnings afford them, and that they were the innocent victims of an injustice.

In order to make every accident and incident happening on the road a lesson to all the trainmen, I established, ten or twelve years ago, what I call a Miscellaneous Bulletin Board.

On this we post up brief accounts of mishaps and other occurrences on the line, pointing out how such trouble could be avoided, etc. This board is closely scrutinized. We do not mention names, but, of course, the men know "who's who" in most cases. This board has done much to keep the men on their guard, prevented many accidents, and shows them how headquarters look at every case, instead of letting them discuss every accident around the roundhouse and caboose stoves and form their own conclusions—no two of which will be alike.

To show the class of notices posted, I

inclose a few that have appeared. We usually leave a notice up for ten days.

Too much coal is frequently put on locomotives; so much so, that when running along the road more or less of it jars off over the sides of the tank.

Engineers, please correct this in future by not taking so much.

Flags used on locomotives and cabooses in many cases are badly faded. In some cases, the faded green flags look very much like dirty white ones. When flags are dirty or faded, new flags must be procured in their places.

Conductors and engineers, please give this your careful attention, remembering that the safety of employes and trains largely depend upon it.

I am credibly informed that engineers, more particularly passenger, find fault with flagmen on account of being flagged, even when it is absolutely necessary that the train should be stopped.

If engineers have any criticisms to make about when they should or should not be flagged, they will please make them at the office, and not take the matter up with the flagmen personally.

Engines Nos. 6 and 21 collided near the water tank in shop yard; damage, about \$80. No. 21 was going to the shops after coming in on passenger train. When the yard engine first saw No. 21 they were in one of the shop tracks, and should have remained there until No. 21 passed. Instead of doing this, they backed out on the main track, and continued to back until they saw that No. 21 was not liable to stop.

Yard engines must under no circumstances detain road engines going to or from the shops or their trains.

There is little doubt but what engine No. 21 was making too high speed around the curve, and both engineers are more or less to blame, but particularly the engineer on engine No. 6.

Train No. 9 on Decoration Day, May 30, collected twenty nine passes, twenty five of them from Corning; train No. 6, on the same day, collected fifty-seven passes, fifty-five of them from Corning.

These trains were crowded with passengers all day, and many of them were obliged to stand up. The conductors had frequently to call the attention of the persons holding passes to the fact that paying passengers should have seats in preference to dead-heads, and in some cases persons holding passes were quite indignant because the conductor so requested them.

The number of passes given are not re-

stricted as much as they should be and particularly on legal holidays, when, as a rule, our coaches are filled with persons holding tickets.

Investigating, I find that a large number of these passes were given to persons who had no particular business, any more than to have a ride because it would not cost them anything.

Officers will please continue to follow the pass business up very closely, and not grant passes unless you think employes have some business or reasonable excuse for desiring to go. On legal holidays you will restrict them entirely.

A coal train arrived at the "Y" without any man on the rear end. Investigating, we find that the conductor went over to the engine at Angus; a brakeman got off at Angus to close the switch, and he claims the train ran so fast he could not overhaul it; the flagman got off at Earles to close the switch, and he also claims the train was moving so fast he could not overtake it. There was, therefore, no man on the rear end of the train from Earles to the "Y." Had the train been obliged to stop, no flag would have been sent out, and had it broken in two there would have been no one to control it or prevent a wreck.

1st. The conductor had no business that required him to be on the locomotive.

2d. The engineer should not have left Angus for Earles until he got a signal from a man standing on the rear cars and not on the ground. The flagman should have given a signal to stop the train until the brakeman overhauled it at Angus.

Notwithstanding there is a telegraph office at Earles, not one of these men reported this occurrence to Corning office or to the following train, which shows lack of judgment on their part. Fortunately nothing unusual occurred to cause a wreck.

Trains Nos. 21 and 25 were at Lawrenceville. Train No. 25 occupied the track next to the station, and when they left they pulled through the Tioga crossover on to the F. B. main track.

One of the men from train No. 21 was standing on the F. B. main track south of Tioga crossover, and as rear end of train No. 25 passed flagman asked him to close the switch, and he consented to do so, jumping on the rear end of the caboose and riding to F. B. switch, and claimed to know nothing about the Tioga crossover being wrong. When the Tioga train arrived they ran one car off the end of the track.

The conductor and flagman of train No. 25 claim they expected him to close both switches, and the man from No. 21 understood he was only to close the one.

This conclusively shows that it is best

for the men on every train to close their own switches, and will please do so in future.

A south-bound coal train overtook the way freight at Reading Center, and was nearly stopped when the way freight started. After the way freight passed the station the semaphore was raised, and the engineer of the coal train pulled slowly by the depot the engine and several car lengths, and within six or eight rods on the cabooses of the freight.

Two ladies attempted to cross the track after the freight passed, and their horse was scared, and were unable to do so. They were turned around in the street, and a man caught the horse before any damage was done. The engine of the coal train was behind the depot, where the ladies could not see it, and they claim they understood that trains were to run five minutes apart. This is correct, and should have been done. We learn from this.

1st. That the way freight is holding coal trains; which is prohibited.

2d. That trains are following each other too closely; which is prohibited.

3d. That this train passed the semaphore when it was up; which is prohibited.

Under no circumstances must the pilot of a locomotive pass the semaphore pole until the blade is dropped.

A north bound train had some cars derailed at the south end of Level Corners siding about 5:17 A. M. The cars ran up the main track far enough so that trains could have passed through the side track had not the frog been injured. The trainmen reported that it was necessary for a wrecking crew, which we ordered of the Beech Creek Co. Instead of taking their engine and going to the section house near Larry's Creek, getting the sectionmen out and telling them what was required to make the side track ready for passing trains, they remained at the wreck, and the wrecking train had orders to stop and get the sectionmen, where they found them surfacing the track at nearly 8 o'clock in the morning. When they arrived at the wreck they had to go back to the toolhouse for the necessary material and tools to take out the frog and put in a piece of rail—and it was about five hours after the derailment before trains could pass. Had they taken their engine and went immediately for the sectionmen the track could have been made ready in not to exceed one and a half hours, thereby saving delay to all other trains of at least three and a half hours.

Conductors and engineers should always look the situation over carefully and work with a view of getting trains around the

wreck at the earliest possible moment, leaving the wreck to be cleaned up later on.

Train No. 82 whistled for and received the signal at Slate Run and passed on time. The operator fell asleep and neglected to raise it. The conductor of train No. 82 neglected to see whether it was raised or not, and neglected to report this fact at the next telegraph office, as the rules require.

Train No. 66 was the next train to pass there, and did pass without seeing the semaphore blade lowered. Conductor of No. 66 also passed there without seeing it raised or reporting this fact at the next telegraph office. When the dispatcher asked the operator for train No. 66, he did not know whether it had passed or not, as his semaphore had not been raised after train No. 82 passed. The rules require that under no circumstances must a train pass a telegraph office until they know the semaphore has been lowered after they whistled for it, and also required every conductor to see it raised after his train is passed and if not done, to report it from the next telegraph office.

You will doubtless remember that some time ago a similar circumstance occurred at Blackwells, and it came very near causing a head-end collision. Notwithstanding this, these men deliberately violated the rules, and took the chances of their own lives and the lives of their fellow employees. Fortunately, no accident occurred; but these men are each held personally responsible for the violation of rules, and a similar occurrence will cause their prompt and permanent dismissal from the service of the company.

A brakeman was posted to go on train No. 85. Instead of going, he arranged with another who was not an employee of the company to go in his place, without permission from the office. When called in the office to explain, he said he had been here about two years and did not know that he had to get permission under these circumstances.

For the information of all other brakemen, will say that the man who went in his place will not receive any pay for the trip, as he was not employed by the company to perform such service, and the brakeman who was posted has been discharged for this and other offences.

The conductor is not responsible, for he supposed this man was an extra man until going down Pine Creek, he asked him his name, at which time he asked the conductor to put the other man's name on the time-slip and he would get his pay from him, as the other man had been here about two years and was entitled to \$1.75, where

he would receive only \$1.624. The company does not allow this kind of financiering.

If we have any more brakemen who are so ignorant of the rules, and do not know they must receive permission from the office when they desire to lay off or procure a man in their place, it is high time that they do know it, and this notice is posted for their information.

A train derailed a car one and one-half miles north of Tioga. The conductor came to Tioga at 9:40 A. M., and reported he thought he could clear the track in an hour. He went back to the wreck and did not show up again until 12:15, at which time the track was clear. This was one hour and thirty minutes after No. 4's time at Tioga, he holding them there by flag. Had he said at 10:30 that he would hold No. 4, we could have run them through the Coke Works and over the Tioga road, and get them to Corning nearly on time. We finally ran train No. 4 through the Coke Works, making them one hour and thirty minutes late at Corning. No. 1 was also held forty minutes at Lawrenceville before we ran them via Coke Works, and the conductor is responsible for this delay. Some trainmen seem to have the impression that there is no other train on the road but theirs.

A loose wheel derailed a north-bound train taking the side track at Blackwell's. Train No. 1 was detained fifty minutes on account of 4th 70 pulling around the wreck through the short side track just below the station. They stalled in this short side track, and instead of cutting a part of their train off and putting it in the north end of the passing track and then going back and getting the balance of it and letting train No. 1 out about on time, they continued to try to pull the entire train at once, and with the above results.

This is very, very bad judgment on the part of the conductor and engineer.

We don't always give the boys left-handed compliments. Here is a right-handed one from a farmer.

WEDGEWOOD, N. Y., July 31, 1893.

Mr. G. R. Brown, Gen'l Supt., Corning, N. Y.:

DEAR SIR—Yesterday morning, as train No. 85, drawn by engine 56 was approaching this station, your employes on same discovered a portion of a flock of sheep on the track, and instead of dashing in and over them, by which a number of them must have been killed, they slowed down and used all their efforts, and so managed that not a sheep was injured. I mention this, deeming it worthy of your notice, that

the men on engine No. 56 and train No. 85 should receive your commendation as making the extra effort in the interest of your company, even if in the line of duty.

We put up a notice that at the end of the year we will pay a cash premium of \$60 to every freight conductor whose services have been *entirely* satisfactory. It speaks well for the men when our report shows that forty-five out of fifty-six conductors were awarded premiums. The reasons the other eleven failed are given below, which shows that some of them lost it through no fault of their service.

1. Brought car of freight Newberry Junction to Corning as an empty car.
2. Absent on vacation about half a year.
3. Stood in Billsboro side track to switch car in spur, set one brake back of car to be switched. Rear end ran down and collided with car going in spur.
4. Only worked part of year; resigned.
5. High speed Beaver Dams to Watkins, and from Log City to Long Point.
6. Violation of rules. He supposed engineer had sent a flagman.
7. Put two cars off end of side track at Dreden by giving back-up signal without receiving same from the man on rear end of the train. Broke telegraph wires. Did not report it until next day.
8. Ran double-header to Beaver Dams, and only took cars that one engine should haul. (Since discharged for drinking. Now proprietor of saloon in Corning.)
9. Allowed 3d 70 to pass Cooks less than ten minutes behind, the second section overtook them south of Preshto and collided.
10. Left car of horses at Hinrods Junction that were slipped for Watkins. Man in charge told him it was an error on bill. Settled difference in freight, \$4.50, besides losing premium.
11. Engine "John" (pony engine used by officers of company) found train south of Earles; his flagman not out proper distance; conductor in caboose and could see flagman plainly.

We also pay premiums to section foremen for best kept track.

For the trainmen we keep a record-book. This book is never shown to any employe, except that page which is his personal record.

In it I write down a brief statement of every irregularity for which a man is responsible; this record takes the place of the "lay-off," and is dreaded fully as much; the man goes to work at once and no one but himself suffers, and he only in reputation at headquarters.

We are very careful in the selection of our men, promote all our own engineers and conductors, and in a few months or a year or two our record tells us whether they are "adapted for the business" or not.

We have engineers who have been running here more than twenty-five years, without a scratch of the pen against them; while others, who have been running as many months, have quite a page full of irregular "circumstances;" but down near the bottom of such a page can generally be found the word "discharged"—incompetent.

When a man commences to "make a record" (in the book), we call him in and talk with him. He is reminded that, if this gets too long, we shall have to consider him a failure for our service, show him his weakness—if we know it—and give him another chance. But he understands that it will not be entirely for the last offense that he is dismissed—the "suspended sentence" cases are against him.

With this system the good men are retained, developed, benefited and encouraged and the culls are got rid of to the betterment of the service all around.

It is well understood that we do not wish to retain in the service men who deliberately deceive us about mishaps on the road; we want the "straight" of every matter and we want it at first hands. It would be a very lively spotter who could get to my office sooner than some of the men who are responsible for accidents. If it is not serious enough for dismissal the matter is overlooked or made a matter of record, and the man goes out on his regular run. Then the "Miscellaneous Board" has another object lesson on it.

If there is anything that will stimulate a good man, who has become careless enough to make a lapse of duty that "gets him in the book," more than that simple record, I do not know what it is. They beg not to be put on "record," but when the record is made and the victim warned to look out and attend to business in future, and to take his run out in the morning, he goes away with a mental vow not to be caught again—and some of the records are years apart. In some cases one memorandum is made, and never an occasion given for a second one.

Good men who have made some little mistake, are less likely to do so again than men who have not yet tried the responsibilities of running trains and engines, or men who are not familiar with our road or work. If the responsible officer takes such an offender into his office, talks the matter over dispassionately and tells him that he is considered too good a man to be discharged for incompetency, that the accident has cost so much, which the company will stand "this time," but perhaps not the next, and tells him to "go and sin no more," this has a tendency to make better and more successful railroad men of the ones that are naturally adapted to railroad work

—and the "next time" comes only too soon to the man out of his sphere.

There is nothing in this to disgrace him among his fellows, nothing to make him feel revengeful or maltreated; but everything to make him feel as though he was encouraged and helped, and that his final success depended solely upon himself. Can as much be said of the plan that disgraces a man among his fellows, that takes the comforts, and, perhaps, the necessities from his home, that makes him a loafer for thirty or sixty days and puts him in the way of temptations that he would not find at his work, and that leaves him, in many cases, in debt to the dealers who furnish his family supplies?

On many roads there is a great want of cordiality or confidence between the men and the officials immediately over them. In too many cases a suggestion from a trainman to an officer would be resented as an unwarranted interference. It seems to me this is not in the interest of the railroad company, however much it may enhance the dignity of the official—who is himself only "one of the hired hands," with a little more responsibility.

I have found suggestions from the men of vital importance in matters of detail, and every man in the service knows that the rule and motto at headquarters is, "Suggestions are Always in Order."

Train and enginemen see and know things about the road that an operative officer could never find out in his office. At their suggestion, we have frequently made minor changes in time-table, etc., and every change has been an improvement. The humblest man on a section may suggest something that will save the company hundreds of dollars, and besides this encourages men to think and become more interested in their work, and feel at liberty to modestly offer other suggestions.

When a suggestion is made that is considered impractical, the reason that it is so is pointed out, and both the man and the manager have learned something. I am sure this rule makes and keeps up a friendly feeling between the men who plan the work and those who execute it.

Roads that can afford to let one department fight another, who can afford to have hundreds of employes disinterested and dissatisfied with their work, who can afford to the officers "out" with the men, and the men glad to see any hoped-for improvement a failure, are few and far between.

The suggestions set forth in this article may not be practicable everywhere, but on a moderate sized road (Fall Brook has 257 miles all single track, with an average tonnage of about 6,000,000 yearly) where the superintendent knows all the men, or most of them, it has worked so well for years that

I have an abiding faith that it will work anywhere, and in every case in the interest of better service.

#### Points in Brake Handling.

MR. EDITOR:—While in conversation with the air brake inspector in charge of the Westinghouse air brake exhibit at the World's Fair, he explained to us some valuable points in the handling of the air brake, the most important one was the time it takes to charge auxiliary reservoirs and the inspector claims, as this point is not well understood by the majority of engineers handling air, is the chief cause of their running by. It takes two minutes to charge an empty passenger auxiliary reservoir to the maximum pressure, and two and one half minutes to charge a freight auxiliary, and forty auxiliaries could be charged in the same time as one, if the train pipe pressure can be held to seventy pounds during the time of recharging. This time limit of recharging is owing to the size of feed ports in triple valves through which the air must pass to enter the auxiliaries. The area of feed port in passenger triple is one-sixteenth inch, while those of the freight are three-sixty fourths inch. If the feed ports were made larger, with the varying length of freight trains that exists at present, the auxiliaries near the head end of train would charge to a higher pressure than those at rear end and if an application of the brakes was made before a thorough equalization of all auxiliaries, there would be an unequal action of brakes. If we had a standard length for freight trains, the feed ports could be made larger, as in the passenger triple, as there is generally a uniform length of passenger trains, and it is for this reason that the feed ports are larger in the passenger triple than the freight.

The inspector then went on to explain the point more fully by the use of the brakes. He had the brakes connected to represent a passenger train of eight cars, using the old style brake valve with the excess pressure valve, and the governor being connected to the train pipe to also show to us the bad features of the governor thus being connected. After charging the train to seventy pounds he made an application as though he was coming into a station, reducing ten pounds off of train line, which left sixty pounds in train pipe and auxiliaries then lapping the valve while train was stopping, he accumulated a high reservoir pressure, then supposing that he was going to stop short of the mark, he released the brakes, and leaving the handle in release position too long, allowing the high reservoir pressure to equalize with train pipe which raised the latter to ninety pounds. Now before any brake action can be had thirty pounds must be taken out of

train pipe in order to get below the auxiliary pressure, which was sixty pounds after we made the first application. So it can be seen that it was not owing to the want of air to make the stop at the proper point, it is the want of time to get this high pressure out of train pipe in order to get below the auxiliary pressure caused by leaving the valve handle in release position too long. At this test we were shown that it would have taken about eighty seconds to re-charge the reservoir, and as we did not have that much time to leave the handle in release position, we were instructed in order to avoid stopping short, to bring the handle to release position for just a moment then return it immediately to lap to prevent the high charging of train line, and if it is necessary to make the second application, we will get the brake action owing to the fact that the train line pressure will not be much higher than the auxiliary pressure. It was upon this point of brake handling that the Westinghouse Co. made improvements as to the amount of excess pressure to be carried, for the governor is no longer connected to train pipe, but to the main reservoir, and no more air can be stored in the main reservoir than that amount to which the governor is set at. Recent experiments with the new brake valve and governor connected to main reservoir have demonstrated the fact that the limited amount of reservoir pressure has been found to meet the requirements perfectly.

BALTIMORE, MD. *Walter C. Garaghty.*

#### Examination Questions.

MR. EDITOR:—On the back of the Traveling Engineer's examination chart, accompanying the January issue of *Locomotive Engineering*, are 36 important questions pertaining to the locomotive, and it is our object in this letter to answer them to the best of our ability for the benefit of the fireman, especially those that have not received one of the charts.

The first question is what is clearance?

Clearance in a cylinder is the space allowed for the piston to clear the cylinder heads when the engine is on the center.

What is lead?

Lead is the amount of the opening of the steam port at the beginning of the stroke of the piston.

Show position of valve and piston when cutting off at half stroke.

To those having the chart, move the piston to half stroke position, and close the admission port by the valve. Or, in other words, if the piston is moving from front end of cylinder the valve will open the front steam port wide and then close it again when the piston gets 12 inches from front end of cylinder.

How does this make steam work expansively?

By cutting off the steam from the cylinder before the piston has completed the stroke, owing to the valve having lap, and the steam thus enclosed in the cylinder is moving the piston by expansion.

Has this valve inside lap? No.

What is lap, what does it mean?

The lap of a valve is that portion which overlaps the steam ports when the valve is in the center of the seat, or that portion of the valve which is more than necessary to cover the steam ports.

Why is lap given to a valve?

To effect an early cut off by closing the steam port before the piston reaches the end of stroke and work steam expansively.

Where would you place the valve if you had to disconnect for a broken eccentric?

Place the valve in position to cover both steam ports.

Where would you place it if you broke a steam chest?

That depends upon how bad the chest is broken. If you could block the steam passages to the chest it would not be necessary to cover the ports with the valve, as no steam could enter the cylinder.

Where would the valve be when compression commenced on forward stroke?

The valve would be in the position to just close the front port to the exhaust, as compression commences immediately after exhaust closure, and is prolonged until the end of stroke or until the valve opens the port to give the lead.

What is pre-admission?

Pre-admission is the admission of steam to the cylinder just before the piston arrives at end of stroke, or the amount of opening before the motion of piston is reversed. It is more commonly called lead.

Show point of release.

The release or exhaust occurs immediately after expansion ends, so the valve would be in position to just establish communication between the steam port and exhaust.

What is changed about the valve when the reverse lever is hooked up.

The lead is increased, the valve will cut off steam earlier in the stroke, the exhaust will open earlier, and compression commence sooner.

How would you place piston and valve if disconnecting a mogul or ten wheeler, where side rod pin would strike crosshead key if it was blocked in center of guide?

Either remove crosshead key or move piston to front end of cylinder and valve to front end of chest, so the steam pressure could hold piston ahead.

How would you block valve if one of the bridges broke?

Cover all the ports with the valve, fasten it by blocking on each side of the valve or

on top and then bolting cover down on top of blocking, take down valve stem, main rod, and block crosshead.

How if rocker arm broke?

Block valve so as to cover all ports.

What is the reason that the piston is not in the center of the guides when the pin is on the top quarter?

It is the cause of the angularity of the main rod, or the angle the main rod assumes in passing the quarter.

Why does the piston travel unevenly?

Because the wheel runs at an even gait but the angularity of the rod causes the piston to move faster during one-half of its stroke than the other half.

Does this cause the valve to travel the same?

The valves move uniformly as they are driven by eccentrics which are fastened on the axle but their movement must be distorted, so as to cause them to move in the same relation with the piston in order to obtain an equal cut off, which is got by offsetting suspension-stud of link.

What effect has the length of main rod on the piston travel?

The shorter the main rod the greater the angle it assumes and the greater the unevenness of piston travel. A short rod increases the angularity, while a long rod reduces it.

Suppose you were running ahead, shut off, with the reverse lever hooked up close to the center, what would the valve do?

The valve would raise and fall on the seat at the end of stroke, owing to the fact of running shut off with the lever hooked up close, the valve closes the port some time before the piston reaches the end of stroke, which compresses air ahead of the piston, until the pressure is great enough to lift the valve.

Why is the valve placed over the center of ports when engine is disconnected?

To prevent any steam from entering the cylinder.

What could happen that would cause you to disconnect without covering the ports?

A broken steam chest, or any break down where the steam would be blown off of boiler.

When an engine is running 30 miles per hour, at what part of the travel does the piston go the fastest?

The piston travels the fastest when going from the center of cylinder to the front head and return.

Does it stop at each stroke? When?

Yes. When passing the center.

At what part of the piston travel is the greatest pressure exerted on the crank pins?

Immediately after leaving the center, because the leverage on the driving wheel increases as the pin leaves the center, until the pin is at or near the quarter, and then

decreasing until the pin reaches the other center.

In running ahead, why does the top guide wear the most?

The top guide has been found to wear the most with engines in road service, as the crosshead has a tendency to move upward after passing the back center, and the engines having very little running to do in back motion.

What is back pressure?

Back pressure may be stated as pressure which opposes the movement of the piston by the live steam. Too contracted exhaust nozzles will cause back pressure as well as engines with very small eccentric throw, when working close hooked up.

What is the difference between back pressure and compression?

Back pressure takes place while the exhaust port is open; compression occurs later in the stroke, beginning when the exhaust is closed and ending when the admission port is open to give the lead.

Compression is the pressure caused by the closing of exhaust port before the end of stroke, and increased ahead of the piston as it nears the end of stroke.

What is cavity in valve for?

To establish communication or an exit for the steam after it has done its work in the cylinder. After the steam has expanded in the cylinder it is somewhat weaker, and the large opening affords a free escape. It is also for this reason that the exhaust port is made larger than the steam ports.

What is meant when we say cutting off at six inches?

After the piston has moved six inches from the end of cylinder the valve closes the port, thus cutting off the steam from the cylinder, and the steam thus imprisoned is propelling the piston by expansion.

Could you change the lap of valve by changing the eccentric?

No. Lap can only be changed by cutting off part of the valve, and to increase would have to use a longer valve.

When a valve blows where does the steam go?

Through the exhaust port and out the stack.

What is inside clearance? What is it for?

Inside clearance means that the width of the exhaust cavity of the valve is made somewhat wider than the inner edges of the steam ports, so that it does not cover them when the valve stands central on the seat. Or in other words, when the valve in center of seat there is communication between both ends of cylinder and exhaust. It is used to free the exhaust. While inside lap delays the release of steam, inside clearance causes the release to occur earlier.

Could you work steam expansively with a valve without lap? Why?

No. Because the first form of slide valves used were just merely long enough to cover the steam ports, and the slightest movement of the valve opened one port to admit steam to the cylinder and the other to the exhaust and the steam followed the piston the whole length of stroke. By giving the valve lap steam is cut off early in the stroke, and from the time it is cut off until the exhaust is open the steam is expanding in the cylinder, which action is due to the valve having lap.

Suppose this piston was on the forward dead center and you put the reverse lever in full forward gear, where would the valve be? Where would it be if you put the lever in full back gear.

The valve would be in position to have the front steam port opened to the amount of lead, or in other words, would show the amount of lead the engine had in full stroke and by raising the lever from full gear to mid-gear the valve would increase the lead, and then lowering the lever from mid-gear to full back gear position the valve would be moved to its original position, or to the same place it was when the lever was in full forward gear.

MR. EDITOR, as we stated in the beginning of this letter that we answered these questions to the best of our ability, and yet we are mindful of the fact that we can all live and learn every day, and if there is anyone that takes exceptions to any of the answers given we would be pleased to learn of them through the MAGAZINE.

BALTIMORE, MD.

Walter C. Garaghty.

#### A Broken Tire.

MR. EDITOR:—Perhaps the following incident might interest some of the MAGAZINE readers: An engine was run in here one day this winter with a broken tire on main driver, and left on a spur track for a few days of zero weather, after which they tried to run her to the shops; but she slipped so badly that the tire expanded, allowing the wheel to revolve without moving the tire. The tire was cooled and engine started again, but the engineer had a long grade to ascend, and when about one mile away the same thing occurred as before. The engineer waited till the tire cooled, then returned. The bent rod was straightened, both were put on, when she proceeded all right.

BANGOR, MAINE.

Prince Stafford.

THE great Manchester ship canal which has been some six years in building was opened for traffic on Dec. 7. It is 35½ miles long and cost \$75,000,000, or about \$2,100,000 per mile. As an engineering achievement under prodigious difficulties it is a marvel of the age.—*Railway Age*.

## Questions and Answers.

The following questions and answers have been clipped from *Locomotive Engineering*:

R. C., Sedalia, Mo., writes:

There have been some disputes among the men in the shop about the weight of locomotives and their parts. We have decided to refer the thing to you. We want to know: 1. How many engines were there in the World's Fair over one hundred tons weight? A.—None. 2. Where is the heaviest engine ever built, how heavy is she, and who was the builder? A.—Working the Grand Trunk business in the tunnel under the St. Clair river, near Detroit. About one hundred tons. Baldwin Locomotive Works. 3. What is the weight of a boiler with say 230 2-inch flues? A.—From 23,000 to 25,000 pounds.

J. C. B., Memphis, Tenn., writes:

I have often seen mention of steel made by the Coffin process, but no explanation of what the process is. You would favor several readers by explaining the process. A.—The Coffin treatment is a process to which steel is subjected after being made for toughening the material. The piece to be treated is heated uniformly to a cherry red and then it is dipped in cold depending upon the size of the article. It is then taken out of the water for a few seconds, the length of time internal heat of the article is sufficient to bring it back to a low red heat. From this temperature it is permitted to cool gradually. The process is said to cause a molecular change in the steel which makes it exceedingly tough.

S. W., Portland, Me., asks:

1. Will you please tell me what an intercepting valve is for? A.—An intercepting valve is used only on two-cylinder compound locomotives. It is a valve that automatically shuts off live steam from the low-pressure chest and opens it to the exhaust steam from the high-pressure cylinder. 2. What is the best way to cramp a valve-stem where metallic packing is used? A.—You cannot "cramp" the gland on valve-stem of an engine equipped with metallic packing. The Jerome has a set screw through the side, take this out and remove the washer under head and screw it down on to the stem. With the other kinds always carry a piece of sheet metal that can be fastened to one of the studs and reach back to the keyway in the stem, having a slot to match the keyway.

T. E. O., Parsons, Kan., writes:

There has been an argument among the shopmen in regard to the question: Does an engine lose any power when she is on the dead center crowding against her own bearings? A.—The arguments on this question generally relate to the disadvan-

tages of the crank, and some people see in a rotary engine an important advantage since it has no dead center. An engine at rest can exert no power on the side where the crank is on the center, because the force of steam on the piston will merely press the connections against the axle-box. That is not, however, looked upon as loss of power, because the power exerted by a certain length of crank is calculated from the greatest leverage—to the zero of the dead center. The pressure of steam on the piston is productive of two species of strains upon the crank-axle. When the crank is on the center, the turning effect of the power applied to the piston is nothing. When the crank is on the quarter, the rotative tendency is greatest, as the full leverage of the crank can then be exerted. From that position the leverage gradually diminishes until the dead center is reached, when it is nothing. In figuring the rotative power that can be obtained through a crank, the average rotative effect is taken. This is known to be as .6366 is to 1 for an entire revolution. When, in the case of an engine with, say, 24-inch stroke, which is 12-inch of crank, .6366 is multiplied by 12, it gives 7.64 inches as the length of crank receiving constant rotative effort. This gives a basis for figuring the tractive power of a locomotive.

C. A. R., St. Thomas, Ont., says:

What is the use of making the valve of the low-pressure cylinder of a compound so that it will cut off before the end of the stroke? A.—A cut-off is used in the low-pressure cylinder because it results in economy of steam. Many attempts have been made to use the steam in the low-pressure, through the full stroke, but the arrangement never worked satisfactorily. To explain the reputed causes of this would require more space than we can devote to this department.

J. B., Syracuse, N. Y., asks:

Is it possible or likely that a man, who is in good health and has passed a rigid examination for color-blindness, would become so color-blind two years afterwards that the company decided that he was not safe to be on a locomotive? A.—It may be possible for this to happen, but it is very improbable. There is one form of color-blindness, however, which has been fatal to not a few railroad men that may develop in the length of time stated. It is almost certain to be rapidly developed in a man who takes an unduly active interest in labor organizations or makes himself obnoxious to men in authority. We have known a variety of cases where men of this kind suddenly became color-blind and at once lost sight of their jobs. It is surprising how much lack of color a company's

surgeon can see in the eyes of a man who is considered objectionable.

R. Young, Boston, writes :

Suppose a locomotive with a boiler pressure of 140 pounds is pulling a train regularly, and can do most of the work when cutting off at  $\frac{1}{2}$ -stroke and slightly throttled. Would there be any gain by increasing the boiler pressure to 180 pounds? A.—We think there would be loss instead of gain. The engine would have to be throttled more, and there would be loss from slipping, without any gain in steam expansion. The throttled steam would be a little superheated, but that gain would not be enough to offset the losses.

Wm. O. D., Conneaut, O., asks :

What is the exact number of pounds of air we get in brake-cylinder from train line in emergency application, train line and auxiliaries charged to 70 pounds when application was made? A.—It all depends on size of cylinder and travel of piston—in other words, in the *volume* the air has to expand into. The best way to state it would be, the amount of pressure taken out of train-pipe, in an emergency application, by the quick-action valve—we do not know exactly, but it is a very small amount.

And the following have been taken from the *American Machinist* :

R. T., Dorchester, Mass., writes :

Please answer the following questions : What are the names of gases of which air is composed? And in what proportion? Also give similar information relating to water? A.—Air is composed by volume of 21 parts of oxygen and 79 of nitrogen; by weight, 23 of oxygen and 77 of nitrogen. These gases are not chemically united, but are mixed mechanically. Air also contains  $\frac{1}{1000}$  of carbon dioxide, some aqueous vapor, and small varying amounts of ammonia, nitric acid, ozone, and organic matter. Pure water consists of hydrogen and oxygen in the proportion of two volumes of the former to one volume of the latter; or by weight it is composed of two parts hydrogen united with sixteen parts of oxygen.

Y. K. W., Erie, Pa., writes :

Kindly give a solution of the following problem: do not use algebraic forms. The observed performance of a boiler was: Water evaporated per hour, 6.8 pounds; coal consumed, 1 pound per hour; steam pressure by gauge, 68 pounds; temperature of feed water, 176 degrees Fahr. What is the equivalent evaporation from and at 212 degrees? A.—For computations of this kind the absolute steam pressure must be taken, which is equal to  $68 + 14.7 = 82.7$  pounds; for convenience in referring to tables of the properties of saturated steam, say 83 pounds. One pound of steam at 83

pounds absolute pressure contains 1,209.8 units of heat; the temperature of the feed water is 176 degrees; hence  $1,209.8 - 176 = 1,033.8$  units of heat required to raise each pound of steam to the given pressure, but 6.8 pounds of water have been evaporated by 1 pound of coal; hence the total number of heat units given out by 1 pound of coal will be  $1,033.8 \times 6.8 = 7,029.84$ . To evaporate 1 pound of water at and from 212 degrees requires 965.7 units of heat; hence dividing the units of heat given out by 1 pound of coal, as found above, by 965.7, we have  $\frac{7,029.84}{965.7} = 7.27$  pounds of water evaporated

from and at 212 degrees. Subtracting the temperature of the feed water from the units of heat in a pound of steam, as we have done, is not strictly correct, because as the temperature of the water is increased above 176 degrees, the addition of a heat unit will raise its temperature slightly less than one degree, but the decrease is so slight that it need not be considered. For all ordinary purposes we may calculate that if we add one heat unit to a pound of water below 212 degrees it will increase its temperature one degree.

A. F., Philadelphia, Pa., writes :

Kindly inform me as to what determines the size of a boiler? A.—The size of boiler is determined by the amount of water which is to be evaporated in a given time. After this has been established the amount of coal to be burnt can be determined and from this the grate and heating surface are computed as explained in answer to 246 in our issue of June 13, 1889; and also in an article relating to designing small upright boilers in our issue of March 27, 1890. 2. What factor of safety is used? A.—A so called factor of safety of 6 is generally used, that is to say, the stress in the plates due to the steam pressure is not allowed to exceed  $\frac{1}{6}$  of the ultimate tensile strength of the plate. Since the riveted joints are considerably weaker than the solid plate, the real factor of safety is less, and in some cases much less than 6. 3. To what pressure are boilers tested above their working pressure? A.—The test pressure is usually equal to  $1\frac{1}{2}$  times the highest working pressure above the atmospheric pressure. 4. There is an idea among my acquaintances that a pound of water pressure equals a certain number of pounds of steam pressure. I hold that a pound of pressure is a pound whether steam or water is used. We depend on your answer for the settlement of these contentions. A.—You are right, there is no difference between the intensity of steam pressure and water pressure.

A. T. H. P., Cleveland, O., writes :

Kindly state if there ever was a steam engine built without a crank or slides. If so,

state the construction of cylinder and other principles? A.—Rotary engines have no cranks or slides; the construction of cylinders for the different types of these engines varies so much that we have no space for their description. There has been a number of crank engines built without slides, the parallel motion taking the place of the slides; in these the cylinders are of the same construction as in any ordinary engine.

R. L., Auburn, N. Y., writes:

In reading works and articles on the steam engine I frequently find a statement to the effect that it is not economical to expand steam below the pressure that will overcome the friction of the engine; also the loss that comes from making a pump of the engine. I do not understand this. Can you explain? A.—Such statements standing by themselves are misleading and, if true—particularly the first one—are so by accident only. It would be bad practice, generally, to design a non-condensing engine, which, we understand, you refer to, so that steam would, with the regular load, be expanded lower than about five pounds above atmosphere. But this is something, so far as the economical use of steam is concerned, with which the friction of the engine has nothing to do. It might quite as well be said that expansion should not be lower than the pressure required to drive the "big planer," or something of the sort. But it is one thing to design an engine for a definite load, and another thing to operate it under existing conditions as to load, steam pressure available, speed, etc. Suppose it took 20 pounds pressure to overcome the friction of the engine. It would not be good steam economy to stop expansion at 20 pounds above atmosphere, which you would do if you took the first statement literally. The conditions in operating a steam engine are frequently such that it is economical to carry expansion to, or even below, the atmosphere. When expansion in a non-condensing engine is below the atmosphere it is likened by some to a pump, we suppose, because when the exhaust valve is opened the flow will, at first, be into instead of out of the cylinder. If this in-flow was of air of ordinary temperature it would tend to cool the cylinder. But the in-flow is generally through a pipe of considerable length the contents of which are nearly as warm as—perhaps warmer than—the contents of the cylinder, so that under conditions ordinarily obtaining no particular harm results.

SOME French savants recently succeeded in raising a balloon 10 miles above the earth's surface; it carried no persons, but had clock work instruments which recorded temperatures. At  $7\frac{1}{2}$  miles above the earth the temperature was  $60^{\circ}$  F. below zero.

#### A New Car Brake.

The Carter Car Brake company of Minneapolis has recently been experimenting with a new form of car brake for street and steam railway use, which is a departure from the usual form. The device is the invention of Clarence W. Carter, of Minneapolis. In brief, it consists of two brake shoes suspended outside the wheels of a truck by means of hangers which admit of the movement of the shoe in an upward direction, but not downwardly. The shoes are hung considerably below the center of the wheels and are connected each with the other by means of a rod. Each shoe is also attached to the end of a chain which passes over a sheave or pulley and is connected to the brake rod or levers. In applying, one of the shoes is drawn up against its wheel, when the friction between it and the wheel causes it to rise still further, at the same time by means of the connecting rod pulling the other shoe against the wheel. The result is that the friction between each wheel and its shoe, when they are once brought in contact, sets the brake upon the other wheel. The result of tests so far made upon street cars is said to be that a car equipped with this brake can be smoothly stopped in about two-thirds the distance required with ordinary forms of brake gear. Further tests upon freight and passenger cars will soon be made.—*Railway Age*.

THE famous English high-speed locomotive "James Toleman," built by Westwood & Winby of London, and which Mr. Winby, its designer, claims is superior to any English or American engine ever built, is to be put into service shortly upon the Chicago Milwaukee & St. Paul road between Chicago and Milwaukee. It will be run in the fast passenger service between those points. Mr. Winby has been trying for some time to get up a trial of speed between his and some other well-known engine, preferably the New York Central No. 999, the Columbia of the Baldwin Locomotive Works, now in freight service on the Milwaukee road, or the Queen Empress of the London & Northwestern, but apparently on the ground that such a test would really prove nothing, there has been no acceptance to his challenge. Such a test as is now settled upon will be of infinitely greater value to Mr. Winby and the railway public at large than any single test possible could be; and whether it proves what Mr. Winby expects or not, the value of his type of engine will be more definitely determined than in any other way. Certainly no man ever exhibited a more abiding faith in the machine of his design or followed it to a decisive test with greater ardor than has Mr. Winby in the present instance.—*Railway Age*.

**A Severe Indictment of American Railroads.**

The two recent railway bridge accidents in America lend point to an article in the *North American Review*, comparing railway accidents in England and America. The writer, Mr. Prout, is editor of the *Railroad Gazette*, and he gives figures showing that it is between 15 and 16 times as dangerous to travel by rail in the United States as it is in the United Kingdom. "The British railroads cost about \$200,000 a mile; the American cost about \$50,000. Safety is not in direct proportion to cost, but the two are closely allied. The average charge for hauling one ton of freight one mile is .967 cent in the United States, and probably between 2 and 2½ cents in England. Again the average passenger fare in the United States is undoubtedly lower. You cannot eat your cake and have it. If the English standard had been enforced here, half or three-quarters of our railroads could not have been built. We have needed more service in proportion to population, and cheaper service, than the inhabitants of an old and thickly settled country, where the distances are short, and we have got it; but we have to pay for it some way. One of the ways has been with our arms and legs, not to mention vital organs." Then there is the great difference made by the carrying out of the block system in England. Of the 19,288 miles of railroad open for traffic in the United Kingdom in 1891, 11,043 miles, or 57 per cent., was double track; in the United States about 54 per cent. is double track. The absolute block system is used on 17,343 miles, or 90 per cent. of the railroads of the United Kingdom; in the United States the block system, absolute or permissive, is in use on about 5 per cent. In the United Kingdom 94 per cent. of all junctions, crossings, turnouts, and passing and yard switches used by passenger trains are protected by interlocked signals. In the United States there are no records from which it is possible even to estimate the amount of such protection; but while it is considerable absolutely, it is very small relatively. But double tracks, block signals, and interlocked signals, at switches and crossings, will prevent collisions, except in the rare cases when an engineman disregards a signal, or from some defect in apparatus cannot stop his train at a signal; and collisions are about 46 per cent. of all our train accidents." "A change," says Mr. Prout, "has begun with growing density of traffic on the more important railroads, double tracking goes on year after year, and in increasing ratio. Signals of both sorts—that is block signals and interlocked switch signals—are being introduced rapidly on lines of thin as well as heavy traffic, and increasing attention is paid to other means of safety. At the moment when I write, the

Safety Appliance Committee of the American Railway Association is sitting in New York to deliberate on the best means of extending the use of the block system." But he sums up, "We do habitually kill more passengers than the English, and we do so because they have, per unit of railroad line, more than 10 times as much double track, 16 times as much block signalling, very much more interlocking of switches, and considerably better arranged track."—*London Railway Review*.

ENGINEERS and firemen will be interested in knowing that four years ago W. J. Lewis patented an ingenious device for moving the valves of a locomotive, and dispenses entirely with the links and eccentrics. The special advantages consist of great economy in fuel, high speed, as well as ease of manipulation. The motion is conveyed from the crosshead of the engine, and imparts a variable travel to the valve, giving at the opening of the port a very rapid movement and a retarded action while expansion takes place. In addition, it is claimed that the device gives a saving of 20 per cent. in fuel, with 15 per cent. increase in tonnage, and at the same time an increase of about the same per cent. in speed. The Manhattan and other companies here are ordering this device, which it is expected will very materially save in the cost of operation, and at the same time give a much higher speed than has yet been attained by the old link motion.

THE "Columbia" the special fast locomotive built by the Baldwin Locomotive Works is now in freight service upon the C. M. & St. P. road in order to get her into condition before entering the fast passenger service between Chicago and Milwaukee. It has been reported that the engine had been or was to be purchased by the road, but on the authority of general manager Earling it is stated that there is no such present intention. The present arrangement is for testing purposes only.—*Railway Age*.

**Inventing Car Couplers.**

A peculiarity about the invention and patenting of car couplers is that the greatest part of the applications to the Patent Office go from small country towns where there are no railroad shops or establishments engaged in car building. The origin of a great many of the inventions is that a man of an inventive turn hears about the injury and destruction to life that is caused yearly in the work of coupling cars, and he proceeds to design a coupler that he supposes will work automatically. He has not any idea of the real re-

quirements of a car coupler, but he is intent principally upon getting up something which will couple with another of the same form when both come together on a straight line. This is the origin of so many link and pin couplers being patented long after those of the vertical type have been made standard.

The inventors in numerous instances do not know what a vertical plane coupler is. They get the inventing idea into their heads and work it out by examining the couplers of the cars they find standing on side tracks. The link and pin coupler is still in the majority, and the rustic inventor naturally supposes that the majority is the side he ought to keep in with. The consequence is that the Patent Office continues to receive a good revenue every month from the inventors of car couplers of a form that no railroad company will ever apply to a single car.—*Locomotive Engineering*.

An eminent medical authority, in a recent number of the *Boston Surgical and Medical Journal*, maintains that coffee is a real brain food, and has the power of absolutely increasing a man's capacity for brain work. The writer further says: "Opium stimulates the imagination; alcohol lifts a man up for the moment to throw him into confusion and irregularity of action, but caffeine increases his power of reasoning, and absolutely adds to his brain-work capacity for the time."—*National Car and Locomotive Builder*.

The following is given as the performance of an English locomotive, which it is claimed will be hard to beat by an engine in this country:

A tank engine, with cylinders 17 in. diameter, 24 in. stroke, six coupled wheels, 4 ft. 9 in. diameter, weighing 40 tons, hauled twenty-five loaded wagons, weighing 15 tons each = 375 tons, and with the engine a total weight of 415 tons, up a bank of 1 in 90, which is equal to hauling 1,245 tons on a level road.—*American Machinist*.

#### Mine Owners and the Coal Contracts.

Great interest is taken by all classes in South Yorkshire in the result of the half-yearly contracts for the supply of coal to the railway and gas companies, the time for the settlement of which has now arrived. The matter is one of the deepest importance, for upon the issue, says a *Daily News* correspondent, depends the future peace or otherwise of the coal industry. The owners, failing to obtain a reduction of wages, will endeavour to increase the prices to the railway companies, and in the contracts now under consideration they have advanced prices 1s. 6d. per ton upon the old

contracts. The companies returned the tenders with an intimation they were not prepared to pay any increase. The owners, however, are using their organization to secure better prices, and if they continue their present firm attitude it is believed they will be masters of the situation, and that the companies will have to yield. The miners are watching the negotiations with the greatest anxiety, for if the owners are able to secure 1s. 6d. a ton increase on their contracts, they will not, it is understood, attempt again to economize at the expense of the workmen.—*London Railway Review*.

#### Marking Eccentrics.

At a gathering of railroad men not long since, a master mechanic of a prominent road, in discussing the question of keying *vs.* set screws for a locomotive eccentric, said that he once knew of a case in which a new engineer, who came highly recommended, proposed, the first thing, to forestall any possible trouble with slipped eccentrics, and went under his engine with hammer and cold chisel and made a mark at the side of each eccentric extending over onto the strap. He went out on the road, and one of the first things to happen him was to slip an eccentric. He went under to find out by his marks which one it was, and to his surprise found none of the marks agreeing, and supposed all the eccentrics had slipped, he set them all to make the marks agree, and had an example of the most wonderful steam distribution ever known—or would have had if he could have got the engine to move.—*American Machinist*.

It is rather apparent that the immigration laws of this country will soon be made very much more stringent than they are at present, one of the requirements quite probably being that immigrants shall be able to read and write in the language of the country from which they come. The change likely to be made is the result of the unloading here from European countries of a class of emigrants in every way undesirable, and the efforts of many manufacturers to fill their works with "cheap labor."—*American Machinist*.

THE state of Illinois profited largely in its treasury from the world's fair traffic of the Illinois Central. That company pays the state 7 per cent. of its gross earnings, and this tribute for the six months ending October 31 was \$450,176. For the previous six months the payment was \$302,890, making the total tax for the year \$753,067. The Illinois Central nearly if not quite pays the entire expense of the state government—an arrangement which put state railway ownership far into the shade.—*Railway Age*.

## WOMAN'S DEPARTMENT.

EDITED BY IDA A. HARPER.

Letters for publication should be directed to Mrs. Ida A. Harper, Stanford University, California.

### EDUCATION FOR WOMEN.

There are no backward steps in the movement for the higher education of women, but a steady advance throughout this country and in many parts of Europe. The advantages of the public schools are free alike to both sexes, and we can hardly conceive of their being otherwise. Public sentiment would not tolerate that girls should not have the same privileges of a common school education, paid for out of the public funds, as are granted to boys. And yet when free schools were first established, during the present century, there was no thought of permitting girls to attend them. Finally, as a sort of concession, girls were allowed to enter the lower grades, but, until about forty years ago, they were not admitted to the high schools. All this time women were paying their proportion of the taxes to support these schools. It was only about twenty-five years ago that the various state universities began to open their doors to girls, and yet women were being taxed right along to carry on these institutions.

Does this seem an injustice, in the light of modern times? Let us see. Women are being taxed annually to support the state institutions for the blind, the insane, the deaf and dumb, the feeble minded, etc., and yet there are only a very few States in the Union which will permit women so much as a representation on the boards of trustees, even if there is no salary attached. Women are taxed to the utmost to build state houses and pay the heavy expenses of the legislatures, and yet, up to the present time, only in one state out of the forty-four, has any woman been permitted to sit as a member of these legislatures. Women are taxed in exactly the same ratio as men to pay for our county court houses and for the expensive salaries of all the county officials, and yet only in one state is any woman allowed to serve as a county official. Women are taxed to the last dollar for municipal purposes, and yet only in two states may they serve in any municipal capacity. Not only are they forbidden to fill office themselves, but they are not allowed any voice whatever in selecting the persons who are to serve state, county or city, who are to make the laws they must obey, and levy the taxes they must pay. If a railroad or a street or a sewer is to be built and paid for by taxation, a public vote will be taken. Men who do not own a dollar's worth of

property will vote whether the improvements shall be made, but the women who must put their hand in their pockets and help pay for them, are refused the privilege of a ballot. It is just as well for us to think of these things when we are inclined to condemn our ancestors for their bigotry and injustice and congratulate ourselves upon our broad liberality and great freedom.

But we are making some progress, and this is especially true in regard to matters of education. There are very few of the large universities of the country which still keep their doors absolutely closed to women. Johns Hopkins and Yale grant them very limited privileges. Harvard has maintained an annex for a number of years, which has now been re-christened Radcliffe College, but it will not yet perform the simple act of fairness of granting a regular Harvard degree to a woman who has performed the same work and passed the same examinations as the men who receive the degree. Columbia college gives the full degree but does not guarantee to furnish equivalent instruction to her woman's annex, Barnard college. Michigan University, which ranks among the highest, admits girls on exactly equal terms. The same is true of Cornell university, at Ithaca, N. Y. The two great new institutions, opened within the past three years, Chicago university and Stanford university, make no distinction whatever between the two sexes. There are a large number of excellent colleges in all parts of the country, which offer the same facilities to both sexes. There are also a sufficient number of law, medical, art and technical training schools which admit women, to make it possible for every girl to find the opportunity she may desire. The renowned universities of England, Scotland, Ireland, Germany, France and Switzerland extend their privileges in whole or in part to women.

The statement that women are improving these opportunities and distinguishing themselves by the excellence of their work, receives corroboration at every point. It is the universal testimony of the presidents of co educational colleges that the experiment is an unqualified success. The professors of the different departments testify, almost without exception, that the average class standing and the examinations of the girls are above those of the boys. In matters of discipline no trouble whatever is experienced with the girls. President Harper, of Chicago university, is quoted as saying that when he was placed at the head of that institution he was strongly opposed to co-education, but that he is now ready to declare that the only department which has never made him the slightest trouble

is the young woman's department. Numerous instances are on record of especially noted work that is being done. Notice has heretofore been made of Mrs. Arthur Lowell Davis, who has just entered Johns Hopkins for the post-graduate degree of Doctor of philosophy. She is a graduate of Columbian University where she made a wonderful record in mathematics. She passed a civil service examination in mathematics and astronomy, in which every man who attempted it failed, was marked perfect and given a \$1,200 position in the Nautical Almanac office, in connection with the Navy Department. She has been employed also in the most difficult astronomical observations.

Another American girl, Dorothea Klumpke, of San Francisco, has just passed a most brilliant examination in science and mathematics and received her degree at the famous University of Sarbonne, in Paris, an honor which can hardly be described. She has been given an important position in the Paris observatory. Miss Gertrude Mitchell, of Liverpool, eighteen years of age, has won the first place in all England and Wales in the examinations for the queen's scholarship. She achieved this position over 4,750 competitors.

These cases especially are mentioned because the honors have been gained in the department of mathematics, in which it always has been claimed that women were deficient. Every college could furnish examples to the contrary. The mental equality of women is becoming very fully recognized. In the first twenty-five years in which they ever had an opportunity, women have refuted the arguments that were used to hold them in mental bondage for untold centuries. The way is open, and every girl who possibly can accomplish it should obtain a college education. If she must earn her living, it will enable her to do so in a much easier and more remunerative way. If this is not necessary, then she should secure this education for the pleasure it will afford herself and the great benefit it will be to her in the management of her children and her household.

#### THE NEW YORK CONVENTION.

It is always a question, every month, which subjects of particular interest to women to take up for discussion, since these subjects are so numerous and are forming so large a part of the daily issues that attract our attention. Just at present the progressive women of the United States are especially interested in the battle that is being fought in New York state. Next May this state is to hold a constitutional convention for the purpose of revising its constitution, and a campaign has been organized and is being vigorously carried on to

secure an amendment which shall strike out the word "male" as a qualification for voters. Should such an amendment be secured, it would confer full suffrage upon the women of that state. If this should be done it is almost impossible to predict the extent of the influence it would exert. The political importance of this state is well known. It holds, practically speaking, the balance of power in national elections. Should its women be enfranchised, its influence would be tremendously increased, and the neighboring states would be compelled to extend similar privileges to their women in self-defense. This undoubtedly would be followed by similar action on the part of the remainder of the states, so that it can be seen the matter is one of very great importance.

The best suffrage speakers have been brought into New York, a large amount of literature is being circulated and great interest is being taken in the work. The principal drawback is the lack of money. No fund from any source is available, and the workers must depend wholly upon personal contributions, a very slow way of obtaining money, as every one knows who has tried it for any cause in which he is interested. I wish it were possible for our readers to assist in this work, whose success would mean a great step forward in obtaining the ballot for women everywhere. No matter how small the sum of money, it will help. It can be sent to Miss Susan B. Anthony, Rochester, N. Y., or to the state treasurer, Mrs. Henrietta M. Banker, Elm Cliff, Au Sable Forks, Essex Co., N. Y. There will be no danger of this money's being misapplied. In Colorado, it is said, not one dollar of their limited means went for whiskey or tobacco or for any except purely legitimate purposes. Those of the speakers who can afford to do so, give their services, others serve for very little over their expenses. In all the long forty-five years' struggle to obtain equal rights for women, no one of the leaders has ever made any money out of the work, although many have given time and talent and labor which, expended in other directions, would have brought fame and fortune. This is true of all who engage in reform work. The world will not pay to be reformed, it would rather fight the reformers. After they are dead and the cause they died for has succeeded, the world feels that it has done its duty by pronouncing a fine eulogy and raising a monument.

The workers in New York find much encouragement in the attitude of the press. The *Sun*, the *Herald*, the *Recorder*, the *Press* and others of the metropolitan papers champion the cause, while many of the newspapers of Buffalo, Rochester, Syracuse and other large towns maintain a favorable

and hopeful attitude. There is a very considerable sentiment toward equal suffrage in New York. School suffrage has already been granted to women, and municipal suffrage several times has come within a few votes of passing the legislature. Governors Cleveland, Flower and Hill have shown a friendly feeling toward the question. There should be no partisanship in this matter. Women, when enfranchised, will vote with every political party, but should any one make itself conspicuous in securing for them the exercise of this right, it would deservedly receive the weight of their influence. There is little doubt, however, that a tremendous power in New York City will be brought forward to defeat the granting of suffrage to women. The saloon element and its accessories are bitterly hostile to giving political privileges to women. They have fought it in every state where it has been attempted. This contest in New York is particularly important from the fact that there will not be another constitutional convention in that state for twenty years. We will watch with anxiety to see whether her men will do this simple act of justice to women, give them the right to represent themselves, the very right which is supposed to distinguish an American citizen and constitute a republic. At present, women are taxed without representation and governed without their consent, the two great wrongs which brought on the war of the revolution.

#### THE HEAD OF THE FAMILY.

Very much shocked our good old grandmothers would have been, if, in their day, any one should have dared to raise the question as to who was the head of the family. "He" was the head, of course. "He" might have been an insignificant, inefficient and altogether inferior person, but because he was "he," that made him lord and master. A neighbor of mine, a woman of the old school, with all of the ancient ideas in regard to the absolute submission of wives, always spoke of her husband, and all other husbands, as "Mr." Never "Mr. Smith" or "Mr. Brown," but simply "Mr.," in a tone of the most profound respect. She was much the superior of the two but was terribly tyrannized over by her husband. One day I said to her, "Why don't you stand up for your rights and lay down the law to him?" She looked at me in perfect horror and exclaimed, "Why, what do you suppose 'he' would say?" "Well, I would find out," I replied. She tried it and it scared the man almost to death, and, from that day she never again allowed him to have the mastery over her, although she was always a devoted and conscientious wife.

Tradition has it that the husband is the

head of the family, but under the new dispensation the headship is determined by character and competency. Certain persons, of both sexes, are born to be leaders. The marriage vow cannot transform these characteristics, they will assert themselves. According to the modern idea, there should not be any head to the family, but there should be an equitable division of labor, with a head to each of the two departments. The husband should not assume the role of dictator, nor should the wife. There should be mutual interests, mutual respect, mutual concessions. The husband should no more assert his right to control the person, property and individual will of the wife, than should she make such a claim. Marriage should be a pure democracy, founded upon exact justice and sincere love. Where these exist, there will be no vexing questions of headship and supremacy. This applies to the settlement of all the various matters that come up for discussion in married life.

As regards outward observance, I confess that I like to see the husband deferred to as at least the nominal head of the family, provided always that he is a man who is worthy of respect. There are cases where the wife is so manifestly pre eminent in character, in efficiency, in respectability, that she is universally recognized as the superior member in the matrimonial firm. But in the average family, it seems in good form, certainly, to acknowledge the husband and father as entitled to authority and regard, as the senior partner, so to speak. He is usually the elder, he has the responsibility of maintaining the family, he represents it in the community. For his own household to relegate him to an inferior position lowers him in the estimation of the outside world. Within the privacy of the home life, however, the father should rigidly train the children to think that there is no higher law than the will of the mother; and he should set them the example of thus regarding it himself. We want to get just as far away as possible from the idea of the absolute supremacy of the man, but we do not want to go to just as vicious an extreme by advocating the absolute supremacy of the woman. We simply desire an equalizing of the honors.

#### BY THE WAY.

A delegation, representing the Illinois Federation of Labor, the Chicago Trades Assembly and other labor organizations, has called upon Mrs. Potter Palmer and presented her with an engrossed copy of resolutions, thanking the World's Fair lady managers, and herself in particular, for their efforts in securing the right to grant diplomas to the individual artisan, inventor and mechanic who assisted in creating the

exhibits that received the awards at the fair. Had it not been for this action, the public would have known only that such and such great exhibit received a prize, but no credit would have been granted to the individual workers whose skill gave the value to the exhibit. From the beginning to the end of the exposition Mrs. Palmer lost no opportunity of showing her friendship and appreciation to working women. She is a woman born to the purple, accustomed all her life to the luxurious surroundings of wealth, and yet she gave two years of hard and unceasing work to the cause of women in connection with the great fair, and it is due to her, more than to any one woman, although many labored nobly, that women received the splendid recognition that was accorded them. They made a century of progress in that celebrated year of 1893. Mrs. Palmer has now, through her husband, given \$200,000 for the erection of a woman's building in Chicago, which shall be devoted wholly to the interests of women.

The New York *Sun* continues in its good work for equal suffrage. It says in regard to the recent elections in New Zealand, where the women exercised the full suffrage: "When they voted at the elections held in the colony a few weeks ago, the objections to females suffrage were dispelled. Their demeanor was worthy of their sex, and the demeanor of the male voters toward them was respectful and correct. They gave evidence of their interest in public affairs, of their political independence, mainly by voting against the government, and of the soundness of their judgment in discriminating between the rival candidates. The scenes at the polling booths, as described by the colonial papers, were in every way satisfactory. The arguments against female suffrage will not hereafter be urged by the New Zealanders."

The New York *Press* says: "The working of woman suffrage in New Zealand is developing a new phase of practical politics. At a recent election a feminine committee was appointed to look after babies while their mothers went to the polls to vote. The question as to who will take charge of the children if the women take part in active politics has been made maliciously prominent by the masculine foes of woman suffrage. The women of New Zealand have solved the problem."

And the Boston *Globe* remarks: "A correspondent of the San Francisco *Chronicle* describes the order, decorum and intelligence with which the women of New Zealand went to the polls and voted on Nov. 28, 1893. If they can do that in New Zealand perhaps the legislature of Massachusetts will sometime be ready to let the wo-

men of the old Commonwealth try their hand."

The great thunderer, the London *Times*, says, in commenting upon the New Zealand elections: "The result decisively scatters any fears of a sex vote, and testifies to the discrimination and wholesome division of opinion of the new electorate."

Scores of similar extracts might be made from the leading newspapers of the country, showing that they recognize the change that is taking place in public sentiment upon this question.

\* \* \*  
An American paper, published in the far-away regions of the Caucasian mountains, says: "A short time ago there died in Boston one of the great persons of the United States of America, Mrs. Lucy Stone. We are accustomed to hear and read of 'great men'; but a 'great woman,' to us Orientals—why only to us? even to the Europeans—seems strange. How is it possible that a woman should be great? A woman can and must be 'nice,' 'tender,' 'womanly,' sometimes even 'talented,' but to be great does not belong to her. Greatness is granted only to men." And then it goes on to say that in America a woman may possess all of these womanly attributes and yet be strong and independent also, and it gives an extended account of the life and work of Lucy Stone and the present political status of women in this country. The article has gone the rounds of the Constantinople and other Oriental papers.

\* \* \*  
Rev. M. J. Savage, the leading Unitarian minister of Boston, recently delivered a sermon on "A Man in the Family," in which he uttered the following commendable sentiment: "The wife should have unlimited freedom in regard to her opinions, just as the child should when he is grown,—religious, political, what not. Encourage freedom of thought and diversity. Let the wife lead her own life. Let her study. She has the same right, if she pleases, to belong to a club that a man has, to follow her intellectual and artistic bent that he has, and the same right to lead a full and rounded existence. And, if she be true and there be mutual respect and confidence, the home is made only the richer by this living out of the full life of both the husband and the wife." But how strange that he must say a wife "should" have or do all this. Is it possible there are husbands who refuse these privileges to their wives?

\* \* \*  
A great national convention of Working Girls' Clubs is to be held in Boston, in May, and five thousand delegates are expected. Among the subjects for discussion are, "What stand shall the Working Girls' Clubs take on the labor question, and what effect

are they likely to have upon its solution?" and "What is the effect of working for pin-money upon those who work for a living?" Much is to be hoped for from such organizations as these and, doubtless, some leaders in thought and oratory will be developed, who will prove themselves a power in the great labor battles which are yet to be fought.

The New York *Sunday Press* offered a prize for a sermon to young women. Over one thousand were submitted and the prize was awarded to Mrs. Eliza Archard Conner, who is connected with the American Press Association of New York. The sermon was written under the following heads:

1. Do some useful work and do it with enthusiasm.
2. Lay up some money.
3. Be sincere.
4. Be helpful to others.
5. Be neat.
6. Stand by your own sex.
7. Uphold forevermore the purity, dignity and worth of womanhood.

Before this is read the legislature of Massachusetts probably will have voted upon the granting of municipal suffrage to the women of that state. The new executive, Governor Greenhalge, recommended it in his message, in January. Massachusetts women have had school suffrage for a number of years. At the last school election in Boston sixty-two per cent. of the registered men and ninety per cent. of the registered women voted. For the last five years, in that city, the women have held the balance of political power in the election of school commissioners.

The recent death of the wife of the great novelist, William Makepeace Thackeray, has called attention to the fact that she has been in an insane asylum over forty years. Considerable newspaper sympathy has been expended upon the lonely existence of the novelist during all his life time, but no comment has been made upon the fact that his wife was a strong, healthy girl when she was married, that she bore four living children the first five years of her marriage, and that, with the birth of the last, she went into an insane hospital for life.

#### *Managing the Husband.*

The subject of managing one's husband seems to receive a deal of attention from your correspondents, and some of the recipes given for insuring a happy home are novel, to say the least. The Chicago girl, who blacks her husband's shoes, is certainly entitled to the first prize. I'd like to know what kind of a man her husband is, and what he married her for, anyway? She

seems to have a kind of Pullman porter job.

The remedy suggested in the Texas letter sounds rather severe, although I have known of its being used successfully. I should not dare try it myself except as a last resort, for it is like some of these patent medicines—bound to kill if it does not cure.

Nobody's pet plan will work with all husbands or wives. "Know thyself" is a good motto, but "know your better half" is better, after you are married. A thorough understanding of one another's dispositions and tastes is the only foundation on which you can build a lasting happiness. You are working in the dark until you find that out, and you won't learn it all the first month, either. One of my friends said once that the first two years of her married life were perfect misery. She didn't understand Charley, and he didn't understand her, and each was constantly doing something to please the other that the other misunderstood. After awhile each learned a little, and when I knew them, some years later, they were a thoroughly contented couple.

Before this reaches you I fancy you will have a shower of letters condemning your Texas correspondent's breezy way of recommending separation as a cure for matrimonial disagreement, and I "rise to remark" that in the main I agree with her. Not that I think one ought to apply for a divorce the first time Jim comes home cross, but I do know of cases where a wife is clinging desperately to a husband who has ceased to care anything at all for her. Sometimes it has come about through her fault, sometimes through his; sometimes the marriage was a mistake in the beginning, but when such a state of affairs exist and cannot be altered, it seems to me that a separation is the only remedy. Existence together is a daily aggravation of the trouble.

Thank Heaven, I haven't any grief of that kind, and Joe is only too glad of a chance to stay home evenings, and never asks me what I do with the money; so, let's talk about something else.

I shall be glad to know what you think of higher education for girls. You hint at a belief that the more they know the less their chances of marriage. I should not wonder if statistics would support that opinion, nevertheless, it is not true out here. Living in the shadow of two co educational universities, I have some personal knowledge of the subject, and I can assure you that California girls go on securing the best attainable education and the best attainable husbands at the same time.

Your mention of health and pleasure resorts reminds me that there is one place where I want to spend a whole month some

summer when Joe can spare the time. On the west side of San Francisco Bay, north of the Golden Gate, there is a little inlet where the water is as smooth as glass. It is a sort of land-locked bay, open to the south and east, but protected from the westerly trade winds by the coast range and some islands. Along the shore some houses are built out over the water, and more expensive residences are scattered all over the island of Belvidere, which rises out of the water like a mountain. All around on the water are "arks," i. e., what the English call house-boats. They are boats, inasmuch as they float and have anchors, but they are calculated to be stationary. People fit up the interiors to suit themselves. Of course, they are small, and accommodations are somewhat like those on steamers. Here one can live without noise, heat or dust. The air is perfectly pure and fresh from the ocean. Every "ark" has its row-boat, for communication with land and neighbors. There is enough scenery to interest and amuse without alluring one off on wearisome tramps. To the south, San Francisco's streets climb over Telegraph and Clay street hills. Nearer is Alcatraz, with its fort and light-house. To the east is Angel Island, with its military station. Ferry boats, plying between San Francisco and other towns on the bay, are in sight but beyond hearing, and every vessel that goes through the Golden Gate moves slowly across your line of vision on the south. It is the ideal place for a summer's holiday.

OAKLAND, CAL. *Emily L. Baker.*

#### THE HEART'S SECRET CHAMBER.

(The following lines are dedicated to my friend, Mr. Walter Edwards, Oakland, Cal.)

You say that I am happy now,  
That sorrow lurks not near,  
That life for me hath many charms—  
You speak of friends so dear;  
And yet dark shadows lie around  
My path where'er I tread,  
While ties of friendship, once so dear,  
Are severed now and dead.  
The happy past of years ago,  
Is but a memory now,  
O'er which the longings of the soul  
Have left their imprint on my brow;  
My way through life is filled with gloom,  
Dense as the rayless night,  
Uncheered, I walk life's path alone,  
Where beams no dawning light.

Could you but read between the lines,  
You ne'er would ask again  
If life for me is fraught with joy—  
Is free from care and pain;  
A smile may often wreath the lip,  
And words of joy be said,  
To shield the heart from human gaze,  
When faith and trust are dead.

A nameless sorrow fills my soul—  
Has entered there with stealthy tread,  
While o'er my life dark shadows roll—  
Hope from heart hath fled;  
And yet how much the heart can bear—  
May break, yet give no sign—  
How can my life know aught but pain  
When voiceless grief is mine?

WEST OAKLAND, CAL. *Nellie Bloo*

#### Sponge Out the Headache.

The ordinary nervous headaches will be readily relieved, and in many cases entirely cured, by removing the waist of one's dress, knotting the hair high up on the head, out of the way, and while leaning over a basin, placing a sponge soaked in water as hot as it can be borne on the back of the neck.

Repeat this many times, applying the sponge behind the ears, and the strained muscles and nerves that have caused so much misery will be felt to relax and smooth themselves out deliciously, and very frequently the pain promptly vanishes in consequence.

Every woman knows the aching face and neck generally brought home from a hard day's shopping or from a long round of calls and afternoon teas. She regards with intense dissatisfaction the heavy lines drawn around her eyes and mouth by the long strain on the facial muscles, and when she must carry that worn countenance to some dinner party or evening's amusement, it robs her of all the pleasure to be had in it. Cosmetics are not the cure, nor bromides, nor the many nerve sedates to be had at the drug shop.

Use the sponge and hot water again, bathing the face in the water as hot as it can possibly be borne; apply the sponge over and over again to the temples, throat and behind the ears, where most of the nerves and muscles of the head center, and then bathe the face in cold water running from the faucet. Color and smoothness of outline come back to the face, an astonishing freshness and comfort is the result, and if a nap of ten minutes can follow, every trace of fatigue will vanish.

MAKING SURE. *First Lady* (off for a journey).—I hope we've got the right train.

*Second Lady*.—I asked seventeen trainmen and ninety-three passengers if this train went to Blankville; and they all said yes, so I guess we're all right.—*New York Weekly*.

ON HIS DIGNITY. "Is Mistah Gwaynus in?" asked the sable caller. "He is, sah," replied the dusky functionary at the door, "but he is occupied." "How soon, sah," said the caller, pulling up his shirt collar, "will Mistah Gwaynus be vacant?"—*Chicago Tribune*.

"I ought to study photography," mused the seaside young man who had proposed again. "I really ought. I can develop more negatives in a given time than anybody I know of."

Tom.—Do you believe any man ever did really make a mistake and kiss the wrong girl in the dark? Jack.—No; how can one kiss the wrong girl, anyhow?—*Puck*.

APRIL, 1894.

### ECONOMIC EXPERIENCES.

In the *Forum* for January, 1894, David A. Wells has an important article on "The Teaching of Our Recent Economic Experiences." Mr. Wells is widely known as a gentleman of profound erudition and as eminently qualified to write upon the subject he presents in the *Forum*.

In reviewing his article, we propose little more than the presentation of the figures representing the recent disastrous experiences of the people in the United States and the more salient of the arguments which the writer furnishes, indicating the cause of such experiences.

Reversing the order followed by Mr. Wells, it may be well to give his views of the cause of the nation's recent deplorable experiences, which, unfortunately, are still going forward, and which, in the opinion of the most hopeful, must continue.

"In the first place," says the writer, "the immediate and principal cause was, beyond all question, a *distrust* of the very foundation on which the whole superstructure of the trade and credit of the country rests, namely, *its currency*."

The writer does not state why there was "distrust" of the "currency"—whether there was too much or too little currency, or what cause existed for discrediting the currency. Indeed, there seems to have been, by the writer's own statement, no real cause whatever for such distrust, for he says "the evidence is complete and unassailable that the disastrous economic experiences of the United States during the past year were, as respects origin and characteristic features,

and in a national sense, purely local," and that "it is also equally capable of demonstration that the cause of this same disturbance was mainly *artificial* and *wholly unnecessary* and *unnatural*;"—not a distrust of the currency as it existed at the time the panic began, but "as before pointed out, a distrust on the part of the people of the United States of the *future money of their country*." It was not, therefore, a distrust of the currency when the "artificial and wholly unnecessary" disturbance began, but a "distrust" of the "future money of the country,"—a very marked distinction and difference. During the debates on the money question, it was held that the disturbances and disasters were the result of a "conspiracy" on the part of certain individuals to bring about a panic, that they might secure such legislation as they desired, and if the panic was "mainly artificial and unnecessary," as Mr. Wells declares, it would seem that such a conspiracy did exist, in consequence of which incomputable disasters resulted. What were these disasters? We give Mr. Wells' summary, as follows:

The national treasury, of late years so overflowing with surplus revenues that millions of dollars (\$21,453,718 in 1890 and 1891), were given for the privilege of simply anticipating the payment of debts funded at low rates of interest, now faces the certainty, independent of any change in the methods or rates of taxation, of an annual deficit of necessary revenues of something like \$30,000,000.

A decrease in the gross earnings of the railroads of the country from May to October, inclusive, of at least \$30,000,000; of which \$12,033,000, or, eliminating the World's Fair business of \$20,000,000, accrued in the month of August alone.

The loss occasioned by destruction of property by fires in 1893, in excess of that experienced in the previous year, and undoubtedly in a large degree the result of incendiarism contingent on hard times, is estimated at \$25,000,000.

Between the 4th of May and the 12th of July, deposits to the amount of \$194,000,000 were withdrawn from the national banks alone.

Between the 4th of May and the 3d of October, these withdrawals amounted to \$378,000,000—\$259,000,000 by individuals, and \$79,000,000 by banks and bankers. And if to this sum the withdrawals which occurred in like proportion from savings banks, state banks, trust companies and private banks, be added, the aggregate would undoubtedly exceed \$500,000,000.

To meet this drain, the national banks were compelled to call in loans to the extent of \$318,000,000, and all other banking institutions of the country pursued a similar policy.

This concurrent action constituted the most remarkable feature of the recent remarkable economic experience under consideration. It probably finds no exact parallel in all economic history. It greatly intensified adverse influences which before operated gradually; paralyzed the whole industrial system of the country by annihilating for the time being a great deal of its machinery of exchange and making commercial credit well nigh impossible; and entailed losses of such magnitude that long years, in the case of any other nation, would have been necessary to effect even moderate recuperation.

Between January 1 and October 31 (but mainly in the three months of July, August and September) 154 national banks, 181 state banks, 49 savings banks, 188 private banks and 13 loan and trust companies—or an aggregate of 385 banks or banking institutions—suspended payment, with liabilities of \$169,000,000. But of this aggregate, the suspension of 171 was temporary, and the outcome of an unreasoning insistence that perfectly solvent institutions should liquidate on demand.

During the period above named, over \$1,200,000,000 of the railroad property of the country was placed in the hands of receivers.

During the first six months of 1893, the receipts of revenue by the federal government were greater by more than \$10,000,000 than for the same time in 1892; but during the months of July, August, September and October, 1893, there was a decrease of more than \$27,000,000, as compared with the receipts of the corresponding months of the preceding year.

The number of failures for the year 1893 will exceed 16,000, as compared with 12,000, the largest number ever before reported in any one year. The aggregate of these contingent liabilities will probably exceed \$400,000,000, as compared with a maximum of about \$200,000,000 in any one year since 1857.

The foregoing is the classification of the stupendous losses which have fallen upon the country during eight months of the year 1893. And Mr. Wells adds:

Finally, in order to make this summary complete, there must be added the losses incurred by the owners of shops and factories who were obliged to suspend operations; and, above all, by the thousands of men and women representing every form and grade of labor, who, by reason of widespread limitations of their usual opportunities for employment, were unable for considerable periods to earn wages.

To state specifically in terms of money how great these losses have been in the aggregate, is not possible; but few who have made the matter a subject of investigation will doubt that a *thousand millions of dollars*, or more than one-third of the amount of the national debt at the close of the war, would be an under rather than an over estimate.

David A. Wells, as a writer on economic questions, has a national reputation. His views are accredited important in the most influential monetary and business circles, and it therefore becomes eminently prudent to examine his postulates and con-

clusions to ascertain if, after all, he is not the victim of hallucinations.

He avers (1st) that the panic resulted from "distrust of the very foundation on which the whole superstructure of the trade and credit of the country rests, namely, its currency." (2d) He avers that this "distrust of the people of the United States related to the *future* of the money of their country."

The fact is, that the people of the United States, at the beginning of the panic, or for an indefinite period prior to the panic, entertained no distrust "of the currency of their country." The people, the masses, the great public, were entirely satisfied with their currency, so well satisfied were they that they demanded more of it, and declared that all business interests were suffering for the want of more of this currency. Why then say they distrusted it?

That the people had confidence in the currency is true beyond controversy, testimony is voluminous, and the battle fought in the extra-session of congress, was fought on the one side by currency tinkers and on the other side by those who demanded that the currency should be let alone, that it was good enough for the people.

Again, Mr. Wells utterly defeats the hypothesis of distrust when he says the panic "*was mainly artificial and wholly unnecessary and unnatural.*" It could not have been then unnatural, and wholly unnecessary and artificial, if there had been any distrust on the part of the people of the soundness of the currency. Hence, the theory of *distrust* fails utterly.

Instead of distrust the people had boundless confidence in the currency. They liked the gold, the silver (even the subsidiary silver), the greenbacks and the national bank bills, and accepted without a grimace the nickels and copper coins; a protest was never heard from the people. Hence the panic was created and carried forward by the few conspirators who, striking at silver, struck fatal blows at every industry in the land. They demanded a gold standard and won the fight, and brought incalculable disasters upon the country. The conspirators did create distrust, as Mr. Wells avers,

which was "artificial, unnecessary and unnatural."

Mr. Wells alludes to the silver mining industry of the country as a calamity, depreciates the importance given to silver as a money metal, which indicates conclusively that his *Forum* article was written in the interest of those who fought to enthrone gold and degrade silver, and then takes occasion to point out that the people of the United States are without exception the greatest aggregation of ignoramuses on economic questions to be found on the face of the earth. Referring to those who advocate a financial policy which makes silver and gold equally valuable as currency at a specific ratio, as having been viciously educated, he arraigns the people of the United States for their ignorance and stupidity; he launches forth his anathemas as follows:

But the people have been so educated; and, by reason of such default, the most appalling ignorance prevails in respect to the above (silver theories) and all other economic subjects; and not only among the masses, but among many who are filling important stations as legislators, editors, and educational directors and teachers. And under such a condition of things it is almost hopeless to expect that fundamentally clear and correct ideas, or ideas remedial of specific evils, will ever be embodied in our financial or economic legislation, or that an end will be put to constantly recurring but needless losses to the nation.

It will be observed by the foregoing that Mr. Wells gives it up. In surveying the field, he is unable to discover in the intelligence of the American people any redeeming qualification pointing to a sound financial policy, and all of this dubious foreboding results from the nation's belief in silver as a money metal. Under such circumstances it were sheer folly to recite the dismal forecasts of Mr. Wells. And yet, we are obliged to him for his summary of the disasters that have come upon the nation. Unwittingly, perhaps, but nevertheless certainly, he has declared that there was no necessity for the panic, that it was brought about by artificial means, and necessarily, therefore, by men, who hoped to make money by the wrecks they wrought. So far not a remedial act has been passed by congress, and yet the skies are brightening. The nation is working up out of the darkness into light, and that too with the currency unchanged, absolutely in *statu quo*.

The silver dollar *goes*, as good as gold, the greenback and national bank bill fraternize. There is not a country on the face of the earth that has a better currency, which would indicate after all, Mr. Wells to the contrary notwithstanding, that as a people, we are not so steeped in ignorance as he would have his readers believe. Since Mr. Wells is forced to the conclusion that the panic was artificial, unnecessary and unnatural, our conviction is strengthened that it was the result of a conspiracy, deep laid and cruel, and that it has caused more suffering than any other panic that ever visited this or any other country in all the past, and that it has fallen more disastrously upon working people than upon any other class. We do not doubt that vicious legislation, for which both the old parties are more or less responsible, aided the conspirators, but in all ages of the world there has been treason to truth, to country, to men and to God. Washington's generous treatment of Arnold could not hold him to his fealty to obligation. Christ's love of men could not restrain Judas from accepting the silver coins, nor could the certainty of loss and suffering defeat the purposes of the conspirators who, for gain, brought the panic of 1893 upon the country.

It is going the rounds that Queen Victoria puts in her spare time in plying the crochet needle, and an English journal is authority for the statement that at an exhibition of women's industries lately held at Glasgow, a pair of wristlets in gay stripes and a blue and scarlet hood worked by the Queen were on view. The story is doubted, still it is possible. The Queen has much leisure on her hands, and may deem it advisable to set an example to aristocratic ladies, of industry, since the time may come even in England when they will have to take in sewing. Old things are passing away, and the "mud sills," according to Darwin, may yet be on top.

SAYS the *Ram's Horn*, The devil never asks anybody to go further than the next corner to begin with. The "wheat corner," for instance.

# EX-PRESIDENT HARRISON BEFORE THE PIERCE BUSINESS COL- LEGE, PHILADELPHIA.

Ex-President Harrison is known to be a lawyer of great erudition, a juriconsult, a man whose opinions are weighty and exert a powerful influence upon thoughtful men. In this we do not refer to political partisanship, or to politics in the usual acceptance of the term.

In December last Mr. Harrison delivered an address before the Business College of Philadelphia, designed as advice to young men, but he took occasion to refer to some questions in which the public generally take special interest.

It is a fact worthy of special notice that the most distinguished statesmen of the country, in delivering addresses, either in or out of congress or legislatures, without reference to the subject announced, take occasion to introduce "capital and labor," and invariably represent these factors of progress and prosperity as occupying toward each other attitudes of antagonism, and Mr. Harrison follows the general line of remarks, as for instance, he said:

It is a sad and dangerous fact that capital and labor are organized to fight each other; that the laboring man is taught to regard his employer as an antagonist—too often as an enemy—and that the greedy or vexed and impatient employer, resentful of what he regards as unwarranted interference with his business, is sometimes too ready to treat a workman with a grievance as he would treat a jolting, unbalanced machine—throw it into the scrap pile.

We regard it especially unfortunate that men of high standing do not distinguish between capital and capitalists. Capital is one thing, one and the same thing, always and everywhere. Capital cannot and never did organize to fight labor or anything else. Capitalists, who own and control capital, do organize to antagonize labor—not all of them, possibly not the half of them, not the half of those who employ their capital in industrial pursuits and hire workingmen—hence that form of expression which makes capital an antagonist of labor is not only misleading, but conveys a false impression relating to the position of labor.

Labor never did occupy an attitude of hostility to capital; a moment's reflection discloses the preposterousness of the proposition. In the very nature of things it can

not be true that labor antagonizes capital, and being untrue the assertion has done and is still doing labor incalculable injury, while at the same time capitalists who have antagonized labor have gained immense advantages by asserting that labor always antagonizes capital, while all that labor has done or proposes to do is to antagonize that class of capitalists who "*treat workingmen with a grievance, as they treat a jolting, unbalanced machine—throw it into the scrap pile.*"

Mr. Harrison gets right when he puts arrogant, heartless capitalists instead of capital in antagonism to labor, which explains seventy-five per cent. of all the troubles between labor and capitalists.

Hitherto labor has seldom been consulted about wages. Capitalists have gone forward and perfected their enterprises and then have coldly calculated the profits they could secure upon each man's labor in their employment, and necessarily the lower the wages the larger their profits; and when labor has organized for the avowed purpose of securing fair, living wages, capitalists have set up the howl that labor was antagonizing capital. The press of the country has lent its influence to spread the astounding falsehood and public opinion has adopted the vicious slander. The courts have been debauched by the unfounded indictment and labor has paid the penalty. Mr. Harrison, pursuing the subject of antagonism, said:

Like the armed peace now maintained in Europe, this situation is costly and dangerous. Every benevolent and thoughtful man is anxious and distressed. I suppose a just and perfect peace will not be established until the kingdom of the elder brother is set up throughout the world and the golden rule becomes the law of human life. The right to acquire is more important to the poor man than the rich. Many reforms are weakened by their exclusiveness—the invitation is not wide enough. Men are put on the other side because of their surroundings or the color of their skin, without a chance to make their own choice. It is a most wholesome and saving fact that the working people of the United States so generally reject the teachings of anarchy. The workman is a producer; the anarchist a destroyer, and fellowship is impossible. How shall the poor be helped by the destruction of other men's property, or by assassination or riot? When doors are barred and the streets are full of tumult and men's hearts of fear, is there any harvest for toil?

Labor is armed only with the righteousness of its cause. It creates capital. It makes revenues possible. Strike it down

and an era of universal decay would come as certain as that darkness would prevail if Jehovah were to blow out the sun. Labor can not call out the standing army of the nation nor the militia of the states to protect it when capitalists, as at Homestead, Buffalo, Idaho and Tennessee, were robbing and degrading it. Nor does it avail much or anything to appeal to the courts. They are Dead sea fruit, so often tried that they no longer tempt the eye. We do not suppose "a just and perfect peace" is anticipated in the near future. Perfection is not a possibility until human nature has undergone many radical changes, but labor proposes to fight for the golden rule, and if it can not be established in a government of the people then labor will accept the "kingdom of the elder brother." Labor builds, labor preserves, hence has no sympathy with anarchy; labor is law-abiding; labor provides the food for all and demands enough to supply its wants. It builds all the houses in the world and demands for itself a shelter from the storms. Labor supplies all the clothing used by the human family and objects to being clothed in rags. Labor never did make an unreasonable demand, was never overpaid. It has in the past begged the privilege of living. If the signs of the times impress the public mind with any lesson relating to labor it is that in the future, utterly regardless of the Malthusian idea, there shall be a plate at the table for every worker and for the child of every worker, and the banquetting board shall be abundantly supplied with food. The imploring days of labor are drawing to a close. Streaming rays of golden light are flashing above the horizon and a new era is about to dawn. Ex-President Harrison remarks that "there is only one good thing about these evil times, and it is good will. They give men an opportunity to show their concern for each other. The will of the largest brotherhood is being called, and men see with great wonder how great the family is. How many idle workmen now see that it is not safe to assume that their employers' interests and theirs are wholly antagonistic, or that one umbrella may not shelter both. Is not the conclusion too clear to escape the most sluggish under-

standing: that hard times for the employer can not be good times for the employe? A brisk and regular demand for the products of labor at fair prices is the only safe support of the wage scale, as it is of dividends." In so far as labor is concerned, it never was required that "evil times" should come to convince labor that the interests of employers were their interests. The majestic march of enterprises across the continent demonstrates the fact, and labor submits to sacrifices with a moral courage that challenges admiration when emergencies require them, and complains only when the facts proclaim that sacrifices are too often required that dividends may be declared on investments which represent unblushing fraud. Ex-President Harrison pointed out how trusts and corporations have managed to create distrust, and then says:

The capital error in our legislation has been the failure to limit and supervise corporate securities; to require that the stock shall represent an investment, and that the investment shall be adequate to the enterprise; that creditors may be secured, and that the public may not be tolled or the laborers' wages cut to pay interest or dividends on securities that do not stand for investments.

In this is locked up the one crying evil that has been prolific of the antagonisms between labor and capitalists. Corporate stock and securities do not represent honest investment. It is the fraud that tolls the public and cuts down the wages of laborers that "dividends may be paid on securities that do not stand for investments." A fraud more huge and infamous than that the world has never known. Ex-President Harrison voices his condemnation of the infamy, and labor, which is ceaselessly robbed by the men who perpetrate the fraud, will continue to fight it until it ceases to rob them of their means of support.

---

REPORTS have it that President Mayer, of the B. & O. was once a locomotive fireman—but unfortunately for the purpose of inspiring ambition in the hearts of the Knights of Pick and Shovel who now *Keep-erhot*, Fireman Mayer was animated by a big deal in coal, and selected his own time for promotion which came the day the deal was consummated.

### PROVIDING FOR THE NEEDY.

In the *Forum* for February we find two articles devoted to the relief of the needy—one captioned "Methods of Relief for the Unemployed," by Josephine S. Lowell, and the other, by the Rev. Dr. Lyman Abbott, captioned "The Personal Problem of Charity."

Nothing is more common than to find, in our leading newspapers and magazines, what is designed to pass for profound dissertations on defenseless poverty, that kind of poverty which must be relieved by some sort of charitable effort on the part of individuals, associations, municipal or state governments, and in every instance the learned or reverend panacea makers manage to steer clear of the true cause and remedy for at least 95 per cent. of the poverty which, increasing by regular steps downwards, finally reaches the misery breeding depths from out of which the world hears the moaning cries for help, and to which we propose to make special reference in this article.

We are told that in our great cities, helpless poverty is an "acute disease" while in European centers of population it is "chronic;" that is to say, while the American wretchedness born of poverty, is sharp and severe, it is incidental, while that which afflicts the squalor-cursed people of Europe and appals the nations is deep seated, of long duration and incurable.

Mrs. Lowell, in her article relating to relief for the unemployed, remarks as follows:

What explanation can be given of a condition of chronic "seasonal" distress in any given community?

There are several reasonable causes to be assigned for the phenomenon, each of which is, or may be, responsible for a part of the evil.

It means, if it unskilled labor which suffers year after year for the necessities of life, either that the individuals who suffer are unable to perform labor in sufficient quantity, or of the kind which would bring them in return the means of *civilized living*, or that they are actually in excess—are surplus labor; that is, they are not needed to do the work of that particular community.

If this is not the explanation, if it is not unskilled but the skilled workmen who suffer each year from recurrent distress, then the explanation is to be found either in inadequate wages, which, being paid only during the working part of the year, are insufficient to maintain a family during the whole year, or else in want of thrift on the part of the working people themselves.

Having outlined the causes of what she calls "acute" and "chronic" distress, Mrs. Lowell proceeds to *explain* the causes under three heads, viz., "(1) a surplus of unskilled labor; (2) low wages; (3) improvidence," and having thus stated conditions and causes, the erudite lady remarks that "the usual remedies applied to meet such distress are all directly calculated not only to aggravate it where it exists, but to create it. These remedies are charitable relief, charitable work, and, when the evil becomes so great as to attract public attention, relief by public works."

In the foregoing review of conditions, our attention is called to what is termed "unskilled labor," as if there should be found a remedy for the evil, some method of reducing this "surplus labor."

Our readings lead us to conclude that writers who profess to understand labor questions, regard "unskilled labor" as a dire misfortune, a calamity which an inscrutable God is forever visiting upon the world, when, in fact, what is termed "unskilled labor" is as essential in carrying forward the enterprises of our high civilization as "skilled labor." Mrs. Lowell does not seem to take such a view of the subject, nor is she an exception; she has no conception of the continuity of labor. She sees a stately edifice rising from its foundations and challenging the admiration of all beholders, and thinks only of the "skilled laborer"—the "unskilled" are a mere herd, who, owing to their number, are unable to earn a "civilized living," and must therefore be content with the living of savages. If, however, the "unskilled" laborers were to cease from their tasks, not another building would ever be erected in Massachusetts, the home of Mrs. Lowell, unless the "skilled" laborers came down from their elevation and performed the work of the "unskilled laborers." Neither Mrs. Lowell nor any other writer on labor problems has deemed prudent to demonstrate the fact that but for the "unskilled" workingmen of the country, advancement would cease as if by a decree of Jehovah. "Unskilled labor" is not only the foundation labor of all industrial enterprises, but it is that element of progress which keeps the wheels of

enterprise forever in motion, and the colossal curse of the world, the curse of all lands and of all ages is, that man's greed, man's cupidity, man's cruelty and satanic depravity, has been massed to deprive "unskilled labor" of the means to secure a "civilized living," to reduce what is called "unskilled workingmen" to the lowest depths of degradation and squalor. And not content with the subjugation of the "unskilled," they, on all occasions when an opportunity offers, seek to strike down "skilled labor," and they are making such headway as to create universal alarm, and Mrs. Lowell, without the aid of spectacles, may, as we write, see in Massachusetts men and women, "skilled" and "unskilled," parading the streets, proclaiming that their wages do not enable them to secure a "civilized living."

To state that there is a "surplus of unskilled labor," that is to say, more than can be employed at wages sufficient to secure a "civilized living," is to assume that the labor problem defies solution and is to become yearly a more alarming menace to the peace of society, and to prevent outbreaks, "charitable relief" must grow, must increase indefinitely. If "unskilled labor," or labor of any description, is to be self-sustaining and to enjoy a "civilized living," honest, fair wages must be paid. There is absolutely no other method of solving the problem, and hence Mrs. Lowell could have devoted her paper to that simple proposition, since it is the reduction of wages that denies to multiplied thousands a "civilized living," and drives them to the subsistence often worse than that of savages, and in doing this, Mrs. Lowell could have found abundant data in Massachusetts and elsewhere, as a basis of righteous denunciation of Christless employers who scheme and conspire to reduce wages to a point where neither skilled nor unskilled labor shall have the means of enjoying a "civilized living." Indeed, between low wages and *low* wages, in all of the cities of the country, without an exception, "charitable relief" in many different ways becomes a necessity from which there is no appeal. And this relief, says Mrs. Lowell, is "directly calculated not only to aggravate distress,

but to create it." That is to say, feed a hungry man and hunger pangs become the sharper; clothe the naked and you add to the chances of freezing to death; shelter the exposed to winter storms and you augment their sufferings, and therefore "organized relief" should be discontinued. Mrs. Lowell, who is advertised as being familiar with "sociological problems," and as "one foremost among practical workers in the relief of distress," has panaceas for the cruelties which our Christian civilization inflicts upon labor, that will attract attention, if not for their novelty, at least for their nonsense. She says:

To diminish the surplus of unskilled labor, one plain remedy is to cease to attract more unskilled people to the spot where there is already too many, and to deal with such as come naturally, in a way which, while good for them, will not be agreeable to them.

How we are to cease attracting "unskilled labor" to "spots" where there are already too many, Mrs. Lowell does not state. Unskilled laborers, as matters now stand, go where they please, like other "sovereign" citizens, and take their chances. Mrs. Lowell's plan does not "diminish" the number of "unskilled laborers," but rather scatters them where there are no charities, organized or unorganized, in the rural districts, where there are no soup houses, and where the unemployed can whistle down blizzards and die without disturbing those philanthropists who are learned in sociological and relief problems. But, Mrs. Lowell has ideas about "unskilled people" who go to "spots" where they are too numerous. With such people she would "deal" in a way "which, while good for them, will not be agreeable to them." In what way Mrs. Lowell would deal with "unskilled" unfortunates that would be agreeable or disagreeable to them, she does not state; her plans do not seem to have been matured. But she proceeds with her remedies, as follows:

Another obvious course is to convert unskilled into skilled labor by education and training, and still a third, if the evil is threatening, is to endeavor by migration and emigration to diminish by physical means the overcrowding.

The conversion of unskilled labor into skilled labor means, if it means anything, to ultimately do away with unskilled labor.

The term "unskilled" is used to designate a class of workmen who are not skilled to the extent of those who served regular apprenticeships and are therefore supposed to be first class mechanics. Such men are more frequently designated as "common" laborers rather than "unskilled" laborers—that is to say, they perform a kind of labor which does not require an apprenticeship for its performance, and these people Mrs. Lowell would redeem from common labor to the exalted position of "skilled labor" by "education and training." Or, she would have them "migrate" like wild geese, go on the road *a la* tramp, or "emigrate"—that is to say, get out of the country—anything but settle down in "spots" where they become "surplus labor." Mrs. Lowell's idea is, that, for instance, hod carriers should become bricklayers, that in brick yards mud mixers should become moulders, and so on through all the trades, utterly oblivious of the fact that the work performed by the unskilled is essential to every enterprise and cannot be dispensed with, since if all were "skilled," unskilled labor would have to be performed by the "skilled." Again, says Mrs. Lowell:

The natural remedy for low wages is the formation of the various trades into unions or other labor organizations; and, fortunately, this is a work which will go on with increasing success with the growth of intelligence and energy on the part of the working people themselves, and a *sense of justice on the part of employers.*

We italicise a sentence in the foregoing for the purpose of suggesting that it spoils the only rational remedy for low wages mentioned by the writer. But trade unions do not reduce the number of "unskilled laborers;" on the contrary, numerous trade unions limit the number of apprentices to the various trades, because to accept all who apply would fill the country with "skilled labor" to an extent that "skilled labor" would be as unremunerative as the unskilled, and all would go down together to the degraded level where wages would not secure a "civilized living"—all would sink to savagery; and, as for employers, to any cheering extent, being actuated by a "sense of justice," is to anticipate the day when the ox and the lion will federate for mutual improvement, and with dead-wall

announcements go on the road to lecture employers on the justice of paying honest wages.

As for the "Personal Problem of Charity," discussed by Rev. Dr. Lyman Abbott, a gentleman who has mixed law, divinity and journalism in his life work, little need be said. He sees in every community thousands of persons who are suffering because they "have not the ability to employ themselves." Mr. Abbott seems to have been one of that class of unfortunates. He studied law, and quit it for divinity; as lawyer or divine, somebody had to employ him. Then he quit divinity and obtained a secretaryship of a "commission;" here again he was employed. Then he resigned his secretaryship and accepted employment as an editor, and was then employed by Plymouth church. In all of these changes he did not and could not have employed himself. He had any number of jobs which, we doubt not, paid him all he was worth. But of this we care nothing. He now sees great "public duties," so great as to constitute a "serious" public problem, and yet he vigorously denounces all kinds of public charity and public relief as an outrage upon the law that "Thou shalt love thy neighbor as thyself," and in public relief of the needy he sees no evidence of the law of love, and therefore the giving of soup and the distribution of bread, and all such schemes of "indiscriminate charity," he denounces as "unjust—grossly, wickedly unjust." Such views are not worth criticising, except to say if Mr. Abbott's theories of relief prevailed to-day, there would be commotions in this land such as no prudent man would care to depict.

Impractical cranks and vagarists discuss labor problems and methods of relief for the destitute and the suffering. If a man is hungry, feed him; if he is naked, clothe him; if he is homeless, shelter him; if possible, give him work. Do not stop to inquire about his antecedents, and let him starve because he has been imprudent. A man-eating tiger could not be more cruel. And while doing these things, demand for labor such wages as will secure a "civilized living." If one scheme proves a failure, try another, and keep on trying. Grasp the

underpaid toilers, the unskilled, the men who perform the foundation work of all great enterprises. Champion their cause. Christ set the example, and every man's cheek may mantle with lofty pride who stands forth demanding justice for the weak and defenseless, for with fair wages to them the gloomy clouds which now darken all our skies would disappear, and while workmen are treated justly they will not reappear.

We do not expect aid from employers. They are blinded by self interest, and as we think, are sadly mistaken in their estimates of what is good for them. But we do hope for a solution of the vexed problem—payment of such wages as will enable all toilers to secure a "civilized living." This will come when all classes of toilers unite in their demands, and, this done, the exclamation, *Vox populi! Vox dei!*—the voice of the people is the voice of God—will echo throughout the land.

#### IDLENESS, POVERTY, TRAMPS.

Mr. J. S. Jennings, of Wichita, Kansas, writes to the *National View* as follows:

For the past year there have been thousands of mills, manufactories, mines and furnaces idle, which have thrown 4,000,000 men and 2,000,000 women and children out of employment. The real cause of this has not been mentioned by the monopolistic press during the recent campaign, because it is not to the interest of the money lords to do so. They have been beating around the bush about the tariff question and other false issues in order to throw dust in the eyes of the voters and blind them in regard to the real questions at issue. The fact of the business is, the tariff question starts a great many factories in good times that never ought to be started, and failure from lack of money and demand for that class of goods stops them in hard times. But what makes hard times? Every sensible man or woman, who was born rational, knows that it has always been a lack of money that causes hard times.

Admitting Mr. Jennings' estimate of the number, 6,000,000 men and women, thrown out of employment during the past year, is there anything under heaven more natural than that there should be an immense number of tramps in the country?—honest tramps, seeking for work, despairing tramps, hungry tramps, ragged tramps, and often desperate tramps.

Mr. Jennings estimates the loss in wages to this 6,000,000 idle laborers thrown out of employment at \$1.00 a day, making \$6,000,-

000 a day, or \$1,800,000,000 a year. Such loss brings poverty, squalor, and unnumbered ills. Mr. Jennings says the cause of this untold wretchedness is a lack of money. He should have said a lack of money because bankers and capitalists withdrew their money from circulation, and this they did by a conspiracy designed to establish what is called a "gold standard." They succeeded, and, as a result, the country, from ocean to ocean, from north to south, is in the grasp of the most fearful conditions.

In this connection, we notice in the *Kansas Commoner* the following excerpts:

They are coming. A dispatch from San Francisco says that forty tramps left there Tuesday for Kansas, "attracted by Governor Lewelling's tramp circular. They prefer the warmth of Lewelling's smile to the blue skies and mild climate of California."—*Leavenworth Times*.

TOPEKA, Dec. 10.—Governor Lewelling's circular to police boards of cities of the first class makes Kansas a paradise for tramps. Reports of petty thefts, robbery and assaults and insults to women by roving vagabonds are coming in from all parts of the state. Incoming freight trains are loaded with vagrants. They demand food, clothing and lodging at private residences with brazen effrontery, and when they are arrested police magistrates dismiss them without penalty unless some specific charge other than vagrancy is lodged against them. Seventeen tramps were arrested here in Topeka on Friday night at the request of railroad employees. They had taken possession of box cars and refused to vacate. They were charged with trespassing, but the police judge declined to hold them. The police in all cities under control of the government are powerless, in the face of the governor's order, to drive out objectionable characters. In cities other than of the first class the jails are being rapidly filled with tramps.—*Dispatch to New York World*.

Last night twenty tramps boarded a Missouri Pacific freight train at Fort Scott, and came to Topeka. The train crew was compelled to let them ride. When they arrived here they were arrested and then discharged by the police judge under the governor's order.—*Topeka dispatch to St. Louis Republic*.

The *Commoner* pronounces the declarations of the various newspapers relating to tramps as "infernal lies," and it adds: "If hell were dragged from one end to the other, nothing more debased and villainous could be found than some men who are a curse to Kansas, found in some of her newspaper offices."

The *Commoner* simply desires to show that Kansas is 'not overrun with tramps, that they are not "seizing freight trains," nor playing the devil generally in Kansas—all of which the *Commoner* charges is mere par-

san clap trap and entitled to no consideration.

Aside from conditions in Kansas, of which we know little regarding the number of tramps, it is nevertheless true that the army of tramps in the United States during the past year has been indefinitely increased, and that, too, by conditions resulting as Mr. Cleveland says from "congressional legislation." Such a declaration ought not to be forgotten, because, if "congressional legislation" is responsible for the widespread disasters which have brought upon labor the woes which now afflict it, labor should unify to put an everlasting *finale* to such legislation.

#### ARISTOCRACY AND DEMOCRACY— THE WAY THEY PAY.

England is a very old, a very rich and a very great nation. It don't make a bit of difference to England how her poor manage to live or how they die, the aristocracy never discuss "retrenchment and reform" in so far as those in office are concerned. The work of paying fat salaries goes on forever. The nation pays its Empress and Queen \$1,975,000 a year—which is nearly forty times as much as the United States pays its president. The Prince of Wales is required to get along on \$200,000 a year, but he fails to make both ends meet, and is always head over heels in debt, but if his august mother ever dies, or dies first, the Prince will have a rattling good income. The Duke of Edinburg, brother of the Prince, has been forced to live on \$125,000 a year. How he has managed to keep the wolf from his door is a mystery—but in addition, his pay as a full admiral in the British navy has helped him out in a pinch—and now, being a German Prince, his income will doubtless enable him to have three square meals a day.

England has an established church, in which certain officials put on about as much style as Jehovah permits those who are called to preach, to wear—as for instance, the primate of all England pockets \$75,000 a year and has a palace. He is splendidly fixed. The Archbishop of York gets only \$50,000 a year, the Bishop of London is treated quite as shabbily, but the

shame of the thing appears when it is known that the Bishop of Durham, has to put up with \$35,000 a year—and to show to what depths of parsimoniousness a great nation can descend, the salaries of other bishops range from \$10,000 to only \$25,000 a year. It is difficult to comprehend such destitution. Royalty and religion are dom'd foin things in England—bet yer loif. When it comes to the judiciary, law has a splendid innning. The Lord Chief Justice of England gets \$40,000 a year and the other justices range all the way from \$10,000 to \$30,000 a year. If the Rickses and Tafts of the United States received such salaries, the aristocracy of the judges wouldn't permit a railroad employe to come into their presence, except upon their knees.

The United States, in the way of paying fat salaries, is a long distance in the rear of England. But we can claim the distinction that we pay our congressmen and senators \$5,000 a year, give them private secretaries, and opportunities to speculate a little in a private way, while England requires Englishmen to make laws and repeal laws and *gaup* without pay. England pays her ambassadors princely salaries while those of the United States have to get along on less than half the sum their British cousins receive—and that is the reason our Yankee representatives can't cut a dash in foreign courts on \$17,500 a year. Cleveland tried to overcome the difficulty by appointing Van Alen as Minister to Rome, a Yankee millionaire who had the good sense to decline the mission—though, had he gone to Rome he would have overshadowed the Vatican and painted the ancient capital of the Cæsars a beautiful scarlet. The fates were once, at least, on our side, and saved the country from unnecessary degradation.

Englishmen talk of dis-establishing the church, and being exceedingly distinguished for common sense, they will one of these days permit the people to pay the clergy if they are wanted—and if they are not, request them to enter upon some other branch of business. A religion so excessively aristocratic and expensive ought to no longer burden the poor of England. Men ought to be able to get to heaven at reduced rates.

## FURIOUS FANATICS.

We have been deluged with communications during the past few days in reference to the editorial on the American Protective Association which appeared in the March issue of this MAGAZINE. A peculiar feature of this correspondence is that in every instance where the writer condemns our utterances, he does so anonymously. There is not an exception to the rule. Several of them demand that their communications be published, but in accordance with a well known rule of the MAGAZINE, they have all found their way to the waste basket. The MAGAZINE is avowedly in favor of fair play, and its columns are open to all sides of a question, but it does not under any circumstances publish anonymous communications.

The editorial alluded to contains the opinions of the editor, and he alone is responsible for them. He has no apology to make for such utterances. If the persons who criticise and condemn him have the courage of their convictions and desire a hearing, they can have it, and the MAGAZINE, is open to them; but they cannot be permitted to play the role of sneaks and shoot from ambush. Let them have the manliness to step to the front and give expression to their honest thought, and right or wrong, their course will challenge respect and admiration.

One correspondent who addresses us as "Father Debs," demands retraction, and coupled with the demand there is a covert threat of assassination. An anonymous writer is, as a rule, a sneak, and a sneak is always a coward, and the coward who makes this threat is convincing proof of the truth of the article in question.

We care nothing about the American Protective Association except in so far as it is forced into labor organizations, is made to set brother against another, divide the membership, destroy the strength that unity confers, and reduce the whole mass of workmen to the insufferable level of slaves. And that is what is being done with the A. P. A., and we know it of our own knowledge. We do not speak upon hearsay. We know of scores of lodges, unions and divisions that have perished all

but in name under the blighting curse of such persecution, and if suffered to continue it is only a question of a short time when labor organizations will be exterminated as if by the ravages of a plague and then wages will go down to the starvation point, rights will be cloven down and the sun of American labor will set in universal gloom. It is such calamities that we would avert, and this and this alone prompted us to sound the warning. We do not doubt there is bigotry and fanaticism on the other side. But one wrong does not justify another and it will not do to follow a vicious example.

The A. P. A. naturally enough does not show its hand among the wealthy and influential—the ruling classes. As a matter of course it does not disrupt plutocratic relations nor array corporations against each other—they have too much sense to be divided upon any such proposition. It is left for the poor devils who are already half starved and more than half enslaved to take each other by the throat and in the interest of their masters bring on their self-destruction. And, singular enough, not one in fifty of these insane bigots who are so exceedingly sensitive on the subject of religion could, to save his soul, repeat the ten commandments or the Lord's prayer.

We are not and never have been Catholic. We hate a bigot of one denomination as much as another. We have no choice of fanatics. They are found in all creeds and all denominations, and if they had their way the reign of the wheel and the rack and the thumbscrew would again be inaugurated and the music of groans would fill the land.

Let us have done with persecution because of opinion's sake, and, above all, let us show ourselves possessed of hard sense enough to know that in introducing sectarian war into our labor organizations we are carrying out the designs of our masters to enslave and rob us.

AWAY back in 1771 Thomas Jefferson ordered India cotton stockings from London. at a cost of 10 shillings a pair—about \$2.50. In the march of events a dozen pairs of cotton stockings can be had for \$1.20.

# SETTLING WITH WOUNDED RAILROAD PASSENGERS OUT OF COURT.

The year 1893 will pass into history as one of unparalleled railroad disasters, and the sum total of dead and wounded, when it is given, will shock the country. As a result, the men whose duty it is to find the maimed, when a wreck occurs, and arrange a settlement for damages sustained, have been kept constantly busy. So eager are the railroad corporations to settle with those who are not killed, that it has been said, "that as soon as a victim of a railroad wreck recovers consciousness a claim agent is at his bedside with a compromise offer and a quit claim of further demands for damages, ready for signature," and it is further said that railroad surgeons are also claim agents, who "compromise with the victim while setting a broken limb." Such sayings, while referred to as "American pleasantries," contain many grains of truth, and indicate the readiness of the public to speak of railroad horrors with levity.

A general attorney of a great railroad system, having its headquarters in St. Louis, is credited with saying, that "the profits of the entire World's Fair business of the year had been actually eaten up by the losses through wrecks." The general attorney of this great railroad system, with headquarters in St. Louis, further remarked: "If you see a railroad damage suit in court, put it down that the railroad company believes the claim either excessive or without merit. Every railroad has a claim department. It is a bureau, really, of the general manager's department, and the legal department stands toward it only in an advisory capacity." "There are," said the general attorney, "a great many people employed in the claim department, both in the main office and scattered along over the line. We run over a cow. One of our claim agents goes at once to the owner and ascertains that we are to blame. Our fences are down. Our man offers the farmer the price of the cow and a little more. In an action at law he is entitled to twice the value. Should it develop, however, that the cow in this case is a pioneer of the royal blood, and a queen in her own right, who

has been living incognito in America, and whose death alone has forced her confidential friends to reveal the fact that she has a pedigree larger than an anti-silver repeal speech, and that instead of being the humble muley cow she was supposed by the neighbors to be, and worth about \$60, she is really worth \$1,600 or \$2,000; only then we go to court. As a matter of fact, we no longer run over as much 'blooded stock' as formerly. Time was when the most valuable boars in the world were allowed to forage in the swamps of southeast Missouri; but I think that the Iron Mountain killed all the \$1,500 hogs, and they are now raising the plain razor-back, rarely worth \$20 each."

It is, doubtless, true, that in some localities, where the cattle range is not fenced, only \$20 cows and razor-back hogs are found, but, if we are to believe the records, a good many thoroughbred men and women have disappeared in late railroad wrecks, nor is it to be doubted that when such fatalities occur, the officials of the road, aside from all consideration of damages, experience real heartfelt regrets. The general attorney said that, "when a railroad is so unfortunate as to have a wreck in which passengers are hurt, the first care is to get all the injured as soon as possible to a place where they can get the best surgical and medical aid. No expense is spared. Next, we endeavor to deliver as soon as possible to their destination all those who are not injured so badly as to prevent their traveling. We admit our liability in these cases, of course, and as soon as possible our agents call on those who are merely scratched, and prepare a settlement on a mutually satisfactory basis. Nine out of ten people are anxious to get home, and be bothered no more. Any reasonable demand based upon loss of time and work is promptly met. In many cases the injured come to us with a proposition. Many people never dream of making a claim. More serious cases take longer to dispose of. We generally wait until complete recovery to make settlement. We sometimes negotiate for months at a time. It is safe to say that in ninety-five cases out of a hundred we settle without recourse to the courts, and in the remain-

ing five, three of them will never go to trial."

The claim agent is always courteous, always sympathetic, and being glib-tongued, the victim at once perceives that \$10 cash down is better than fighting a corporation for \$100, is brought around by the claim agent, and consents to settle and sign a compromise agreement, in form as follows:

WHEREAS, On the 29th day of February, A. D. 1899, I, Junius Brutus Brown, a passenger on the Jerkwater Railroad Company, and as such passenger was traveling on the Bungtown District, Arizona Division, of said railroad; and

WHEREAS, I, the said Junius Brutus Brown, received certain injuries, to-wit: A broken collar bone;

And WHEREAS, I, the said Junius Brutus Brown, believe that my said injuries are the direct result of the negligence of said railroad company, its officers, agents and employees;

And WHEREAS, the said railroad company denies any and all negligence on the part of itself, its officers, agents and employees, and denies any and all liability for damages for the injuries so, as aforesaid, by me sustained; but, by reason of an offer of compromise made by me, the said Junius Brutus Brown, for the purpose of avoiding litigation, to receive and accept the sum of fifty dollars, in full accord and satisfaction for all claims for damages which I may or might have, either at common law or by virtue of any legislative enactment of the state of Arizona, for the injuries aforesaid, has paid to me the said sum of fifty dollars.

Now, therefore, in consideration of the premises, and of the payment to me of the aforesaid sum of \$50, the receipt whereof I do hereby acknowledge, I do hereby remiss, release, quitclaim and forever discharge the said The Jerkwater Railroad Company, its leased and operated lines, of and from all actions, suits, claims, reckonings and demands for, on account of, or arising from the injuries so, as aforesaid, received, and any, every and all results hereafter flowing therefrom.

Witness my hand and seal, this 29th day of February, A. D. 1899.

JUNIOUS BRUTUS BROWN. [Seal.]

Signed sealed and delivered in the presence of Russell Sage, George Gould.

Manifestly, the corporation is not to be blamed for driving the best possible bargain with men and women who are injured but not killed in railroad wrecks, but the great public, forced, as it is, to travel by rail, is asking with ever increasing emphasis if it is not possible to reduce the number of wrecks? They ask, do corporations place their trains in the hands of competent men? They ask if it is not true that incompetent men are employed because they can be had at a reduced rate of wages? The question is asked, if men, in charge of

trains, are not required to go without sufficient sleep to insure safety? In view of the fact of the enormous cost of train wrecks, it would seem that railroad managers would secure the most competent men, and that they would pay such wages as would silence all complaints relating to incompetency, and admitting a fact easily verified, continuous service without sleep is dangerous, they would see to it that men should never be placed in charge of a train who had not had sufficient rest and sleep. If all the facts were known where trains had been wrecked because train men had been without sufficient sleep, the country would be startled by the revelations. Enough is known, however, to prove that wrecks are constantly occurring because of the cupidity of managers in employing incompetent men, and because even competent men are overworked. Certain it is that engineers, firemen, conductors, brakemen, telegraphers and switchmen ought not to be on duty more than eight hours. Since it matters not how conscientious men may be, the inexorable laws governing mind and body cannot be abrogated, and the danger point is reached when the time of drowsiness is reached. We know of no more important questions directly relating to the safety of railroad travel and transportation.

STANLEY, in Central Africa, found a tribe of dwarfs who poisoned their arrows, but now comes the *British Medical Journal* with the announcement that filthy finger nails are far more dangerous, the dirt having been analyzed was found to contain thirty-six kinds of micrococci, eighteen bacilli, three sarcinae and other things equally dangerous. In such cases a fight with finger nails is as dangerous as if knives or pistols were used. Death in hideous forms lurks under finger nails, and a scratch is about equal to a snake bite.

THE demand is to crack the cracker trust which has a capital \$10,000,000. Put the whole thing in the soup.

THE United States has 3,000,000 bread winning women and girls, working outside of their homes.

# **MOURNING, FASHION AND FUNERALS.**

Now and then some one with the courage of conviction takes the stand for the purpose of impressing on the public mind the folly, to use no harsher term, of exhibitions of costume mourning. Fashion, the fickle, heartless goddess, invades the chamber of death and demands that the corpse shall be tricked out in "store clothes," cut, trimmed and made by a fashionable mantuamaker or tailor, with as scrupulous regard to details as if the cadaver were to attend a ball or picnic, and then this divinity of folly as rank as ever contaminated the social atmosphere, squats like a toad at the ear of the bereaved and maps out a programme of spectacular mourning, and insists that it shall be carried out to the letter, and warning the victim of bereavement that any departure from the letter of the decree will set the tongues of all the gossiping crew to wagging for the purpose of showing that the living were totally destitute of regard for the dead, because there is a deficiency of fashionable mourning goods in their attire.

Of all the incongruities of daily life, says the *Chicago Herald*, "the woman with the happy, smiling face, and gown heavily trimmed with crape is the most noticeable. Every day one sees on the street, in the theatre and sometimes in a ballroom people who wear the habiliments of woe and whose actions are entirely out of keeping with their attire. The wearing of mourning is, of course, a matter of custom, and to the sensitive woman such attire affords a protection from many remarks that would otherwise wound most deeply; to such it would mean a real sacrilege to wear the bright colors that were once typical of their own bright feelings," but, says another contemporary, "many others, simply because they are slaves to a custom, will shroud themselves in crape and bombazine and have not the slightest change in their feelings. It is no fancy picture when we tell of gay little parties attended by those wearing deep mourning, who are perfectly willing to enter into every form of enjoyment if the matter is only kept quiet. Hypocrites abound in this world, but there are many

more clothed in sable garments than of any other type." The revolting significance of this fashionable mourning business is found among other things, in the fact that according to the programme, the mourner's grief is mapped and measured by the costumer, regardless of expense and all ideas of the sacredness of sorrow. Fashion demanding first, the deepest black, then a lighter shade and still lighter, as the months go by, until fashion being satisfied, the mourner is relieved of all badges and resumes the old time costume. "Mourning," says a contemporary dictated by fashion, "is very expensive, and often costs a family more than they can well afford," and if fashionable mourning costumes are considered together with fashionable funerals, the regulation number of carriages, sham rosewood coffins and silver washed cast iron trimmings, the quiet, sensible looker on is ready to exclaim that the vulgar "pomp of death" is far more terrible than death itself, and that in such exhibitions "the black made the woe" and the hearse and the carriages the attractions, hence—

"Why is the hearse with 'scutcheons blazoned round,  
And with the nodding plumes of ostrich crowned?  
No; the dead know it not, nor profit gain,  
It only serves to prove the living vain."

All outward insignia of mourning has become by the people of common sense a tribute which real and sham mourning alike pay to fashion, than which there is nothing more false and frivolous in human affairs. It is essentially pagan, symbolizing superstitions blended with ostentatious pride and vanity fit only for ridicule; but when considered from the standpoint of expense, the whole artillery of economics should be leveled against it.

It has come to be at last in these days when the very air is burdened with the theories of men who labor to solve economic problems, that death is about the most expensive item in living. This is seen at a glance when all the items are grouped and the sum total is arrived at. The fashionable mourning outfit, the fashionable coffin and plumed hearse, the fashionable number of carriages, the cemetery lot and the fashionable headstone, monument, crypt or mausoleum, with many other

things which have crept in, go to make up a sum total of money expenditures which for all practical worth might as well be thrown into the fire. No good, no benefit to living or dead comes of all this aggregation of sham, but to the living, in a vast number of cases, it means sacrifices which are a standing advertisement that in the chamber of death, at the funeral and the bone yard fashion rules her votaries with a sway as despotic as at an uppertendom ball or wedding.

To the rich, fashionable and expensive funerals may be indulged regardless of cost, to the poor who ape the folly, a fashionable and expensive funeral is well calculated to force the conclusion that education so far has accomplished little in the way of giving common sense the victory over vulgar folly and superstition.

In the first place, fashion, playing upon ignorance, demands that the corpse shall be arrayed in purple and fine linen for decomposition and a banquet for worms; that the unsightly thing shall be placed in a coffin of rosewood made of common poplar boards stained to imitate the most costly woods of the forest, worth, perhaps, from \$2.50 to \$5.00, but palmed off on the unsuspecting at from \$25.00 to \$75.00. Then a hearse, with nodding plumes, instead of common wagons is provided at, say \$5.00 or \$10.00, when \$1.00 would have been ample pay for the services performed, and then there must be provided a number of carriages for those who free want a ride to the cemetery and back at a cost of \$25.00 to \$50.00.

And all of this and much more in the same line to impress upon the gaping crowd, that there is a deal of mourning for the dead, and often after the huge farce is performed the last dollar and dime of the bereaved has disappeared and survivors are required to go in debt for the next day's subsistence.

Why not regulate funerals upon a common sense basis? Why this irrational and superstitious exhibition of paganism, when one pays the debt of nature? why throw away hard earned dollars upon the dead which derive no benefit from such expenditures? why bury money with the dead?

why this senseless ostentation? Why should the poor in the matter of funerals be everlastingly trying to imitate the rich? From \$10 to \$20 is an ample expenditure to bury a dead person, from King to peasant. Why permit fashion and folly to swell the extras to \$100 or \$1,000? It is estimated that wage workers, annually, expend \$100,000,000 to bury their dead, \$90,000,000 of which is thrown away, as a tribute to Fashion, that the world may say, "see how these people mourn." But the world says nothing in that line— but rather an ostentatious funeral becomes the subject of ridicule.

#### GEORGE WILLIAM CHILDS.

Leigh Hunt made Abou Ben Adhem immortal by simply writing of him as one who loved his fellow men. True, there is the glamour of poetic fancy thrown over Abou's case, but the fact stands that Abou's name, of all the list of those who sought the favor of the Lord, stood at the head; and the splendid moral of the story is that those who love their fellow men love the Lord, and the better they love their fellow men the better they love the Lord.

George William Childs was the Abou Ben Adhem of his time. He loved his fellow men steadily, ceaselessly, munificently, and in such a practical way that his investments of good will in money and in kind words must have yielded him enormous dividends of joy and happiness.

George William Childs was best known as the proprietor of the *Philadelphia Public Ledger*, peculiarly a home publication, which he controlled for thirty years. This publication gave employment to a large number of persons, all of whom, without an exception, now rise up and with one voice bless his name. There is not one discordant note. In the orchestra of labor every instrument is attuned to the praise of George William Childs, and on the lower planes to which misfortune dooms its helpless and sorrowing victims, the remembrance of the tears he has dried, and the moans he has silenced, will be cherished in a thousand humble homes, and if prayers can purchase a soul's exaltation in the "Land o' the leal," the immortal spirit of

George William Childs will enjoy infinite blessedness.

At the age of 65 years G. W. Childs received the summons of promotion, and was ready. He had a large fortune, not a dollar of which was obtained by miry methods; free from dirt and duplicity, there was no stain upon his wealth. He loved to make money and he loved to give it away. His money making methods were practical and the same was true of his benevolences. He began life poor, standing upon the ground floor, and though he advanced rapidly, the more he received the more he gave. Many of his gifts are known—necessarily so, for they were public in character; but the bulk of them are known only to those who received them, prompted by the love he bore towards his fellow men in need and who could repay only in gratitude.

George W. Childs believed in labor organizations, and union printers were employed on his *Ledger*. He paid high wages, and he paid pensions, and he introduced, under some other name, perhaps, what amounted to profit sharing, besides, positions on his paper were practically permanent.

It was said of George W. Childs that he had two homes, one in the city and one in the country, but in fact, the philanthropist had built a thousand homes in the hearts of those who had been the recipients of his liberality, and in these homes gratitude, more enduring than granite or bronze, will preserve his memory in perennial fragrance as the days speed on to join the vanishing years.

THE city of New York, which has more foreign born residents than native born—is out Irelanding Ireland, by its evictions. Landlordism in New York wears no gloves upon its claws. When rent is due the tenant goes into the street if the money is not forthcoming. Great cities are poor places for the poor. God! where is a good place for the poor?

A NEW YORK Philanthropist furnishes coal to the poor at cost—by the scuttleful or in larger quantities.

## BOSTON'S HUNGRY UNEMPLOYED WORKINGMEN.

The term "unemployed" has terrible significance when the unemployed have no money or means of obtaining food, but by work—and when no work can be had, the situation becomes more alarming, the deeper hunger fastens its fangs in the vitals of the victims of idleness. On February 20, according to the Associated Press reports, "five thousand men, hungry, ragged and ugly, crowded into the state house and the adjoining grounds and very fiercely demanded immediate aid in their distress."

Back of these five thousand men, "hungry, ragged and ugly," there were at least fifteen thousand "hungry and ragged" wives and children. The picture is simply harrowing—background, foreground, perspective and coloring appals the beholder. "The Governor of Massachusetts, says the report," addressed the mob, but did not satisfy the men, and then an effort was made to get a petition before the legislature then in session, but as the rules were against such a proceeding, and things began to look serious, and when the men were told that the legislature had refused to accept their petition, yells of derision and contempt were of startling significance, and threats were made to "clean out the state house." Things looked equally, but the legislature yielded, accepted the petition of the men and appointed a committee to meet with the representatives of the unemployed. A strong force of police cleared the state house and the grounds, and the men slowly and sullenly retired.

Such things are premonitions. Men hungry, ragged, cold and ugly, become desperate at short notice. It was recently said in congress, "Hunger knows no law," Under such conditions it is folly to call men "anarchists" and "socialists" or apply other epithets. Better far use milder terms, better far be gentle and kind. Men out of employment by no fault of their own, are not likely to be patient when "hungry, ragged and cold," and this fact the legislature of Massachusetts appreciated—and by yielding to the demands of hungry men acted wisely.

While reading of such escapes from violence as threaten the peace of Boston, the fact that the number of the unemployed is increasing, creates new alarms.

Here and there, we hear of the revival of industries, but in the great centers of population, there comes no evidences of improvement—and in the railroad industry, matters go steadily from bad to worse, men are not only thrust into idleness but those who are retained are subjected to a reduction of wages.

It was hoped that some relief might come from congressional legislation, but

instead congress wrangles until in the hall of the house of representatives, a man of national renown, pleading for the coinage of silver dollars as one means of relief, thrills the country by his denunciations of congress as a mob, and the representatives of the people as anarchists and as infamous as bomb throwers.

Under such circumstances, the "hungry and ragged" have a poor show for immediate relief from national legislation.

### THE NEW YORK SUN ON RAILROAD WRECKS AND WRECKERS.

The New York *Sun*, which dares tell the truth, in a recent issue, refers to certain western railroads as presenting "the most disastrous and discouraging spectacle in our commercial history—as for instance, the wreckage of the Northern Pacific, the Atchison, the Union Pacific and other vast railroad properties." The ruin of these roads says the *Sun* "has been achieved by steady gradations at a time when the development of the surrounding country had not been retarded, when the population had been rapidly increasing, and when every condition conducive to prosperity existed in abundance. It was not caused by the shrinkage in silver, the abandonment of mines, or the money panic. These events gave it emphasis, and precipitated results that had long been inevitable." The *Sun* gives its readers to understand that the disasters which have overtaken the railroads, were brought on by a class of men in control of the roads, and therefore boldly asserts that "not the least discouraging aspect of the whole situation is that the courts have resolved in almost every instance to appoint as receivers for these bankrupted properties the very men under whose management their misfortunes had been created!" The men who, by their incapacity or dishonesty, have dragged down great and powerful organizations, seem by those very qualifications to have commended themselves to the courts. They have been made the receivers. Their personal emoluments are greater than the salaries they had before. Their control is more absolute, and they perpetuate with insolence and defiance the vices that disgraced their previous administration." It is seen that "the courts" are responsible for the appointment of men as receivers who wrecked the roads, and the result is as the *Sun* puts it, that "never was the management of the lines affected more cutthroat and depraved, than it is at the present moment." In this cutthroat and depravity management, the courts federate with the cutthroats, and to make good the losses occasioned by rascality the receivers and the courts seek to rob and degrade the employees, and the remedy for these outrages

the *Sun* believes is to "impeach the judges," who seem to be in alliance with the "cutthroat and depraved management."

It is most gratifying to note that a paper of the standing and influence of the New York *Sun* dares to tell the country wholesome truths about courts and cutthroats who wreck railroads and then seek to get even by robbing employees.

THERE is a steady and an ever increasing tide of humanity flowing from the country, the rural districts, to towns and cities, which accounts for a larger per cent. of the poverty, crime and degradation of which complaint is made. To show the extent of this drift of population to cities the 11th U. S. Census shows number of people living in places of 8,000 or more inhabitants at each of the census years, and the proportion this number bears to the total population of the country are here given:

	Population in cities.	Per cent. of total population.
1790 . . . . .	131,472	3.35
1800 . . . . .	210,873	3.97
1810 . . . . .	356,920	4.33
1820 . . . . .	475,135	4.93
1830 . . . . .	864,509	6.32
1840 . . . . .	1,433,994	8.52
1850 . . . . .	2,897,586	12.49
1860 . . . . .	5,072,236	16.13
1870 . . . . .	8,071,875	20.33
1880 . . . . .	11,318,547	22.57
1890 . . . . .	18,235,670	29.12

Deplore this tendency as we may, there is no remedy. The great industrial enterprises of the age, as a general proposition, are located in cities and of necessity, thither go those who work for wages—wages often so meager as to make life a ceaseless battle in which thousands and tens of thousands go to the Potter's field, with as little ceremony as beasts are disposed of.

Swing inward, O, gates of the future.  
Swing outward, ye doors of the past.  
For the soul of the people is moving.  
And rising from slumber at last:  
The black forms of night are retreating.  
The white peaks have signaled the day.  
And freedom her long roll is beating.  
And calling her sons to the fray.

It so happens that a man cannot tell what will happen to-morrow. Fortunate, we think, that we cannot, but he can sow good seed to-day and wait for the harvest. He can to-day speak kind words, brave words, perform good deeds, brave deeds. He can equip himself to-day for the battle to-morrow, or, when it comes. He can set a noble example of patience and fortitude and courage—and if workmen will do that, then the gates will swing outward or inward as he shall decree. There is no time for croaking, misgiving, despondency, no time for railing against fate. What is wanted is courage that will do and dare, and having done all things will stand—stand by the right, though the stars fall.

## ONLY SIXTEEN CENTS.

In the city of New York, as also in Philadelphia, there has been established a "Legal Protection Society," designed to protect the weak against the piracies of a set of scoundrels, who avail themselves of every opportunity to swindle those whom they believe are defenceless. As an instance of this sort of depravity, the Philadelphia *Ledger* recites a case which occurred in New York as follows:

Elizabeth Lawrence was engaged to make babies' coachet sacques at her home. Before permitting her to carry away the material necessary for the work her employer required her to make a deposit of \$2 as security. The price agreed upon for making the sacques was \$2 per dozen. She returned fourteen garments, expecting to be paid at the stipulated price, but was told that the wool returned was two ounces short and that 16 cents would be deducted from the amount due. Complainant assured her employer that she returned all the material, and could not afford to lose 16 cents. She protested in vain. He was obdurate, and insolently told her she would have to take what he offered her or go without. The plaintiff told her story at the rooms of the institution, and steps were taken to compel the gentleman to pay the sum due. He professed great surprise that any society should condescend to defend a woman in so small a matter; but when informed that the case would be placed before the court forthwith, he paid the amount due, threatening at the same time to "show up" such an interfering body; that he claimed the right to make any terms he pleased with his work-women without being dictated to, etc. The sum in dispute seems small, but when we consider that a woman receives only \$2 per dozen for the garments, and with close application cannot finish more than three sacques in two days, \$2 is a large sum to her. It also meant considerable money to the proprietor if he is in the habit of settling with his work people in this way, especially if he employs a number of workers.

In the foregoing we have brought to public notice an instance of attempted robbery of a type of which there are multiplied thousands in our great cities. The robbery of the poor and defenceless is a national curse, and the robbers who steal small fractions of dollars from women are undoubtedly the most depraved villains that befoul the atmosphere. To hear of the existence of a "Legal Protection Society," whose mission it is to check the scoundrels in their nefarious work, has a redeeming sound and helps our faith in Christian civilization. The society should have its branches everywhere. It is an immensely good thing to have in any community.

When a man from the ranks of labor ventures upon business enterprises it is always with more or less misgiving for the reason that his training and experience have not been such as to fit him for commercial pursuits, but now and then in spite of such disadvantages a man sheds his overalls and animated by a spirit of self-reliance boldly plunges in and achieves success. Such a man is John J. McGrane, the manufacturing jeweler of New York City, who until within a comparatively short time was a locomotive engineer and is still a member of the Brotherhood of Lo-

comotive Engineers. Mr. McGrane has the courage of success. He has faith in himself and faith in the world and with consummate skill, tact and perseverance he has hewn out the pathway to an independence in the commercial world that challenges admiration. John Hill of *Locomotive Engineering* says of John McGrane the Jeweler: "John J. McGrane, the well-known railroad jeweler of this city, made a neat stroke of business in getting complete control of the sale of the U. S. Waltham Co.'s new fine watch, named 'The President.' This movement is the latest, and has every known improvement up to date. It has been thoroughly tested, and the makers offer with it a written guarantee for its time-keeping qualities. It takes some nerve to guarantee the sale of a large number of fine movements per month to hold a monopoly on a brand of goods, but John has sand and knows the watch will bear out all that can be said for it." McGrane is in all regards self-made. He has pride and pluck in about equal proportions, is painstaking, conscientious and animated by a laudable ambition to extend his patronage to continental proportions. Special attention is called to the advertisement in this issue of this enterprising and fair dealing jeweler.

In addressing the railway employees of Kansas in reference to his recent candidacy for railroad commissioner for Kansas, Mr. Allen H. Chapman said: "I thank you for your endorsement of my candidacy for the office of railroad commissioner of Kansas and wish to say to you as friends and brothers that the executive council of our state feel most kindly toward us as railway employees and workmen. They fully appreciate your request for representation as evidenced by the following which appeared in a late issue of the *Topeka Press*: At a meeting of the executive council yesterday John Hall was unanimously elected to fill the position of state railroad commissioner for the next three years. Mr. Hall has already served as commissioner for one year, and therefore succeeds himself. A. H. Chapman, who was also a candidate for the place and who represented all the railroad organizations, made a very favorable impression on the members of the council and would have received the appointment had it not been for the fact that Mr. Hall had had the short term and had made such a creditable record that it was felt he was entitled to the first consideration." It is because a precedent had to be observed that my appointment was not made, and appreciating this fact I cheerfully submit to the inevitable and again return thanks and the assurance of my gratitude for your fidelity and support.

## THE AMERICAN FEDERATIONIST.

Volume I, Number 1, official magazine of the American Federation of Labor, Samuel Gompers, editor, is on our table. In his salutatory Editor Gompers says: "We shall stand as the mouthpiece, defender and advocate of the toilers in all their struggles for right and justice—in their efforts to receive the full results of their toil. While we shall not step too far in advance, neither will we be found lagging in the rear of the column of the hosts of labor whose onward triumphant march is the goal of human justice, the glory of the Son of Man." These are noble words, bravely spoken, and worthy of all commendation. The initial issue is full to overflowing with live issues ably discussed by such well known writers as John Swinton, John B. Lennon, George E. McNeil, Chris Evans, Henry D. Lloyd, Frank K. Foster, Sam L. Leffingwell, Thos. J. Morgan, Henry Weisman, J. W. Sullivan, Henry White and others. The subscription price is but 50 cents per year, a mere trifle, which every toiler, however poorly paid, can afford to pay for a periodical of such excellence as the *Federationist*. Most cordially do we welcome this new candidate for favor to our sanctum, wishing Editor Gompers and his staff all hoped for success in the field of journalism.

SAM JONES writes that "dirt, debt and the devil are the three enemies of social life." He thinks that "society is as much a divine institution as the church itself." He declares that "social life has gone to seed in the extremes, illustrated in the character of the dude and the life of the bum. The difference between the brainless, aimless, worthless dude and the red-nosed bum is illustrated more by their outstinks than their instincts; the one imports his perfume, the other deals in domestic goods. The one is a butterfly, and the other a dirt-dauber. I prefer the vagabond to the dude. Vagabonds may be reformed, the dude never. Neither can have any real place in social life, and neither can contribute anything to the betterment of humanity, or the good of the world." Generally speaking, Sam is correct—dirt, debt and the devil are fit companions, but the alliteration leaves the impression that the devil is only associated with dirt and debt, while in fact the devil shows his forked tail where there is an abundance of soap, clean linen and a plutocratic purse; and he is found in church, congress and courts, with cash, credits and checks, profligate of prayer and passes, bribes and benedictions, and is an expert in so blending religion and rascality that only an expert can tell "tother from which." Still, it is well to avoid "dirt, debt and the devil.

Locomotive firemen can read the following relating to firing on an ocean steamer, and decide whether or not they would like to be a steamship fireman. Writing of firing on an ocean grayhound, a contemporary says:

On the City of Paris there are sixty firemen, who feed the fiery maws of fifty-four furnaces, that create steam in nine boilers. Fifty coal passers shovel the fuel from the bunkers to the furnace door, and the firemen toss it in. There is something more than mere shoveling in firing. The stoker must know how to put the coals on so that they will not burn too quickly nor deaden the fire. He must know how to stir or poke the fire so as to get all, or nearly all, the heat out of the coal. Service in the fire room is divided into six watches of four hours each. The fireman works and sleeps alternate four hours. After the first day from port two out of every six furnaces are raked out to the bare bars during the first hour of each watch. Thus, in a voyage, all the furnaces are cleaned once in twenty-four hours. The steam goes down a bit in the hour while the cleaning is going on. The stokers shovel into the furnaces 15 tons of coal every hour, or 300 tons a day. The ship usually takes in 2,000 tons at Liverpool or New York, and has between 500 and 800 tons left when she arrives at the other side. The engineers' department is entirely distinct and separate from the firemen's. In the City of Paris there are twenty-six engineers, including hydraulic and electrical. They are educated in engine shops on shore, and a certain number of them go on ships every year. They are all machinists, so whenever the machinery breaks down they know how to repair the damage. In case the chief engineer should be disabled, any assistant could take his place.

It will be observed that in firing an ocean steamer there is no "righthand side" for the fireman. Engineers are not taken from the ranks, they are taught the business on shore. All things considered, the locomotive fireman, we think, has by far the best job.

## THE NEW STANDARD DICTIONARY.

The first volume of Funk & Wagnall's new Standard Dictionary has made its appearance, and it is a superb work in every detail. The Standard involves years of patient, painstaking labor by the best lexicographers of the times, besides necessitating an outlay of money, the sum total of which is astounding. The *Liverpool Daily Post*, in referring to this latest and greatest triumph in lexicography, says: "It may be averred that the great lexicographer would have scorned to use the word 'mammoth' to describe a dictionary, and a hundred and fifty years ago it would have been inexcusable. No other epithet suggests itself, however, as being so directly applicable to the Standard Dictionary, the first volume of which, printed in New York, has just been issued by the Funk & Wagnalls company, of that city. A simple catalogue of the words used by the well-nigh one hundred millions of the English-speaking peoples would be comprehensive in the widest sense. But when to the catalogue are added the definition and illustration of the words by quotations, according to the prolific plan of the Standard editors, at the head of whom

is Mr. Isaac K. Funk, the bounds of mere comprehensiveness are broken, and a more expressive of greater dimensions is required. The sub-title states that the dictionary is constructed 'upon original plans, designed in the light of the most recent advances in knowledge,' and there is plentiful evidence of the modern spirit both in the highly organized scheme adopted and in the results as they appear in the volume itself. Dr. Johnson toiled on day after day in his Grub street garret during the seven years following 1747, with the aid of very few copyists. In this case the work has been done by a small army, comprising an editor-in-chief, a consulting editor, a managing editor, three associate editors, and more than two hundred assistant editors, specialists, and other scholars.

"In an interesting introduction the plan of action is explained. Working in the belief that the chief function of a dictionary is to 'record usage, not, except in a limited degree, to seek to create it,' the editors tabulated a list of about 300,000 words and phrases taken from the existing dictionaries. These were classified and, when necessary, given to specialists to define, great care being exercised in the treatment of words peculiar to localities, as those used in Anglo-Indian or Anglo-African communities. A feature has been made of technical trade and industrial words, examples of which are the 'ell-pump' and 'putty-joint,' spoken of by the plumber during his labors in the cause of suffering domesticity; and the 'clapper' of the house-builder. Thus the wants of clamorous labor which, it is said, 'is knocking for admission as never before with its hundred hands at almost every door,' are specially provided for. That the recent developments in science have been taken advantage of is shown by the fact that over 4,000 terms referring to electricity have been collected. The style of spelling adopted is American, all the reforms introduced being in the direction of phonetics. With regard to quotations it has been, says the editor-in-chief, 'a Herculean task to select, locate, and verify exactly all the quotations used. Practically all English literature has been ransacked for this purpose, scores of thousands of volumes having been read, hundreds of readers in different parts of the world participating in the labor.' Stock dictionary quotations have been avoided in favor of those of modern authors, which are to serve the purpose 'as well or better.' 'This,' says Mr. Funk, 'is a distinct gain.' As some of the 'best writing in English to-day is to be found in the high class newspapers,' quotations have been taken from that source. Such, then, is the scope and aim of the Standard Dictionary. It is an implement that will be of vast service to

those who cultivate the literary arts on either side of the Atlantic. It is a monument to American industry, no less than the great White City by Lake Michigan. In view of the originality of the first part of the dictionary, the second will be expected with interest."

It is expected that the work will be completed by June 1st, and we do not hesitate to predict that the Standard will at once take its place by common consent at the head of the lexicons now in use. The work is fully up with the times. It is a marvel of accuracy and no detail, however unimportant, is omitted. That the Standard is the work of master minds will not be doubted for an instant. It is exhaustive and combines the best features of all other dictionaries, and it is not too much to say that it stands unrivalled in excellence and merit.

The work is well named. It is and will be the Standard, and the publishers are to be congratulated upon their great triumph which will endure as a monument to their fidelity to a noble purpose which amounts to a benefaction.

TEN thousand brotherhood men and more throughout the country will rejoice to hear of the appointment of Bro. R. V. (Dick) Dodge to the office of Postmaster of San Diego, Cal. Dick and his brother Jack are deservedly two of the most popular members the order ever had. Way back in the early days, when it required sand and sacrifice to be a brotherhood man, the Dodge boys enlisted, and from that time to this they have been valiant followers of the flag; when there was fighting to do they were in the thickest of it, nor was either of them ever guilty of despondency, no matter how fierce the ordeal through which fate or fortune decreed they should pass in their fight for the triumph of the right. They first raised the standard of the brotherhood in Southern California, and have manfully stood by it through good and evil report. And so we rejoice to know that "Dick" has been honored with the post-mastership, and we do not hesitate to predict that his administration will be clean and spotless, and that the people of San Diego will have faithful and efficient service to a degree that will challenge comparison.

THE Mason Regulator Co., Boston, Mass., have just published a new book on "What an Engineer should know about Electricity," price 50 cents. It is in pocket edition, very convenient and serviceable and of incalculable value to all who have to do with electrical engineering. The same enterprising firm has also gotten up a "chief engineer's log book," price 75 cents and an "engineer's log book," price 50 cents, practicable and useful for purposes of reference and otherwise.

**THE O'DOWDS AND THEIR NEIGHBORS.**

Mrs. Mabel O'Dowd had her friends t'other night

At a party by dozens and scores:

And each one felt the throb of superior delight,

Just as he or she entered her doors.

'Twas "the hit of the season" for wealthy display,

And her guests were decidedly proud,

But a few, like myself, who were not in the play,

Now feel bitter towards Mrs. O'Dowd.

About ten years ago the dear madame was poor,

But her husband and she gathered swill.

They raised pigs, that had always the run of the floor,

(Growing fat, until ready to kill).

With the land at high tide, and good markets for pork.

Dollars grew in their socks pretty fast,

Which enabled them soon to lay off from such work,

And veneer with their riches the past.

With a cunning known only to jealousy, I

In disguise entered there with the crowd,

And the cobwebs I kept from the sight of each eye,

As I scrutinized Madame O'Dowd:

I had also a chance to catch on to each guest,

And observe with what elegant grace,

Every one tried to do his or her level best

To be king or queen bee of the place.

On the list of their friends was a grand place to get,

One was sure of both fustling and sport;

And I took in the sights and the sayings, you bet,

(Of that modern *bon ton* resort.

Mid the blare of the band both the hostess and host

Led the march, and up close in their wake

Came some couples of upstarts, deserving this roast,

Which I hope in good nature they'll take.

Billy Everson, vender in chemical soap,

And a kin of O'Dowd's by the hogs;

Charley Edwards, whose grandsire met death by the

rope

And their wives, just as graceful as frogs;

Bill Devine, that drove mules on the "raging canal,"

And his wife that was cook on the scow;

Then she went by the title of "Starvation Sal"—

She's a full blown aristocrat now.

Biddy Deegan, that shook off the worthy old name

Her old father and forefathers wore;

She is now Celia Darling, and brazen the claim

That she's the heiress to ducats galore;

Jennie Stanhope, the only genteel person there,

And her mother, once queen of the class,

In the cobble-stone school, where we kids in despair

Often knelt to the beautiful lass.

Ellen Raymond, head waitress in Farley's hotel,

Ere she collared big Larry O'Neill;

Andy Malcolm, that always could cut such a swell,

With his stockings low down at the heel;

Johnny Fraser and wife, that are dunned every day

For the numerous debts which they owe,

To the roll of the music kept dancing away,

At this glittering parvenu blow.

When the music had ceased and the supper was served,

Table etiquette there was unknown;

There was ignorance dense in the manner they carved,

And the way that they gnawed at a bone;

But their dollars were mighty, they blinded their eyes

To their actions distasteful and loud;

Many pigs that would grunt at the gang in surprise,

Off were killed by Patricius O'Dowd.

Now, my moral is this: We must speed and get wealth

If we wish to be somebody here.

There are those who'd approve were it gotten by

stealth,

And the theft would not cost them a tear.

We can then blossom forth in the bloom of our pride,

And our neighbors with envy can kill.

Like the wealthy O'Dowds, who now swim with the

tide,

Since they made all their riches on swill.

*Shanty Maguire.*

**The Hosts of Labor are Enslaved.**

MR. EDITOR:—We are the victims of monstrous misrepresentations, bound in slavery by our adherence to doctrines taught us from the primer class in our school rooms up and on to the bible class in our Sunday schools. We have been duped—mised; and yet we cannot charge conspiracy on the part of our parents or ancestors, but rather may say in their defense that they, like us, have been the victims of their own ignorance.

When I meet men who labor sixteen hours or less every day in the year, and who, with all their labor, are doomed to suffer the tortures of the damned; who are as familiar with the pangs of hunger, the lack of sufficient raiment and shelter, as they are with the seasons of the year, then do I covet the power of a monarch to command a halt! Then do I wish for absolute power, that I may strike from the limbs of this laborer the chains of labor and pauperism that have shackled him from his birth! We, who are enrolled in the army of labor, in our daily struggle and toil for our cur-like existence, are compelled to suffer and mutely bear pain, fatigue and misery, unknown, unexperienced, and unconsidered by that regiment of labor tyrants composed of sharks and dictators, the majority of whom have gained their crowns through the success of their ancestors in the nefarious deeds of bygone days. We are dependent upon their wealth for the maintenance of our existence. But, why so? Is not our labor sufficient? And are they, who have paralyzed the natural resources of this country to riot in luxury on the fruits of our labor forever, while we meekly starve in the cold shadows of a social edifice constructed on the ruins of our manhood and conceived for our degradation? No! Perish the thought that it should be so! It is time that we, the life producing element of our country's population, should demand recognition and fair dealing from our masters, and the character of our demand must be such as not to be mistaken. Our organizations must, in the eyes of our laws, be placed in a position of equality with the organizations of our masters; must command the same respect and consideration in the courts as the organizations of capitalists. They must be relieved from the influence of that factitious public opinion which, parrot like, assails the hosts of labor with the sophistries manufactured for its use, which contemptuously demands an answer to such questions as: "Who are you? Of what consequence are your various trade unions and brotherhoods? Are they not akin to the mafia or the bandits of the Mexican border? Do you not congregate in your numerous halls and lodge rooms and plot and connive to wreck some

trust, deliver some railway corporation into the hands of the receivers, or pauperize some millionaire captain of industry?" Too long have laboring men withheld an explanation of their interests and convictions; too long have they been meek and modest in facing the world; too long have they refrained from making a clean breast of actual facts and necessities, accompanied by a firm and resolute demand for their rights. The gracious public is only asked to be honest and admit that God placed all men equally upon the earth; why not, then, accord to all an equal chance in the battle of life? And why not all laboring men be bound together by the same ties and identified in the same societies? I am not a commissioned advocate of socialism, neither am I an anarchist; I am only one of the many unwilling slaves whose heart shudders and whose hands rebel against certain infringements of the self-evident laws of nature. I am actuated only by that social and patriotic principle destined as a part of human nature, and, therefore, inherited at birth. Alas! think of the helpless millions who are forced to forsake their manhood and abandon the gospel truths that God and nature ordained they should possess and enjoy. Should the man who is born in possession of and reared upon a fortune of millions rule as high king over the unfortunate one who is born in the bare field of labor, and reared as an ox in the yoke? Should he be permitted to apply the lash and wring from the brow of the human ox a drop of sweat for every drop of sparkling liquor quaffed by him, the natural born lord and monarch? No, never! "Of all the good things God hath given" excess is a sin. Excessive riches, excessive poverty, alike with happiness and wretchedness. But to the question, what are the benefits of brotherhoods and unions? Labor organizations have quelled many an uprising rebellion, made a wise and industrious people, and to them is due the credit for the few paltry dollars yet in circulation and thus prevented from being hoarded up by some tyrannical syndicate. I do not charge all syndicates and corporations, millionaires and magnates as guilty, but in conceding that a man is innocent of robbery until proved a thief, most of us can cast our mind's eye on the thieves. And how they cater to our childish ignorance with the glamour of their military trappings! Have a care, you bright, ambitious youths! Steer clear of the "home guard" militia, and spend not the morning hours of your manhood in these sham military schools! We need none of such. The fact has long been demonstrated that in times of war we able bodied, hard-working, and, in a military sense, ignorant men, are the pilots, the wheelers, and the very life of the battle,

while the educated military man is reserved for the rear. Organizations, whether civil, social or religious, are the keystones of civilization. The law of admission to any of these is to prove to the world that you are a "golden rule" man; that you recognize your duty to become a helpmate, fraternally, intellectually, morally and socially, to your fellow man, and if you can donate from five to five hundred dollars per annum for the common benefit you can become a member of most any organization or society. The dues and assessments of such organizations are disbursed and distributed among the unfortunate, the widows and orphans, thus relieving the state and certain landlords of an ever increasing drain on their beloved treasure. When a question of importance arises none but wise and discreet council is exercised or considered. Too many distrust our integrity and prevail on others to regard us as enemies to God and human nature. There exists to-day two classes of workingmen—the employed and the unemployed. The latter have, heretofore, been supported by the former, but now, owing to legislation in direct opposition to labor's interests, and the repudiation by employers of certain agreements existing between them and their employes, the last chord of fraternal obligation existing between them is severed. As an instance, one of the recent repudiations of mutual agreement is the refusal to recognize traveling cards, a rule that has been in operation for years with mutual benefit to employers and employes. This serves as the last day of grace between peace and war. This is one of the most unjust, unscrupulous and tyrannical acts ever perpetrated on human nature. Those who have experienced the benefits of traveling cards well know that the recognition of cards is but an act of mutual friendship and courtesy. And when a card is called into service its holder is seldom drawing favors in advance of deposit. Perhaps his act of generosity or heroism was displayed months or even years previous; perhaps property to the amount of thousands of dollars, and human lives were involved and dependent on his care and judgment. Now, if these fraternal obligations be discontinued in the future what can we expect but discord, contempt, disrespect and indifference to take their place? Our well earned experience and ingenuity has been given gratis to the world; we have used cuts, diagrams and directions for the purpose of enhancing our neighbor's knowledge, and this is our reward. Experience is a sad but honest teacher. Many a man who but yesterday instructed a student is to-day in idleness while the student has his bench in life and is unwilling to share even one meal of victuals with his former teacher. Take

heed and avoid exposing those points you tabored so long to learn, and shy away from those various, numerous and even damnable "question box queries." There is no law as yet to compel a man to divulge his scientific knowledge.

The poor, the clamoring poor! inoculated with poverty, ignorance and misery. Slavery on the one hand, idleness on the other. What shall be done with them? Laboring people have supported paupers, reared their families and built not a few millionaires in this country and the time is now here when we should deliver over the paupers to their rightful makers—the millionaires. Let the millionaires, their rightful makers and owners, care a short time for the poor, and perhaps they will be enlightened and awake to a realization of the best interests of America and her people. They may then discover that Americans can protect and support America but not the globe. They may then advocate free coinage and free men, high tariff and home manufactures, exclusion laws and American people, brotherhoods, unions and happy homes. Oh, Lord! have our government such, and take from our direct care and supervision the poor, the honest and deserving poor, and permit them to earn and enjoy an honest living with honest wages and the most vigilant protection. The toilers of this country have presented a flag of truce time after time to the various corporations and syndicates, and what has been done with them? The corporations have seized our flags and braided them into a hangman's noose with which they would gleefully dangle us in the air while they replace us with imported, inexperienced and incompetent men, confined with the few rats, scabs and human vultures they have produced within the last few years.

Brothers, let us be martyrs to the cause of humanity! Deny not our name, nation, identity or ballot, and one consoling thought will remain to us: The low wage ferret, the lackeys of the labor tyrants, the human vultures, the traitors of manhood, together with the iron monarchs who run their mills at reduced wages these winter months for sweet charity's sake (?) will be relegated to the rear. How can one weak and miserable human being amass his countless millions, hire numerous assassins, and be always doing something for sweet charity's sake? Charity! The word is a mockery. It is but a part of the booty stolen from the toilers at various times. Is it charitable to demonetize wages and coin, and compel the poor to live on adulterated food? The Carnegie iron mills yielded rich profits at the former rates of wages, what will be the returns for the coming months at greatly reduced wages? Did the merchants make reductions in the prices of the laborer's

provisions to correspond with the reductions in wages?

To those who are suffering: Let your actions be your prayers, and your prayers be deliver us from the surplus, the vast surplus of tradesmen. Place yourselves upon an equality with your fellow workmen's interests and support the flag of emancipation. Let us all pray in union.

LA JUNTA, COL.

*Ira D. Mayhull.*

#### **Railway Employees and the Ballot.**

MR. EDITOR:—When we see by late statistics that one man out of every fifteen in the United States is a railway employe, we are forcibly reminded of how small a figure they cut in the government of the country. Why is this? I will endeavor to answer my own query in the light of facts of which I am cognizant.

I meet a railroad friend, and after the usual amount of conversation on what is aptly termed "shop," the Ricks and Jenkins outrages are referred to. I make a suggestion that our only redress lies in the ballot. My friend retorts:

"That's all bosh! the railroad companies will buy up any man that we can elect."

I become interested. Here is a railroad man who follows up politics some. "What ward do you live in, Jim?"

What's the matter? Jim scratches his head and looks uncomfortable. Well, I'll be merciful; he's only a railroad man, and after all, what does he care what ward he lives in?

"Who is your congressman, Jim?" Jim becomes desperate.

"Well, to tell you the truth, Mac, I didn't vote at the last election, and haven't followed the reports."

"Did you register, Jim?"

"Yes, but I didn't feel very well on election day, and I knew that my vote wouldn't make any difference one way or the other."

"What kind of a time do you have at your primaries, Jim?"

"Primaries! I never attended a primary election in my life. What's the use? The politicians fix all that."

Now, brothers, how many of you does the above apply to? From my observation, a goodly per centage, I'll warrant. If we persist in neglecting our great privilege, our bounden duty as citizens of this great republic that has taught the whole world a salutary lesson, and leave the nominating power entirely with the "pot house politicians" and "ward heelers," what can we expect? Take the great state of Illinois for example. Sixty thousand railroad men earning a living—but, hold; I will qualify that—endeavoring to earn a living within its boundaries. A few years ago a commit-

tee representing this magnificent army petition the governor to appoint one of their number on the railroad commission, and how does he answer them? By arrogantly and impudently appointing a stock yards politician, who could not tell whether vacuum were weighed or measured, to the position. Would you secure the recognition your numbers and intelligence entitle you to? Yes. Well, then, get together and organize as Eugene V. Debs would organize you, in a body, without regard to what position you fill or what pay you receive. Get together and select a man who has the honesty and ability to legislate in your interests. Go to the primary election in your district; vote for him and nominate him. And after you have nominated him, work for his election, and throttle every fraud you detect among the "heelers." Keep aloof from them; let none of them pollute your mind with their corrupt methods; keep clean, even if it costs you a few votes to do it. It will pay you later.

The above may seem like a good deal of effort, and may interfere with some little personal comfort, but you will find it the best paying investment you ever made. One often hears the proposition that any man, and especially a poor man, is corruptible. Conceding that there may be more truth in that proposition than an optimist would like to admit, wherein lies the remedy? Elect men pledged to the enactment of such laws as the following:

Making the offering of a political bribe a capital offense.

Making the acceptance of a political bribe punishable by life imprisonment.

The above may sound chimerical, but do you think that any man would have the temerity to offer or receive a bribe with such laws staring him in the face? I think not.

CHICAGO, ILL.

F. A. McLaughlin.

#### Mr. Gray and the Anarchists.

MR. EDITOR—Everything in this world has its uses, even the louse and the rattlesnake, if we only knew what those uses were. So have such things as Mr. W. H. Gray their uses. They, too, play their part in the mysterious phenomena of natural economy. They are to the social, or body politic, what the louse is to the individual body—a sure sign that it is filthy and needs cleansing. They show us the rottenness of our institutions and laws, and the foul vermin that they breed. Mr. Gray shows us something more—the tremendous task on hand to overcome the opposition of that prejudice and superstition which holds in slavery the minds, and so the bodies, of those whom they are trying to lift out of their degradation and make free. For he

is a true type of a class whose ignorance and bigotry forces them to prefer rotting in their slime to coming out of their dirty pool into the clean fields of reason and common sense, to proclaim their manhood and take their liberty.

This miserable wretch turns upon the men who are sacrificing themselves in the battle for human freedom; giving all their great talents, courage, character and energies to the great cause of liberty. Turns upon them as a maddened brute, driven to desperation by cruel treatment, would turn upon those who were endeavoring to relieve it of its agonies. No man who ever wrote a line could paint the character of his mind more accurately than he does himself; and it is not such a one as intelligent men would be proud of.

In his muddy article, "Pardon of the Anarchists," in the January MAGAZINE, he says to the editor: "You do not arouse my anger," and a little further on proceeds to give the lie to this statement by calling Mr. Debs "Eugene Vindictive Debs," and Governor Altgeld "John Pardon Altgeld." He is too ignorant, however, to perceive that he has stepped on himself.

"Why is it," he asks, addressing Mr. Debs, "that you alone indorse the Governor's action, with the exception of the Anarchists themselves?" Here, again, he exposes his ignorance of the sentiment of the reform and labor press of the country, as all of this press that has come under the notice of the present writer—who is somewhat acquainted with it—has, almost without exception, endorsed the Governor's action.

"Are you (Debs) of the opinion that John Pardon Altgeld and Eugene Vindictive Debs are the only able-minded men our country has produced?" Mr. Debs has led too busy a life, and had too many other things to think about, to find time to think much on his own greatness; and there is not the least doubt but he is entirely ignorant of how really great he is. But, whatever he may think on this point, and great and talented as he and Governor Altgeld really are, they are not the only great ones that "our country has produced;" nor even do they stand pre-eminently alone in their greatness; for though they are in the front ranks, there are thousands by their side and thousands more close behind them.

"What a pity, that out of sixty millions of people only two seem to know the law." It would, indeed, be a pity were it true; but, fortunately for the enslaved millions, it is not true; for if each of them were a thousand times greater than he is, the country must still go down despite of all that they could do to save it. But, thanks to their efforts, and those of hundreds of others who, like them, have educated

thousands to a knowledge of the "law"—the law of freedom, justice and humanity—they do not monopolize the knowledge of that subject.

"The same crowd you (Debs) were to address on the lake front were mostly of the type mentioned, as it is clearly demonstrated by their attempt to raid one of the big department stores down town." What is the cause of which this "crowd" is the effect? Is it not our class laws and corrupt judges? Is not this "crowd" the fruit of unjust laws and slimy ermine? and is it not to such crowds, robbed of their rights and turned into hungry wild beasts, that Debs, and others like him, *must* preach the gospel of truth, that they may show them what their rights are and how to get them?
